As the Senator from Alaska knows, I have been very strongly in favor of foreign aid. When I was in the other body and a member of the Foreign Affairs Committee, I worked and voted for foreign aid. I have voted for it while I have been a Member of the Senate. I think we must continue the program. I deeply believe there is a need for it, and I know the Senator from Alaska feels likewise. But, on another occasion, I said there is such a thing as being so broadminded that we get flatheaded; and I am wondering if we have not reached that point on foreign aid in this country. We are so concerned about the poor and the unfortunate and the needy abroad—which we should be, and properly so, that we go to the extent of neglecting our own. That is the point the Senator from Alaska is so ably making. I am glad he is doing so, because it needs to be done.

Mr. GRUENING. As the Senator has noticed, in the last year we have been borrowing money from our own people to be able to spend abroad as the $12 billion deficit in 1959 reveals and, under the policies of this administration, which wishes to raise interest rates, our people will have to pay still more to raise the money to give and lend to foreign nations, whereas, loans made to foreign countries are really not true loans at all, since they are repayable in soft currencies, which makes them virtually gifts, masquerading as loans.

Mr. DODD. Of course, they are. I do not want to delay the Senator further. I wish to hear what else he has to say. However, I should like to say that his complaint is not that we are carrying on a foreign aid program, but, rather, that we are not carrying it out properly, that we are not doing the job as it should be done, and that we are not taking care of our own people as they should be taken care of and, in my own judgment, as a priority matter. It is getting so that it is considered bad for an American to stand up and say that America should be given a priority in anything. In some quarters it is considered wrong to do that. It has got so that if one raises his voice so he can be heard in this Chamber, he is characterized as a demagog. We are led to believe that we must whisper; we must speak softly, in double terms and then only in certain places. It is high time that our leaders, as the Senator from Alaska is doing, speak up so they can be heard, and give the people the facts they need, so we can move ahead at home and abroad.

Mr. GRUENING. I thank my able colleague from Connecticut. I shall not delay the Senate much further, but I think when the people read in today's RECORD, what some of these foreign projects are, they will have a better understanding of the Eisenhower-Nixon double standard. Let me refer to the list of projects.

Here is one item for $10 million for a textile mill in the Sudan.

Here is one for $2 million for agricultural and industrial development in Somalia.

Here is one for $800,000 for construction of a warehouse in Nigeria.

Here is one for $23 million for an irrigation project for the Kingdom of Morocco.

Here is one for $5 million for an electric power plant for the Government of Libya.

Here is one for a pulp factory in Tunisia; and so on—projects which in this country our Government would denounce as socialistic and all the other adverse things that it says about any projects for the American people.

What makes these foreign aid projects sacrosanct? Yet projects costing much lesser amounts, projects which have been carefully worked out, that have passed both bodies of Congress, which are aimed at relieving distress, whether for area redevelopment, education, housing, resource development or to end water pollution, needs that exist in this country, are labeled as "unnecessary, unwise, and costly"?

Perhaps there is some allergy on the part of the Eisenhower-Nixon administration to loans repaid in American dollars and that when the loan is to be paid in new Taiwan dollars, rupees, or other soft currencies, the loan no longer is "unnecessary, unwise, and costly"?

Mr. President, I confess that I cannot understand such double talk.

But I can understand this, Mr. President: Our gross national product has now reached the sum of one-half a trillion dollars annually. What we were seeking to do in enacting S. 722 was to devote a sum approximately equivalent to what could be produced by our national effort in 4 hours to relieving the economic distress of our fellow citizens here at home in areas needing economic redevelopment.

It is my sincere opinion that the devotion of that small fraction of our gross national product to such a worthy purpose at home has at least as much merit as devoting many times that much to similar projects abroad.

The time will come—and I hope it will be not too long distant—when the Eisenhower-Nixon administration will rue the day that it forsook the interests of the people here at home in favor of the people in 104 foreign countries, and adopted its double dealing, double talking, double standard, making it the first administration in American history which by its actions shows that it prefers the interests of the people of foreign lands to the interests of the people of our own.

Mr. President, I yield the floor.

Mr. KUCHEL. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMUNITY ANTENNA SYSTEMS

Mr. MANSFIELD. Mr. President, unless there is further business, it is the intention to adjourn the Senate shortly.

Mr. President, as I understand the situation, when the Senate adjourns this afternoon until 12 o'clock tomorrow, the pending business will be Calendar No. 950, S. 2653, to amend the Communications Act of 1934 to establish jurisdiction in the Federal Communications Commission over community antenna systems.

The PRESIDING OFFICER. The Chair lays before the Senate the bill, S. 2653, which will be stated by title for the information of the Senate.

The LEGISLATIVE CLERK. A bill (S. 2653) to amend the Communications Act of 1934 to establish jurisdiction in the Federal Communications Commission over community antenna systems.

Mr. MANSFIELD. Mr. President, I announce to the Senate that this measure will not be considered today, but will be taken up for consideration at the conclusion of morning business tomorrow. I believe unanimous consent has been granted that if morning business should conclude before 2 o'clock, the bill, S. 2653, will be laid before the Senate and will be open for consideration and debate by the Senate.

The PRESIDING OFFICER. The Senator is correct.

ORDER FOR ADJOURNMENT

Mr. MANSFIELD. Mr. President, I ask unanimous consent that when the Senate concludes its deliberations today it stand in adjournment until 12 o'clock noon tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE SUMMIT CONFERENCE

Mr. KUCHEL. Mr. President, this is a sad day in this melancholy world. What mankind had fondly hoped might conceivably result in forward progress toward the cause of peace with honor apparently in advance has been doomed to failure.

Today in Paris the Soviet Premier has done a tragic and frightening disservice by his announcement calculated to scuttle a summit meeting which he himself originally sought.

For years the Soviets have maintained a far-flung system of espionage all around the globe. Other states, including our own, have done likewise, though none on the same scale, I believe, as Russia. We have apprehended and convicted many Soviet secret agents who were plying their trade in our own country. Now Russia, in regard to the U–2 plane incident, has announced that an American reconnaissance plane pilot will be held for trial on charges of espionage behind the Iron Curtain. Meanwhile, they announce the orbiting in outer space of a mechanism which, when perfected, perhaps could supply a worldwide reconnaissance capability to them.

This morning the Soviet Premier used the U–2 incident as a basis for effectively preventing the meeting from being held. What is it, Mr. President, which the Soviets apparently, at all costs, desire to have remain secret behind their own borders? Is it progress in the fields of peaceful pursuits, or is it something else?

We deal here with the perpetuation of American liberty, and equally, with the cause of mankind's freedom. What new, or different arrangements may now be necessary, here and elsewhere, to assure our freedom, our Government will be prepared to make, and it will make them with the unstinting approval of all the American people and, I feel sure, with the approval of free governments and free peoples everywhere.

I have just read the text of the statement which our President made today in Paris at the conference of the heads of state. I ask unanimous consent that the text of this statement appear at this point in my comments.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Having been informed yesterday by General de Gaulle and Prime Minister Macmillan of the position which Mr. Khrushchev has taken in regard to this Conference during his calls yesterday morning on them, I gave most careful thought as to how this matter should best be handled. Having in mind the great importance of this Conference and the hopes that the peoples of all the world have reposed in this meeting, it concluded that in the circumstances it was best to see if, at today's private meeting, any possibility existed through the exercise of reason and restraint to dispose of this matter of the overflights which would have permitted the Conference to go forward.

I was under no illusion as to the probability of success of any such approach but I felt that in view of the great responsibility resting on me as President of the United States this effort should be made.

In this I received the strongest support of my colleagues, President de Gaulle and Prime Minister Macmillan. Accordingly, at this morning's private session, despite the violence and inaccuracy of Mr. Khrushchev's statement, I replied to him on the following terms:

"I had previously been informed on the sense of the statement just read by Premier Khrushchev.

"In my statement of May 11 and in the statement of Secretary Herter of May 9, the position of the United States was made clear with respect to the distasteful necessity of espionage activities in a world where nations distrust each other's intentions. We pointed that these activities had no aggressive intent but rather were to assure the safety of the United States and the free world against surprise attack by a power which boasts of its ability to devastate the United States and other countries by missiles armed with atomic warheads. As is well known, not only the United States but most other countries are constantly the targets of elaborate and persistent espionage of the Soviet Union.

"There is in the Soviet statement an evident misapprehension on one key point. It alleges that the United States has, through official statements, threatened continued overflights. The importance of this alleged threat was emphasized and repeated by Mr. Khrushchev. The United States has made no such threat. Neither I nor my Government has intended any. The actual statements go no further than to say that the United States will not shirk its responsibility to safeguard against surprise attack.

"In point of fact, these flights were suspended after the recent incident and are not to be resumed. Accordingly, this cannot be the issue.

"I have come to Paris to seek agreements with the Soviet Union which would eliminate the necessity for all forms of espionage, including overflights. I see no reason to use this incident to disrupt the conference.

"Should it prove impossible, because of the Soviet attitude, to come to grips here in Paris with this problem and the other vital issues threatening world peace, I am planning in the near future to submit to the United Nations a proposal for the creation of a United Nations aerial surveillance to detect preparations for attack. This plan I had intended to place before this conference. This surveillance system would operate in the territories of all nations prepared to accept such inspection. For its part, the United States is prepared not only to accept the United Nations aerial surveillance, but to do everything in its power to contribute to the rapid organization and successful operation of such international surveillance.

"We of the United States are here to consider in good faith the important problems before this conference. We are prepared either to carry this point no further, nor undertake bilateral conversations between the United States and the U.S.S.R. while the main conference proceeds."

My words were seconded and supported by my Western colleagues who also urge Mr. Khrushchev to pursue the path of reason and commonsense, and to forget propaganda, Such an attitude would have permitted the conference to proceed. Mr. Khrushchev was left in no doubt by me that this ultimatum would never be acceptable to the United States.

Mr. Khrushchev brushed aside all arguments of reason, and not only insisted upon this ultimatum, but also insisted that he was going to publish his statement in full at the time of his own choosing.

It was thus made apparent that he was determined to wreck the Paris conference.

In fact, the only conclusion that can be drawn from his behavior this morning was that he came all the way from Moscow to Paris with the sole intention of sabotaging this meeting on which so much of the hopes of the world have rested.

In spite of this serious and adverse development, I have no intention whatsoever to diminish my continuing efforts to promote progress toward a peace with justice. This applies to the remainder of my stay in Paris as well as thereafter.

ADJOURNMENT

Mr. MANSFIELD. Mr. President, if there is no further business to come before the Senate at this time, I move, pursuant to the order previously entered, that the Senate adjourn until 12 o'clock tomorrow.

The motion was agreed to; and (at 2 o'clock and 31 minutes p.m.) the Senate adjourned, under the order previously entered, until tomorrow, Tuesday, May 17, 1960, at 12 o'clock meridian.

NOMINATIONS

Executive nominations received by the Senate May 16, 1960:

SUBVERSIVE ACTIVITIES CONTROL BOARD

Edward C. Sweeney, of Illinois, to be a member of the Subversive Activities Control Board for the remainder of the term expiring August 9, 1960, vice R. Lockwood Jones, resigned.

Edward C. Sweeney, of Illinois, to be a member of the Subversive Activities Control Board for a term of 5 years expiring August 9, 1965. (Reappointment.)

U.S. DISTRICT JUDGE

Roy L. Stephenson, of Iowa, to be U.S. district judge for the southern district of Iowa, vice Edwin R. Hicklin, retired.

INDIAN CLAIMS COMMISSION

Arthur V. Watkins, of Utah, to be Chief Commissioner of the Indian Claims Commission, vice Edgar E. Witt, resigned.

T. Harold Scott, of Colorado, to be an Associate Commissioner of the Indian Claims Commission, vice Arthur V. Watkins.

ATOMIC ENERGY COMMISSION

Loren Keith Olson, of Maryland, to be a member of the Atomic Energy Commission for the remainder of the term expiring June 30, 1962, vice John Forrest Floberg, resigned.

CONFIRMATIONS

Executive nominations confirmed by the Senate May 16, 1960:

SECURITIES AND EXCHANGE COMMISSION

Harold C. Patterson, of Virginia, to be a member of the Securities and Exchange Commission for the term expiring June 5, 1965.

PUBLIC HOUSING COMMISSIONER

Bruce Savage, of Indiana, to be Public Housing Commissioner.

MISSISSIPPI RIVER COMMISSION

Maj. Gen. Thomas A. Lane, Corps of Engineers, to be a member and president of the Mississippi River Commission, under the provisions of section 2 of an act of Congress approved June 28, 1879 (21 Stat. 37) (33 U.S.C. 642).

CALIFORNIA DEBRIS COMMISSION

Col. John A. Morrison, Corps of Engineers, to be a member of the California Debris Commission, under the provisions of section 1 of the act of Congress approved March 1, 1893 (27 Stat. 507) (33 U.S.C. 661).

SUBVERSIVE ACTIVITIES CONTROL BOARD

Francis Adams Cherry, of Arkansas, to be a member of the Subversive Activities Control Board for a term of 5 years expiring March 4, 1965.

U.S. ATTORNEYS

Ralph Kennamer, of Alabama, to be U.S. attorney for the southern district of Alabama, term of 4 years.

William L. Longshore, of Alabama, to be U.S. attorney for the northern district of Alabama, term of 4 years.

Joseph S. Bambacus, of Virginia, to be U.S. attorney for the eastern district of Virginia, term of 4 years.

U.S. MARSHAL

Oliver H. Metcalf, of Pennsylvania, to be U.S. marshal for the middle district of Pennsylvania for the term of 4 years (now serving under an appointment which expired March 1, 1960).

FARM CREDIT ADMINISTRATION

Lester Clyde Carter, of Arkansas, to be a member of the Federal Farm Credit Board, Farm Credit Administration for a term expiring March 31, 1966.

Robert T. Lister, of Oregon, to be a member of the Federal Farm Credit Board, Farm Credit Administration, for a term expiring March 31, 1966.

NATIONAL SCIENCE FOUNDATION

Malcolm M. Willey, of Minnesota, to be a member of the National Science Board for the remainder of the term expiring May 10, 1964.

INDIAN CLAIMS COMMISSION

Arthur V. Watkins, of Utah, to be Chief Commissioner of the Indian Claims Commission.

IN THE U.S. COAST GUARD

The following-named persons to be appointed to the rank indicated in the U.S. Coast Guard:

To be commanders

Richard H. Puckett
Arthur C. Hoene, Jr.
James W. Conway
Arthur A. Atkinson, Jr.
Thomas F. Dunham, Jr.
James M. Winn

To be lieutenants

David F. Bosomworth
Paul F. Bade
George H. Garbe

To be lieutenants (junior grade)

Robert Burke
John W. Kime
Richard J. Green
Thomas D. Combs, Jr.
Paul T. Kaufmann
Louis K. Bragaw, Jr.
Charles S. Niederman
Ronald A. McClellan
David R. Markey
William C. Parish, Jr.
Frederick C. Bruner
Henry J. Harris, Jr.
Keith D. Ripley
Harold E. Fallen, Jr.
Arnold B. Beran
Donald M. Morrison, Jr.
Ronald G. Malone
Tommy G. Woodworth
Robert L. DeMichiell
John I. Maloney, Jr.
Russell C. Bishop, Jr.
Terrill H. Oloege
Thomas T. Matteson
Ralph N. Fennacchini
Thomas W. Pinnegan
John P. Flaherty, Jr.
John R. Mitchell
John B. Lynn
Harland D. Hanson
Davlid J. Heskell, Jr.
James E. Brown, Jr.
George D. Passmore, Jr.
Richard J. Collins
George P. Vance
John C. Wirtz
Robert A. Johnson
Richard W. Michaels
Douglas B. Thurnher
James C. Osborn
John M. Cece
Richard "D" Thompson
Robert J. Cardinal
Donald B. Davis
Thomas P. Nolan
Peter J. Rots
Matthew J. Ahearn
Everett L. Crowell
Ralph Z. DelGiorno
John R. Erickson
William R. Babineau
Richard Buell
Ernest J. Bader
Carol E. Conry
Richard J. Marcott
Albert D. Super
Andrew R. Rippel

To be ensigns

Leonard Francis Alcantara
Rudolph George Anderson
Leon Elwood Beaudin
Daniel Francis Bobeck
Carl Melvin Brothers
Robert Allen Burt
Richard Oliver Buttrick
Frederick Michael Casciano
Robert James Cheney, Jr.
Gerald Francis Corcoran
Robert Austin Creighton
Ian Stuart Cruickshank
Kenneth Charles Cutler
Randolph DeKroney
Michael Bernard Dunn
William Joseph Ecker
John Norman Faigle
Jerome Patrick Foley
Bailey Mozo Geeslin
Robert Alan Ginn
Donald Charles Greenman
William Henry Hall, Jr.
John Richard Hay
Neal Frederick Herbert
Eugene Joseph Hickey, Jr.
John Heaton Hill
Douglas Anthony Hlousek
Ronald Paul Hunter
George Forsyth Ireland
Robert Edward Isherwood
Michael Richard Johnson
Frederick Paul Karres
Eugene Martin Kelly
Charles Harold King, Jr.
Richard Robert Kuhn
Thomas Youlden Lawrence, Jr.
Walter Ted Leland
Paul Robert Lewis
Jan Darryl Long
Merrill Conrad Louks
Terry Luther Lucas
James Edwin Margeson, Jr.
Paul Anthony Joseph Martino
John Eugene McCarty
Angus McKinnon
George Henry Moritz III
Martin James Moynihan
Jerome Marvin Myers
William Edgar Neal
Harry Elis Obedin
James Harold Parent
David Loren Parr
George Henry Peck III
Keith Palmer Pensom
Theodore Hugh Purcell
Kenneth Monfort Rappolt
Rupert Blue Reynolds, Jr.
Paul Dennis Russell
John Allan Schmidt

PUBLIC HEALTH SERVICE

The following candidates for appointment or permanent promotion in the Regular Corps of the Public Health Service to the offices indicated, subject to qualifications therefor as provided by laws and regulations:

FOR APPOINTMENT

To be senior surgeons

David Brand
Louis S. Gerber

To be senior assistant surgeon

George W. Douglas, Jr.

To be senior sanitary engineer

Edwin L. Ruppert

To be senior assistant sanitary engineer

Leo Weaver

To be senior scientists

Alfred S. Lazarus
Olaf Mickelsen

To be scientists

Herbert T. Dalmat
John E. Porter

To be veterinary officer

James Lieberman

To be nurse officer

Marie H. Van Son

To be health service officer

Claudia B. Galiher

FOR PERMANENT PROMOTION

To be senior assistant surgeons

John W. Dickson
S. Paul Ehrlich, Jr.

To be senior assistant sanitary engineers

Delbert A. Larson
Thomas N. Hushower

To be assistant sanitary engineer

Joseph H. Meier

To be senior assistant pharmacist

Donald B. Hare

To be senior assistant nurse officer

Marie Herold

FOR APPOINTMENT

To be senior surgeons

Henry H. Kyle

To be senior assistant dental surgeons

Robert J. Lucas
Joe T. Hillsman
Samuel J. Wycoff
Francis O. Webb

To be assistant dental surgeons

Charles C. Swoope, Jr.
Gerald W. Gaston
William E. Dorrill
Richard L. Christiansen
George N. Newton
Wellesley H. Wright
Jim D. Webb
William L. Knudson
Richard K. Fred
David A. Dutton
Franz P. Helm
Buckner S. Burch
Manuel H. Marks
Orlen N. Johnson
Gresham T. Farrar, Jr.
Donald R. Swatman

To be senior assistant sanitary engineer

Ian K. Burgess

To be senior assistant nurse officers

Laurette M. Beck
Patricia P. Grimaila

To be assistant nurse officer

Juanita M. Barkley

To be junior assistant nurse officer

Ray Cameron

To be senior assistant surgeons

Harry P. Anastopulos
Robert B. Balderson
Richard F. Barbee
Robert N. Barnes
Frank C. Bigler
Aaron B. Brill
Ray A. Brinker
Willard L. Brown
Willard R. Brown
Gerald E. Caplan
Leo J. Castiglioni
Ruth Coffin
John F. Dotter
Arvo B. Ederma
Richard W. Emmons
Earl R. Feringa
James P. Fields
Paul J. Fry, Jr.
George G. Glenner
John E. Glennon
Leon I. Goldberg
Betty E. Hathaway
Lowell R. Hughes
Robert A. Jordan
Karl M. Johnson
Marion E. Kintner
Charles E. Koch, Jr.
Frederick L. Lang
William C. Larsen
Dale Lindholm
Robert P. Locey
William R. Martin
Samuel Milham, Jr.
Barry Miller
John P. Nasou
Alvin H. Novack
John A. Oates, Jr.
William M. O'Brien
Gerald H. Payne
Paul G. Pechous
Darwin J. Prockop
H. McDonald Rimple
Marcus N. Rogers
Saul W. Rosen
William B. Sheldon
Richard A. Smith
Roland W. Sonntag
Richard A. Stamm
Barron H. Stillman
Michio Takahashi
John B. Titmarsh, Jr.
Fred E. Tosh
Robert C. Vander Wagen
Cecil C. Vaughn, Jr.
Richard D. Wasson
Charles L. Whetstone
Harold W. Wylie, Jr.

To be assistant surgeons

William J. Atkinson
John R. Baugh
Frederick V. C. Featherstone
George T. Harding, Jr.
Otto L. Loehden
Robert J. Warren

To be senior assistant dental surgeons

George L. Crocker
Raymond D. Haslam
Phillip K. Humphreys
Donald P. Jelinek

Maj. Gen. Robert E. L. Eaton, 594A (brigadier general, Regular Air Force), U.S. Air Force.

Maj. Gen. Richard M. Montgomery, 1025A (brigadier general, Regular Air Force), U.S. Air Force.

Maj. Gen. Harvey T. Alness, 1085A (brigadier general, Regular Air Force), U.S. Air Force.

Maj. Gen. Russell L. Waldron, 1164A (brigadier general, Regular Air Force), U.S. Air Force.

Maj. Gen. Romulus W. Puryear, 637A (brigadier general, Regular Air Force), U.S. Air Force.

Maj. Gen. Thomas S. Moorman, Jr., 644A (brigadier general, Regular Air Force), U.S. Air Force.

Maj. Gen. Benjamin J. Webster, 974A (brigadier general, Regular Air Force), U.S. Air Force.

Maj. Gen. Leighton I. Davis, 1111A (brigadier general, Regular Air Force), U.S. Air Force.

Maj. Gen. James H. Walsh, 1120A (brigadier general, Regular Air Force), U.S. Air Force.

Maj. Gen. Thomas C. Musgrave, Jr., 1129A (brigadier general, Regular Air Force), U.S. Air Force.

Maj. Gen. William T. Hudnell, 1171A (brigadier general, Regular Air Force), U.S. Air Force.

Maj. Gen. Howell M. Estes, Jr., 1211A (brigadier general, Regular Air Force), U.S. Air Force.

Maj. Gen. Joseph J. Nazzaro, 1241A (brigadier General, Regular Air Force), U.S. Air Force.

Maj. Gen. Bruce K. Holloway, 1336A (brigadier general, Regular Air Force), U.S. Air Force.

Maj. Gen. Maurice A. Preston, 1337A (brigadier general, Regular Air Force), U.S. Air Force.

Maj. Gen. John D. Ryan, 1418A (brigadier general, Regular Air Force), U.S. Air Force.

Maj. Gen. William H. Blanchard, 1445A (brigadier general, Regular Air Force), U.S. Air Force.

Maj. Gen. James Ferguson, 1530A (brigadier general, Regular Air Force), U.S. Air Force.

Maj. Gen. David Wade, 1582A (brigadier general, Regular Air Force), U.S. Air Force.

Maj. Gen. Thomas P. Gerrity, 1613A (brigadier general, Regular Air Force), U.S. Air Force.

To be brigadier generals

Brig. Gen. Donald L. Hardy, 618A (colonel, Regular Air Force), U.S. Air Force.

Brig. Gen. Charles H. Pottenger, 661A (colonel, Regular Air Force), U.S. Air Force.

Brig. Gen. Robert J. Goewey, 910A (colonel, Regular Air Force), U.S. Air Force.

Maj. Gen. Harry C. Porter, 976A (colonel, Regular Air Force), U.S. Air Force.

Maj. Gen. James C. Jensen, 1042A (colonel, Regular Air Force), U.S. Air Force.

Maj. Gen. Joseph D. C. Caldara, 1048A (colonel, Regular Air Force), U.S. Air Force.

Maj. Gen. Dale O. Smith, 1074A (colonel, Regular Air Force), U.S. Air Force.

Brig. Gen. Perry B. Griffith, 1075A (colonel, Regular Air Force), U.S. Air Force.

Maj. Gen. Elvin S. Ligon, Jr., 1077A (colonel, Regular Air Force), U.S. Air Force.

Maj. Gen. Robert M. Stillman, 1114A (colonel, Regular Air Force), U.S. Air Force.

Maj. Gen. Daniel E. Hooks, 1166A (colonel, Regular Air Force), U.S. Air Force.

Maj. Gen. Benjamin O. Davis, Jr., 1206A (colonel, Regular Air Force), U.S. Air Force.

Maj. Gen. Albert P. Clark, 1218A (colonel, Regular Air Force), U.S. Air Force.

Maj. Gen. Turner C. Rogers, 1232A (colonel, Regular Air Force), U.S. Air Force.

Maj. Gen. Von R. Shores, 1236A (colonel, Regular Air Force), U.S. Air Force.

Maj. Gen. Lewis L. Mundell, 1286A (colonel, Regular Air Force), U.S. Air Force.

Maj. Gen. John M. Reynolds, 1299A (colonel, Regular Air Force), U.S. Air Force.

Maj. Gen. Sam W. Agee, 1346A (colonel, Regular Air Force), U.S. Air Force.

Brig. Gen. Kenneth O. Sanborn, 1363A (colonel, Regular Air Force), U.S. Air Force.

Maj. Gen. Don R. Ostrander, 1343A (colonel, Regular Air Force), U.S. Air Force.

Maj. Gen. Robert J. Friedman, 1397A (colonel, Regular Air Force), U.S. Air Force.

Maj. Gen. Robert A. Breitweiser, 1406A (colonel, Regular Air Force), U.S. Air Force.

Brig. Gen. Prescott M. Spicer, 1413A (colonel, Regular Air Force), U.S. Air Force.

Maj. Gen. Fred M. Dean, 1450A (colonel, Regular Air Force), U.S. Air Force.

Maj. Gen. Waymond A. Davis, 1470A (colonel, Regular Air Force), U.S. Air Force.

Maj. Gen. Marcus F. Cooper, 1543A (colonel, Regular Air Force), U.S Air Force.

Maj. Gen. Cecil H. Childre, 1551A (colonel, Regular Air Force), U.S. Air Force.

Maj. Gen. Sam Maddux, Jr., 1561A (colonel, Regular Air Force), U.S. Air Force.

Maj. Gen. Frank E. Rouse, 1595A (colonel, Regular Air Force), U.S. Air Force.

Maj. Gen. Hewitt T. Wheless, 1609A (colonel, Regular Air Force), U.S. Air Force.

Brig. Gen. Glen R. Birchard, 1623A (colonel, Regular Air Force), U.S. Air Force.

Brig. Gen. Henry R. Sullivan, Jr., 1655A (colonel, Regular Air Force), U.S. Air Force.

Maj. Gen. William K. Martin, 1697A (colonel, Regular Air Force), U.S. Air Force.

Maj. Gen. Henry Viccellio, 1728A (colonel, Regular Air Force), U.S. Air Force.

Maj. Gen. Osmond J. Ritland, 1731A (colonel, Regular Air Force), U.S. Air Force.

Brig. Gen. Don Coupland, 1766A (colonel, Regular Air Force), U.S. Air Force.

Maj. Gen. Beverly H. Warren, 1768A (colonel, Regular Air Force), U.S. Air Force.

Maj. Gen. Keith K. Compton, 1849A (colonel, Regular Air Force), U.S. Air Force.

Brig. Gen. John K. Hester, 1870A (colonel, Regular Air Force), U.S. Air Force.

Brig. Gen. Joseph R. Holzapple, 1897A (colonel, Regular Air Force), U.S. Air Force.

Maj. Gen. David A. Burchinal, 1936A (colonel, Regular Air Force), U.S. Air Force.

Maj. Gen. James F. Whisenand, 1945A (colonel, Regular Air Force), U.S. Air Force.

Maj. Gen. Glen W. Martin, 1955A (colonel, Regular Air Force), U.S. Air Force.

Brig. Gen. Charles M. Eisenhart, 1957A (colonel, Regular Air Force), U.S. Air Force.

Maj. Gen. William W. Momyer, 1964A (colonel, Regular Air Force), U.S. Air Force.

Brig. Gen. Joseph J. Preston, 1966A (colonel, Regular Air Force), U.S. Air Force.

Maj. Gen. Harold H. Twitchell, 19034A (colonel, Regular Air Force, Medical), U.S. Air Force.

Brig. Gen. Major S. White, 19056A (colonel, Regular Air Force, Medical), U.S. Air Force.

Brig. Gen. Richard L. Bohannon, 19067A (colonel, Regular Air Force, Medical), U.S. Air Force.

Brig. Gen. John K. Cullen, 19068A (colonel, Regular Air Force, Medical), U.S. Air Force.

The following-named officers for temporary appointment in the U.S. Air Force to the grade indicated, under the provisions of chapter 839, title 10, of the United States Code:

Major generals

Brig. Gen. Donald P. Graul, 455A, Regular Air Force.

Brig. Gen. Donald L. Hardy, 618A (colonel, Regular Air Force), U.S. Air Force.

Brig. Gen. Charles H. Pottenger, 661A (colonel, Regular Air Force), U.S. Air Force.

Brig. Gen. Perry B. Griffith, 1075A (colonel, Regular Air Force), U.S. Air Force.

Brig. Gen. Major S. White, 19056A (colonel, Regular Air Force, Medical), U.S. Air Force.

Brig. Gen. John K. Cullen, 19068A (colonel, Regular Air Force, Medical), U.S. Air Force.

Brig. Gen. Kenneth O. Sanborn, 1363A (colonel, Regular Air Force), U.S. Air Force.

Brig. Gen. Prescott M. Spicer, 1413A (colonel, Regular Air Force), U.S. Air Force.

Brig. Gen. Glen R. Birchard, 1623A (colonel, Regular Air Force), U.S. Air Force.

Brig. Gen. Henry R. Sullivan, Jr., 1655A (colonel, Regular Air Force), U.S. Air Force.

Brig. Gen. John K. Hester, 1870A (colonel, Regular Air Force), U.S. Air Force.

Brig. Gen. Joseph R. Holzapple, 1897A (colonel, Regular Air Force), U.S. Air Force.

Brig. Gen. Charles M. Eisenhart, 1957A (colonel, Regular Air Force), U.S. Air Force.

Brig. Gen. Joseph J. Preston, 1966A (colonel, Regular Air Force), U.S. Air Force.

Brig. Gen. William C. Kingsburg, 923A (colonel, Regular Air Force), U.S. Air Force.

Brig. Gen. Jermain F. Rodenhauser, 933A (colonel, Regular Air Force), U.S. Air Force.

Brig. Gen. Thomas J. Gent, Jr., 1130A (colonel, Regular Air Force), U.S. Air Force.

Brig. Gen. Charles B. Root, 1258A (colonel, Regular Air Force), U.S. Air Force.

Brig. Gen. Frederic H. Miller, 1273A (colonel, Regular Air Force), U.S. Air Force.

Brig. Gen. Chester W. Cecil, Jr., 1298A (colonel, Regular Air Force), U.S. Air Force.

Brig. Gen. William B. Keese, 1531A (colonel, Regular Air Force), U.S. Air Force.

Brig. Gen. Arthur C. Agan, Jr., 1759A (colonel, Regular Air Force), U.S. Air Force.

Brig. Gen. James W. Wilson, 1711A (colonel, Regular Air Force), U.S. Air Force.

The nominations of Arthur C. Aho et al., for promotions in the Regular Air Force, which were confirmed on May 16, 1960, were received by the Senate on April 25, 1960, and may be found in full in the executive proceedings of the CONGRESSIONAL RECORD for that date, beginning with the name of Arthur C. Aho, which is shown on page 8641.

WITHDRAWAL

Executive nomination withdrawn from the Senate May 16, 1960:

FEDERAL COMMUNICATIONS COMMISSION

Edward K. Mills, Jr., of New Jersey to be a member of the Federal Communications Commission for the unexpired term of 7 years from July 1, 1954, vice John C. Doerfer, resigned.

HOUSE OF REPRESENTATIVES

MONDAY, MAY 16, 1960

The House met at 12 o'clock noon.

The Chaplain, Rev. Bernard Braskamp, D.D., offered the following prayer:

Joshua 24: 24: *The Lord our God will we serve, and His voice will we obey.*

O Thou who art the Supreme Ruler of the Universe, in these days of world crisis and confusion, may we never allow our faith in Thy divine sovereignty to become extinguished and our vision of universal peace to become eclipsed.

We earnestly implore Thee that the leaders of nations, now attending the summit conference, may be united in a sincere desire and determination to achieve for broken and bruised humanity the blessings of a nobler and more excellent way of life.

Grant that our President and those assembled with him in the council chamber may be conscious of the unmistakable guidance of Thy spirit, bestowing upon them wisdom and skill in finding the right approach and solution to the many complex international problems.

May our citizens encourage the hearts and strengthen the hands of our chosen representatives by giving them the clear and convincing assurance that they are willing and ready to make every sacrifice in the struggle to preserve the sanctity and security of our beloved country and the freedom of all mankind.

Hear us in the name of the Prince of Peace. Amen.

THE JOURNAL

The Journal of the proceedings of Thursday, May 12, 1960, was read and approved.

SUNDRY MESSAGES FROM THE PRESIDENT

Sundry messages in writing from the President of the United States were communicated to the House by Mr. Ratchford, one of his secretaries.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. McGown, one of its clerks, announced that the Senate had passed without amendment a joint resolution of the House of the following title:

H.J. Res. 602. Joint resolution authorizing the President to proclaim the week in May of 1960 in which falls the third Friday of that month as National Transportation Week.

The message also announced that the Senate had passed, with an amendment in which the concurrence of the House is requested, a bill of the House of the following title:

H.R. 10777. An act to authorize certain construction at military installations, and for other purposes.

The message also announced that the Senate insists upon its amendment to the foregoing bill, requests a conference with the House on the disagreeing votes of the two Houses thereon, and appoints Mr. STENNIS, Mr. JACKSON, Mr. CANNON, Mr. CASE of South Dakota, and Mr. SALTONSTALL to be the conferees on the part of the Senate.

The message also announced that the Senate had passed a bill of the following title, in which the concurrence of the House is requested:

S. 910. An act to authorize the payment to local governments of sums in lieu of taxes and special assessments with respect to certain Federal real property, and for other purposes.

COMMUNICATION FROM THE CLERK OF THE HOUSE

The SPEAKER laid before the House the following communication from the Clerk of the House, which was read:

MAY 13, 1960.

The Honorable the SPEAKER,
House of Representatives.

SIR: Pursuant to authority granted on May 12, 1960, the Clerk received from the Secretary of the Senate today the following message:

That the Senate passed the bill (H.R. 9449) entitled "An act to amend certain sections of title 14, United States Code, relating to personnel matters in the U.S. Coast Guard, and for other purposes."

Respectfully yours,
RALPH R. ROBERTS,
Clerk, U.S. House of Representatives.

HOUSE BILLS AND JOINT RESOLUTION ENROLLED

Mr. BURLESON, from the Committee on House Administration, reported that that committee had, on May 13, 1960, examined and found truly enrolled bills and a joint resolution of the House of the following titles:

H.R. 8042. An act to authorize the Secretary of Commerce to resell any two of four C1–SAY–1 type vessels to the Government of the Republic of China for use in China trade in Far East and Near East waters exclusively;

H.R. 9449. An act to amend certain sections of title 14, United States Code, relating to personnel matters in the U.S. Coast Guard, and for other purposes;

H.R. 11510. An act to amend further the Mutual Security Act of 1954, as amended, and for other purposes; and

H.J. Res. 352. Joint resolution to authorize preliminary study and review in connection with proposed additional building for the Library of Congress.

ANNOUNCEMENT

The SPEAKER. The Chair desires to announce that, pursuant to the authority granted him on Thursday, May 12, 1960, he did on May 13, 1960, sign the following enrolled bills and joint resolution of the House:

H.R. 8042. An act to authorize the Secretary of Commerce to resell any two of four C1–SAY–1 type vessels to the Government of the Republic of China for use in China trade in Far East and Near East waters exclusively;

H.R. 9449. An act to amend certain sections of title 14, United States Code, relating to personnel matters in the U.S. Coast Guard, and for other purposes;

H.R. 11510. An act to amend further the Mutual Security Act of 1954, as amended, and for other purposes; and

H.J. Res. 352. Joint resolution to authorize preliminary study and review in connection with proposed additional building for the Library of Congress.

CENTENNIAL OF THE BIRTH OF GENERAL OF THE ARMIES JOHN J. PERSHING

Mr. WHITENER. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk House Joint Resolution 640 to authorize and request the President to issue a proclamation in connection with the centennial of the birth of General of the Armies John J. Pershing, with Senate amendment thereto, and concur in the Senate amendment.

The Clerk read the title of the bill.

The Clerk read the Senate amendment, as follows:

Page 2, line 1, strike out all after "Pershing." down to and including "Government" in line 5 and insert "The Secretary of Defense will be responsible for coordination between such civic and patriotic organizations and the departments and agencies of the Government".

The SPEAKER. Is there objection to the request of the gentleman from North Carolina?

There was no objection.

The Senate amendment was concurred in, and a motion to reconsider was laid on the table.

Mr. WHITENER. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD and to include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from North Carolina?

There was no objection.

Mr. WHITENER. Mr. Speaker, in connection with the approval of House Joint Resolution 640 I would like to advise my colleagues that the sole amendment which we are called to act upon is very minor. It merely substitutes the Secretary of Defense for the Secretary of the Army as the official to be responsible for coordination between civic and patriotic organizations and departments and agencies of the Government in the honoring of the late General of the Armies John J. Pershing on the 100th anniversary of his birth.

The brief statement contained in Senate Report No. 1304 giving vital data as to the life, works, and honors of the great American, General Pershing, strikes me as worthy of being made available to the general public. Therefore, Mr. Speaker, as a part of my remarks, this statement is attached for printing in the CONGRESSIONAL RECORD:

STATEMENT

September 13, 1960, is the 100th anniversary of the birth of General of the Armies John J. Pershing.

In view of the significant contribution which General Pershing made to the American victory in World War I, in organizing the American Expeditionary Forces in 1917 and their subsequent participation in the battles in France, and in view of the fact that he symbolizes the men of the AEF who fought under him, this resolution would authorize and request the President to proclaim September 13, 1960, as a day upon which all Americans should pay honor and respect to General Pershing and the men who served under him.

This resolution authorizes departments and agencies of the Government to cooperate with civic and patriotic organizations in ceremonies commemorating General Pershing's birth. In addition, the resolution, as amended, designates the Secretary of Defense as the responsible officer for the coordination between civic and patriotic organizations and the departments and agencies of the Government.

The 100th anniversary of the birth of General Pershing will occur on September 13, 1960. The anniversary will afford a convenient and appropriate time for the American people to pay honor to General Pershing and the unique American military system of which he was a product and exemplar. It will also furnish an appropriate occasion to recall the achievements of the men and women who served in the AEF, whose ranks grow thinner with each passing year.

Accordingly, the committee recommends the favorable consideration of House Joint Resolution 640, as amended.

Following is a statement of General Pershing's military history and accomplishments.

John J. Pershing was born near Laclede, Mo., on September 13, 1860. He was appointed to the U.S. Military Academy from his native State on July 1, 1882, and upon graduation on July 1, 1886, was commissioned a second lieutenant of cavalry. He was promoted to first lieutenant on October 20, 1892; and to major (temporary) on August 18, 1898; to captain (permanent) on February 2, 1901. On June 30, 1901, he reverted to the permanent rank of captain; and was promoted to brigadier general, Regular Army, on September 20, 1906; to major

general on September 25, 1916; and to general on October 6, 1917. He became general of the armies on September 3, 1919.

General Pershing joined the 6th Cavalry on September 30, 1886, and served with it at Fort Bayard, Fort Wingate, and Fort Stanton, N. Mex., until December 1, 1890. He served in the field in campaigns against the Apache Indians; and being transferred to South Dakota, he participated in campaigns against the Sioux Indians, and commanded Indian Scouts at Pine Ridge Agency, S. Dak.

From September 25, 1891, to October 1, 1895, General Pershing was professor of military science and tactics at the University of Nebraska, and upon completion of that duty joined the 19th Cavalry at Fort Assiniboine, Mont. During the following summer he participated in a roundup of Cree Indians in the northwestern States and their return to Canada. On December 20, 1896, he was assigned to duty on the staff of Gen. Nelson B. Miles, at Headquarters of the Army in Washington, and on May 1, 1897, returned to his regiment at Fort Assinniboine where he remained to June 1, 1897.

He then served as assistant instructor of tactics at the U.S. Military Academy, West Point, N.Y., to May 5, 1898, when he joined, at his own request, his regiment, the 10th Cavalry, at Chicamauga Park, Ga., sailing with it to Cuba, where he served with distinction in the Santiago campaign. Upon his return to the United States he was on duty at Headquarters of the Army, Washington, D.C., to December 20, 1898, and in the Office of the Assistant Secretary of War in connection with insular affairs until his appointment, upon the organization of the Division of Customs and Insular Affairs, as its first Chief.

In September 1899, he requested active service in the Philippines where he served in various official capacities in the Department of Mindanao, until October 11, 1901, when he returned to the line in command at Iligan, in charge of Moro affairs at Camp Vicars, and in command of Vicars, participating in many operations against the Moros. He returned to the United States in July 1903, and after serving until January 1904, with the War Department General Staff in Washington, D.C., was assigned to duty as Assistant to Chief of Staff, and as Acting Chief of Staff, Southwestern Division, Oklahoma City, Okla., to October 24, 1904. He attended the Army War College, Washington, to January 1905.

He served as military attache in Japan, beginning in February 1905, and during the Russian-Japanese War he was an accredited observer with the Japanese Army and accompanied General Nuroki's army in later stages of the Manchurian campaign. His duties brought him back to the United States, then to Europe under special instructions pending result of situation in the Balkans, as an observer should open hostilities ensue. In December 1908 he returned to the United States, serving for a short time in the Office of Chief of Staff, in Washington, D.C. He returned to the Philippines in October 1909, where he assumed command of the Department of Mindanao. Upon his return to the United States in January 1914 he commanded the 8th Brigade to April 1914; served on the Mexican border to March 15, 1916, when he entered Mexico in command of the Punitive Expedition, remaining there until February 1917. Upon his return to the United States, he commanded the District of El Paso, Tex., to February 21, 1917, and the Southern Department to May 1917.

He was designated by the President on May 26, 1917, to lead the American forces in the World War, and sailed for France on May 28, 1917. He returned to the States on September 8, 1919, at which time he was assigned to duty at General Headquarters, American Expeditionary Forces, Washington, to August 31, 1920; and at Headquarters, General of the Army, Washington, to July 1, 1921. On that date he was appointed Chief of Staff of the Army, in which capacity he served until his retirement, for age, on September 13, 1924.

In 1923, General Pershing became Chairman of the American Battle Monuments Commission, which was created by Congress for the purpose of commemorating the services of the American forces in Europe during the World War. In November 1924 he was designated by President Coolidge as Ambassador to represent the United States in Peru during the centennial of the battle which marked the end of Spanish domination in South America. He returned the following year to South America, where he served as head of the Tacna-Arica Plebiscitary Commission. On June 24, 1936, he was appointed by the President as a member of a commission to prepare plans for the erection of a memorial within the Panama Canal Zone to Gen. George W. Goethals, builder of the Panama Canal.

On June 27, 1936, he took his seat in the French Institute, having been elected a member (foreign associate) of the Academy of Moral and Political Sciences.

In 1937 he was appointed by President Roosevelt as a member of a special delegation to represent him at the Coronation of His Majesty King George VI, and attended the ceremonies in London.

General Pershing received many honorary degrees, which are shown below. His military decorations and awards were numerous, and follow in detail.

HONORARY DEGREES

LL.B. and LL.D., University of Nebraska.
D.C.L., Oxford University.
LL.D., Cambridge University.
LL.D., University of St. Andrews, Scotland.
LL.D., University of Arizona.
LL.D., University of Missouri.

Serbian: Order of the Star of Kare-Georges with Swords (first class).
Venezuelan: Grand Cordon of the Order of the Liberator.

SPECIAL AWARDS

State medals

Missouri: Distinguished Service Medal.
Virginia: Distinguished Service Medal.
New Mexico: Medal of Honor.

Tendered thanks of Congress

"*Resolved by the Senate and House of Representatives of the United States of America in Congress Assembled*, That the thanks of the American people and the Congress of the United States are due, and are hereby tendered, to Gen. John J. Pershing for his highly distinguished services as commander in chief of the American Expeditionary Forces in Europe and to the officers and men under his command for their unwavering devotion and heroic valor throughout the war." (Joint resolution of Congress Sept. 18, 1919, approved Sept. 29, 1919.)

Special gold medal

"In recognition of his peerless leadership, heroic achievement, and great military victories, as Commander in Chief of the American Expeditionary Forces in Europe in World War I, and for his gallant and unselfish devotion to the service of his country, in his contribution to the preparation for, and the prosecution of World War II." (Awarded by act of Congress, Aug. 7, 1946.)

Special medal

A commemorative medal from Dr. Adofe Magica, president of the Committee of the City of Buenos Aires, "Sir, in the name of the committee in charge of the festivities with which the city of Buenos Aires celebrated joyously the advent of peace, consummated by the Treaty of Versailles, I have the honor to convey to you a commemorative medal which has been especially dedicated to you. Receive it, sir, with a testimony of the profound admiration and respect with which we hold your great services to the cause of justice and civilization."

Resolution of a foreign city

Letter of February 3, 1920, of resolution passed at a public meeting by the citizens of Wanganui, New Zealand, as an expression of their appreciation of the value of General Pershing's services in the World War.

AREA REDEVELOPMENT LEGISLATION

Mr. SAYLOR. Mr. Speaker, I ask unanimous consent to extend my re-

marks at this point in the RECORD and to include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. SAYLOR. Mr. Speaker, I would like to include an article which appeared in the Saturday, May 14, 1960, edition of the Washington Post, as follows:

WORTH TRYING AGAIN

To no one's astonishment President Eisenhower has vetoed the so-called area redevelopment bill, charging that it would spread Federal aid too thin, extend some aid that is unnecessary and inhibit local initiative by excessive Federal intervention. There is some merit in all of these objections although the complaint that the bill would duplicate assistance now provided under other programs is not valid enough to justify a veto, in our view.

Mr. Eisenhower does not contend that there is no need for various kinds of economic help for chronically depressed areas; indeed, he calls again for enactment of his own somewhat more modest program. If the need is real, as it certainly seems to be in States like Pennsylvania, Kentucky, West Virginia, and Massachusetts, would it not have been better to accept some program with which to make a start on redevelopment in these areas?

By the same reasoning, however, it may now be asked whether Congress ought not to meet the President half way and pass another bill that eliminates the major sources of objection. Mr. Eisenhower has indicated he would accept some broadening of the criteria in his proposal. If legislation, not mere campaign talk, is the objective, a workable and useful program ought still to be within reach.

I also feel that the Congress and the administration can reach a compromise on this legislation, and sincerely hope that we can get a bill through the legislative processes in a short time.

SUBCOMMITTEE ON IRRIGATION AND RECLAMATION

Mr. ASPINALL. Mr. Speaker, I ask unanimous consent that the Subcommittee on Irrigation and Reclamation of the Committee on Interior and Insular Affairs may be permitted to sit during general debate this afternoon.

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There was no objection.

CONSENT CALENDAR

The SPEAKER. This is the day for the call of the Consent Calendar. The Clerk will call the first bill on the Consent Calendar.

AGRICULTURAL ATTACHÉ ROTATION

The Clerk called the bill (H.R. 8074) to amend section 602 of the Agricultural Act of 1954.

Mr. WEAVER. Mr. Speaker, at the request of another Member, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Nebraska?

There was no objection.

NATIONAL HISTORIC SITE AT BENT'S OLD FORT, COLO.

The Clerk called the bill (H.R. 6851) authorizing the establishment of a national historic site at Bent's Old Fort near La Junta, Colo.

Mr. FORD. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

USE OF PESTICIDE CHEMICALS ON AGRICULTURAL COMMODITIES

The Clerk called the bill (H.R. 7480) to amend the Federal Food, Drug, and Cosmetic Act, with respect to label declaration of the use of pesticide chemicals on raw agricultural commodities which are the produce of the soil.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 403 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 343) is amended—

(1) by adding at the end of paragraph (k) thereof the following sentence: "The provisions of this paragraph with respect to chemical preservatives shall not apply to a pesticide chemical when used in or on a raw agricultural commodity which is the produce of the soil.";

(2) by adding at the end of such section the following new paragraph:

"(l) If it is a raw agricultural commodity which is the produce of the soil, bearing or containing a pesticide chemical applied after harvest, unless the shipping container of such commodity bears labeling which declares the presence of such chemical in or on such commodity and the common or usual name and the function of such chemical: *Provided, however,* That no such declaration shall be required while such commodity, having been removed from the shipping container, is being held or displayed for sale at retail out of such container in accordance with the custom of the trade."

SEC. 2. Nothing in the amendments made by the first section of this Act shall affect any requirement of the laws of any State or Territory.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

House Resolution 526 was laid on the table.

ADDITIONAL PAY FOR MANAGERS OF VA INSTALLATIONS

The Clerk called the bill (H.R. 9792) to amend section 4111 of title 38, United States Code, with respect to the salary of managers of Veterans' Administration hospitals, domiciliaries, and centers.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 4111(b) of title 38, United States Code, is amended by adding immediately after the first sentence thereof the following: "Notwithstanding any other provision of law, the per annum rate of salary of each individual serving as a manager of a hospital, domiciliary, or center shall not be less than (1) the rate of salary of the highest paid employee of the Veterans' Administration (other than himself) assigned to or employed at such hospital, domiciliary, or center, increased by (2) $500 per annum."

With the following committee amendments:

On page 1, line 3, strike out "section" and insert "the first sentence of subsection".

On page 1, beginning on line 4, strike out "by adding immediately after the first sentence thereof the following" and insert "to read as follows".

On page 1, line 8, strike out "not".

On page 1, beginning on line 8, strike out "less than (1) the rate of salary of the highest paid employee of the Veterans' Administration (other than himself) assigned to or employed at such hospital, domiciliary, or center, increased by (2) $500 per annum" and insert in lieu thereof "$16,500; and that of each individual serving as a director of professional services at a hospital, domiciliary, or center shall be $16,250".

The committee amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

The title was amended to read: "A bill to amend section 411 of title 38, United States Code, with respect to the salary of managers and directors of professional services of Veterans' Administration hospitals, domiciliaries, and centers."

A motion to reconsider was laid on the table.

CASTILLO DE SAN MARCOS NATIONAL MONUMENT, FLA.

The Clerk called the bill (H.R. 8226) to add certain lands to Castillo de San Marcos National Monument in the State of Florida.

Mr. WEAVER. Mr. Speaker, at the request of another Member, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Nebraska?

There was no objection.

INCENTIVE PAY FOR PERSONNEL OF NUCLEAR SUBMARINES

The Clerk called the bill (H.R. 10500) to amend the Career Compensation Act of 1949 with respect to incentive pay for certain submarine service.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of

America in Congress assembled, That subsection 204(a)(2) of the Career Compensation Act of 1949, as amended (37 U.S.C. 235(a)(2)), be amended to read, "(2) duty on board a submarine, including, in the case of nuclear-powered submarines, periods of training and rehabilitation after assignment thereto as determined by the Secretary concerned, and including submarines under construction from the time builders' trials commence;".

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

SETTLEMENT OF AIRCRAFT CRASH AT LITTLE ROCK, ARK.

The Clerk called the bill (H.R. 11644) to remove the present $5,000 limitation which prevents the Secretary of the Air Force from settling certain claims arising out of the crash of a U.S. Air Force aircraft at Little Rock, Ark.

There being no objection, the Clerk read the bill as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the $5,000 limitation contained in section 2733 of title 10, United States Code, shall not apply with respect to claims arising out of the crash of a United States Air Force aircraft at Little Rock, Arkansas, on March 31, 1960.

SEC. 2. With respect to claims filed as a result of an aircraft crash described in the first section of this Act, the Secretary of the Air Force shall, within thirty months after the date of the enactment of this Act, report to Congress on—

(1) each claim settled and paid by him under this Act with a brief statement concerning the character and equity of each such claim, the amount claimed, and the amount approved and paid; and

(2) each claim submitted under this Act which has not been settled, with supporting papers and a statement of findings of facts and recommendations with respect to each such claim.

SEC. 3. No part of the amounts awarded under this Act in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with these claims, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

Mr. LANE. Mr. Speaker, I ask unanimous consent that a similar Senate bill, S. 3338 be considered in lieu of the House bill.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There being no objection, the Clerk read the Senate bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the $5,000 limitation contained in section 2733 of title 10, United States Code, shall not apply with respect to claims arising out of the crash of a United States Air Force aircraft at Little Rock, Arkansas, on March 31, 1960.

SEC. 2. With respect to claims filed as a result of an aircraft crash described in the first section of this Act, the Secretary of the Air Force shall, within 30 months after the date of the enactment of this Act, report to Congress on—

(1) each claim settled and paid by him under this Act with a brief statement concerning the character and equity of each such claim, the amount claimed, and the amount approved and paid; and

(2) each claim submitted under this Act which has not been settled, with supporting papers and a statement of findings of facts and recommendations with respect to each such claim.

SEC. 3. Payments made pursuant to this Act for death, personal injury, and property loss claims, shall not be subject to insurance subrogation claims in any respect. No payments made pursuant to this Act shall include any amount for reimbursement to any insurance company or compensation insurance fund for loss payments made by such company or fund.

SEC. 4. No part of the amounts awarded under this Act in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with these claims, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

The proceedings by which H.R. 11644 was passed were vacated, and that bill was laid on the table.

CLAIMS OF CERTAIN EMPLOYEES OF THE ALASKA RAILROAD

The Clerk called the bill (H.R. 4084) to confer jurisdiction upon the Court of Claims to determine the amounts due and owing and render judgment upon the claims of certain employees of the Alaska Railroad for overtime work performed.

Mr. PELLY. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Washington?

There was no objection.

AMENDING THE NATIONAL SCIENCE FOUNDATION ACT

The Clerk called the bill (H.R. 11985) to make American nationals eligible for scholarships and fellowships authorized by the National Science Foundation Act of 1950.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the second sentence of section 10 of the National Science Foundation Act of 1950 (64 Stat. 149, 152; 42 U.S.C., sec. 1869) is amended by adding the words "or nationals" after the word "citizens".

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

EXTEND TIME FOR FINAL PROOF UNDER DESERT LAND LAWS

The Clerk called the bill (H.R. 11706) to authorize an extension of time for final proof under the desert land laws under certain conditions.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Interior is authorized, in his discretion, without regard to and in addition to extensions authorized or granted under the provisions of the Acts of March 28, 1908 (35 Stat. 52; 43 U.S.C. 333), April 30, 1912 (37 Stat. 106; 43 U.S.C. 334), March 4, 1915 (38 Stat. 1161; 43 U.S.C. 335), and February 25, 1925 (43 Stat. 982; 43 U.S.C. 336), or other provision of law existing prior to the date of the approval of this Act, to grant to any entryman of the class provided in section 2 of this Act, one extension of not more than three years within which to make final proof, but one additional extension of three years under this Act may be granted to any entryman upon a showing satisfactory to the Secretary that the entryman possesses adequate financing for completion facilities during the requested extension period.

SEC. 2. The benefits of this Act shall be limited to entrymen who, on the date of the approval of this Act, held an uncanceled entry under the desert land laws of the United States to reclaim public lands of the United States located on the Lower Palo Verde Mesa in the Palo Verde Irrigation District in Riverside County, California, who, with ninety days after approval of this Act, or prior to the cancellation of their entry for failure to submit satisfactory final proof, whichever is later, submit to the satisfaction of the Secretary, a showing that because of unavoidable delay in the construction of the irrigation works intended to convey water to the land embraced in their entry, they are, without fault on their part, unable to make final proof within the time limited therefor, and that the proposed irrigation works is feasible from a financial and engineering standpoint and can be developed within three years after the termination of the cause of the unavoidable delay. Within the meaning of this section 2 "unavoidable delay" shall include delay occasioned by litigation involving rights to water for the proposed irrigation works.

SEC. 3. The Secretary of the Interior is authorized, in his discretion, to accept as annual proofwork required prior to the date of approval of this Act sums of money expended for engineering or legal expenses incurred in obtaining, attempting to obtain, or perfecting water rights or irrigation works for entrymen included in section 2. For purposes of this section 3, sums paid in advance to an organization of entrymen for such expenses shall be considered so expended within the year of payment by the entrymen.

With the following committee amendments:

Page 2, line 3 after the word "of" insert "not more than".

Page 2, line 5, after the word "completion" insert "of the necessary irrigation facilities".

Page 2, line 12, after the word "California," insert "and".

Page 2, lines 22 and 23, strike out the words "developed within three years after the termination of the cause of the unavoidable delay." and insert in lieu thereof: "financed within one extension period of not more than three years and can be completed either during such extension period or thereafter in one additional extension period of not more than three years."

The committee amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

Mr. SAUND. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. SAUND. Mr. Speaker, my bill—H.R. 11706—is designed to permit the completion of certain worthwhile irrigation developments on lands situated within my congressional district.

Under the bill, authority would be given to the Secretary of the Interior, under certain conditions set forth in the bill, to extend by not more than 3 years the time within which holders of desert land entries on public lands in the Lower Palo Verde Mesa, Riverside County, Calif., may complete the reclamation and cultivation of their entries as required by the Desert Land Act. A further extension of up to 3 years is also authorized if the entryman can show before the end of the first extension that he has adequate financing to complete his project during the additional period and if other requirements are met.

In addition, section 3 of the bill permits the acceptance of expenditures for engineering or legal expenses, including sums paid for these purposes to an organization of entrymen, as proof of the past annual expenditures for benefit of the entries required under the Desert Land Act. The minimum amount required for proof work is $1 per acre per year.

H.R. 11706 is designed to afford relief to approximately 60 holders of desert land entries in the area described above. The entrymen are attempting to develop their lands for irrigation through the Palo Verde Irrigation District. The district's project to develop irrigation water from the Colorado River has been delayed by lack of financing. Financing could not be had because, at least in part, of uncertainty arising out of pending litigation between Arizona and California concerning rights to the use of Colorado River water. In the meanwhile, the time has expired or is expiring within which final proof of development must be made under the Desert Land Act.

Mr. Speaker, this is a bill worthy of the support of all of the Members of the House.

VALIDATING CERTAIN SALARY OVERPAYMENTS

The Clerk called the bill (H.R. 4271) to validate the salary overpayments made to certain officers and employees incident to the salary adjustment provisions of the Federal Employees Salary Increase Act of 1955, and for other purposes.

Mr. FORD. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

AMENDING CERTAIN LAWS CONCERNING STATE OF HAWAII

Mr. O'BRIEN of New York. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 11602) to amend certain laws of the United States in light of the admission of the State of Hawaii into the Union, and for other purposes.

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Hawaii Omnibus Act".

PRINTING OUTSIDE UNITED STATES

SEC. 2. Subsection (a) of section 2 of the Act of August 1, 1956 (70 Stat. 890), is amended by striking out the words "the continental United States" and inserting in lieu thereof the words "the States of the United States and the District of Columbia".

SOIL BANK ACT

SEC. 3. Section 113 of the Soil Bank Act, as amended, is amended to read as follows: "This subtitle B shall apply to the several States and, if the Secretary determines it to be in the national interest, to the Commonwealth of Puerto Rico and the Virgin Islands; and as used in this subtitle B, the term 'State' includes Puerto Rico and the Virgin Islands."

ARMED FORCES

SEC. 4. (a) Title 10, United States Code, section 101(2), is amended by striking out the words "Hawaii or".

(b) Title 10, United States Code, sections 802(11) and 802(12), are each amended by striking out the words "the main group of the Hawaiian Islands,".

(c) Title 10, United States Code, section 2662(c), is amended by striking out the word ", Hawaii,".

(d) Title 10, United States Code, is amended by striking out clause (6) of section 4744; by renumbering clauses (7) through (9) as clauses (6) through (8); by amending redesignated clause (8) to read as follows: "The families of persons described in clauses (1), (2), (4), (5), and (7)."; and by striking out the words "clause (8) or (9)" in the last sentence of such section and inserting in lieu thereof the words "clause (7) or (8)".

HOME LOAN BANK BOARD

SEC. 5. (a) Paragraph (3) of section 2 of the Federal Home Loan Bank Act, as amended, is further amended by striking out the words "the Virgin Islands of the United States, and the Territory of Hawaii" and by inserting in lieu thereof the words "and the Virgin Islands of the United States".

(b) Section 7 of the Home Owners' Loan Act of 1933, as amended, is further amended by striking out the words "Territory of Hawaii" and inserting in lieu thereof the words "State of Hawaii".

NATIONAL HOUSING ACT

SEC. 6. The National Housing Act is amended by striking out the word "Hawaii," in sections 9, 201(d), 207(a)(7), 601(d), 713(q), and 801(g).

SECURITIES AND EXCHANGE COMMISSION

SEC. 7. (a) Paragraph (6) of section 2 of the Securities Act of 1933, as amended, is further amended by striking out the word "Hawaii,".

(b) Paragraph (16) of section 3(a) of the Securities Exchange Act of 1934, as amended, is further amended by striking out the word "Hawaii,".

(c) Paragraph (37) of section 2(a) and paragraph (1) of section 6(a) of the Investment Company Act of 1940, as amended, are each amended by striking out the word "Hawaii,".

(d) Paragraph (18) of section 202(a) of the Investment Advisers Act of 1940, as amended, is further amended by striking out the word "Hawaii,".

SMALL BUSINESS INVESTMENT ACT

SEC. 8. Paragraph (4) of section 103 of the Small Business Investment Act of 1958 is amended by striking out the words "the Territories of Alaska and Hawaii,".

SOIL CONSERVATION AND DOMESTIC ALLOTMENT ACT

SEC. 9. (a) Section 8(b) of the Soil Conservation and Domestic Allotment Act, as amended, is further amended by striking out the words "in the continental United States, except in Alaska," and inserting in lieu thereof the words "in the States of the Union, except Alaska,".

(b) Section 17(a) of the Soil Conservation and Domestic Allotment Act, as amended, is further amended to read as follows: "This Act shall apply to the States, the Commonwealth of Puerto Rico, and the Virgin Islands, and, as used in this Act, the term 'State' includes Puerto Rico and the Virgin Islands."

WATER STORAGE AND UTILIZATION

SEC. 10. Section 1 of the Act of August 28, 1937 (50 Stat. 869), as amended, is further amended by striking out the words "the United States, including the Territories of Alaska and Hawaii, and Puerto Rico and the Virgin Islands" and inserting in lieu thereof the words "the States of the United States and in Puerto Rico and the Virgin Islands".

WILDLIFE RESTORATION

SEC. 11. Section 2 of the Act of September 2, 1937 (50 Stat. 917), as amended, is further amended by striking out the words "; and the term 'State' shall be construed to mean and include the several States and the Territory of Hawaii".

FISHERY RESOURCES

SEC. 12. The Act of August 4, 1947 (61 Stat. 726), is amended—

(a) by striking out the words "the Territories and island possessions of the United States" and inserting in lieu thereof the words "the United States and its island possessions" in sections 1 and 2;

(b) by striking out the words "Territory of Hawaii and" in section 1;

(c) by striking out the word "Territorial" and inserting in lieu thereof the word "State" in section 3; and

(d) by striking out the words "Hawaiian Islands" and "Territory of Hawaii" and inserting in lieu thereof, in both cases, the words "State of Hawaii" in section 4.

FISH RESTORATION

SEC. 13. Section 2(d) of the Act of August 9, 1950 (64 Stat. 431), as amended, is further amended by striking out the words "; and the term 'State' shall be construed to mean and include the several States and the Territory of Hawaii".

CRIMINAL CODE

SEC. 14. (a) Title 18, United States Code, section 1401, is amended by striking out the

words "the Territory of Alaska, the Territory of Hawaii,".

(b) Title 18, United States Code, section 5024, is amended by striking out the words preceding the first comma and inserting in lieu thereof the words "This chapter shall apply in the States of the United States".

(c) Section 6 of Public Law 85–752, as amended, is further amended by striking out the words preceding the first comma and inserting in lieu thereof the word "Sections 3 and 4 of this Act shall apply in the States of the United States".

EDUCATION

National Defense Education Act

SEC. 15. (a)(1) Subsection (a) of section 103 of the National Defense Education Act of 1958, relating to definition of State, is amended by striking out "Hawaii," each time it appears therein.

(2)(A) Paragraph (2), and subparagraph (C) of paragraph (3), of subsection (a) of section 302 of such Act, relating to allotments for science, mathematics, and foreign language instruction equipment, are each amended by striking out "continental United States" each time it appears therein and inserting in lieu thereof "United States".

(B) Effective in the case of promulgations of allotment ratios made, under section 302 of such Act, after enactment of this Act and before satisfactory data are available from the Department of Commerce for a full year on the per capita income of Alaska, subparagraph (B) of such paragraph (3) is amended to read:

"(B) The term 'United States' means the continental United States (excluding Alaska) and Hawaii."

(C) Effective in the case of promulgations of allotment ratios made under such section 302 after such data for a full year are available from the Department of Commerce, subparagraph (B) of such paragraph (3) is amended to read:

"(B) The term 'United States' means the fifty States and the District of Columbia."

Promulgations of allotment ratios made under such section 302 after such data for a full year are available from the Department of Commerce, but before such data are available therefrom for a full three-year period, shall be based on such data for such one full year or, when such data are available for a two-year period, for such two years.

(3) Section 1008 of such Act, relating to allotments to territories, is amended by striking out "Hawaii,".

Vocational education

(b)(1) Section 4 of the Act of March 10, 1924 (43 Stat. 18), extending the benefits of the Smith-Hughes vocational education law to Hawaii, is repealed.

(2) The last sentence of section 2 of the Act of February 23, 1917 (39 Stat. 930), relating to allotments for salaries of teachers of agricultural subjects, is amended by striking out "$27,000" and inserting in lieu thereof "$28,500". The last sentence of section 4 of such Act, as amended, relating to allotments for teacher training, is amended by striking out "$98,500" and inserting in lieu thereof "$105,200".

(3) Paragraph (1) of section 2 of the Vocational Education Act of 1946, relating to definition of States and Territories, is amended by striking out "the Territory of Hawaii,".

(4) Subsection (e) of secton 210 and subsection (a) of section 307 of such Act, relating to definition of State, are each amended by striking out "Hawaii,".

School construction assistance in federally affected areas

(1) Paragraph (13) of section 15 of the Act of September 23, 1950 (64 Stat. 967), as amended, relating to definition of State, is amended by striking out "Hawaii,".

School operation assistance in federally affected areas

(d)(1) The material in the parentheses in the first sentence of subsection (d) of section 3 of the Act of September 30, 1960, as amended, relating to determination of local contribution rate, is amended to read: "(other than a local educational agency in Puerto Rico, Wake Island, Guam, or the Virgin Islands, or in a State in which a substantial proportion of the land is in unorganized territory for which a State agency is the local educational agency, or in a State in which there is only one local educational agency)".

(2) The fourth sentence of such subsection is amended by striking out "in the continental United States (including Alaska)" and inserting in lieu thereof "(other than Puerto Rico, Wake Island, Guam, or the Virgin Islands)" and by striking out "continental United States" in clause (ii) of such sentence and inserting in lieu thereof "United States (which for purposes of this sentence and the next sentence means the fifty States and the District of Columbia)". The fifth sentence of such subsection is amended by striking out "continental" before "United States" each time it appears therein and by striking out "(including Alaska)".

(3) The last sentence of such subsection is amended by striking out "Hawaii," and by inserting after "for which a State agency is the local educational agency," the following: "or in any State in which there is only one local educational agency,".

(4) Paragraph (8) of section 9 of such Act, relating to definition of State, is amended by striking out "Hawaii,".

Land-grant college aid

(e) Notwithstanding the last sentence of subsection (b) of section 5 of the Act entitled "An Act to provide for the admission of the State of Hawaii into the Union", approved March 18, 1959 (73 Stat. 4; Public Law 86–3), there is hereby authorized to be appropriated to the State of Hawaii the sum of $6,000,000. Amounts appropriated under this subsection shall be held and considered to be granted to such State subject to those provisions of the Act entitled "An Act donating public lands to the several States and Territories which may provide colleges for the benefit of agriculture and the mechanic arts", approved July 2, 1862 (7 U.S.C. 301–308), applicable to the proceeds from the sale of land or land scrip.

IMPORTATION OF MILK AND CREAM

SEC. 16. Subsection (b) of section 9 of the Act of February 15, 1927 (44 Stat. 1103), as amended, is amended to read:

"(b) The term 'United States' means the fifty States and the District of Columbia."

OPIUM POPPY CONTROL

SEC. 17. Section 12 of the Opium Poppy Control Act of 1942, as amended, is further amended by deleting therefrom the words "the Territory of Hawaii,".

HIGHWAYS

SEC. 18. (a) The definition of the term "State" in title 23, United States Code, section 101(a), is amended to read as follows:

"The term 'State' means any one of the fifty States, the District of Columbia, or Puerto Rico."

(b) Sections 103(g) and 105(e) of title 23, United States Code, are repealed.

(c) Section 103(d) of title 23, United States Code, is amended to read as follows:

"(d) The Interstate System shall be designated within the United States, including the District of Columbia, and it shall not exceed forty-one thousand miles in total extent. It shall be so located as to connect by routes, as direct as practicable, the principal metropolitan areas, cities, and industrial centers, to serve the national defense and, to the greatest extent possible, to connect at suitable border points with routes of continental importance in the Dominion of Canada and the Republic of Mexico. The routes of this system, to the greatest extent possible, shall be selected by joint action of the State highway departments of each State and the adjoining States, subject to the approval by the Secretary as provided in subsection (e) of this section. All highways or routes included in the Interstate System as finally approved, if not already coincident with the primary system, shall be added to said system without regard to the mileage limitation set forth in subsection (b) of this section. This system may be located both in rural and urban areas."

(d) Notwithstanding any other provision of law, for the purpose of expediting the construction, reconstruction, or improvement, inclusive of necessary bridges and tunnels, of the Interstate System, including extensions thereof through urban areas, designated in accordance with section 103(d) of title 23, United States Code, as amended by section 1 of this Act, the sum of $12,375,000 shall be apportioned to the State of Hawaii out of the sum authorized to be appropriated for the Interstate System for the fiscal year ending June 30, 1962, under the provisions of section 108(b) of the Federal-Aid Highway Act of 1956 (70 Stat. 374), as amended by section 7(a) of the Federal-Aid Highway Act of 1958 (72 Stat. 89), such apportionment to be made at the same time such funds are apportioned to other States. The total sum to be apportioned under section 104(b)(5) of title 23, United States Code, for the fiscal year ending June 30, 1962, among the States other than Hawaii, shall be reduced by said sum apportioned to the State of Hawaii under this section. The Secretary of Commerce shall apportion funds to the State of Hawaii for the Interstate System for the fiscal year 1963 and subsequent fiscal years pursuant to the provisions of said section 104(b)(5) of title 23, United States Code, and, in preparing the estimates required by that section, he shall take into account the apportionment made to the State of Hawaii under this section.

(e) Section 127 of title 23, United States Code, is amended by adding at the end thereof the following sentence: "With respect to the State of Hawaii, laws or regulations in effect on February 1, 1960, shall be applicable for the purposes of this section in lieu of those in effect on July 1, 1956."

INTERNAL REVENUE

SEC. 19. (a) Section 4262(c)(1) of the Internal Revenue Code of 1954 (relating to the definition of "continental United States" for purposes of the tax on transportation of persons) is amended to read as follows:

"(1) CONTINENTAL UNITED STATES.—The term 'continental United States' means the District of Columbia and the States other than Alaska and Hawaii."

(b) Section 2202 of the Internal Revenue Code of 1954 (relating to missionaries in foreign service) is amended by striking out "the State, the District of Columbia, or Hawaii" and inserting in lieu thereof "the State or the District of Columbia".

(c) Section 3121(e)(1) of the Internal Revenue Code of 1954 (relating to a special definition of "State") is amended by striking out "Hawaii,".

(d) Sections 3306(j) and 4233(b) of the Internal Revenue Code of 1954 (each relating to a special definition of "State") are amended by striking out "Hawaii, and".

(e) Section 4221(d)(4) of the Internal Revenue Code of 1954 (relating to a special definition of "State or local government") is amended to read as follows:

"(4) STATE OR LOCAL GOVERNMENT.—The term 'State or local government' means any State, any political subdivision thereof, or the District of Columbia."

(f) Section 4502(5) of the Internal Revenue Code of 1954 (relating to definition of "United States") is amended by striking out "the Territory of Hawaii,".

(g) Section 4774 of the Internal Revenue Code of 1954 (relating to territorial extent of law) is amended by striking out "the Territory of Hawaii,".

(h) Section 7653(d) of the Internal Revenue Code of 1954 (relating to shipments from the United States) is amended by striking out ", its possessions or the Territory of Hawaii" and inserting in lieu thereof "or its possessions".

(i) Section 7701(a)(9) of the Internal Revenue Code of 1954 (relating to definition of "United States") is amended by striking out ", the Territory of Hawaii,".

(j) Section 7701(a)(10) of the Internal Revenue Code of 1954 (relating to definition of "State") is amended by striking out "the Territory of Hawaii and".

(k) The amendments contained in subsections (a) through (j) of this section shall be effective as of August 21, 1959.

JUDICIARY

SEC. 20. Title 28, United States Code, section 91, and the Act of June 15, 1960 (64 Stat. 217), as amended, are each amended by striking out the words "Kure Island,".

VOCATIONAL REHABILITATION

SEC. 21. (a) Subsection (g) of section 11 of the Vocational Rehabilitation Act, relating to definition of "State", is amended by striking out "Hawaii,".

(b)(1) Subsections (h) and (i) of such section, relating to definition of allotment percentages and Federal shares for purposes of allotment and matching for vocational rehabilitation services grants, are each amended by striking out "continental United States" and inserting in lieu thereof "United States" and by striking out "(including Alaska)".

(2) Paragraph (1) of such subsection (h) is further amended by striking out "the allotment percentage for Hawaii shall be 50 per centum, and" in clause (B).

(3) Subsection (h) of such section is further amended by adding at the end thereof the following new paragraphs:

"(3) Promulgations of allotment percentages and computations of Federal shares made before satisfactory data are available from the Department of Commerce for a full year on the per capita income of Alaska shall prescribe for Alaska an allotment percentage of 75 per centum and a Federal share of 60 per centum and, for purposes of such promulgations and computations, Alaska shall not be included as part of the 'United States'. Promulgations and computations made thereafter but before per capita income data for Alaska for a full three-year period are available from the Department of Commerce shall be based on satisfactory data available therefrom for Alaska for such one full year or, when such data are available for a two-year period, for such two years.

"(4) The term 'United States' means (but only for purposes of this subsection and subsection (i)) the fifty States and the District of Columbia."

(4) Subsection (i) of such section is further amended by striking out "the Federal share for Hawaii shall be 60 per centum, and" in clause (B).

LABOR

SEC. 22. (a) Section 3(b) of the Act of June 6, 1933 (48 Stat. 114), as amended, is further amended by striking out the words "Hawaii, Alaska,".

(b) Section 13(f) of the Fair Labor Standards Act, as amended, is further amended by striking out the words "Alaska; Hawaii;".

(c) Section 17 of the Fair Labor Standards Act, as amended, is further amended by striking out the words "the District Court for the Territory of Alaska,".

(d) Section 3(a)(9) of the Welfare and Pension Plans Disclosure Act is amended by striking out the word "Hawaii,".

NATIONAL GUARD

SEC. 23. Title 32, United States Code, section 101(1), is amended by striking out the words "Hawaii or".

WATER POLLUTION CONTROL ACT

SEC. 24. (a)(1) Subsection (h) of section 5 of the Federal Water Pollution Control Act, relating to Federal share for purposes of program operation grants, is amended by striking out "continental United States" and inserting in lieu thereof "United States", by striking out "(including Alaska)", and by striking out, in clause (B) of paragraph (1), "for Hawaii shall be 50 per centum, and".

(2) Such subsection is further amended by adding at the end thereof the following new paragraphs:

"(3) As used in this subsection, the term 'United States' means the fifty States and the District of Columbia.

"(4) Promulgations made before satisfactory data are available from the Department of Commerce for a full year on the per capita income of Alaska shall prescribe a Federal share for Alaska of 50 per centum and, for purposes of such promulgations, Alaska shall not be included as part of the 'United States'. Promulgations made thereafter but before per capita income data for Alaska for a full three-year period are available for the Department of Commerce shall be based on satisfactory data available therefrom for Alaska for such one full year or, when such data are available for a two-year period, for such two years."

(b) Subsection (d) of section 11 of such Act, relating to definition of "State", is amended by striking out "Hawaii,".

COAST AND GEODETIC SURVEY

SEC. 25. The first sentence of section 1 of the Act of August 3, 1956 (70 Stat. 988), is amended by striking out the words "the several States" and inserting in lieu thereof the words "the States of the continental United States, excluding Alaska".

VETERANS' ADMINISTRATION

SEC. 26. (a) Title 38, United States Code, section 624(a), is amended by striking out the words "outside the continental limits of the United States, or a Territory, Commonwealth, or possession of the United States" and inserting in lieu thereof "outside any State".

(b) The first sentence of title 38, United States Code, section 903(b), is amended to read as follows: "In addition to the foregoing, when such a death occurs in the continental United States or Hawaii, the Administrator shall transport the body to the place of burial in the continental United States or Hawaii."

(c) Title 38, United States Code, section 2007(c), is amended by striking out the word "Hawaii,".

DAVIS-BACON ACT

SEC. 27. Section 1 of the Act of March 3, 1931 (46 Stat. 1494), as amended, is further amended by striking out the words ", the Territory of Alaska, the Territory of Hawaii," and the words ", or the Territory of Alaska, or the Territory of Hawaii".

FEDERAL PROPERTY AND ADMINISTRATIVE SERVICES ACT

SEC. 28. The Federal Property and Administrative Services Act of 1949, as amended, is further amended by—

(a) striking out the words "continental United States (including Alaska), Hawaii," in section 3(f) and inserting in lieu thereof the words "States of the Union, the District of Columbia,";

(b) striking out the words "continental United States, its Territories, and possessions" in section 211(j) and inserting in lieu thereof the words "States of the Union, the District of Columbia, Puerto Rico, and the possessions of the United States";

(c) striking out the words "continental limits of the United States" in section 404(c) and inserting in lieu thereof the words "States of the Union and the District of Columbia"; and

(d) striking out the words "and the Territory of Hawaii" in section 702(a).

BUY AMERICAN ACT

SEC. 29. Section 1(b) of title III of the Act of March 3, 1933 (47 Stat. 1520), as amended, is amended by striking out the word "Hawaii,".

PUBLIC HEALTH SERVICE ACT

SEC. 30. (a) Subsection (f) of section 2 of the Public Health Service Act, relating to definition of State, is amended by striking out "Hawaii,".

(b) The first sentence of section 331 of such Act, relating to receipt and treatment of lepers, is amended by striking out ", Territory, or the District of Columbia". The fifth sentence of such section is amended by striking out "the Territory of Hawaii" and inserting in lieu thereof "Hawaii".

(c) Subsection (c) of section 361 of such Act, relating to regulations governing apprehension and detention of persons to prevent the spread of a communicable disease, is amended by striking out ", the Territory of Hawaii,".

(d)(1) Clause (2) of subsection (a) of section 631 of such Act, relating to definition of allotment percentage for purposes of allotments for construction of hospitals and other medical service facilities, is amended by striking out "the allotment percentage for Hawaii shall be 50 per centum, and".

(2) Such subsection is further amended by striking out "continental United States (including Alaska)" and inserting in lieu thereof "United States".

(3) Subsection (b) of such section, relating to promulgation of allotment percentages, is amended by striking out "continental United States" and inserting in lieu thereof "United States". Such subsection is further amended by inserting "(1)" after "(b)" and by adding at the end thereof the following new paragraphs:

"(2) The term 'United States' means (but only for purposes of this subsection and subsection (a)) the fifty States and the District of Columbia;

"(3) Promulgations made before satisfactory data are available from the Department of Commerce for a full year on the per capita income of Alaska shall prescribe an allotment percentage for Alaska of 50 per centum and, for purposes of such promulgation, Alaska shall not be included as part of the 'United States'. Promulgations made thereafter but before per capita income data for Alaska for a full three-year period are available from the Department of Commerce shall be based on satisfactory data available therefrom for Alaska for such one full year or, when such data are available for a two-year period, for such two years;".

(4) Subsection (d) of such section, relating to definition of State, is further amended by striking out "Hawaii,".

SOCIAL SECURITY ACT

SEC. 31. (a)(1) Paragraph (8) of subsection (a) of section 1101 of the Social Security Act, relating to definition of Federal percentage for purposes of matching for public assistance grants, is amended by striking out "continental United States (including Alaska)" and inserting in lieu thereof "United States".

(2) Subparagraph (A) of such paragraph is further amended by striking out "(i)" and by striking out ", and (ii) the Federal percentage shall be 50 per centum for Hawaii".

(3) Such paragraph is further amended by adding after subparagraph (B) the following new subparagraphs:

"(C) The term 'United States' means (but only for purposes of subparagraphs (A) and (B) of this paragraph) the fifty States and the District of Columbia.

"(D) Promulgations made before satisfactory data are available from the Department of Commerce for a full year on the per capita income of Alaska shall prescribe a Federal percentage for Alaska of 50 per centum and, for purposes of such promulgations, Alaska shall not be included as part of the 'United States'. Promulgations made thereafter but before per capita income data for Alaska for a full three-year period are available from the Department of Commerce shall be based on satisfactory data available therefrom for Alaska for such one full year or, when such data are available for a two-year period, for such two years."

(b)(1) Subsections (a), (b), and (c) of section 524 of such Act, relating to the definition of allotment percentages and Federal shares for purposes of allotment and matching for child welfare services grants, are each amended by striking out "continental United States (including Alaska)" and inserting in lieu thereof "United States".

(2) Such section is further amended by adding after subsection (c) the following new subsections:

"(d) For purposes of this section, the term 'United States' means the fifty States and the District of Columbia.

"(e) Promulgations made before satisfactory data are available from the Department of Commerce for a full year on the per capita income of Alaska shall prescribe a Federal share for Alaska of 50 per centum and, for purposes of such promulgations, Alaska shall not be included as part of the 'United States'. Promulgations made thereafter but before per capita income data for Alaska for a full three-year period are available from the Department of Commerce shall be based on satisfactory data available therefrom for Alaska for such one full year or, when such data are available for a two-year period, for such two years."

(c)(1) The last sentence of subsection (i) of section 202 of the Social Security Act is amended by striking out "forty-nine" and inserting in lieu thereof "fifty".

(2) Subsections (h) and (i) of section 210 of such Act relating to definitions of State and United States for purposes of old-age, survivors, and disability insurance, are each amended by striking out "Hawaii,". Such subsection (h) is further amended by striking out the comma after "District of Columbia".

(d) (1) Paragraph (1) of subsection (a) of section 1101 of such Act, relating to definition of State, is amended by striking out "Hawaii and".

(2) Paragraph (2) of such subsection, as amended, relating to definition of "United States", is amended by striking out ", Hawaii,".

(e) Subparagraph (C) and (G) of paragraph (6) of subsection (d) of section 218 of the Social Security Act, as amended, are each further amended by striking out "the Territory of" and "or Territory" each time they appear therein.

(f) Subsection (p) of such section is amended by striking out "Territory of".

(g) The last sentence of subsection (a) of section 1501 of the Social Security Act is amended by striking out "Alaska, Hawaii,".

SMALL RECLAMATION PROJECTS

SEC. 32. The Small Reclamation Projects Act of 1956 (70 Stat. 1044), as heretofore and hereafter amended, shall apply to the State of Hawaii.

CONGRESSIONAL RECORD

SEC. 33. Section 73 of the Act of January 12, 1895 (28 Stat. 617), as amended, is further amended by striking out the word "Hawaii,".

FEDERAL REGISTER

SEC. 34. Section 8 of the Federal Register Act (49 Stat. 502), as amended, is further amended by striking out the words "continental United States (including Alaska)" and inserting in lieu thereof the words "States of the Union and the District of Columbia".

HOME PORTS OF VESSELS

SEC. 35. Section 1 of the Act of February 16, 1925 (43 Stat. 947), as amended, is further amended by striking out the words "Alaska, Hawaii, and".

MERCHANT MARINE ACT, 1936

SEC. 36. (a) Subsection (a) of section 505 of the Merchant Marine Act, 1936, as amended, is further amended by adding at the end thereof the following new sentence: "For the purposes of this subsection, the term 'continental limits of the United States' includes the States of Alaska and Hawaii."

(b) Section 606 of such Act, as amended, is further amended by adding at the end thereof the following new sentence: "For the purposes of this section, the term 'continental limits of the United States' includes the States of Alaska and Hawaii."

(c) Section 702 of such Act, as amended, is further amended by adding at the end thereof the following new sentence: "For the purposes of this section, the term 'continental United States' includes the States of Alaska and Hawaii."

COMMUNICATIONS ACT

SEC. 37. Section 222(a)(10) of the Communications Act of 1934 is amended by striking out the words "the several States and the District of Columbia" and inserting in lieu thereof the words "the District of Columbia and the States of the Union, except Hawaii".

AIRCRAFT LOAN GUARANTEES

SEC. 38. Section 3 of the Act of September 7, 1957 (71 Stat. 629), as amended, is further amended by striking out the words "Territory of Hawaii" and inserting in lieu thereof the words "State of Hawaii".

REAL PROPERTY TRANSACTIONS

SEC. 39. Section 43(c) of the Act of August 10, 1956 (70A Stat. 636), as amended, is further amended by striking out the words "United States, Hawaii," and inserting in lieu thereof the words "States of the Union, the District of Columbia,".

SELECTIVE SERVICE

SEC. 40. Section 16(b) of the Universal Military Training and Service Act, as amended, is further amended by striking out the word "Hawaii,".

REPORTS ON FEDERAL LAND USE

SEC. 41. The President shall prescribe procedures to assure that the reports to be submitted to him by Federal agencies pursuant to section 5(e) of the Act of March 18, 1959 (73 Stat. 6), providing for the admission of the State of Hawaii into the Union, shall be prepared in accordance with uniform policies and coordinated within the executive branch.

HAWAIIAN HOMES COMMISSION LANDS

SEC. 42. Section 5(b) of the Act of March 18, 1959 (73 Stat. 5), is amended by inserting, immediately following the words "public property" the words ", and to all lands defined as 'available lands' by section 203 of the Hawaiian Homes Commission Act, 1920, as amended,".

LEASE BY UNITED STATES OF PUBLIC PROPERTY OF HAWAII

SEC. 43. Until August 21, 1964, there shall be covered into the treasury of the State of Hawaii the rentals or consideration received by the United States with respect to public property taken for the uses and purposes of the United States under section 91 of the Hawaii Organic Act and thereafter by the United States leased, rented, or granted upon revocable permits to private parties.

TRANSFER OF RECORDS

SEC. 44. (a) There are hereby transferred to the State of Hawaii all records and other papers that were made or received by any Federal or territorial agency, or any predecessor thereof, in connection with the performance of functions assumed in whole or in substantial part by the State of Hawaii. There are hereby also transferred to the State of Hawaii all records and other papers in the custody of the Public Archives of Hawaii that were made or received by any Federal agency.

(b) There are also hereby transferred to the State of Hawaii all books, publications, and legal reference materials which are owned by the United States and which were, prior to the admission of Hawaii to the Union, placed in the custody of courts, libraries, or territorial agencies in Hawaii in order to facilitate the performance of functions conferred on such courts or agencies by Federal law.

USE OF G.S.A. SERVICES OR FACILITIES

SEC. 45. The Administrator of General Services is authorized to make available to the State of Hawaii such services or facilities as are determined by the Administrator to be necessary for an interim period, pending provision of such services or facilities by the State of Hawaii. Such interim period shall not extend beyond August 21, 1964. Payment shall be made to the General Services Administration by the State of Hawaii for the cost of such services or facilities to the Federal Government, as determined by the Administrator.

PURCHASES OF TYPEWRITERS

SEC. 46. Title I of the Independent Offices Appropriation Act, 1960, is amended by striking out the words "for the purchase within the continental limits of the United States of any typewriting machines" and inserting in lieu thereof "for the purchase within the States of the Union and the District of Columbia of any typewriting machines".

FEDERAL MARITIME BOARD

SEC. 47. Section 18(a) of the Act of March 18, 1959 (73 Stat. 12), providing for the admission of the State of Hawaii into the Union, is amended by striking out the words "or is conferring" and inserting in lieu thereof the words "or as conferring".

TARIFF ACT OF 1930

SEC. 48. Section 309(a) of the Tariff Act of 1930, as amended (19 U.S.C. 1309(a)), is amended by inserting "or between Hawaii and any other part of the United States or

between Alaska and any other part of the United States" immediately after "possessions" wherever it appears.

EFFECTIVE DATES

SEC. 49. (a) The amendments made by section 15(a)(2)(A), by section 24(a), by paragraphs (1), (2), and 3 of section 30(d), by subsection (b), and paragraphs (1) and (3) of subsection (a), of section 31, and, except as provided in subsection (g) of this section, by section 21(b) shall be applicable in the case of promulgations or computations of Federal shares, allotment percentages, allotment ratios, and Federal percentages, as the case may be, made after August 21, 1959.

(b) The amendments made by paragraph (2) of section 31(a) shall be effective with the beginning of the calendar quarter in which this Act is enacted. The Secretary of Health, Education, and Welfare shall, as soon as possible after enactment of this Act, promulgate a Federal percentage for Hawaii determined in accordance with the provisions of subparagraph (B) of section 1101(a)(8) of the Social Security Act, such promulgation to be effective for the period beginning with the beginning of the calendar quarter in which this Act is enacted and ending with the close of June 30, 1961.

(c) The amendment made by paragraphs (1) and (2) of subsection (b) and paragraphs (1), (2), and (3) of subsection (d) of section 15 shall be applicable in the case of fiscal years beginning after June 30, 1960.

(d) The amendments made by paragraphs (1) and (3) of section 15(a) shall be applicable, in the case of allotments under section 302(b) or 502 of the National Defense Education Act of 1958, for fiscal years beginning after June 30, 1960, and, in the case of allotments under section 302(a) of such Act, for fiscal years beginning after allotment ratios, to which the amendment made by paragraph (2) of section 15(a) is applicable, are promulgated under such section 302(a).

(e) The amendment made by section 31(c)(1) shall be applicable in the case of deaths occurring on or after August 21, 1959.

(f) The amendments made by subsection (c), paragraphs (3) and (4) of subsection (b), and paragraph (4) of subsection (d) of section 15, by section 21(a), by section 24(b), by subsections (a), (b), and (c), and paragraph (4) of subsection (d), of section 30, and by subsection (d), and paragraph (2) of subsection (c), of section 31 shall become effective on August 21, 1959.

(g)(1) The allotment percentage determined for Alaska under section 11(h) of the Vocational Rehabilitation Act, as amended by this Act, for the first, second, third, and fourth years for which such percentage is based on the per capita income data for Alaska shall be increased by 76 per centum, 64 per centum, 52 per centum, and 28 per centum, respectively, of the difference between such allotment percentage for the year involved and 75 per centum.

(2) The Federal share for Alaska determined under section 11(i) of the Vocational Rehabilitation Act, as amended by this Act, for the first year for which such Federal share is based on per capita income data for Alaska shall be increased by 70 per centum of the difference between such Federal share for such year and 60 per centum.

(3) If such first year for which such Federal share is based on per capita income data for Alaska is any fiscal year ending prior to July 1, 1962, the adjusted Federal share for Alaska for such year for purposes of section 2(b) of the Vocational Rehabilitation Act shall, notwithstanding the provisions of paragraph (3)(A) of such section 2(b), be the Federal share determined pursuant to paragraph (2) of this subsection.

(4) Section 47(c) of the Alaska Omnibus Act (Public Law 86-70) is repealed.

(h) The amendment made by section 48 shall apply only with respect to articles withdrawn as provided in section 309(a) of the Tariff Act of 1930, as amended, on or after the date of the enactment of this Act.

ADMINISTRATION OF PALMYRA, MIDWAY, AND WAKE

SEC. 50. Until Congress shall provide for the government of Palmyra Island, Midway Island, and Wake Island, all executive and legislative authority necessary for the civil administration of Palmyra Island, Midway Island, and Wake Island, and all judicial authority other than that contained in the Act of June 15, 1950 (64 Stat. 217), as amended, shall continue to be vested in such person or persons and shall be exercised in such manner and through such agency or agencies as the President of the United States may direct or authorize. In the case of Palmyra Island, such person or persons may confer upon the United States District Court for the District of Hawaii such jurisdiction (in addition to that contained in such Act of June 15, 1950), and such judicial functions and duties as he or they may deem appropriate for the civil administration of such island.

OTHER SUBJECTS

SEC. 51. The amendment by this Act of certain statutes by deleting therefrom specific references to Hawaii or such phrases as "Territory of Hawaii" shall not be construed to affect the applicability or inapplicability in or to Hawaii or other statutes not so amended.

SEPARABILITY

SEC. 52. If any provision of this Act, or the application thereof to any person or circumstances, is held invalid, the remainder of this Act, and the application of such provision to other persons or circumstances, shall not be affected thereby.

The SPEAKER. Is a second demanded?

Mr. SAYLOR. Mr. Speaker, I demand a second.

The SPEAKER. Without objection, a second is considered as ordered.

There was no objection.

Mr. O'BRIEN of New York. Mr. Speaker, I yield myself 10 minutes.

Mr. Speaker, this bill, H.R. 11602, might be accurately described as an epilog to statehood. Until 2 years ago the Subcommittee on Territorial and Insular Affairs handled a great many bills dealing with the then Territories of Hawaii and Alaska. Congress, in its wisdom, in these last 2 years has voted to bring those Territories into the Union as States.

A year ago as a result of the granting of statehood to Alaska we approved here the so-called Alaska omnibus bill. Now we come before the House with the Hawaii omnibus bill.

I might say, Mr. Speaker, that this legislation is necessary because of the numerous changes which must occur when an area passes from Territorial status to that of statehood. The basic purpose of this bill is to accomplish those changes in Federal laws which have become necessary and desirable because of Hawaii's admission into the Union on an equal footing with the other States in all respects whatsoever.

The President noted in his 1961 budget message to Congress that, "As in the case of Alaska, comprehensive legislation will be necessary to enable Hawaii to take its place as the equal of the other 49 States."

Mr. Speaker, this is a bulky bill but many of the sections are technical and merely change the status of Hawaii to that of any other State under existing law.

I think the committee, which conducted full hearings and which reported this bill out unanimously, has prepared and submitted to the House a conservative and reasonable bill which will do the job and which will enable Hawaii to take its full place as the 50th State in the Union.

The cost of the omnibus bill is slightly in excess of $6 million, compared with the $10 million cost of the Alaska omnibus bill. The principal item of cost in this measure is $6 million in lieu of land grants. As we know, when each of the other States came into the Union they were given land in place of land scrip, and the moneys evolved from those grants were used to support their land-grant colleges, agricultural colleges.

Hawaii comes before Congress in a rather unusual position. We do not have the vast land holdings which were in being at the time the other States were admitted.

The land which does exist in Hawaii is owned in large measure by private enterprise or by the Federal Government. It would be impossible to devise a bill under which we could give to Hawaii the kind of land grant that we gave to Alaska and to the other States which came into the Union. The very zealous and hard-working, capable Representative from Hawaii, Congressman INOUYE, came before the committee and proposed that we follow a formula. He suggested that in the past we have given to each new State the equivalent of 30,000 acres for each Representative in Congress. That would spell out to 90,000 acres in the present instance. Well, we do not have the acres—so he took the 90,000 acres and multiplied that by the fair valuation of land in Hawaii and came up with a figure of $36 million. The committee considered his request, and then decided unanimously to reduce that sum to one-sixth or $6 million. I would like to point out that of all of the 50 States in the Union, Hawaii is the only State that has not been granted any land in place or in script for the specific purpose of establishing a college for the teaching of the agricultural and mechanical arts. May I say, Mr. Speaker, in that connection, the establishment of such a college and the development of such a college in Hawaii would be of tremendous benefit not only to the rest of the Nation but to the friendly peoples in the Pacific, many of whose young people study at the University of Hawaii. They would be able to acquire agricultural and mechanical skills which could be used, in my opinion, much more effectively than some of the moneys that we have granted to countries under the heading of Foreign Aid or Mutual Aid. I believe that this $6 million would be a splendid investment. I believe it is a fair compromise

in view of the fact that we have given other States land in place of script.

Mr. ASPINALL. Mr. Speaker, would my colleague from New York yield?

Mr. O'BRIEN of New York. I yield to the gentleman from Colorado.

Mr. ASPINALL. I think it should be understood that the State of Hawaii does not get an outright grant, but that the money is placed in trust and the investment interest of the money is at the discretion of the State of Hawaii for this particular project; is that not correct?

Mr. O'BRIEN of New York. The gentleman is very correct.

Mr. ASPINALL. While I am on my feet, Mr. Speaker, may I congratulate my distinguished friend and coworker on the Committee on Interior and Insular Affairs for the fine work he has done in this field. In his operations and labors in the Congress, he has been indefatigable. His decisions have been worthy of commendation, effective, and constructive. I wish also to join in the fine compliment he has paid to our new Congressman from Hawaii, Mr. INOUYE.

Mr. O'BRIEN of New York. I thank the gentleman. I would restate what the chairman of the full committee has said, that this money is not an outright grant. It must be placed in trust and only the income can be used for the purposes of an agricultural college.

Mr. Speaker, there are many other matters in this legislation, but I assure the House that virtually all of them are changes which must be made in connection with the transformation from Territorial to statehood status. There is no great degree of controversy that I know of about the other provisions of the bill.

M.. Speaker, I yield 5 minutes to the gentleman from Hawaii [Mr. INOUYE].

Mr. INOUYE. Mr. Speaker, on August 23, 1959, I stood before you in this well to take the oath of office as the first U.S. Representative from the new and sovereign State of Hawaii. At that moment I was extremely tempted to address this distinguished body to express the deep and warm gratitude of the people of Hawaii for your action in granting statehood to Hawaii. Although belated, may I now take this opportunity to express to you, in behalf of the people of Hawaii, our "mahalo" and warm "aloha." "Mahalo" means thank you, and "aloha" means many things—it means a friendly hello, a fond farewell, but above all, it means warm love and friendship.

Today, this body is considering H.R. 11602, a bill to amend certain laws of the United States in light of the admission of the State of Hawaii into the Union, and for other purposes. The distinguished chairman of the Subcommittee on Territories of the House Committee on Interior and Insular Affairs, the Honorable LEO W. O'BRIEN, has most adequately explained the provisions of this bill. This bill is a supplement to the action taken by this body in granting statehood to Hawaii.

It provides for certain benefits long denied us because of our Territorial status, and also because of our geographic separation from the continental United States. Furthermore, it provides for the restoration of certain benefits which we enjoyed as a Territory, but subsequently denied us upon the granting of statehood.

The initial drafting of this measure was done by the Budget Bureau under the supervision of Dr. Harold Seidman. I wish to, at this time, express my gratitude to Dr. Seidman and his staff for carrying on the monumental project of preparing this Hawaii omnibus bill.

I would also like to express the gratitude of the people of Hawaii to the very distinguished chairman of the House Committee on Interior and Insular Affairs, the distinguished gentleman from Colorado, the Honorable WAYNE N. ASPINALL; to the distinguished chairman of the Subcommittee on Territories, the gentleman from New York, the Honorable LEO W. O'BRIEN; and to the distinguished ranking minority member of the committee, the gentleman from Pennsylvania, the Honorable JOHN P. SAYLOR; and to all of the members of the distinguished committee. The people of Hawaii will be forever indebted to the distinguished members of the House Committee on Interior and Insular Affairs for their compassion and understanding in advocating greater self-government and self-determination to the proud people of Hawaii.

I have looked forward to this day for a long time. The several months I have spent with you have been most enjoyable and encouraging. I shall never forget your many courtesies and your kindnesses. I am indeed very proud to be one of your colleagues.

Thank you.

Mr. COLMER. Mr. Speaker, will the gentleman yield?

Mr. INOUYE. I shall be very happy to yield to the gentleman from Mississippi.

Mr. COLMER. I would like to ask the gentleman if I correctly understand the purpose of this $6 million proposition. That is, that you get certain lands, like other States have gotten, for educational purposes.

Mr. INOUYE. Under the Morrill Act of 1860, every State was given 30,000 acres of land for each Representative in Congress. Because of the land situation in Hawaii, I have asked the committee to grant the State of Hawaii money in the sum of $6 million—in lieu of a land grant. But as the chairman stated, we will not receive this grant of $6 million but we will receive the interest on it.

Mr. COLMER. In other words, instead of getting the land you are getting money in the form of a revolving fund?

Mr. INOUYE. That is correct.

Mr. COLMER. I wondered why you could not get land. Can you give us some light on that subject?

Mr. INOUYE. As the gentleman from New York [Mr. O'BRIEN] stated, we have no public domain where we can have 90,000 acres of land available for such purpose. Most of the Federal lands are used for military purposes.

Mr. COLMER. I just wanted to get that straight in my own mind. Of course, as one who opposed the admission of Hawaii as a State, I still think that having been admitted as a State, it is entitled to the same treatment that all other States of the Union received.

May I say in this connection that I am also very happy the gentleman who is now addressing the Chamber is and has the great honor of being the first Representative from Hawaii. I happen to know that the gentleman is quite a war hero, if I may say that without embarrassment to him. I knew about him long before he came to Congress. He trained in my State of Mississippi and rendered valiant service to the cause of our great common country of which he is now a part. I welcome him to this Chamber and congratulate the people of Hawaii on their wisdom in selecting him to be their first Congressman.

Mr. McCORMACK. Mr. Speaker, will the gentleman yield?

Mr. INOUYE. I shall be very happy to yield to the majority leader.

Mr. McCORMACK. I want to congratulate the gentleman from Hawaii [Mr. INOUYE] on the able presentation he has made here on this bill which means so much to the State and the people of Hawaii.

The gentleman from Hawaii [Mr. INOUYE] has made an outstanding record already in this body and enjoys the confidence and respect of his colleagues. He serves his people in a manner which reflects the greatest credit upon them. They are justified in feeling proud of the gentleman and the character of public service he renders.

Mr. INOUYE. I thank my leader for his compliments.

Mr. RIVERS of Alaska. Mr. Speaker, will the gentleman yield?

Mr. INOUYE. I am happy to yield to my colleague from Alaska.

Mr. RIVERS of Alaska. Mr. Speaker, I rise in support of H.R. 11602, known as the Hawaiian omnibus bill, introduced by our distinguished colleague, DANIEL INOUYE, of Hawaii. At the outset I wish to compliment the gentleman from Hawaii upon the fine job he is doing for our 50th State, and to express my pleasure in his friendship and in serving with him in this great legislative body.

My work last year in behalf of the Alaska omnibus bill, in association first with the chairman of the Subcommittee on Territorial and Insular Affairs, the able and dedicated gentleman from New York, LEO O'BRIEN, and then with the chairman of the full Committee on Interior and Insular Affairs, the distinguished gentleman from Colorado, WAYNE ASPINALL, and the other fine members of the committee, highlighted the need of an omnibus bill for a new State. The very fact of a grant of Statehood to an erstwhile Territory compels provisions for an orderly transition from Territorial status to full-fledged State operations. Also required are amendments to numerous Federal statutes making them applicable to the new

State on an equal footing with the other States, and many technical amendments to the United States Code deleting inappropriate references and otherwise bringing the United States Code in conformance with the new situation.

This bill, first drafted by the Bureau of the Budget along the lines set forth in the Alaska omnibus bill enacted a year ago, has been painstakingly considered by the subcommittee and the full committee of which I am a member, and is, in my opinion, admirably suited to meet the need, and constitutes legislation which I unqualifiedly recommend to this House for passage.

Mr. SAYLOR. Mr. Speaker, I yield myself such time as I may require.

Mr. Speaker, the action we are taking today might be called the windup of statehood for Alaska and Hawaii. During the 85th Congress and the 1st session of the 86th Congress, the House and the Senate in their wisdom overwhelmingly admitted into the sisterhood of States these two great Territories.

Last year the House Interior and Insular Affairs Committee brought to the floor for consideration and adoption a bill which would wipe out all the inequities and inconsistencies in existing laws affecting the new State of Alaska. This year there has been introduced and there is presented now for your consideration a bill which will do the same thing for the new State of Hawaii. If you will examine carefully the report which came to our committee from the Bureau of the Budget you will be surprised to find that the bill was referred to the Committee on Interior and Insular Affairs. The Speaker and Parliamentarian could have assigned this bill to any one of a number of committees, Banking and Currency, Education and Labor; in fact, he could have assigned it to every committee of the House except the Committee on Rules, and I think they might even have found a rule to allow it to go to the Rules Committee, because this bill covers some phase of jurisdiction of each one of those committees. But under the procedure adopted by the Speaker it was referred to the House Committee on Interior and Insular Affairs, I would like to take this opportunity to commend the chairman of our committee, the gentleman from Colorado [Mr. ASPINALL] because, even though this was referred to our committee he directed a letter to the chairman of each of the other committees of the House calling their particular attention to the section of the bill affecting their jurisdiction and asked them for any comments or changes they wanted to make in this legislation.

It shows the manner in which this great House operates, because the Chairman and the staffs of the respective committees all cooperated with the Committee on Interior and Insular Affairs to make this bill possible.

Mr. ASPINALL. Mr. Speaker, will the gentleman yield?

Mr. SAYLOR. I yield to the gentleman from Colorado.

Mr. ASPINALL. I commended the gentleman from New York [Mr. O'BRIEN] and the gentleman from Hawaii [Mr. INOUYE], and I wish to commend also the gentleman from Pennsylvania [Mr. SAYLOR] for his cooperative approach and effective aid in the consideration of legislation leading to the approval of the status of statehood for Alaska and Hawaii, and the necessary legislation needed to bring these two States in a full relationship with the other States. I extend a like commendation to my friend and colleague from Washington [Mr. WESTLAND].

At this time I would like to advise the House that Mr. SISK, Mr. MCGINLEY, Mr. WESTLAND, Mr. O'BRIEN of New York, and Mr. INOUYE traveled extensively throughout the Pacific area last fall on a committee assignment from my committee, paying attention to the problems treated in this particular legislation as well as those in the Pacific area described as the American Samoan Islands, the Island of Guam, and the trust territory over which our Government presently has jurisdiction. They rendered a difficult and valuable service for the Federal Congress and the citizens of the United States.

CALL OF THE HOUSE

Mr. HOFFMAN of Michigan. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently no quorum is present.

Mr. MCCORMACK. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 91]

Alexander	Farbstein	Meader
Alford	Fino	Merrow
Anderson, Mont.	Flynn	Mitchell
	Fogarty	Montoya
Anfuso	Forand	Moorhead
Ashley	Frazier	Morris, Okla.
Ayres	Garmatz	Nix
Barden	Giaimo	Osmers
Barry	Gilbert	Pilcher
Bass, N.H.	Glenn	Pillion
Bentley	Granahan	Porter
Blatnik	Gray	Powell
Bolling	Green, Oreg.	Quigley
Bonner	Griffin	Rogers, Tex.
Bow	Griffiths	Roosevelt
Brewster	Halpern	Rostenkowski
Brown, Mo.	Hays	Santangelo
Buckley	Healey	Scott
Cahill	Hébert	Short
Canfield	Hemphill	Smith, Kans.
Cederberg	Holland	Staggers
Chelf	Irwin	Steed
Coffin	Jackson	Stratton
Corbett	Johnson, Colo.	Stubblefield
Curtis, Mass.	Kearns	Sullivan
Curtis, Mo.	Keogh	Taylor
Davis, Tenn.	Kilburn	Teller
Dent, Pa.	Kilday	Thompson, N.J.
Devine	Kluczynski	Van Pelt
Diggs	Lafore	Walter
Dingell	Landrum	Williams
Dorn, N.Y.	Lesinski	Wilson
Dulski	McDowell	Wolf
Durham	McGovern	Zelenko
Fallon	Macdonald	

The SPEAKER. On this rollcall 327 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

AMENDING CERTAIN LAWS CONCERNING STATE OF HAWAII

The SPEAKER. The Chair recognizes the gentleman from Pennsylvania [Mr. SAYLOR].

Mr. ASPINALL. Mr. Speaker, will the gentleman yield?

Mr. SAYLOR. I yield.

Mr. THOMSON of Wyoming. Mr. Speaker, will the gentleman yield?

Mr. SAYLOR. I yield to the gentleman from Wyoming.

Mr. THOMSON of Wyoming. Mr. Speaker, I would like to ask the gentleman a question or two with reference to section 48 of the bill, amending section 309(a) of the Tariff Act of 1930. There is a justifiable concern with regard to this on the west coast and in the Rocky Mountain area, due to soft market conditions in the petroleum and petroleum-products industry in these regions and the possibility of this amendment aggravating that situation. Am I correct in my understanding that there is an amendment under consideration with reference to this section to exclude petroleum products from the operation of the amendment?

Mr. SAYLOR. That is correct. It was called to our attention, and the reason this amendment was placed in it was to make sure that the carriers have the same privilege with regard to the tax on cigarettes, liquor, and playing cards that their competitors have in the same trips with ships which would leave either the east-coast ports or the gulf-coast ports and go to Hawaii. It was never intended to go as far, apparently, as the amendment does. It is one of the things that was called to the attention of the other body, and I am sure it will be corrected when it gets there.

Mr. THOMSON of Wyoming. At the present time, as the gentleman has indicated, it is impossible under the rules and procedures of the House to amend the bill, but the other body does have it under consideration. With the understanding that an amendment has been offered in the other body to exclude petroleum products and that it will be supported by the House conferees, I am not going to oppose this legislation at this time. Unless such action is taken, though, I would oppose it as it comes from conference.

Mr. O'BRIEN of New York. Mr. Speaker, I have no further requests for time.

The SPEAKER. The question is: Will the House suspend the rules and pass the bill?

The question was taken; and (two-thirds having voted in favor thereof), the rules were suspended and the bill was passed.

A motion to reconsider was laid on the table.

LEGISLATIVE OVERSIGHT COMMITTEE

Mr. HARRIS. Mr. Speaker, I ask unanimous consent that the Legislative Oversight Committee may sit today during general debate.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

SMALL BUSINESS INVESTMENT ACT AMENDMENTS OF 1960

Mr. SPENCE. Mr. Speaker, I move to suspend the rules and pass the bill (S. 2611) to amend the Small Business Investment Act of 1958, and for other purposes, with amendments.

The Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Small Business Investment Act Amendments of 1960".

SEC. 2. As used in this Act, unless otherwise indicated, references to "the Act" are to the Small Business Investment Act of 1958, as approved August 21, 1958 (72 Stat. 689).

SEC. 3. Section 103 of the Act is amended by deleting the paragraph numbered (4) and inserting, in lieu thereof, the following: "the term 'State' includes the several States, the Territories and possessions of the United States, the Commonwealth of Puerto Rico, and the District of Columbia."

SEC. 4. Subsection 301(d) of the Act is amended by deleting the paragraph thereof numbered (9); and by respectively redesignating the paragraphs thereof numbered (10) and (11) as (9) and (10).

SEC. 5. Subsection 302(b) of the Act is amended by deleting the first word and inserting in lieu thereof the following: "Notwithstanding the provisions of section 6(a)(1) of the Bank Holding Company Act of 1956, shares".

SEC. 6. Section 304 of the Act is amended to read as follows:

"PROVISION OF EQUITY CAPITAL FOR SMALL-BUSINESS CONCERNS

"SEC. 304. (a) It shall be a function of each small business investment company to provide a source of equity capital for incorporated small-business concerns, in such manner and under such terms as the small business investment company may fix in accordance with the regulations of the Administration.

"(b) Before any capital is provided to a small-business concern under this section—

"(1) the company may require such concern to refinance any or all of its outstanding indebtedness so that the company is the only holder of any evidence of indebtedness of such concern; and

"(2) except as provided in regulations issued by the Administration, such concern shall agree that it will not thereafter incur any indebtedness without first securing the approval of the company and giving the company the first opportunity to finance such indebtedness.

"(c) Whenever a company provides capital to a small-business concern under this section, such concern shall have the right, exercisable in whole or in such part as such concern may elect, to become a stockholder-proprietor by investing in the capital stock of the company 5 per centum of the amount of the capital so provided, in accordance with regulations prescribed by the Administrator."

SEC. 7. Title 26, chapter 6, section 26-610 of the District of Columbia Code, 1951 edition, is amended by inserting after the word "associations" the following: ", small business investment companies licensed and operating under the Small Business Investment Act of 1958".

The SPEAKER. Is a second demanded?

Mr. McDONOUGH. Mr. Speaker, I demand a second.

A second was considered as ordered.

Mr. SPENCE. Mr. Speaker, this is an amendment to the Small Business Investment Act of 1958. It makes two substantial changes. It provides that the small business investment organization may make direct purchases of stock from the borrowing corporation. It authorizes small business investment companies to purchase stock in small business concerns and relieves the small buiness concern from compulsory purchasing of stock in the investment company.

I think that will encourage the investment of equity capital in small businesses. They are in need of equity capital and long-term loans. We hope that this will stimulate small business. Small business is essential to the economy of our Nation. Without small business we could not have the free competitive enterprise system. If we destroy small business our economy will be controlled by a few great corporations. It would be a concentration of power that would be disastrous to the welfare of our people and the prosperity of our country.

I hope that this bill will be passed. It came out of the committee without a dissenting vote, and I am sure there can be no opposition to the bill in the House.

Mr. McDONOUGH. Mr. Speaker, I have no proposed amendments. Neither do I have any serious objection to this bill. This is a proposal by the House Banking and Currency Committee to expand and increase the facilities of small business in all parts of the Nation. One of the things that I think is extremely beneficial in this proposal to expand small business is that it will supplement and provide a means for employment. This should be a vehicle where depressed areas can be improved by this small business organization expanding manufacturing facilities and retail facilities and service organizations in areas where employment may be low at the present time, and do it on a free enterprise basis, without the type of legislation that was passed in the House recently.

We are not opposing the bill, but I wanted to make this point while we were debating it.

I yield 5 minutes to the gentleman from Kansas [Mr. AVERY].

Mr. AVERY. Mr. Speaker, I do not think I will use the entire 5 minutes. I merely wanted to comment in passing that the amendments to the Small Business Investment Act being considered today were almost identical to the recommendations that flowed from the Subcommittee No. 1 of the Select Committee on Small Business.

Rather extensive hearings were held under the chairmanship of the gentleman from Tennessee [Mr. EVINS], who is on the floor; and we are glad indeed the Banking and Currency Committee saw fit to agree to the recommendations of Subcommittee No. 1 of the Small Business Committee. We support the amendments and urge the passage of this bill.

The amendments to the Small Business Investment Act of 1958 as incorporated in the bill presently under consideration—S. 2611—are consistent with the steady progress and improvement which has characterized Executive and congressional action on the Small Business Act since its inception.

May I mention the fact that the gentleman from West Virginia [Mr. MOORE], who also serves on Subcommittee No. 1 of the House Small Business Committee, introduced on June 11, 1959, the original bill—H.R. 7691—which contained amendments recommended to our subcommittee by the Administrator of the Small Business Administration at the subcommittee hearings held in May 1959. The bill before us is substantially in keeping with Mr. MOORE'S bill and the recommendations of the administration. Mr. MOORE and I also had the pleasure of supporting this legislation before Subcommittee No. 3 of the House Banking and Currency Committee, which subcommittee is presided over by the chairman of the Select Committee on Small Business, the gentleman from Texas [Mr. PATMAN], who I understand will speak in support of the bill later this afternoon.

Mr. ALGER. Mr. Speaker, this act to amend the Small Business Investment Act is another one of many alleged Federal aids to the small businessman, in this instance to help secure equity capital for investment. Does this act, and do any of the other Federal aids, actually provide the basic help needed? Is a tax cut not what the small businessman really needs? Suppose, for example, the small businessman could keep the money he earns that he now pays out in taxes. Would this not provide the additional equity capital needed for business expansion? Now, suppose, on the other hand, we build the Federal bureaucracy through various alleged Federal aids for the small businessman, all of which machinery and personnel costs more money, that is more taxation. So we tax the small businessman more to pay for these services offered him. Are we not actually hurting him, not helping him, by imposing a greater tax-load?

It is my firm conviction that the way to help the small businessman is not to increase the Federal bureaucracy but cut back Government spending and, as quickly as we can, cut down the taxation of all our citizens, including the small businessman. This would be the greatest thing we could do for a small businessman.

From another standpoint, this bill is questionable. Small businessmen know where and how to get loans without Federal aid.

Mr. SPENCE. Mr. Speaker, I yield 5 minutes to the gentleman from Texas [Mr. PATMAN].

Mr. PATMAN. Mr. Speaker, in 1958 the Congress enacted the Small Business Investment Act to encourage the establishment of privately owned small business investment companies. This legislation was enacted in recognition of the

fact that existing financial institutions such as commercial banks were not prepared or designed to satisfy the needs of small business for equity capital and long-term loans. The act authorized the Small Business Administration to assist the proposed new Small Business Investment Companies to get started. We have now had about 20 months of experience operating under the 1958 act and 95 of these investment companies have been licensed. While this is a start, there is general agreement that some amendments to the 1958 act are needed if this new program is to meet the needs of small business properly. S. 2611 would make some changes in the 1958 act which I hope will make this program operate more effectively.

The first change the bill would make would be to open up new ways in which small business investment companies may furnish equity capital to small business concerns. Under the 1958 act as it stands today the only way this can be done is for the small business investment company to buy debentures of the small business concern which are convertible at the option of the investment company into the small business concern's stock. S. 2611 would provide instead that the small business investment company may furnish this capital in other forms to be authorized by the Small Business Administration regulations—such as by directly buying stock in the small business concern, or by buying debentures with detachable stock rights.

S. 2611 would also repeal the requirement of the 1958 act that a small business concern must purchase stock in any small business investment company from which it gets equity capital. This requirement has proved objectionable to the small business concerns who look upon it as an additional expense of obtaining equity funds. S. 2611, as reported by the committee, would repeal this mandatory requirement but preserve for the small business concern the option of buying stock in the investment company up to 5 percent of the amount of capital furnished.

The bill would also make certain other changes in the law again designed to increase the effectiveness of this new program. Further experience under the program may reveal additional changes which should be made but I am hopeful that the bill will prove a big step forward in providing small businesses with the equity capital that they need so sorely if they are to play their proper role in our expanding economy.

The report of our committee is inserted herewith:

SMALL BUSINESS INVESTMENT ACT AMENDMENTS OF 1960

The Committee on Banking and Currency, to whom was referred the bill (S. 2611) to amend the Small Business Investment Act of 1958, and for other purposes, having considered the same, report favorably thereon with amendments and recommend that the bill as amended do pass.

The amendments are as follows:

Page 1, line 4, strike out "1959" and insert "1960" in lieu thereof.

Page 2, strike out all of lines 12 through 19 and insert in lieu thereof the following:

"SEC. 6. Section 304 of the Act is amended to read as follows:

" 'PROVISION OF EQUITY CAPITAL FOR SMALL BUSINESS CONCERNS

" 'SEC. 304. (a) It shall be a function of each small business investment company to provide a source of equity capital for incorporated small-business concerns, in such manner and under such terms as the small business investment company may fix in accordance with the regulations of the Administration.

" '(b) Before any capital is provided to a small-business concern under this section—

" '(1) The company may require such concern to refinance any or all of its outstanding indebtedness so that the company is the only holder of any evidence of indebtedness of such concern; and

" '(2) except as provided in regulations issued by the administration, such concern shall agree that it will not thereafter incur any indebtedness without first securing the approval of the company and giving the company the first opportunity to finance such indebtedness.

" '(c) Whenever a company provides capital to a small-business concern under this section, such concern shall have the right, exercisable in whole or in such part as such concern may elect, to become a stockholder-proprietor by investing in the capital stock of the company 5 per centum of the amount of the capital so provided, in accordance with regulations prescribed by the Administrator.' "

PURPOSE OF THE BILL

The primary purpose of the Small Business Investment Act of 1958 is to make equity-type capital and long-term credit more readily available for small business concerns, through encouraging the establishment of privately owned small business investment companies (referred to in this report as SBIC's). S. 2611 would amend this 1958 act in order to remove certain obstacles which have impeded the realization of this goal. The bill was ordered reported by unanimous vote of your committee, and it has the support of the Small Business Administration.

Under the 1958 act, each SBIC must have a minimum initial paid-in capital and surplus of $300,000, of which $150,000 may be supplied by the Small Business Administration through purchase of subordinated debentures of the SBIC. SBA may also make loans to any SBIC, up to 50 percent of its capital and surplus. Today an SBIC can supply funds to a small business concern in two ways: (1) By having the small business concern's unsecured debentures, convertible into stock in the concern, at sound book value as determined at the time the debentures are issued; or (2) by making term loans (not involving equity interest) of 5 to 20 years.

S. 2611 would open up new methods by which SBIC's may furnish equity capital to small businesses. Under the 1958 act, as indicated above, this can be done only by purchasing convertible debentures. S. 2611 would allow SBIC's to furnish capital in other forms to be authorized by regulation of the Small Business Administration (such as by directly buying stock in small business concerns, or by buying debentures with severable or detachable stock rights).

S. 2611 would also repeal the requirement that a small business concern must purchase stock in any SBIC from which it gets equity capital. Instead, the bill as reported would grant the small business concern an option (exercisable in whole or in part) to buy stock in the SBIC equal to 5 percent of the capital supplied. Other provisions of S. 2611 would authorize a bank that is a subsidiary of a holding company to invest up to 1 percent of its capital and surplus in any SBIC (this is now prohibited where the SBIC is a subsidiary of the same holding company); would extend the act to possessions of the United States, such as Guam; would exempt SBIC's in the District of Columbia from the District of Columbia small loan law; and would make certain other technical amendments, explained below in the section-by-section summary of the bill.

BACKGROUND OF THE BILL

In the 20 months that have passed since Congress enacted the Small Business Investment Act of 1958, the Small Business Administration has licensed 95 SBIC's. While this represents a hopeful beginning, it falls short of SBA's own expectations, and there is general agreement that some changes in the act are needed to remove restrictions that have deterred formation of SBIC's.

The following is a more detailed summary of the status of SBA actions on SBIC applications as of May 6, 1960:

Total proposals (preliminary applications received in Washington office)	189
Total initial capital and surplus	[1] $78,360,504
Federal funds requested through purchase of subordinated debentures under sec. 302 of the act	$20,280,550
Notices to proceed (conditional approval)	54
Amendments or additional information requested	10
Under current active review	19
Notice of insufficiency or withdrawn	11
Licenses issued (final SBA approval)	95
Having a total initial capital	$33,895,681
With subordinated debentures (included above)	$9,540,050
Total actual capital (including proceeds from additional stock sold after licensing)	$51,535,168
Total actual capital, plus amounts of public offerings in progress or contemplated in registration statements filed with SEC	[1] $81,715,168
Total capital plus public offerings (as above) and potential sec. 303 loans giving effect thereto	[1] $122,572,752

[1] These figures do not take into account an additional proposed public offering of $10,000,000 of securities by firm commitment with underwriters, for which registration statement has been filed at SEC by company not yet licensed.

(Based on their present capital, licensees are eligible to borrow maximum of $25,768,000 from SBA under sec. 303 of the act but have actually borrowed only $550,000. Upon completion of public offerings in progress or in registration at SEC, the loan potential will increase by $15,090,000.)

Names, locations, and capital structure of licensed SBIC's, as of May 6, are shown below, together with financial participation in them by SBA. SBA's participation may take the form of initial contributions to capital, through purchase of subordinated debentures of the SBIC's, as shown in the third column. It may also be in the form of loans to SBIC's on their securities (under sec. 303 of the 1958 act) as shown in the fourth column.

Licensed small business investment companies as of May 6, 1960

Name of licensee	Total initial capital and surplus	Subordinated debentures		303 loans	
		Committed	Disbursed	Committed	Disbursed

S. 2611 passed the Senate late in the last session of this Congress. In March of this year, Subcommittee No. 3 (Hon. WRIGHT PATMAN, chairman) of the House Committee on Banking and Currency held hearings on the Senate-passed bill and other proposals for increasing the effectiveness of this program, including amendments proposed by Hon. JOE EVINS, on behalf of the Select Committee on Small Business of the House of Representatives, and Hon. JOHN SPARKMAN, chairman of the Select Committee on Small Business of the Senate. At the conclusion of these hearings, Subcommittee No. 3 agreed upon certain amendments to S. 2611, and reported the bill favorably to the full Banking and Currency Committee, with these amendments, on April 20. The full committee agreed with the recommendations of Subcommittee No. 3, and ordered the bill, as so amended, reported to the House, by a unanimous vote.

FLEXIBILITY IN TYPES OF EQUITY INVESTMENT

Under existing law small business investment companies may provide equity-type capital to small business concerns through the purchase of convertible debentures. Such debentures, which are unsecured promises to repay, are callable at par upon any interest payment date upon 3 months' notice by the issuing company. The debentures are convertible at the option of the SBIC, or a holder in due course, up to and including any call date, into stock of the small business concern at the sound book value of such stock at the time of issuance of the debentures.

Most witnesses who appeared during the hearings expressed the belief there should be more flexibility in types of equity investment that SBIC's could make in small business concerns. The SBA reports that it likewise has been told by people potentially interested in forming SBIC's that greater latitude in the form such investment could take would stimulate the flow of funds to small business concerns. It was pointed out, for instance, that SBIC's could tailor securities to meet the eligibility requirements of trust funds, endowment funds, pension funds, and insurance companies and thus enhance the ability of the investment companies to either borrow money against securities held or permit the sale of such securities to these private secondary markets.

Your committee believes it would be desirable to provide greater flexibility in the types of equity investment that SBIC's may make in small business concerns. Accordingly, section 6 of the bill would broaden equity investment authority granted so that the investment company and the business concerned can arrive at the form the investment should take so long as the financing is in accordance with regulations of the Administrator. In other words, within the limits of publicly known acceptable procedures and subject to SBA regulations, the investment company and the small business concern through open negotiations can decide the type or types of equity investment that would be most desirable for the particular case.

The bill as it came to the committee contained a provision permitting even greater latitude in choice of type of equity investment in that the approval by SBA could be "by regulation or otherwise." Your committee was of the opinion the words "or otherwise" granted too broad and indefinite approval authority and accordingly deleted these words. SBA's regulations will provide definite, ascertainable limits permitting all parties at interest to know in advance what can and what cannot be done in their negotiations as to choice of the investment type or types to be used. At the same time, SBA will have authority through its regulations to protect the interests of small businesses in these negotiations; for example, as SBA indicated during the hearings, it plans to draw its regulations so as to preclude the use of certain types of equity financing which might be patently unfair to small concerns.

In considering this amendment granting wider flexibility, your committee was concerned over the possibility of abuses of this flexibility by some SBIC's which might seek to use it to take control of promising small business concerns. This is a difficult problem to deal with, because absolute prohibitions against SBIC's obtaining control of small business concerns may unduly restrict legitimate operations in some situations where it could be necessary for an SBIC to take a control position. But your committee is pleased to note the testimony of the SBA Administrator that he will not license an SBIC which has as its objective taking control positions in small business concerns, and that SBA will exercise care to prevent abuses. Your committee expects SBA to continue to watch this situation carefully.

SBIC's may also assist small business concerns by making long-term loans not involving equity rights, under section 305 of the 1958 act. This loan authority is not affected by the revisions the bill would make in section 304.

ELIMINATING MANDATORY STOCK PURCHASE REQUIREMENT

The bill eliminates the present requirement that small businesses which receive capital from an SBIC under section 304 must purchase stock of the SBIC in an amount equal to 2 to 5 percent of the capital provided. All witnesses agreed that this mandatory requirement is unpopular both with the SBIC's and the small businesses concerned. The SBIC's do not welcome the prospect of gradual dilution of their ownership, and the small business concerns look upon this requirement as an unnecessary loading charge that deprives them of the full amount of capital furnished. Your committee agrees that this mandatory requirement may create a major obstacle to the program, and that it should be repealed.

Your committee agrees with the House Select Committee on Small Business, however, that the small business should have the option to buy stock if it wishes to do so. We feel that the small businesses themselves should have an interest in SBIC's and in their operation. Accordingly, your committee adopted an amendment to the Senate-passed bill to give the small business concern the option, exercisable in whole or in part, to buy stock in the SBIC in an amount equal to 5 percent of the amount of capital supplied.

BANK HOLDING COMPANY SUBSIDIARIES

Under existing law, a bank holding company may invest up to 1 percent of its capital and surplus in an SBIC, but none of its subsidiary banks may invest in an SBIC that is a subsidiary of the same bank holding company. This restriction has prevented banks affiliated with holding companies from participating fully in this new program. The bill would remove this restriction, so as to permit such an affiliated bank to invest up to 1 percent of its capital and surplus in an affiliated SBIC. Your committee concluded that this limited participation would not conflict with the essential purposes of the Bank Holding Company Act of 1956, and would stimulate investment in small business through the new program.

OTHER PROVISIONS OF THE BILL

Section 3 of the bill eliminates obsolete references to the "Territories" of Alaska and Hawaii, and extends the operation of the act to possessions of the United States, such as Guam. The speaker of the legislature of Guam, Hon. A. B. Won Pat, testified during the hearings on this bill that the extension of the act to Guam "will not only serve the crying needs of small businesses but will enhance the general economy of the territory of Guam."

Section 4 of the bill repeals a provision that now authorizes SBIC's to act as depositories or fiscal agents for the Government when designated by the Secretary of the Treasury. This provision serves no purpose and has caused difficulties in establishing SBIC's in some States.

Section 7 of the bill exempts SBIC's operating in the District of Columbia from the District of Columbia small loans law (D.C. Code. sec. 26–601 et seq.). This act prohibits any company subject to it from making a loan of over $200. Although it was obviously not intended to apply to SBIC's, it does apply to them literally and constitutes an obstacle to effective operations of SBIC's in the District of Columbia. The bill grants the same exemption for SBIC's that is now written into the law for commercial banks, savings banks, savings and loan associations, and real estate brokers.

HOW THE REPORTED BILL DIFFERS FROM THE SENATE BILL

As explained above, the Senate bill authorizes SBIC's to make such equity investments as SBA shall approve "by regulation or otherwise." The bill reported by your committee requires that this be handled by regulation only.

The Senate bill omits from existing law certain provisions restricting additional borrowing by small business concerns to which an SBIC has supplied capital under section 304. None of the witnesses who appeared during the hearings expressed any complaint about the way these provisions are working today, and many letters were received indicating that their omission from the revised section 304 would be misunderstood. To the extent that the SBIC's investment under section 304 takes the form of a debt instrument, it should have some control over additional debt incurred by the borrower. Your committee concluded, therefore, that it would be best to leave these provisions as they are in existing law. They appear as subsection (b) of section 304 of the 1958 act, as it would be rewritten by the reported bill.

The Senate bill repeals the existing requirement that small business concerns purchase stock in SBIC's which supply them with equity-type capital. The reported bill also repeals this mandatory requirement, but it replaces it with an option, exercisable in whole or in part by the small business concern, to buy stock in the SBIC equal to 5 percent of the capital supplied.

SECTION-BY-SECTION SUMMARY

The first section of the bill provides that the act may be cited by its short title (the Small Business Investment Act Amendments of 1960).

Section 2 provides that references within the bill to the act are to the Small Business Investment Act of 1958.

Section 3 eliminates obsolete references to the "Territories" of Alaska and Hawaii, and extends the operation of the act to possessions of the United States, such as Guam.

Section 4 repeals a provision that now authorizes small business investment companies to act as depositories or fiscal agents for the Government when designated by the Secretary of the Treasury. This provision serves no purpose and has caused difficulty in establishing SBIC's in some States, because it has raised questions whether they must comply with the State banking laws.

Section 5 relates to bank holding companies and grows out of an interpretation of the Bank Holding Company Act of 1956 by the Federal Reserve Board. The Board interprets that act, in combination with the Small Business Investment Act of 1958, as permitting

a bank holding company to invest up to 1 percent of its capital and surplus in an SBIC. At the same time, it ruled that a bank holding company's subsidiary bank cannot invest in an SBIC, where the SBIC is or will become a subsidiary of the bank holding company. The bill would allow a bank that is a holding company subsidiary to invest up to 1 percent of its capital and surplus in any SBIC even though the SBIC is a subsidiary of the same holding company.

Section 6 does away with a number of restrictions now in section 304 of the 1958 act, relating to SBIC's providing equity capital for small business concerns. Section 6 amends section 304 to provide that SBIC's may furnish equity capital to incorporated small business concerns "in such manner and under such terms as the small business investment company may fix in accordance with the regulations of the (Small Business) Administration." Thus, the following changes are made in existing law:

(1) Equity capital may now be furnished only in the form of convertible debentures, callable by the borrower on 3 months' notice. The bill would allow SBIC's to furnish capital in other forms to be authorized by SBA regulation (such as by directly buying stock in the small business, or by buying debentures with severable or "detachable" stock rights).

(2) Section 304 now says it "shall be a primary function" of each SBIC to provide equity capital for small business. The bill strikes out "primary." This will confirm SBA's present practice of allowing SBIC's to engage solely in the business of making long-term loans, without actually offering equity capital in any form, so long as their charters contain authority for engaging in, and they are thus available for, both types of operation.

(3) The act now requires a small business concern to purchase stock in any SBIC from which it gets equity capital. The bill eliminates this requirement, but grants the small business concern an option (exercisable in whole or in part) to buy stock in the SBIC equal to 5 percent of the capital supplied to it.

Section 7 exempts SBIC's from the District of Columbia small loan law (D.C. Code, sec. 26–601 et seq.). Commercial banks, savings banks, savings and loan associations, and real estate brokers are now exempt from this act.

Mr. PATMAN. Mr. Speaker, Subcommittee No. 3 of the Banking and Currency Committee of which I have the privilege of being chairman, held hearings on this bill and made a report to the full committee. The full committee adopted the report of Subcommittee No. 3. Subcommittee No. 3 in conducting the hearings relied heavily upon an investigation that had been made by a subcommittee of the Small Business Committee of which the gentleman from Tennessee [Mr. EVINS] was the chairman.

Mr. EVINS. Mr. Speaker, will the gentleman yield?

Mr. PATMAN. I yield to the gentleman from Tennessee.

Mr. EVINS. I thank the gentleman for yielding to me. I merely want to supplement what he said as chairman of the Subcommittee on Banking and Currency. He has brought forth recommendations for needed amendments to the Small Business Investment Act. As the gentleman has indicated, this bill was passed in 1958. At that time there was hope and great expectation as to what the bill might do to aid the small business economy of the Nation. Several months later the very first hearing on the operation of the act was held by my Subcommittee No. 1 of the Select Committee on Small Business.

At that time there were only one or two small business investment companies which had been chartered. During the course of that hearing some five or six more were chartered. Since the hearings and the streamlining of the procedure, following the hearings and also talks with Mr. Duncan Read of the Investment Division of the Small Business Administration, there have been some 97 companies chartered throughout the United States. The report of the Committee on Banking and Currency contains a list of these companies. I think the membership would be interested in knowing their location.

Mr. PATMAN. For the gentleman's information, I am inserting in connection with my remarks the report of the Committee on Banking and Currency which includes the information the gentleman has just referred to.

Mr. EVINS. I thank the gentleman. Certainly the committee is to be commended for bringing this legislation out, because it is needed and necessary. All the witnesses who testified before our committee, and incidentally we were unanimous in our report, stated that the amendments were needed if the act was to be made effective to implement the full purposes of the Congress. The committee under the chairmanship of the gentleman from Texas [Mr. PATMAN] has wanted this legislation to work, and these amendments will provide the necessary convertibility of credit and loans that are needed. I merely want to support what the gentleman has said and urge passage of the legislation at this time. It was unanimous in our committee, and I understand unanimous in the Committee on Banking and Currency.

Our colleague, the gentleman from Texas, Congressman WRIGHT PATMAN, chairman of the Subcommittee on Banking and Currency, held extensive hearings on the bill during March of this year. As all of you know, Mr. PATMAN is also chairman of the House Small Business Committee. Also, our colleague Congressman MULTER, of New York, is a member of both the House Small Business Committee and the House Banking and Currency Committee. These capable gentlemen who down through the years have shown their dedication to the welfare of the small business economy of the Nation, have done an excellent job in bringing this bill to the House for our consideration. They are fully capable of carrying the ball in this matter. However, as chairman of Subcommittee No. 1 of the House Select Committee on Small Business, which has jurisdiction and oversight of the operations of the Small Business Administration, I want to address myself very briefly to the bill.

During May and August of last year, my subcommittee of the House Small Business Committee—Subcommittee No. 1—held extensive hearings into the organization and operation of the Small Business Administration and gave particular emphasis to the work of the Investment Division of the SBA. Up until that time the spotlight of congressional inquiry had not been focused on the implementation of the Small Business Investment Act of 1958. Our subcommittee paid special attention at these hearings to this act.

Based upon these hearings and subsequent investigations by the subcommittee's staff, Subcommittee No. 1 filed a report—House Report No. 1252, 86th Congress—which was submitted to the Speaker on February 8, 1960. In this report it was pointed out that the program was not progressing as expeditiously as had been expected. At the time the proposed hearings were announced on March 7, 1959, only two small business investment companies had been licensed by the SBA. This was approximately 7 months after the act was passed. When the hearings began on May 11, the SBA announced that seven companies had been licensed. When the hearings closed on August 6, nearly a year after the act was passed, 24 small business investment companies had been licensed. On January 15, 1960, nearly 17 months after the act was passed, only 67 companies had been licensed under the act. The total capitalization of these companies to January 15, 1960, was $41,868,000.

Today, after a call to Mr. Duncan Read, Deputy Administrator for the Investment Division of the SBA, I am pleased to advise that 97 small business investment companies have been licensed to date. It is very possible that before the end of this week there will be more than 100 investment companies licensed throughout the United States for the purpose of providing equity capital and long-term loans to small businesses. It is our hope that the work of our subcommittee may have been helpful in assisting the SBA in eliminating red-tape and clarifying the procedures under this new act.

Although the program has been slow getting off the ground, the full purpose of the act may yet be effectively achieved. Great hope still exists for this important act to be of real service to our economy.

The hearings before our subcommittee indicated that certain amendments would be proper and in order and these amendments are recommended in the report of Subcommittee No. 1 of the House Small Business Committee. In fact, most of the amendments incorporated in the Senate bill—S. 2611—were recommended in principle in our report. On last July 6, I introduced a bill—H.R. 8096—which contained similar amendments. The amendments recommended in our report were unanimously approved. These amendments are reasonable and should assist in effectuating the originating purposes of the act. The SBA says they need these amendments. The small business investment companies say they need these amendments. In principle they are good. It may be that some other amendments in time might be necessary. However, the Banking and Currency Committees of both bodies have done an excellent job and the amendments here proposed are now necessary and they should be approved.

It is hoped that the bill will be expeditiously passed and that the minor changes from the Senate version will be approved by the Senate in order to put the tools in the hands of the SBA and the small business investment companies which each say they desire to make the act more workable and effective.

It is hoped that the SBA will accelerate its program in order that more capital will be made available to the small business firms of the Nation in the public interest. The original purpose of this act was good and is still good. But it is also realized that changes are sometimes desired and necessary. I feel that the changes proposed in S. 2611 are reasonable and proper.

ANALYSIS OF THE PROVISIONS OF S. 2611

Sections 1 and 2 are technical and introductory.

Section 3 would define the word "State" to permit possessions such as Guam to come under the provisions of the act and delete obsolete references to the territories of Alaska and Hawaii.

Section 4 would delete subsection 301(d)(9) of the act which gives the small business investment companies power to act as depositories and fiscal agents of the United States. This power is not needed, and has, in some States, given rise to suggestions that SBIC's must be chartered under the banking laws.

Section 5 would amend subsection 302(b) of the act by freeing bank purchases of an SBIC's securities authorized in this section from the provisions of subsection 6(a)(1) of the Bank Holding Company Act of 1956. This amendment would enable a bank which is a subsidiary of a bank holding company to invest the full 1 percent of its capital and surplus in an SBIC, without regard to whether or not such SBIC is, or would become, a subsidiary of the parent company.

Section 6 would rewrite section 304 of the act to eliminate the restriction in the act that equity capital can be furnished a small business concern by an SBIC only through the medium of convertible debentures. This amendment is designed to give more flexibility to the forms of securities and the terms covering their issue. This flexibility would aid the SBIC in finding a secondary market for these securities. This amendment would also eliminate the statement that it is the primary purpose of an SBIC to furnish equity capital to small businesses. This places long-term loans and equity capital on an equal footing.

Another very important amendment in section 6 is one that eliminates the requirement that when equity capital is furnished to a small business concern such concern will purchase from 2 to 5 percent of such amount of stock in the SBIC, and makes this optional rather than mandatory.

Section 7 would amend title 26, chapter 6, section 26–610 of the District of Columbia Code, 1951 edition. This act imposes licensing requirements and other restrictions on persons engaged in lending money in the District of Columbia.

The SPEAKER. The question is on suspending the rules and passing the bill.

The question was taken; and (two-thirds having voted in favor thereof) the rules were suspended and the bill was passed.

GENERAL LEAVE TO EXTEND

Mr. SPENCE. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks in the RECORD on the bill just passed.

The SPEAKER. Is there objection to the request of the gentleman from Kentucky?

There was no objection.

NATIONAL CAPITAL HOUSING AUTHORITY—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

The SPEAKER laid before the House the following message from the President of the United States, which was read and, together with the accompanying papers, referred to the Committee on the District of Columbia:

To the Congress of the United States:

In accordance with the provisions of section 5(a) of Public Law 307, 73d Congress, approved June 12, 1934, I transmit herewith for the information of the Congress the report of the National Capital Housing Authority for the fiscal year ended June 30, 1959.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *May 14, 1960.*

EMPLOYEE TRAINING FOR BETTER PUBLIC SERVICE—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

The SPEAKER laid before the House the following message from the President of the United States, which was read and, together with the accompanying papers, referred to the Committee on Post Office and Civil Service:

To the Congress of the United States:

The Government Employees Training Act (Public Law 85–507) directs the Civil Service Commission to submit annually to the President for his approval and transmittal to the Congress a report with respect to the training of employees of the Government under the authority of the act. I am transmitting to you with this letter the Commission's report entitled "Employee Training for Better Public Service."

It is my firm conviction that training has long been essential for the successful operation of Federal agencies. Today's demands, however, bring a new urgency to training, especially for our career managers. I have, therefore, recently asked all agency heads to strengthen their programs for the selection, development, and training of these key officials. This directive is in addition to that issued in 1955 which supported all types of training.

The action of the Congress in broadening authority to train Federal employees was a healthy and progressive move. The Commission's report shows that Federal officials have made intelligent use of their authority under the act and that it has helped to meet an urgent need. I was particularly interested in the Commission's comments on "The Future," which point out two important areas needing improvement—planning, and budgeting and scheduling for training activities.

The Commission's report is encouraging and its suggestions to the agencies sound. A good beginning has been made under the authority granted by the Congress.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *May 14, 1960.*

NATIONAL MONUMENT COMMISSION—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

The SPEAKER laid before the House the following message from the President of the United States, which was read and, together with the accompanying papers, referred to the Committee on Interior and Insular Affairs.

To the Congress of the United States:

I am enclosing for the consideration of the Congress a report of the National Monument Commission submitted as directed by the act of August 31, 1954. I have requested the Secretary of the Interior to submit to the Congress a proposed bill embodying the Commission's recommendations.

The Commission's report recommends an approved design for the Freedom Monument, asks that the Commission be authorized to erect the Monument, suggests that the number of private citizens serving on the Commission be increased from four to eight, asks the Congress to authorize the appropriation of $12 million as the Federal share of the cost of construction, and requests that the Commission be authorized to solicit private contributions for the remaining cost of the Monument.

The act of August 31, 1954, created the National Monument Commission for the purpose of securing designs and plans for a useful monument to the Nation symbolizing to the United States and the world the ideals of our democracy as embodied in the five freedoms—speech, religion, press, assembly, and petition—sanctified by the Bill of Rights adopted by Congress in 1789 and later ratified by the States.

I believe it important that the story of the noble ideas which shaped our country's beginning, its course, its great moments, and the men who made it possible, be ever present in the minds of Americans. This purpose can be furthered in a variety of ways, but the simplest and most effective of all methods in my judgment is to present it impressively in visual form. The erection of the Freedom Monument would accomplish that objective. The National Capital area is adorned by a galaxy of memorials to individuals but nowhere in the Nation's Capital or this Nation can one find a memorial to the principles

and ideals upon which our Government is based.

The Commission, since its creation, has placed the ideas I have mentioned on the drawing board. It is intimately acquainted with the problems involved in the erection of the Monument; it has advanced the memorial; and I recommend that the Commission be authorized to complete the task.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *May 14, 1960.*

FEDERAL NATIONAL MORTGAGE ASSOCIATION—VETO MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 390)

The SPEAKER laid before the House the following veto message from the President of the United States:

To the House of Representatives:

I return herewith, without my approval, H.R. 7947 entitled "An act relating to the income tax treatment of nonrefundable capital contributions to Federal National Mortgage Association."

When a financial institution sells a mortgage to the Federal National Mortgage Association, the institution is required to purchase shares of Association common stock at par value in an amount equal to 2 percent of the unpaid principal of the mortgage. The market price for this common stock has been appreciably lower than its par value. H.R. 7947 would permit the financial institution to deduct as a business expense the difference between par value and market value when it sells the common stock it was required to purchase.

I am sympathetic with the objectives of the bill. But it provides for the retroactive application of the proposed amendment in a highly discriminatory manner. This is a defect which is sufficiently serious to require my disapproval. Generally, changes in the tax laws should only apply prospectively, for retroactive amendments result in substantial administrative problems. Wholly apart from this, however, the particular provision for retroactivity in H.R. 7947 would benefit only those taxpayers who previously claimed the deduction contrary to the announced position of the Internal Revenue Service; the bill would not permit refund or credit to those taxpayers who accepted the position of the Internal Revenue Service and paid their taxes. I cannot approve such discrimination.

In view of this defect, I withhold my approval from H.R. 7947.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *May 14, 1960.*

The SPEAKER. Without objection, the bill and message will be referred to the Committee on Ways and Means and ordered to be printed.

There was no objection.

MILITARY CONSTRUCTION APPROPRIATION ACT

Mr. VINSON. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 10777) to authorize certain construction at military installations, and for other purposes, with Senate amendments thereto, disagree to the Senate amendments, and agree to the conference asked by the Senate.

The SPEAKER. Is there objection to the request of the gentleman from Georgia? The Chair hears none, and appoints the following conferees: Messrs. VINSON, KILDAY, DURHAM, RIVERS of South Carolina, ARENDS, GAVIN, and VAN ZANDT.

UNIVERSAL TRADES, INC.—VETO MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 389)

The SPEAKER laid before the House the following veto message from the President of the United States:

To the House of Representatives:

I return herewith, without my approval, H.R. 1456, a bill for the relief of Universal Trades, Inc.

The Renegotiation Board, in 1955, ordered Universal Trades, Inc., to refund to the Government $50,000 in excessive profits subject to applicable Federal tax credits. The law provides a 90-day period, after the conclusion of the Renegotiation Board proceeding, in which to apply for a review of the case by the Tax Court of the United States. Universal Trades did not file such a petition.

Under H.R. 1456 jurisdiction would now be conferred on the Tax Court—some 5 years after the expiration of the 90-day period.

Universal Trades claims that income of $92,481.54 was improperly included in its 1952 renegotiation proceeding. A change in the company's accounting method did move this income from 1952 to 1953 for income tax purposes, but for renegotiation purposes no such transfer was made. This treatment was equitable, appropriate for renegotiation purposes, and in accordance with the Renegotiation Act.

Finally, no valid justification appears for the corporation's failure to file a petition with the Tax Court within the prescribed 90-day period. At all times before and after issuance of the Board's order, Universal Trades was in full possession of the facts pertaining to the accounting method used by the Board.

Under the circumstances, therefore, I am constrained to withhold my approval from the bill.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *May 14, 1960.*

The SPEAKER. Without objection, the bill and message will be referred to the Committee on the Judiciary and ordered to be printed.

There was no objection.

POSTPONEMENT OF ROLLCALLS UNTIL THURSDAY

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. McCORMACK. Mr. Speaker, on May 12 I submitted a unanimous-consent request, which the House graciously granted, that any rollcalls on Monday, Tuesday, or Wednesday be postponed until Thursday. It was my intention that any rollcalls asked for today or tomorrow would go over until Thursday. If Calendar Wednesday is exercised, it would not apply to that particular day because there would be no necessity of it. My purpose in asking that rollcalls go over until Thursday was that if Calendar Wednesday is exercised there would be freedom on the part of those exercising their rights under the Calendar Wednesday rule. So, Mr. Speaker, I ask unanimous-consent that so much of my unanimous-consent request as applied to Wednesday be withdrawn. I have discussed this matter with the distinguished minority leader.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

Mr. MARTIN. Mr. Speaker, reserving the right to object, that means that if there are rollcalls on Calendar Wednesday, they will be had on that day.

Mr. McCORMACK. On the legislation that day, yes; but rollcalls that might be ordered today or tomorrow will go over until the following Thursday.

Mr. MARTIN. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts [Mr. MCCORMACK]?

There was no objection.

PROGRAM FOR THE BALANCE OF THE DAY

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. McCORMACK. Mr. Speaker, further legislation for today was the military construction appropriation bill for 1961. At the time that was programed it was overlooked that the authorization bill has not yet been enacted into law. Therefore that bill cannot very well come up today. I just wanted the Members of the House to understand that that bill will not be brought up today and cannot be brought up until the authorization bill comes out of conference, is passed, and, I assume, signed. In any event, it will not come up until a later date.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. McCORMACK. I yield to the gentleman from Iowa.

Mr. GROSS. Then what is the business for the remainder of the day?

Mr. McCORMACK. There is no further business. I scheduled certain bills for the latter part of the week, but I do not feel justified in bringing them for-

ward. I made up a program which at the time justified my action, but I note, in looking over what I said with reference to the program, that I left myself no flexibility. So I am bound by the program that I announced the other day.

MORE DISCRETION IN SPENDING

Mr. JONES of Missouri. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

Mr. JONES of Missouri. Mr. Speaker, I would like to quote from three communications received in my mail this morning.

A Connecticut Yankee writes:

You have been quoted as saying, "I don't like the idea of spending a million dollars" for a memorial to Teddy Roosevelt. To that I am sure T. R. would say, "Bully." A lot of taxpayers, facing mounting costs for everything, feel Congress is altogether too free with our money, that in fact some Congressmen have lost the perspective of the dollar, tossing millions hither and yon. I'm quite sure T.R. would be happy with his place in history as it is, without further cluttering up Washington with memorials which should have been stopped with Washington and Lincoln.

A lady in Canton, Ohio, writes:

I ask the question because I am trying to understand. What possible justification can there be for spending around $1 million for a memorial of that sort?—

Referring to the proposed memorial to the late President Theodore Roosevelt—

Why not put that money to use for the living where there is greater need? Perhaps scholarships for students of government, donation to research in diseases, aid to colleges and universities and give in his name? By the way, where does that money come from?

And, finally, a letter from the 10th District in Missouri, which I am privileged to represent:

I am writing you as you seem to be one of the few in Washington who would like to keep the Government from going completely wild in spending. According to the papers the white collar Government workers are about to get another 10 percent raise. If they do we will have still another big shot of inflation. Doctors and hospitals and all other necessary services and goods will of course go up again, and the farmers and businessmen will take it on the chin again and pay the bills. In my own case I've taken it on the chin about all I can. I own and operate about 300 acres of land and a small hardware store. I work about 70 hours a week and I still don't clear any more actual money than some of these Government boys who put in 40 hours with paid vacations, hospitalization, and other benefits including retirement pensions. In my opinion what the Government is actually doing is taking what some of us have saved over the years and giving it to this group who do very little work and give very little thought and concern to what is happening to this country.

Mr. Speaker, I hope that we will give some thought to the opinions expressed by these people, and begin to exercise just a little more discretion in how we spend the taxpayers' money. Let us spend a little more time in figuring out how we can save a dollar here and there.

MASSACHUSETTS FLOOD DAMAGE

Mr. LANE. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. LANE. Mr. Speaker, some of the severest northeast storms, with consequent tidal flood problems, strike at the Nahant, Winthrop, and Revere coastal areas in Massachusetts.

A beach-erosion control project was authorized for Lynn-Nahant Beach by the River and Harbor Act of September 3, 1954. Construction of the project is awaiting action by the Commonwealth of Massachusetts. Any work done on the authorized Federal project will be eligible for Federal aid equal to one-third the first cost of construction, contingent upon appropriation of funds by Congress. Reimbursement on projects of this type is generally made after the construction is completed and funds have been appropriated by Congress.

Specific Federal aid for this project was authorized for the purpose of "protecting the shores of publicly owned property." Safety improvements were not mentioned in this authority or under subsequent public laws.

However, Public Law 71, 84th Congress, the hurricane survey authority, gives broader coverage, including protection of lives, for long-range coastal protection based on the disaster element of great hurricanes. Where the hurricane problem is present, tidal flood damages caused by storms like that of December 29, 1959, can also be taken into account, according to the division engineer, Corps of Engineers, U.S. Army, Waltham, Mass.

Furthermore, if protection is found to be economically feasible, for specific localities, projects could be recommended that would protect against hurricanes and other severe storms. If the hurricane threat is not severe, there is some question as to whether the Corps of Engineers has the authority to study and recommend projects for protection against storm damage and flooding. Northeast storms are likely to be more severe than hurricanes in many areas on the New England coast.

The purpose of my bill is to remove that doubt from the language of the law, and to make this exposed coastal area of Massachusetts eligible for projects for protection against storm damage and flooding.

We do have our share of hurricanes, but northeast storms are a chronic fact of life that we must contend with along the New England coast. They are frequently more damaging than hurricanes. But as Public Law 71, 84th Congress, gives broader coverage based on the disaster element of hurricanes, but neglects to provide for those areas that suffer similar damage from northeast storms, it is my purpose to correct that oversight.

My bill will "authorize the Secretary of the Army to make surveys with respect to floods aggravated by intense and unusual storms in the areas of Winthrop, Nahant, and Revere, Mass." This will include floods aggravated by or due to wind or tidal effects.

SCHOOL CONSTRUCTION

Mr. MUMMA. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD and to include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. MUMMA. Mr. Speaker, I notice in the whip notice that the school construction bill will be up under Calendar Wednesday rules this week.

This brought to my mind an article that appeared in the Harrisburg Patriot on March 17. This article announced that a vast education study was launched to discover the State's 10-year needs. This was a statement from the office of the Governor of Pennsylvania in which he said this commission of 63 would be formed as a bipartisan group. They are going to make an exhaustive study of the education situation from all angles and will report back to the Governor on January 31, 1961. A copy of the article will appear at the end of my remarks and you will note, under school construction, they are quite up in the air as to what may be done. Personally, in my district, the various school boards, in connection with the general State authority, have built well and much. In fact, in the city of Harrisburg, by a population readjustment, I understand that our schools are not crowded.

There is another point that is quite interesting. I have made sort of a sketchy survey and checked with bond salesmen in my community and they agreed with me in this statement that the general State authority of Pennsylvania and its communities can at this time borrow money cheaper than the Federal Government.

There is another item that I think should be considered seriously as they are doing in Miami, Fla., and that is making fuller use out of schoolrooms. At the present time they say the facilities are only being used 75 percent of the time. Our Harrisburg Patriot also commented editorially on this situation on March 18, 1960.

Another point is the most current report of the Department of Health, Education, and Welfare, supplied to Senator MCNAMARA. The classroom shortage in Pennsylvania really only averages about eight per county and I know personally in my district many more than this are now being built.

In summation, I do not feel in good conscience I could vote for the present bill in light of the situation in my own district. I will be interested in seeing

what the Governor's committee reports and how the debate on this matter turns out.

The article follows:

VAST EDUCATION STUDY LAUNCHED TO DISCOVER STATE 10-YEAR NEEDS—LT. GOV. JOHN DAVIS HEADS WIDE OPEN REVIEW OF PROGRAM

(By John H. Baer)

A sweeping review of Pennsylvania's billion-dollar-a-year education program in the light of today's needs projected through the next 10 years was launched Wednesday by Governor Lawrence.

The Governor appointed Lt. Gov. John Morgan Davis to head a 35-members special Committee on Education and named 28 others to the bipartisan group. The State council of education has allocated $300,000 from the school fund to finance the committee's work.

Six more appointments will be made later, the Governor explained. Some of those he wants to serve are out of the country at present and could not be reached for confirmations.

TO COVER ALL PHASES

The Governor told a special press conference the study is wide open. It is expected to cover everything from kindergarten to college, and include the question of public junior colleges, senatorial scholarships, and school financing.

A committee report is due next January 31, along with legislative proposals where law changes are needed to put the recommendations of the study into effect.

Leaders in the fields of business, labor, the professions and government were included in the committee. But the Governor said he especially avoided naming school administrators, such as the presidents of colleges to the panel. The group will convene here during the first week of April.

DR. CHRISTIE NAMED

Dr. Robert A. Christie, on leave as director of methods and planning in the office of administration, has been assigned by the Governor as executive director for the committee, which will have its headquarters in the State education building.

George Mohlenhoff, former educational director of the American Friends Service committee, and an aid in the office of administration, will serve as chief assistant to Dr. Christie. He also will be on leave for the duration of the special project.

In naming the committee, the Governor said:

"For many years we have recognized that Pennsylvania's educational program has not measured up fully to our community or national needs, or for that matter, to the capacity of the young people it serves.

"We have tried to meet our shortcomings on a hit-or-miss basis attacking specific problems without relating them to the program as a whole," the Governor added.

Noting that a special session of the legislature had been suggested as one means of attacking the education problem, the Governor said it was decided that the study would be a better approach toward legislation.

KEY MATTERS LISTED

Among specific subjects to be probed by the group are curriculum, school district organization, teacher training and relations, school administration, counseling and guidance, school construction, and higher education.

Past policies and procedures in Pennsylvania will be compared to practices in other sections of the country and related to the aims and goal "which we can legitimately establish to give Pennsylvania the best possible education program," Governor Lawrence declared.

Eight research and administrative subcommittees known as task forces will be assigned. Much of the research in the project will be supplied by public service organizations with a strong interest in education.

The eight task forces and their chiefs of staff, all selected so far from the department of public instruction, are:

Curriculum: To deal with matters such as pupil grouping, course content, and length of the school day and year. Dr. Richard A. Gibboney, director of curriculum development.

School district organization: To determine what is the most desirable and efficient size of school districts, to weigh the advantages of various degrees of district consolidation, and to decide how the State may encourage the best type of organization. Dr. Clarence E. Ackley, director of special school audit.

School construction: To examine and make findings on new school building needs, the types of school buildings needed, their cost, the best means of financing them, and to what extent they can be standardized. Dr. James S. Tresslar, director of school buildings.

Teacher education and relations: To set forth the best means of educating and certifying teachers including types of courses they need; hiring and advancing teachers; salary scales including retirement benefits, and coordination between teachers and school administrators and school boards. Dr. Catherine Coleman, director of teacher education.

ADMINISTRATION STUDY

School administration: To suggest how schools can be administered best at every level, including studies of office, professional personnel, and pupil administrative techniques. Dr. Robert A. Mellman, director of curriculum administration.

Guidance and counseling: To suggest the best way to identify and train various pupil talents to assure that pupils receive a full and proper education. Dr. Kathryn Dice, director of special pupil services.

Higher education: To study and make recommendations on the proper and fair means of maintaining adequate facilities, including new types of schools, and to look into public and private financing. Dr. Richard F. Schier, deputy superintendent for higher education.

School finance: To survey the cost to the State, its localities and to the average taxpayer of the present system; to decide whether or not we make the most efficient use of education money and to determine if the present State subsidy system is actually working. Gage the cost of recommendations of the other task forces for 1961 and the next revenues needed for the overall program. A task force chief will be selected from an outside agency.

Superintendent of public instruction, Dr. Charles H. Boehm, said the cost of education in Pennsylvania is now edging the billion-a-year mark, with the State currently paying about 56 percent of the tab in subsidies.

ISRAEL

Mrs. CHURCH. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentlewoman from Illinois?

There was no objection.

Mrs. CHURCH. Mr. Speaker, I rise today, on May 16, the first legislative day following May 14, to express here once more my congratulations to the State of Israel on a record of unparalleled achievement and my own faith in the continued economic, political, and spiritual growth of that strong new country. Such knowledge of achievement, such appreciation of future potential is based on three personal visits which I have made to Israel, in 1955, 1957, and 1959. The progress witnessed on the successive visits bespeaks, indeed, the purpose and vitality on the part of Israel, for which the free world may well be grateful.

On May 14, 1948, in Tel-Aviv, the Provisional State Council proclaimed the establishment of the State of Israel in Palestine, following the United Nations sanction of the establishment of a Jewish State, an Arab State, and an International Zone of Jerusalem on November 29, 1947.

The doors of Israel were quickly opened to the persecuted and homeless Jewish people of the world, hundreds of thousands who came from 70 different nations to find sanctuary and fulfillment of their lives. Within 10 years the population of Israel trebled.

The development, growth, and progress of this small State, about the size of Massachusetts, is indeed phenomenal. The desert land, which provides few natural resources, has been reclaimed; an expanding economy has been developed; and social and cultural institutions have been successfully established.

When the new state was put into being, almost 75 percent of its agricultural needs had to be imported; today, 80 percent of those needs are supplied by Israel itself. The cultivated area has increased from less than 400,000 acres to over 1 million acres. Agricultural exports have more than trebled.

Nineteen hundred and forty-seven found little organized industry in the State of Israel. Today, an essentially agrarian community has been transformed into an intensive industrialized economy. The increase in productive capacity underlies the miraculous absorption of the newcomers. New industries have been established, many of them using local raw materials to a great extent and some using them exclusively. A tremendous housing program has been instituted, through Government and private effort. Over 1,000 miles of roads have been added, railroad mileage has been increased, and merchant shipping expanded. Exports have increased considerably in the small span of 12 years.

The expansion of Israel's educational system was the direct consequence of the Education Act of 1949, which provided that all children between the ages of 5 and 14 must have free elementary education. Six institutions of higher learning are also included.

Great strides have been made in health services, particularly in the field of child welfare. Among the many agencies so engaged, I would mention in particular the work of the Hadassah Medical Service, which has been dramatic. With the increasing demands of an expanding population, Hadassah is meeting the challenge by providing needed hospital facilities, establishing added health centers in various communities, and developing teaching functions and medical research. Hadassah is also a partner in

child rescue work, rehabilitation, land rebuilding, and other humanitarian endeavors.

The efforts of Israel to provide education, employment, housing, and social services for her growing population have been accompanied by cultural efforts to build and strengthen a united nation.

The State of Israel, in a critical frontier area, is carrying the message of democracy to new nations of Asia and Africa, with which it has entered into economic and cultural exchange. The survival and further development of this new state, dedicated to the cause of freedom and peace, is an essential component of the strength of the Middle East and, indeed, of the world.

WOMEN'S ARMY CORPS OFFICERS HONOR LT. COL. MARY ALICE HALLAREN ON THE 18TH ANNIVERSARY OF THE WOMEN'S ARMY CORPS

Mrs. ROGERS of Massachusetts. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentlewoman from Massachusetts?

There was no objection.

Mrs. ROGERS of Massachusetts. Mr. Speaker, May 14, 1960, marks the 18th anniversary of the establishment of the Women's Army Corps of our U.S. Army. I feel a special interest and pride in this splendid organization, for it was I who, on May 28, 1941, introduced a bill in the House of Representatives to establish a Women's Army Auxiliary Corps for service with the Army of the United States.

There were two basic reasons why I—together with many others—was so vitally interested in the establishment of a women's service in our Army. The first was to alleviate the acute shortage of manpower. The second was to answer an undeniable demand from American women that they be permitted to serve their country, together with the men of America, to protect and defend their cherished freedoms and democratic principles and ideals.

During the past 18 years, the thousands of women who have served and who are now serving in the Women's Army Corps have more than justified the creation of that organization. Their outstanding performance of duty during World War II resulted in the passage by Congress in June 1948 of legislation making the Women's Army Corps a permanent and integrated part of the Regular Army and of the Army Reserve.

Their primary mission is to constitute a nucleus of trained military women upon which expansion of the corps would be based in time of national emergency. They also contribute voluntarily the womanpower needed to help meet military manpower requirements.

During the Korean war, they accomplished their primary mission in a superior manner. Many WAC reservists were called to active duty and served with distinction. Enlistments of women were increased, and the increased training requirement was efficiently met.

Now, in peacetime, a well-trained nucleus is being maintained. Present strength of the corps is more than 9,000. These women are contributing to the Army each day their voluntary services in the occupational skills required in the modern army. They are adding to the splendid record of dedicated and loyal service which began 18 years ago.

I am proud of the Women's Army Corps. I am proud of the part I played in bringing it into existence.

On Saturday evening, May 14, in the Crystal Room, Patton Hall, Fort Myer, the WAC officers held a reception in honor of the 18th anniversary of the Women's Army Corps and in honor of their former Director, Lt. Col. Mary Agnes Hallaren on the occasion of her retirement. Colonel Hallaren and lovely mother are beloved and respected friends of mine. She was one of the most beloved teachers that Lowell, Mass., has ever had. We are very proud of each one of her many accomplishments and of every honor paid to her. She has been a tower of strength to the Women's Army Corps and to the Army. Her duty often took a great deal of courage. She was in dangerous zones during the war. No task was too great for her to perform. I am pleased to include here an outline of her impressive record of service in the U.S. Army:

LT. COL. MARY A. HALLAREN, U.S. ARMY

ASSIGNMENTS

Officer Candidate School, WAC Training Center, Fort Des Moines, Iowa, July 7, 1942.
Recruiting, Baltimore, Md., September 15, 1942.
Commandant, First WAC Separate Battalion, Fort Des Moines, Iowa, and Daytona Beach, Fla., October 1, 1942.
Army Air Corps WAC Staff Adviser, England and France, July 15, 1943.
WAC Staff Adviser, European Theater of Operations, Germany, July 16, 1945.
Chief, Civilian Employee Relations, Headquarters, U.S. Forces, European Theater, March 23, 1946.
Deputy Director, Women's Army Corps, Washington, D.C., June 20, 1946.
Director, Women's Army Corps, Washington, D.C., May 7, 1947.
J-1, Headquarters U.S. European Command, May 6, 1953.
Office of Secretary of Defense (Manpower, Personnel, and Reserve), Washington, D.C., May 1957.

AWARDS

Croix de Guerre avec l'Etoile de Vermeil, August 17, 1945.
Legion of Merit, June 29, 1945.
Oak Leaf Cluster to Legion of Merit, April 20, 1946.
Bronze Star Medal, November 14, 1944.
European-African-Middle Eastern Theater (EAME) Campaign Ribbon, July 20, 1943.
Women's Army Corps Service Medal, July 29, 1943.
Commendation Medal, May 31, 1946.
Commendation Ribbon with Metal Pendant (Oak Leaf Cluster), April 19, 1957.

PROMOTIONS

Second lieutenant, August 29, 1942.
Captain, December 23, 1942.
Major, January 1, 1944.
Lieutenant colonel, March 8, 1945.
Colonel, May 7, 1947.

CIVILIAN EXPERIENCE

Born in Lowell, Mass.
Taught school for 15 years.
Traveled summers in Europe, Near East, Latin countries, South America, Alaska, and the United States (for 16 summers).

IMPOSITION OF STATE USE TAXES ON INTERSTATE COMMERCE

Mr. DADDARIO. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Connecticut?

There was no objection.

Mr. DADDARIO. Mr. Speaker, I have today introduced a bill to limit the imposition of State use taxes on sales and other business activities in interstate commerce and to authorize a study by appropriate committees looking toward definitive regulation of this problem. Senator PRESCOTT BUSH is introducing a companion bill in the Senate.

This bill is prompted by the recent Scripto, Inc., against Carson decision of the Supreme Court—1960, 361 U.S. Manufacturers and businessmen in Connecticut have brought to my attention some of the repercussions this decision is likely to have in the growth and conduct of interstate commerce.

This new problem is similar to that posed by the Stockham Valves and Fittings, Inc., decision of a year ago. That case concerned the constitutionality of State net income taxes levied on foreign corporations. As a result, Congress, in its first session, enacted Public Law 86-272 halting such taxation and authorizing the Committee on the Judiciary of the House and the Committee on Finance of the Senate to make full studies leading to uniform Federal standards to be observed by the States.

My bill would amend this public law to bring the subject of sales and use taxes within the definition of such studies and to halt further imposition and collection of such use taxes until the studies are made.

I think we are all aware of the problems at all governmental levels in paying for the wide range of services and activities expected by their citizens. This need is growing with the population. The rapid growth in population, plus general increases in prices and living standards make it unlikely that the pressure for revenues will decrease. This pressure has already pushed State debt levels to new and sometimes record highs.

As a result, States have been casting about for new sources of revenues. The general property tax has long been inadequate to meet the major share of local expenditures. Today, few sources of revenue at the local level have been left untouched. The present principal sources of State tax revenues include sales, motor fuels, income, motor vehicle, liquor and tobacco taxes. And the States are still looking.

It was inevitable that they should come to activities conducted within their borders, but by out-of-State concerns. Like the popularity of tariff and customs duties, these revenues afford a source of income without the painful necessity of taxing residents, and if the ultimate cost

is borne by the consumer, it is not quite so obvious as a direct tax.

This does violence to the unity of the Nation, and to the concept under which our forefathers made this one free-trade territory, with no State barriers. We have, in recent decades, urged this course upon other nations, convinced that the larger the market, and the more freedom to develop it, the greater the benefits. We are seeing some fruitful results from this policy.

Yet we are doing damage to it at home as the States and other subdivisions, in their admitted need for revenue, approach interstate commerce. It could well be, as Mr. Justice Frankfurter warned, that all States of the Union would hasten to follow the policies of Minnesota and Georgia with respect to the imposition of State income taxes on out-of-State corporations, unless some minimum Federal standard is adopted. And the imposition of sales and use taxes on out-of-State sellers also offers new possibilities to harrass such commerce.

It is well within the power of Congress to relieve sellers who maintain no fixed establishment within a taxing State from the obligation of collecting use taxes imposed upon consumer residents from whom the sellers have solicited and filled orders. I believe such relief is justified.

For one thing, thousands of relatively small or moderate sized corporations doing exclusively interstate business spread over several States may be subject to such a tax. They could be required to keep books, make returns, store records, and engage legal counsel, all to meet the diverse and various tax laws of thousands of city and State taxing authorities. The problem is already tremendous, with many such authorities levying quarterly tax requirements, and is growing constantly.

For another, the Congress has been occupied over the years with many difficult and intricate problems affecting economic fields such as railroads, communications, and power which overlap State lines. Trying to devise formulas has proven a difficult and wearing task. The problem of the Scripto decision suggests that this could well spread to many other types of businesses if a Federal study is not now authorized. To quote from the dissent of Mr. Justice Frankfurter:

> The problem calls for solution by devising a congressional policy. Congress alone can provide for a full and thorough canvassing of the multitudinous and intricate factors which compose the problem of the taxing freedom of the States and the needed limits on such State taxing power (*Williams* v. *Stockham Valves & Fittings, Inc.* (358 U.S. 450)).

To me, the arguments of the Stockham case apply with equal pertinence to the Scripto case. Most likely to suffer under the Scripto dictum are the hundreds of thousands of small businesses, the smaller companies without the staff to process the required bookkeeping.

When this matter first came to my attention, at least five States were contemplating extended use of the sales tax field: Kentucky, Virginia, Colorado, Vermont, and Massachusetts. I fully appreciate the feeling at the State level that greater exploitation of tax sources is necessary. I believe, however, that we must sharply define now the limits of such taxation if we are to adhere to the constitutional concept of interstate commerce.

My bill would not prevent States from levying use taxes on resident consumers. It would free business from harassment, from paperwork, and from rigged formulas intended to favor local manufacturers against other Americans. It would meet the long standing judicial interpretation of the commerce clause that—

> The States * * * are not allowed "one single tax worth of direct interference with the flow of commerce."

I believe it is necessary legislation, preliminary to the establishment of a firm congressional policy on the limits of taxation.

SUPPORT LEVELS FOR MANUFACTURING MILK

Mr. JOHNSON of Wisconsin. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

Mr. JOHNSON of Wisconsin. Mr. Speaker, today I am introducing a bill to increase the support levels for manufacturing milk to $3.25 per hundredweight and to 60 cents per pound for butterfat. This modest increase would help assure an adequate supply of dairy products for our own domestic needs and for the very important job of feeding hungry people in nations abroad. While I would like to see dairy price supports returned to the 90 percent of parity level and feel that dairy farmers are entitled to this support price, I do not think it realistic to press for a higher figure at this time.

It is true that milk and butterfat have been selling above the present support price of $3.06 for milk and 56.6 cents for butterfat. However, with dairying going into the flush season, the price trend is again heading downward. In February of this year, farmers were receiving $3.26 for milk and 59.2 cents for butterfat. April figures show farmers receiving $3.17 for milk and 58.7 cents for butterfat.

For several years, the dairy industry has been faced with increasingly severe price and supply problems. Production has moved to new high levels, and domestic consumption has fallen off.

Mr. Speaker, income of dairy farmers has declined each year for the past 8 years, while farm operating costs have risen steadily, setting new records year by year. Under the regime of Secretary Benson and President Eisenhower, the support price for dairy products has been slashed from 90 percent to 77 percent of parity. During this same period, the prices received by farmers for their milk have dropped almost 25 percent, while the cost of family living items has gone up 6 percent. The result has been a devastating cost-price squeeze which has forced many hundreds of thousands of dairy farmers out of business. In some of the major dairy-producing areas, farm families have been putting in as much as 3,300 hours of labor a year and an investment of some $32,000 in plant and equipment to earn an hourly wage rate of 56 cents an hour.

The dairy industry is made up of some 1,200,000 farmers and over 10,200 creameries, milk-drying plants, condenseries, and other processing and distributing firms. These dairy plants are vital industries in their home communities, employing more than 250,000 workers and carrying an annual payroll of more than $500 million. They all make an important contribution to our national economy and deserve a fair return on their labor and investment.

Mr. Speaker, in these days of ever-increasing world tensions, we have a powerful instrument for good will in the products of our dairy farms. The children's milk program has been most successful in bringing nutritious milk to children in our own schools. But we have not licked the problem of the hungry and ill-fed people in our own country, and we have made only a beginning in sharing our food with the underprivileged peoples abroad.

The familiar CARE packages have brought nutrition and comfort to countless peoples in the free world. Schoolchildren in many foreign countries are learning what milk is through the school milk program operated under Public Law 480. We all remember too well the concern last November when the Department of Agriculture ran out of nonfat dry milk for oversea relief right at the height of the Christmas season of good will and giving to the needy.

I sincerely believe that the modest increase in support levels called for in this legislation would not only help provide a greater degree of economic stability to our dairy farmers, but would also help assure an adequate supply of healthful dairy products for schoolchildren and needy in both our country and overseas.

SACRILEGE BEHIND THE CLOAK OF ACADEMIC FREEDOM

The SPEAKER. Under previous order of the House, the gentleman from New York [Mr. DEROUNIAN] is recognized for 15 minutes.

Mr. DEROUNIAN. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and to include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. DEROUNIAN. Mr. Speaker, on or about April 13, past, one of my constituents, incensed by a recent humanities class assignment at the State University College on Long Island, at Oyster Bay, N.Y., gave me a copy of the poem that was the subject of the assignment by the instructor, Merrill G. Rodin.

Profoundly disturbed by the poem, I wired the Governor of the State of New York, the New York State Board of

Regents, the New York State Commissioner of Education, and the dean of the State University College on Long Island, asking an immediate investigation. The poem and my action are related in the following release from my office:

DEROUNIAN BLASTS BEATNIK SACRILEGE

Representative STEVEN B. DEROUNIAN, Republican, of New York, "shocked and greatly disturbed" that "under the guise of teaching the humanities" there was distributed to a class of the State University College on Long Island, at Oyster Bay, N.Y., a "cheap, tawdry, and insolent beatnik poem ridiculing and deriding the most solemn and sacred event in Christian belief—the crucifixion of Christ," has wired Governor Rockefeller, the New York State Board of Regents, the New York State Commissioner of Education, and the dean of the State University College of Long Island, asking an immediate investigation.

"Is such blasphemy part of the education the taxpayers are paying for?" the legislator asked.

"This is the kind of class assignment I would expect in a university in the Kremlin where it is taught that belief in God is an 'opiate.'" Congressman DEROUNIAN said. "All our efforts, everything we strive to accomplish in the United States is for one purpose—to build a better world for our children. Of what value are our labors if mandatory assignments in public schools arrogantly belittle and degrade Christianity? I resent this outrageous episode, as should every Christian."

"If there is a concentrated and planned effort to try to destroy Christian belief, under the guise of education, we should know it," DEROUNIAN stated, "so immediate corrective action can be taken."

The excerpt from "A Coney Island of the Mind: No. 5," distributed to the class in humanities, on or about April 5, for analysis and discussion on April 7, follows:

"A CONEY ISLAND OF THE MIND: No. 5

(By Lawrence Ferlinghetti)

"Sometime during eternity
Some guys show up
And one of them
Who shows up real late
Is a kind of carpenter
From some square-type place
Like Galilee
And He starts wailing
And claiming He is hep
To who made heaven
And earth
And that the cat
Who really laid it on us is his Dad.
And moreover
He adds
It's all writ down
On some scroll-type parchments
Which some henchmen
Leave lying around the Dead Sea somewhere
A long time ago
And which you won't even find
For a couple thousand years or so
Or at least for
Nineteen hundred and forty-seven
Of them
To be exact
And even then
Nobody really believes them
Or me
For that matter.
You're hot
They tell Him
And they cool Him.
They stretch Him on the Tree to cool
And everybody after that
Is always making models
Of this Tree
With Him hung up
And always crooning His name
And calling Him to come down
And sit in
On their combo
As if He is the king cat
Who's got to blow
Or they can't quite make it
Only He don't come down
From His Tree
Him just hang there
On His Tree
Looking real petered out
And real cool
And also
According to a roundup
Of late world news
From the usual reliable sources
Real dead."

Dean Leonard K. Olsen, State University College on Long Island, replied, and I wrote him further:

APRIL 19, 1960.

The Honorable STEPHEN B. DEROUNIAN,
Member of Congress, House of Representatives, Washington, D.C.

DEAR CONGRESSMAN DEROUNIAN: Your telegrams and statements concerning the content of a poem discussed in one of our humanities classes recently have prompted us to make an inquiry into the facts so that the circumstances can be made clear.

I am sure that you did not mean to infer that our college is antireligious, but I regret that we did not have an earlier opportunity to explain this matter and avoid any misunderstandings. It certainly was not the intention of any member of our instructional staff to offend any student or to deride his religious beliefs.

Perhaps we can best understand the event which occurred if we review the purpose of the humanities course at our college which is similar to basic humanities courses in other institutions.

The primary focus of the course is upon works which have won an established and recognized place in the tradition of great literature. These represent values set forth from a wide variety of points of view and modes of expression. Among authors studied for example are St. Thomas Aquinas, Lincoln, Shakespeare, Donne, Milton, Father Hopkins, Yeats, Plato, etc. The students have read such works as "God's Grandeur," by Father Gerard Manley Hopkins, Wordsworth's "Ode on Intimations of Immortality," and St. Thomas Aquinas' "Proofs for the Existence of God."

These works are not studied for themselves, simply, but also for the purpose of developing in the student the disciplined ability to understand and appreciate other comparable works which he will encounter elsewhere in college and in adult life. It is inevitable and desirable that many students will encounter positions with which they cannot agree, but it is the obligation of a university to inquire into and to examine impartially and broadly rather than protect students from views other than their own.

In following the purposes of a humanities course, the program in literature is not antireligious or partisan. The poem to which you refer is not included in the regular program, but was discussed in response to requests from students. In permitting discussion of the poem by an author whose works are not considered antireligious, the instructors assumed both the freedom and the responsibility which traditionally belong to a member of a university faculty. Students were afforded an opportunity to use their newly acquired skills of literary analysis on something considered modern and unconventional and to agree or disagree as they saw fit.

We appreciate your interest in the program and teaching at our college and will be glad to discuss them with you in detail at your convenience.

Sincerely,

LEONARD K. OLSEN,
Dean, State University, College on Long Island.

APRIL 26, 1960.

Dean LEONARD K. OLSEN,
State University,
College on Long Island,
Oyster Bay, Long Island, N.Y.

DEAR DEAN OLSEN: I appreciate your letter of April 19, which arrived while I was in California on committee business.

You have missed my point completely.

Apparently you do not agree with me that a faculty member of a tax-supported college should have, also, the attributes of common sense and judgment, in teaching his students.

I have no objections to the study of beatnik poetry but I do feel very strongly that a captive student audience should not be subjected to perverted proselytizing of the most sacred belief of Christianity. You have been quoted as saying that the poem in question is "deeply religious"; you must know that in the beatnik vocabulary words like "square" and "dead" are words of absolute derision.

Following your line of thought, pornography would be regarded as a respected art and worthy of discussion, in this light, by a class of freshmen students, because the teacher in charge so assigned it.

Sincerely yours,

STEVEN B. DEROUNIAN,
Member of Congress.

Newspapers reported that both the dean and instructor thought the poem "deeply religious," and the author was quoted in the April 19 issue of Newsday, as follows:

What the poem is saying is that the way the world acts, you'd think that Christ is dead and that's what it says. As far as I'm concerned, it is not blasphemous and does not have any blasphemous intent. I used hip language, sure, but I'm not making a parody of the Crucifixion just for the hell of it. All I'm saying is how the spirit of Christ ain't with us no more.

The voice of the people is expressed in this editorial, which appeared in the April 15 issue of the New York World-Telegram and the Sun:

SICK SACRILEGE

If the so-called beatniks of our time (in another day they'd have been called just bums) want to trudge through life unbathed, looking like unmade beds, mumbling their drab jargon and committing it to verse for their mutual commiseration, we suppose that's their business. The Nation has survived worse.

And if they choose to parody religious history with flip irreverence, we suppose that's also to be expected—and endured, and ignored.

But when an English teacher at the State university college at Oyster Bay devotes classroom time to a discussion—and apparently an admiring discussion—of a beatnik Crucifixion poem by an upper echelon San Francisco beatnik, that's just about too much. Christ, in this blank-minded verse, is described as "kind of a carpenter from some square-type place like Galilee." It gets progressively worse, such as "Him just hang there on His tree looking real petered out and real cool."

That's enough. To quote further from this sick sacrilege would be inappropriate on Good Friday.

A girl in one of the classes complained to her parents about this. Word reached her

Congressman, then Albany, and an investigation was on.

We say that any faculty member who provides a forum for sacrilegious trash is unfit for his post.

And what an ironic counterpoint to the barring of even a nondenominational prayer in a public-supported school.

His Excellency, Walter P. Kellenberg, D.D., bishop of Rockville Centre, a distinguished leader of Christianity, has written me:

MAY 11, 1960.

The Honorable STEVEN B. DEROUNIAN,
Congress of the United States,
House of Representatives, Washington, D.C.

DEAR CONGRESSMAN DEROUNIAN: Thank you for your very cordial letter of April 26, 1960, enclosing an excerpt from "A Coney Island of the Mind: No. 5," together with a copy of your comments and evaluation of it.

May I state unequivocally that I concur fully with your reaction to this blasphemous mockery and your request for immediate corrective action.

I have invited the comments of five members of my faculty of St. Pius X Preparatory Seminary and I quote the consensus of opinion: "Whatever the intentions of the author might have been, the work he produced lacks both reverence and good taste.

"Religious truths can be conveyed even to children's minds provided that the teacher presents this sacred doctrine with the reverence it merits. This author presented a sublime truth irreverently.

"No one here thought the work had any literary merit. It seems that the author was trying to make up for lack of insight by originality of language. The result achieved shows confusion of ideas and forced artificiality of expression.

"It is extremely blasphemous and certainly most insulting to the sacred religious belief of millions of God-fearing and God-loving Christians throughout the world."

May I commend you for the action you have taken in this regard.

Very sincerely yours,

WALTER P. KELLENBERG, D.D.,
Bishop of Rockville Centre.

An investigation by the State University of New York is continuing, despite efforts to sweep under the rug of "academic freedom" this disgraceful episode in education, as indicated in Dean Olsen's letter.

It should be increasingly clear to all thoughtful and fair-minded educators that if we are to preserve our Nation and our way of life, we need above all harmony among our citizens and the respect of each for the rights and beliefs of others and to attain the same we must train our young people in such respect for such rights and such beliefs. I am forcibly reminded of Judge Learned Hand's words:

A society in which men recognize no check upon their freedom soon becomes a society where freedom is the possession of only a savage few, as we have learned to our sorrow.

FEDERAL NATIONAL MORTGAGE ASSOCIATION

Mr. MCCORMACK. Mr. Speaker, I aks unanimous consent that the gentleman from Alabama [Mr. RAINS] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. RAINS. Mr. Speaker, on May 10 I introduced H.R. 12153, which provides, among other things, for several amendments to the Federal National Mortgage Insurance Association, designed to permit that agency to serve more effectively its statutory objectives. This bill will be the subject of public hearings before the Subcommittee on Housing beginning May 16.

On Friday, I introduced, by request, another bill on the subject, which also relates to the Federal National Mortgage Association. This bill represents the study and efforts of the National Association of Real Estate Boards, the National Association of Home Builders, and the Mortgage Bankers' Association. Representatives of these three trade associations have held several meetings, and there appears to be general agreement that the changes proposed in this legislation will provide additional sources of mortgage money.

I introduced this bill in order that the subcommittee, representatives of these three associations, Housing Agency officials, and others may direct testimony toward its provisions.

While I have introduced legislation relating to the Federal National Mortgage Association, I am, of course, not wedded to specific amendments. Certainly the combined efforts of these three associations are deserving of serious study by the Subcommittee on Housing.

THE CHICAGO TRIBUNE ENDORSES "HIGHLY IMPORTANT" CHEMICAL PESTICIDES BILL, H.R. 11502, INTRODUCED BY REPRESENTATIVE LEONARD G. WOLF, OF IOWA

Mr. MCCORMACK. Mr. Speaker, I ask unanimous consent that the gentleman from Michigan [Mr. DINGELL] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. DINGELL. Mr. Speaker, in its editorial of May 10 the Chicago (Ill.) Tribune called the chemical pesticides coordination bill, H.R. 11502, introduced by Representative LEN WOLF, of Iowa, "little noticed but highly important." This bill was recently considered by the Fish and Wildlife Subcommittee of the Merchant Marine and Fisheries Committee, of which I am a member.

His sponsorship of this desperately needed legislation is an excellent example of the keen mind of LEN WOLF and his constant delving deep below the surface to discover ways in which he can protect and fight for the public interest.

The chemical pesticides bill is just one of many fine examples of the splendid contribution which LEN WOLF is making in the Congress of the United States in the interest of all of the people.

I met LEN WOLF on his first day in Congress and since that day have always been impressed by his dynamic fighting spirit which has so greatly influenced so much of the significant legislation before Congress.

Few freshmen in the history of Congress have made as great an impact on the legislative activity of this great body. Few freshmen are better known, better liked, or more respected by their colleagues. Let us hope that LEN WOLF will be returned to Congress again and again to continue his hard work and leadership on behalf of the people, and his great contribution to Government.

Under unanimous consent I insert into the body of the RECORD at this point the Chicago Tribune editorial referred to:

TOO MUCH POISON

The House Subcommittee on Fisheries and Wildlife Conservation has just concluded hearings on a little noticed but highly important bill introduced by Representative LEONARD G. WOLF of Iowa. His proposal, called the Chemical Pesticides Coordination Act, is a moderate and sensible move to impose some restraint upon the enthusiastic pesticide spreaders of the Department of Agriculture.

WOLF'S bill provides that no Federal agency shall embark on chemical biological controls without first consulting with the United States Fish and Wildlife Service and the corresponding State agencies in the areas involved. Exceptions may be made by the Secretary of the Interior for projects of demonstrably little danger to wildlife. The Fish and Wildlife Service is authorized to report to Congress if its advice is disregarded.

The most striking example of the need for such legislation has been the fire-ant control program in the Southeastern States. Here 10 to 12 million dollars, most of it Federal money, has been spent to kill an imported insect which the National Wildlife Federation has called "a nuisance, but nothing more." Yet the Plant Pest Control Division of the Department of Agriculture dosed tens of thousands of acres with 2 pounds per acre of heptachlor or dieldrin. The dosage was so destructive of wildlife that the pest control sprayers retreated to two applications of one-fourth pound per acre, spaced 3 or 4 months apart.

The fire-ant poison campaign was so potent that residents in affected areas were advised to keep children off the ground for days, to cover their gardens, and to keep milk cows out of pasture for a month. In one area in Texas, bird populations were reduced 85 percent. In 9,900 acres in Alabama, the quail population was down 88 percent.

On Long Island, prominent citizens including Robert Cushman Murphy, the ornithologist, and Archibald B. Roosevelt sought an injunction against Department of Agriculture spraying against the gypsy moth. While their suit was pending, the contested spraying was done. Because the Government said it did not intend to repeat the dosage at that place, the court of appeals held the question moot. There is no existing legal barrier to keep a demonstrably irresponsible agency from dumping any amount of poison it pleases into anyone's backyard.

Dr. George J. Wallace of the Michigan State University faculty, who has seen robins eliminated from his campus after tree spraying, has stated, "The current widespread and ever-expanding pesticide program

poses the greatest threat that animal life in North America has ever faced—worse than deforestation, worse than market hunting and illegal shooting, worse than drainage, drought, or oil pollution, and possibly worse than all of these decimating factors combined."

Since human beings are bigger and hardier than birds and fish, the toxic effects of pesticides on man are less evident. Robins get the tremors and keel over dead in areas where people are not visibly affected. But even small amounts of poison are not good for the health. The Pure Food and Drug Administration has declared a zero tolerance in human foods for heptachlor, used in the fire-ant program. The National Cancer Institute has listed DDT and other pesticides as carcinogens, and has incriminated some of the petroleum products in which the pesticides are often dissolved.

Certainly chemical poisons are dangerous materials to spread about wholesale. Ill considered applications of these poisons have been made before now, and will be made again and again unless measures are taken to prevent it.

A MATTER OF PRECEDENT

The SPEAKER. Under previous order of the House, the gentleman from West Virginia [Mr. BAILEY] is recognized for 10 minutes.

Mr. BAILEY. Mr. Speaker, on Wednesday of this week the House will have before it a modest proposal from the Committee on Education and Labor to authorize a program of Federal financial assistance to the States for classroom construction.

During the debate we shall hear the tired old argument that such a program does violence to our traditional concept of educational finance; that the Federal Government has no responsibility to public education.

Mr. Speaker, this argument is not only tired and trite, it is completely invalid, as a look at the record will indicate. The record is documented in detail in a study on Federal educational policies, programs, and proposals, prepared by the Legislative Reference Service of the Library of Congress, by Charles A. Quattlebaum, and published as a committee print by the Committee on Education and Labor. My remarks from this point forward rely largely upon extractions from this study.

The Federal Government's interest in, and financial responsibility for, public education predates the Constitution. In 1785 an ordinance, adopted by the Congress of the Confederation for the disposal of public lands in the Western Territory, reserved one section of every township for the endowment of schools within that township. Two years later, in the Ordinance of 1787 providing for the government of the Northwest Territory, the Congress made the clear declaration of policy that "religion, morality, and knowledge being necessary to good government and the happiness of mankind, schools and the means of education shall forever be encouraged."

Federal responsibility to public education has been assumed since the beginning of our present Government under the Constitution.

President George Washington, in his first annual address to Congress said:

> There is nothing more deserving your patronage than the promotion of science and literature. * * *
>
> Whether this desirable object will be best promoted by affording aids to seminaries of learning already established, by the installation of a national university, or by any other expedients will be well worthy of a place in the deliberations of the Legislature.

Alexander Hamilton, a patron saint of today's conservatives, held that whatever concerned the general interests of learning was within the Federal jurisdiction "as far as regards an application of money."

The great Thomas Jefferson, a patron saint of today's liberals, held that Congress could appropriate public lands for the support of education, and in 1806 he proposed to use import duties for education, among other public improvements.

Most new States admitted to the Union subsequent to 1789 were first organized as Territories by the Congress. In so doing, Congress established a school system which was taken over by the new State upon its admission. Thus, the Federal Government itself is responsible for the very existence of public school systems of a large number of States.

During the administration of President Andrew Jackson, in 1836, and nobody will deny that he was one of the patron saints of the liberals, the Government found itself with a surplus of $47 million in the Treasury. Congress passed a law allocating this money to the 38 States that were then members of the Union to use that money for the purpose of constructing school buildings. All of the 38 States accepted the Government appropriation and used the money to build school buildings. I make the point, therefore, that we are not setting a precedent by proposing that the Government spend money for school classroom construction. That precedent was set as early as 1836.

This grant was not an isolated case. During the first part of the last century, Congress made many monetary grants, principally from the sale of public lands, which were frequently used to support education. In most instances the land and monetary grants were for education in general. It has been pointed out that funds from such grants were the sources of the first stable support for free schools in more than half of the States.

During the depression years, the Federal Government spent many hundreds of millions of dollars on educational projects, ranging from literacy classes, nursery schools, to building construction grants and loans.

President Herbert Hoover appointed the National Advisory Committee on Education in 1929. Its mission, as stated by President Hoover on December 3, 1929, in his message to Congress, was to "investigate and present recommendations" relative to Federal policy with respect to education.

This committee made its report in 1931. It said it found in the Constitution 14 warrants for Federal activities in education.

It is significant that none of these provisions authorizes the Federal Government to exercise any control over State and local school systems. Neither H.R. 10128, nor any other bill which I have endorsed, or ever will, authorizes any such control. This finding by President Hoover's handpicked committee makes more valid our contention that the Federal Government may provide financial support to public education without imposition of Federal controls. It is within the pattern suggested by Alexander Hamilton.

In fact, if anything might be construed as unconstitutional, it would be Federal control, but certainly not Federal assistance.

It is interesting to note that this earlier Hoover Commission found that there are national responsibilities for education which only the Federal Government can adequately meet. The American people, the report said, are justified in using their Federal tax system to give financial aid to education in the States.

It is extremely significant, in view of the position taken today by General Eisenhower, that this committee appointed by an earlier Republican President found that to require the matching of Federal money grants with State or local funds is an undesirable policy in the field of education.

In 1936, President Franklin D. Roosevelt appointed an Advisory Committee on Education to consider the whole matter of Federal-State-local relationships in education.

In essence, this committee found that past Federal participation in education has been required by the fact that locally supported programs of education have never been adequate to accomplish all vital national purposes. Their relative inadequacy is increasing, not because the local programs do not improve but because they do not improve rapidly enough to meet increasing needs.

The ability of the States and local communities to provide education has always been unequal. That inequality has been magnified, however, by the recent great changes that have taken place in social and economic conditions. At the same time, education has become increasingly important.

In providing funds to more nearly equalize educational opportunity, the more efficient taxes are the Federal taxes on incomes and estates. These taxes are collected chiefly in the richer areas, where the resources available to local taxation are more than adequate for the support of schools. There are definite limits on the extent to which any individual State can use taxes based upon ability to pay, such as the income and estate taxes. These are the taxes which, above all others, should be used to provide funds for equalization purposes. They can be applied effectively on a large scale only by the Federal Government.

This committee recommended a broad program of Federal assistance, including

general aid to elementary and secondary education.

The Congress, in an act dated June 7, 1939, established the National Resources Planning Board. Part I of its report for 1943, entitled "Postwar Plan and Program" recommended that equal access to elementary and high school education be made available to all children and youth. The NRPB also recommended that most of the increases in expenditures for education in the postwar period must be financed principally, if not entirely, by Federal funds.

The first Hoover Commission on Organization of the Executive Branch of the Government, appointed by President Harry S. Truman in accordance with an act of Congress, was concerned primarily with administrative procedures. The Task Force on Public Welfare, however, observed that past aid programs had been beneficial, that the argument that Federal aid would lead to Federal control was only a screen to make other reasons for opposing Federal aid, and that Federal financial assistance and leadership of a noncoercive nature, while leaving basic control of and responsibility for education as a State and local function, is desirable.

These observations were made in connection with recommendations to coordinate all programs within the Office of Education.

The second Hoover Commission on Organization of the Executive Branch of the Government, appointed by President Eisenhower, had a stated primary purpose to seek reductions in expenditures. Its recommendations were concerned only with then existing programs.

Meanwhile, President Eisenhower also appointed a Commission on Intergovernmental Relations, headed first by Clarence E. Manion and later by Meyer Kestnbaum. This Commission suggested shrinking existing programs, and opposed further Federal activity. No criticism was made on the grounds of Federal control.

President Eisenhower called a White House Conference on Education, which was concluded during late November 1955. This conference agreed that the Federal Government should increase its financial participation in public education.

Most recently there was a White House Conference on Youth, called by President Eisenhower. This conference, by resolution, also called for Federal financial assistance for public education.

Mr. Speaker, the record is quite clear; the Federal Government has been concerned with public education since before the Constitution; and has supported education with grants of money and land since its beginning.

Two early day leaders—Hamilton and Washington—who were members of the Constitutional Convention, recognized a Federal responsibility to education and proposed financial support.

Jefferson, the strict constructionist, who was responsible for the first 10 amendments proposed Federal financial assistance to the States. It might be well to remind Members that the 10th amendment is the one most quoted by those who oppose adequate financial support for public education; yet its author, Jefferson, favored programs of Federal financial assistance to education.

Such conservatives as Hamilton and the late Senator Robert A. Taft have favored the proposition. A bill passed by the other body had Senator Taft's cosponsorship.

Committees and commissions appointed by Presidents Hoover, Roosevelt, and Truman, and conferences called by President Eisenhower have not only recommended programs of Federal financial assistance, but one committee found 14 warrants in the Constitution to support the proposition.

The Federal Government is itself responsible for the establishment of public school systems in the majority of the 37 States admitted to the Union after the original 13. Grants of land and money gave first stability to the financial foundation of public schools in more than half of the States.

The record shows that Federal financial assistance to public education is traditional, constitutional, and without Federal control.

This makes the issue clear cut. When we vote on a school bill, we either vote for our boys and girls or we vote against them.

We either want good education, or we do not.

FEDERAL AID TO EDUCATION

Mr. HECHLER. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

Mr. HECHLER. Mr. Speaker, the aid-to-education bill to which my distinguished colleague [Mr. BAILEY] has just referred is, to my mind, the most important piece of legislation to come before this session of Congress. Our strength as a nation, both now and in the future, rests on a well-educated populace. There once was a time when education was necessary to make democracy work, to strengthen our economy, and to guarantee that America maintained her forward surge of progress. I say that today all of these things are just as essential, but today the very survival of our Nation rests on expanding our educational system.

I am gratified that my beloved colleague, the indomitable dean of our West Virginia delegation, has made this statement today. He has effectively demolished the opposition arguments against aid to education. He has stated the positive benefits which will accrue from the bill which will be considered on Wednesday. I pay tribute to CLEVE BAILEY, who has fought so hard and so courageously down through the years so that America's most precious resource—her children—receive the education they deserve, and from which the Nation will profit.

I hope and trust that when this body convenes on Wednesday the Members will consider their solemn obligation to the future and, within the dictates of their conscience, will support this compromise bill which will play a major role in our survival as a free nation.

MIAMI-JACOBS BUSINESS COLLEGE, DAYTON, OHIO

Mr. SCHENCK. Mr. Speaker, I ask unanimous consent to address the House for 10 minutes and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. SCHENCK. Mr. Speaker, it gives me great pleasure to share with you and my fellow Members of the House of Representatives the pride we in the Third Congressional District of Ohio feel in a college that is this year rounding out a century of educating young men and women for business pursuits. It is the Miami-Jacobs Business College, founded in Dayton, Ohio, in 1860, a year when the now heavily populated industrial metropolis boasted of a total of 20,000 residents. Our city, even then, was showing signs of rapid growth in the field of invention, manufacturing, and commercial enterprises of all kinds and it was in this atmosphere that Edwin D. Babbitt opened his one-room Miami Commercial School. Higher education at the university level was a privilege enjoyed by a select few from the wealthier families and many ambitious youths were glad to take advantage of this type of training for the office jobs arising in the community.

We have come a long way from the days when a commercial school prepared its students to write a good hand and keep the books. In 1865, one of the school's more successful students, A. D. Wilt, took over as its president and for 52 years he dedicated himself to developing a new type of business education, replacing the old emphasis on the mere mechanics of office routine and accounting with good, basic business principles, methods, and management.

Throughout the years of its existence since 1860, this college has shown a steady and remarkable growth. It merged with another excellent business school in the city, headed by a man from Pennsylvania, H. L. Jacobs, and it was then that it became known as the Miami-Jacobs Business College. From 1916 to 1954 the college flourished under the presidency of William E. Harbottle, and became one of the leading schools of its kind in the country. The curriculum has gradually broadened in scope; the school now has its own fine building in the heart of the downtown business district of the city; it is fully equipped with the most modern machines and facilities; and its teachers are competent, dedicated individuals eager to give their students the most comprehensive education possible during the 2 years required for obtaining a junior college degree. It is one

of 24 such colleges recognized by the U.S. Office of Education as an approved, accredited agency for this type of higher education. Charles Harbottle succeeded his father to the presidency in 1954 and he has continued to maintain the school's high ideals and its reputation as one of the most progressive educational institutions for business training in the country.

One of the most vital and necessary bulwarks of our country's defense in these critical times is economic productivity. Another is, of course, the education of our youth in all areas of learning. Miami-Jacobs is meeting both these needs by furnishing the industries of the area with the finest type of employees drawn from the ranks of its graduates. At this point in the school's long and remarkable history, its 100th anniversary, I congratulate its administrators, its teaching staff, and all its students and alumni fortunate enough to have had the advantage of its influence and training in good business techniques and administration.

A BILL PROVIDING DOLLARS FOR EDUCATION WITHOUT ANY FEDERAL DIRECTION OR CONTROL

Mr. PELLY. Mr. Speaker, I ask unanimous consent to address the House for 10 minutes, to revise and extend my remarks, and to include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Washington?

There was no objection.

Mr. PELLY. Mr. Speaker, according to the announced schedule, H.R. 10128, the so-called Thompson bill for school construction, will be called up this week under the Calendar Wednesday rule.

I oppose any legislation for an expanded program of aid to education which could involve control and eventual domination of our public school system by the Federal Government. But my interest in providing quality education is second to none. In this latter connection, many competent witnesses have testified that the Federal Government must assume a greater share of the financial support of schools.

There may be an emergency, but first things should come first, and the more important decision at this time is not with regard to the Nation's classroom shortage nor the adequacy of teachers' salaries. Our first job, as I see it, is to establish a method which would absolutely assure that if financial assistance is rendered it would entail no Federal controls or any opening wedge which could lead to diminishing of local responsibility and authority for the administration and type of education available to the children of America. Any system of aid must be foolproof. Priority should be given the question of how to help, not how much to help.

Can anyone who has studied the history of our Government and has witnessed the expansion of our Federal bureaucracy not recognize that under a program of general Federal aid to schools local control would inevitably be relinquished? Can anyone study education in Japan, Germany, and Italy prior to World War II and not find that centralized control of education is dangerous? The Soviet Union today uses its school system to mold its youth to Communist Party doctrine and control. So it could be here in America.

Therefore, I have taken the firm position that if assistance is necessary it should be in the form of encouragement to the individual States without any strings.

The legislatures and local school authorities must retain the basic right to finance and control its own educational system without any Federal direction or dictation.

The current effort to secure from the Congress funds for public education includes H.R. 22, the so-called Murray-Metcalf bill for school construction and teachers' salaries. It would provide $1.1 billion for fiscal 1960 and each of 3 succeeding years. There will be an attempt, as I understand, during House consideration of the Thompson school construction bill under the Calendar Wednesday rule to substitute the Murray-Metcalf provisions so as to include teachers' salaries.

To me this bill has nose under the tent Federal controls and besides, of course, any such move is a disservice to education because if such a bill went to the President, most certainly it would be vetoed and that would not help the schools.

Another school measure is S. 8, a construction and teachers' salaries bill, which passed the Senate and would provide $916 million the first year. That bill contains the same implications as H.R. 22 and if passed would meet the same fate because both of these bills are opposed by the administration and besides, as I said, contain provisions which could lead to diminished local responsibility.

Another likely supposition is that an attempt will be made to substitute the provisions of what is called the administration's proposal. Under this legislation the Federal Government would pay half of the debt service charges, the principal and interest, on school bond issues in needy districts to provide the cost of new school buildings.

Such a program would be easy on the budget momentarily but my preference would be for a plan which would be free from any threat whatsoever of toe-in-the-door approaches and keeping the Department of Health, Education, and Welfare completely out of the situation.

I have introduced just such legislation. Unfortunately, there is a question as to whether it would be germane and as such, as a substitute for the Thompson school construction bill, on a point of order I may be prevented from offering it as an amendment.

My proposal nevertheless has great merit because it embraces, in my opinion, the one system of assisting schools in which danger of Federal control is completely absent. My bill contains the one method, and possibly the only one, which could draw support from certain Members of Congress from States which under other bills would contribute to the cost but receive little or no benefit and thereby my bill could represent the only legislation of all the bills which could be enacted into law.

My bill would return to the respective States for education three-quarters of the Federal cigarette tax collected by the Federal Government. There would be no Federal agency, or employees, or red-tape involved. There would be only 50 checks each year to 50 States from the Treasurer of the United States to the respective State treasurers. The total disbursement would be approximately $1 billion, and the distribution to each State would be in the same ratio to the total as each State's school-age population bears to the total school-age population of all the States.

My bill then would strengthen State finances so each State itself would be better able to provide an adequate education to every child residing in that State.

The bill clearly declares that responsibility for and over education as set forth by the 10th amendment of the Constitution is reserved to the States. However, in accordance with the Ordinance of 1787 adopted by the Confederation Congress, the bill reaffirms that education shall forever be encouraged.

That is the spirit and essence of H.R. 12093, which I would like to substitute for the Thompson bill. I hope it will not be ruled out on a point of order. But if I am prevented from offering it as an amendment, and if the other measures fail, then I hope consideration will be given to my bill.

Meanwhile, for the information of interested friends of the public schools and those who desire to assure a quality education to every child, I include the text of my bill, and following that I offer a tabulation showing the estimated amount of funds which would be returned to each State.

H.R. 12093

A bill to strengthen State governments, to provide financial assistance to States for educational purposes by returning a portion of the Federal taxes collected therein, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) the Congress hereby finds and declares that responsibility for and control over education is one of the powers not delegated to the United States but reserved to the States or to the people under the tenth amendment to the Constitution.

(b) The Congress hereby reaffirms and reenacts a portion of article III of the Ordinance of 1787, adopted by the Confederation Congress, July 13, 1787, as follows: "Religion, morality, and knowledge being necessary to good government and the happiness of mankind, schools and the means of education shall forever be encouraged."

(c) The Congress further finds that continued encouragement of the means of education requires the strengthening of State governments.

SEC. 2. (a) There is hereby authorized to be appropriated out of any money in the

Treasury not otherwise appropriated, for the fiscal year beginning July 1, 1960, and for each fiscal year thereafter, to each State, to be used by such State for any current expenditure for elementary or secondary school purposes for which educational revenues derived from State or local sources may legally and constitutionally be expended in such State, an amount equal to 75 per centum of the Federal tax on cigarettes (computed as provided in this Act).

(b) For the purposes of this section the term "State" includes the District of Columbia.

SEC. 3. The Secretary of the Treasury shall allot for each fiscal year to each State, from the total amount appropriated for such year pursuant to section 2, an amount which bears the same ratio to such total as such State's school-age population bears to the total school-age population of all the States.

Number of pupils enrolled in full-time public elementary and secondary schools, together with estimated Federal allotments for educational purposes to individual States under H.R. 12093

TWENTY-FIFTH ANNIVERSARY OF REA

Mr. PRICE. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. PRICE. Mr. Speaker, we had an unusual anniversary on Wednesday last—the 25th anniversary of the establishment of the Rural Electrification Administration on May 11, 1935.

The bare statistics of the achievements of the REA are impressive. If we try to list them, they turn out to be lengthy. Even in summary form they reveal what can be done through the active and informed operations of a Government agency working intelligently with the people to help meet the needs of people.

When the REA was started a quarter of a century ago, fewer than 10 percent of America's farmers enjoyed the blessings of electricity. Today, more than 96 percent of the farms are electrified.

This means higher production. A farmer with modern machinery can handle his cattle, his dairy herds, his silage, his feeding and cleaning problems more cheaply and more efficiently.

Electrification also means comfort and leisure. A farm wife in the pioneer days may be a romantic figure as we look back through the lens of fiction, but her life was hard and rigorous. When the day came that she could buy soap instead of making her own, she still had to get her meals and clean her house by drudgery. The daily chores were a grinding burden on her family.

There is electricity in the homes of the farm wives today, and they have vacuum cleaners and food freezers and electric stoves. Most of the back-breaking chores are performed by power-driven mechanisms. There is television and radio. There is a different light on the land.

What has been responsible for this vast change? It has been, very plainly, the result of a decision made to create the REA and to use Federal Government money to furnish the capital needed to take electricity to the farm.

This Government money, let it be remembered, has been furnished in the form of loans—not gifts. The farmers got access to a system whereby they were encouraged to organize cooperatives and let the co-ops borrow Federal money to create electric systems and then repay the Government, with interest, out of the earnings.

The system has worked. It has been one of history's most remarkable achievements.

As a Member of this House, it is a matter of pride to me to realize that the creation of the Rural Electrification Administration was underwritten by Congress and given statutory sanction.

The REA was created by Franklin D. Roosevelt in 1935, in an Executive order based upon an emergency relief law. Many of our people today cannot recall what the depression was like—what mass joblessness was and what daring steps were needed to help overcome the depression and lay the foundations for a better society.

After President Roosevelt set up the REA, it was given a permanent status by act of Congress. It has become an institution in our land.

I confess I do not understand the attitude of mind that has placed the REA under attack in the last several years by those who would rather quibble about alleged flaws than recognize the solid accomplishment. It is sufficient to observe that the attack has occurred—that REA interest rates, for example, are called "too low" by doctrinaires who cannot bring themselves to acknowledge good in what the Federal Government did when it was infused with an active desire to serve the general welfare.

The attacks have been beaten back, and I am sure they will be beaten back as often as necessary in the future.

I salute the REA. It has spread good across the land, and we pay our tribute to those who built well before us when we celebrate the anniversary of the great work they set in motion.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. THOMPSON of New Jersey (at the request of Mr. GEORGE), for today, May 16, on account of official business.

Mr. SHORT (at the request of Mr. ARENDS), for week of May 16, on account of death in his family.

Mr. DURHAM (at the request of Mr. FOUNTAIN), for 10 days, on account of illness in the family.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. DEROUNIAN, for 15 minutes, today.

Mr. BAILEY, for 10 minutes, today.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the CONGRESSIONAL RECORD, or to revise and extend remarks, was granted to:

Mr. DORN of South Carolina and to include extraneous matter.

Mr. ASPINALL and to include extraneous matter.

Mr. LANE and to include extraneous matter.

Mr. ALLEN and to include extraneous matter.

Mr. SAYLOR and to include extraneous matter.

Mr. RABAUT.

Mr. PHILBIN.

Mr. ALGER.

Mr. PUCINSKI in three instances.

(At the request of Mr. MCCORMACK, and to include extraneous matter, the following:)

Mrs. GRIFFITHS.

(At the request of Mr. ROBISON, and to include extraneous matter, the following:)

Mr. ARENDS.

SENATE BILL REFERRED

A bill of the Senate of the following title was taken from the Speaker's table and, under the rule, referred as follows:

S. 910. An act to authorize the payment to local governments of sums in lieu of taxes and special assessments with respect to certain Federal real property, and for other purposes; to the Committee on Interior and Insular Affairs.

ENROLLED JOINT RESOLUTION SIGNED

Mr. BURLESON, from the Committee on House Administration, reported that that committee had examined and found truly enrolled a joint resolution of the House of the following title, which was thereupon signed by the Speaker:

H.J. Res. 602. Joint resolution authorizing the President to proclaim the week in May of 1960 in which falls the third Friday of that month as National Transportation Week.

BILLS AND JOINT RESOLUTION PRESENTED TO THE PRESIDENT

Mr. BURLESON, from the Committee on House Administration, reported that that committee did on May 14, 1960, present to the President, for his approval, bills and a joint resolution of the House of the following titles:

H.R. 1607. An act for the relief of Mrs. Anne Morgan;

H.R. 8042. An act to authorize the Secretary of Commerce to resell any two of four C1–SAY–1 type vessels to the Government of the Republic of China for use in China trade in Far East and Near East waters exclusively;

H.R. 9449. An act to amend certain sections of title 14, United States Code, relating to personnel matters in the U.S. Coast Guard, and for other purposes;

H.R. 10474. An act to authorize construction of modern naval vessels;

H.R. 11510. An act to amend further the Mutual Security Act of 1954, as amended, and for other purposes; and

H.J. Res. 352. Joint resolution to authorize preliminary study and review in connection with proposed additional building for the Library of Congress.

ADJOURNMENT

Mr. HECHLER. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 1 o'clock and 39 minutes p.m.) the House adjourned until tomorrow, Tuesday, May 17, 1960, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

2146. A communication from the President of the United States, transmitting an amendment to the budget for the fiscal year 1961 involving an increase in the amount of $32,500,000 for the Atomic Energy Commission (H. Doc. No. 387); to the Committee on Appropriations and ordered to be printed.

2147. A letter from the Secretary of the Army, transmitting a letter from the Chief of Engineers, Department of the Army, dated March 11, 1960, submitting a report, together with accompanying papers and an illustration, on a survey of Gleason Creek, Robinson watershed, at and in the vicinity of Ely, White Pine County, Nev., authorized by the Flood Control Act approved May 17, 1950 (H. Doc. 388); to the Committee on Public Works and ordered to be printed with one illustration.

2148. A letter from the Assistant Secretary of the Navy (Material) relative to a proposal by the Department of the Navy to transfer *Flamingo* (MSCO–11), to Jansen-Richardson Post No. 488 of the American Legion, Ellsworth, Mich., pursuant to title 10, United States Code, section 7308; to the Committee on Armed Services.

2149. A letter from the Secretary of the Interior, transmitting a draft of proposed legislation entitled "A bill to authorize the use of surplus grain by the States for emergency use in the feeding of resident game birds and other wildlife, and for other purposes"; to the Committee on Banking and Currency.

2150. A letter from the Administrator, General Services Administration, transmitting a report on the progress of the liquidation of the national defense, war and reconversion activities of Reconstruction Finance Corp., to comply with the provisions of the RFC Liquidation Act (Public Law 163, 83d Cong., 67 Stat. 230, 231), as amended, and with Reorganization Plan No. 1 of 1957 (22 F.R. 4633); to the Committee on Banking and Currency.

2151. A letter from the Assistant Secretary of the Interior, transmitting a draft of proposed legislation entitled "A bill to supplement and amend the act of June 30, 1948, relating to the Fort Hall Indian irrigation project, and to approve an order of the Secretary of the Interior issued under the act of June 22, 1936"; to the Committee on Interior and Insular Affairs.

2152. A letter from the Director, Administrative Office, U.S. Courts, transmitting a report of statistical tables reflecting the business transacted by the bankruptcy courts and other pertinent data for the fiscal year ending June 30, 1959, pursuant to section 53 of the Bankruptcy Act (11 U.S.C. 81); to the Committee on the Judiciary.

2153. A letter from the Attorney General, transmitting a draft of proposed legislation entitled "A bill to amend section 507 of the Classification Act of 1949, as amended, with respect to the preservation of basic compensation in downgrading actions"; to the Committee on Post Office and Civil Service.

2154. A letter from the Secretary of the Army, transmitting a letter from the Chief of Engineers, Department of the Army, dated March 10, 1960, submitting a report, together with accompanying papers and an illustration, on the economic justification of Wilson Dam and Reservoir, Saline River, Kans., in response to an item in Public Law 505, 84th Congress, 2d session, approved May 2, 1956; to the Committee on Public Works.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, pursuant to the order of the House of May 12, 1960, the following bills were reported on May 13, 1960:

Mr. SHEPPARD: Committee on Appropriations. H.R. 12231. A bill making appropriations for military construction for the Department of Defense for the fiscal year ending June 30, 1961, and for other purposes; without amendment (Rept. No. 1606). Referred to the Committee of the Whole House on the State of the Union.

Mr. NORRELL: Committee on Appropriations. H.R. 12232. A bill making appropriations for the legislative branch for the fiscal year ending June 30, 1961, and for other purposes; without amendment (Rept. No. 1607). Referred to the Committee of the Whole House on the State of the Union.

Under clause 2 of rule XIII, pursuant to the order of the House of May 12, 1960, the following bill was reported on May 14, 1960:

Mr. SPENCE: Committee on Banking and Currency. S. 2611. An act to amend the Small Business Investment Act of 1958, and for other purposes; with amendment (Rept. No. 1608). Referred to the Committee of the Whole House on the State of the Union.

[*Submitted May 16, 1960*]

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mrs. PFOST: Committee on Interior and Insular Affairs. S. 1214. An act to amend the act of March 11, 1948 (62 Stat. 78), relating to the establishment of the De Soto National Memorial, in the State of Florida; with amendment (Rept. No. 1609). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, pursuant to the order of the House of May 12, 1960, the following bills were introduced May 13, 1960:

By Mr. SHEPPARD:

H.R. 12231. A bill making appropriations for military construction for the Department of Defense for the fiscal year ending June 30, 1961, and for other purposes.

By Mr. NORRELL:

H.R. 12232. A bill making appropriations for the legislative branch for the fiscal year ending June 30, 1961, and for other purposes.

[*Introduced and referred May 16, 1960*]

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. BENNETT of Florida:

H.R. 12233. A bill relating to the recovery from liable third persons of the cost of medical care and treatment furnished by agencies and departments of the United States to persons authorized by law to receive such care and treatment; to the Committee on the Judiciary.

By Mr. BROCK:

H.R. 12234. A bill to amend section 406 of the Federal Aviation Act of 1958, so as to eliminate authority for the payment of subsidies for domestic trunk air transportation; to the Committee on Interstate and Foreign Commerce.

By Mr. DADDARIO:

H.R. 12235. A bill to amend the act of September 14, 1959, with respect to sales and use taxes imposed by States in sales and other business activities in interstate commerce, and authorizing studies by congressional committees of this type of taxation; to the Committee on the Judiciary.

By Mr. GILBERT:

H.R. 12236. A bill to provide Federal assistance for projects which will demonstrate or develop techniques and practices leading to a solution of the Nation's juvenile delinquency control problems; to the Committee on Education and Labor.

By Mr. LANE:

H.R. 12237. A bill to authorize the Secretary of the Army to make surveys with respect to floods aggravated by intense and unusual storms in the areas of Winthrop, Nahant, and Revere, Mass.; to the Committee on Public Works.

By Mr. JOHNSON of Wisconsin:

H.R. 12238. A bill to amend the Agricultural Act of 1949 with respect to the level of price support for milk for manufacturing purposes and for butterfat; to the Committee on Agriculture.

By Mr. JOHNSON of Maryland:

H.R. 12239. A bill to amend the Federal Trade Commission Act to provide for the issuance of temporary cease-and-desist orders to prevent certain acts and practices pending completion of Federal Trade Commission proceedings; to the Committee on Interstate and Foreign Commerce.

By Mr. GEORGE P. MILLER:

H.R. 12240. A bill to amend sections 4504, 4511, 4520, and 4549 of the Revised Statutes, related to shipping articles; to the Committee on Merchant Marine and Fisheries.

By Mr. RODINO:

H.R. 12241. A bill to amend section 376 of title 28, United States Code; to the Committee on the Judiciary.

By Mr. TEAGUE of Texas:

H.R. 12242. A bill to amend the Flood Control Act of 1958 with respect to certain reservoir projects in Texas; to the Committee on Public Works.

By Mr. EVINS:

H. Res. 529. Resolution to name and dedicate the three House Office Buildings; to the Committee on Public Works.

MEMORIALS

Under clause 4 of rule XXII, memorials were presented and referred as follows:

By the SPEAKER: Memorial of the Legislature of the State of South Carolina, memorializing the President and the Congress of the United States to request the U.S. Treasury Department to mint a sufficient number of half dollars commemorating Old Ninety Six Star Fort; to the Committee on Banking and Currency.

Also, memorial of the Legislature of the State of Massachusetts, memorializing the President and the Congress of the United States to enact legislation increasing the compensation of postal employees; to the Committee on Post Office and Civil Service.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. AUCHINCLOSS:

H.R. 12243. A bill for the relief of Incoronata Raffa; to the Committee on the Judiciary.

By Mr. COLLIER:

H.R. 12244. A bill for the relief of Joe Ho Kwong and Alverne Joe (Goon) Kwong, to the Committee on the Judiciary.

By Mr. DOOLEY:

H.R. 12245. A bill to admit the oil screw tugs *Barbara, Ivalee, Lydia,* and *Alice*; and the barges *Florida, DB 8, No. 220,* and *No. 235* to American registry and to permit their use in the coastwise trade while they are owned by Standard Dredging Corp., a New Jersey corporation; to the Committee on Merchant Marine and Fisheries.

By Mr. FOLEY:

H.R. 12246. A bill to exempt from taxation certain property of the National Woman's Party, Inc., in the District of Columbia; to the Committee on the District of Columbia.

By Mr. McCULLOCH:

H.R. 12247. A bill for the relief of Keith K. Hoover; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII,

464. The SPEAKER presented a petition of the chief clerk, the Council of the City of New York, New York, N.Y., relative to requesting passage of House Concurrent Resolution No. 39, with respect to the submission of a peace formula by the President of the United States during the next summit conference between the United States and the Union of Soviet Socialist Republics, which was referred to the Committee on Foreign Affairs.

EXTENSIONS OF REMARKS

We Shall Beat Them With Ingenuity

EXTENSION OF REMARKS

OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1960

Mr. PUCINSKI. Mr. Speaker, recently I had occasion to discuss the present world situation, particularly the increasing pressure that America is experiencing from foreign imports, with one of the Nation's most successful businessmen, who got his start in my district and continues to have his central store in my district.

I was most encouraged to hear Mr. Sol Polk, whose merchandising techniques have attracted nationwide attention and who is now celebrating his 25th anniversary as a retailer, assure me that America will find an answer to the problems which now confront us.

"We shall beat them with ingenuity," was Mr. Polk's confident rejoinder.

I think this is a powerful slogan which we Americans ought to adopt throughout our Nation.

There are few people I know who are more qualified to make this statement with such confidence than Sol Polk. From a very humble beginning, Sol Polk and his family have been able to build a highly impressive retailing institution. I think we all know how thoroughly competitive is the retailing field. Yet, by using the full scope of ingenuity, initiative, and dedication to the highest principles of retailing, Sol Polk today stands out as one of the Nation's most successful businessmen.

I am very concerned that so many Americans look to the future with grave fear and apprehension. The spirit of confidence and dedication, which exemplifies Sol Polk, is too frequently being replaced in many people by an attitude of despair and lethargy.

If all of us, as Americans, will recognize the full depth of the statement—"We shall beat them with ingenuity"—I feel that we can recapture that precious attribute which has distinguished us as free Americans from all other social orders.

It is true that the world is growing ever smaller. We are now engaged in a great race for conquest of outer space. As a Nation, we are also confronted with a world that is experiencing an industrial revolution. Many areas of the world, which for centuries have remained dark and totally undeveloped, are today seeing the magic of light. Nations which for centuries have relied on primitive methods of production and satisfied themselves with only an agrarian economy, today are becoming bastions of industrial development.

Many nations whose industrial potential was totally destroyed during World War II, are today again competing for world markets. It should come then as no surprise that competition in our country from foreign imports will mount in an ever increasing degree.

I find comfort in Sol Polk's confident prediction that "We shall beat them with ingenuity," because I believe we can, if we exercise our traditional American initiative.

The aura of fear and uncertainty in this country must be replaced with confidence that we have the ability to solve our problems with ingenuity. It was this ingenuity which has helped make the United States the greatest Nation in the world today. It was this ingenuity which has given our Nation the highest standard of living anywhere in the world today. It was this ingenuity which has given us a productive capacity that has inspired the imagination of people throughout the world.

There are many problems confronting America today, but I am confident that, in the words of Sol Polk, "we will solve them with ingenuity."

Yes, Mr. Speaker, to those who would predict the collapse of America; to those who would have the world believe we are a decadent Nation; to those who would want to cast doubts about our ability to defend freedom, to those who fear other ideologies will destroy us, I should just like to send this admonition: "We shall beat them with ingenuity."

I feel confident we shall meet the challenge of the sixties not by lowering our own standard of living, but rather by inspiring the rest of the world to raise its own standard; not by surrendering our own liberties but by bringing freedom to others; not by going backward but, instead, by proceeding forward—and all of this we shall do with traditional American ingenuity.

Senator Randolph, West Virginia's Son of the Year—Address by Senator Mansfield

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, May 16, 1960

Mr. MANSFIELD. Mr. President, on Saturday, May 14, I met with members of the State Society of West Virginia for the purpose of designating our distinguished colleague, the Senator from West Virginia [Mr. RANDOLPH], as West Virginia's Son of the Year.

Mr. President, in meeting with these people of West Virginia, I felt both honored and humble. Their State had just been subject to much disgraceful malignment and to many irresponsible charges of bigotry and backwardness.

West Virginians have now given an answer to those who fostered this malignment, to those who made these charges. They have given an example to the rest of us of a political maturity in which such false issues as religion and sectionalism are put aside and political judgments are made on the basis of records and platforms. I sincerely hope the rest of us, particularly the pollsters and commentators, will take this example to heart.

Mr. President, I ask unanimous consent that my remarks in designating Senator JENNINGS RANDOLPH as West Virginia's Son of the Year, delivered before the State Society of West Virginia, be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PRESENTATION TO SENATOR JENNINGS RANDOLPH AS WEST VIRGINIA'S SON OF THE YEAR, SHERATON-PARK HOTEL, MAY 14, 1960

(Address by Senator MANSFIELD)

I hope that West Virginia has room for many sons. In view of the warmth and friendliness of your welcome to me I am going to apply for adoption. I have no sense of being an outsider here tonight and perhaps that is understandable. For my meeting with you, topographically speaking, is a kind of meeting of the mountains. What West Virginia is to the East in that respect, Montana is to the West. Each State gives character and spine to its respective sector of the country.

I've heard somewhere that West Virginia is a wonderful State in which to work because if you get tired all you have to do is stop and lean on it. Montana is something like that except that there we can lean on it even when we are working.

Even as West Virginia and Montana share a common heritage of mountains, the two States also share a common heritage of great natural resources and for that reason they are sometimes called Treasure States. For those of us of these States, however, the real treasure is not copper or coal but fine, generous and friendly people.

We share another heritage—West Virginia and Montana—a less pleasant heritage—the heritage of grave economic problems which grow out of a heavy dependence on a single industry. This is not the occasion to detail these problems. I mention them only by way of noting that we are close not only in the sense of common joys but also common sorrows.

For, tonight, then I hope you will act favorably on my petition for adoption as a son of West Virginia. I file it because it takes an ordinary son like myself to recognize an outstanding son. And to recognize and to honor an outstanding son of West Virginia is half of the reason why we are gathered here tonight.

The man whom we honor as West Virginia's son of the year began a long time ago the work which was to merit him this great distinction. The work began as soon as he had learned enough at Salem College to teach his younger brothers and sisters. And for 7 years, as a newspaperman and educator he taught and taught well.

But that was only prelude to his coming to the House of Representatives in 1933. From his seat there which he held for a long time—I found him enthroned as a senior when I arrived as a freshman in 1943—from his seat there he carried on his work in education. Only this time he was not educating West Virginia about the rest of the country but rather the rest of the country about West Virginians. He did much, too, I may add, during his service in the House to make the District of Columbia the 56th county of West Virginia. So strenuous was his—if I may coin a word—his Westvirginianism that we in the House of Representatives in 1946 voted him the man who was doing most for his constituents.

There is one achievement to his everlasting credit which dates from his days of service in the House: Few people know of it because it is in keeping with his modest nature not to publicize it. Yet, I believe tonight is the time to bring it to light. Back in 1936, he authored the act which established blind citizens as the operators of newsstands and snack bars in all Federal buildings. Out of his sensitive awareness of the needs of his fellow men this concept has grown until now more than 2,000 blind persons are running these small, successful businesses. Each year they do over $35 million of business and last year they earned more than $5 million for themselves. That is the kind of imaginative approach to public welfare in which the entire Nation can share a deep sense of achievement. We, West Virginians, can take special pride in the fact that it was our son of the year who provided the inspiration and the legislative drive in the House of Representatives which made the achievement possible.

Yet his long service in the House was also prelude, prelude to his coming to the Senate. In that body, in his work on the Labor and Public Welfare and Public Works Committees, in his work on the whole range of the questions which come before the Senate, in close partnership with your other dedicated Senator, BOB BYRD, he has pursued a diligent course of service which blends the interests of West Virginia with those of the Nation in a most responsible and helpful fashion.

West Virginia's son of the year is well chosen. It is a distinction and a privilege to make this year's presentation to Senator JENNINGS RANDOLPH whose service to the State and to the Nation has extended over many years and yet is just at its beginning.

To a good, decent, honorable, and devout man it is a personal privilege to have the honor to present this citation. It is more than deserved.

Sound Leadership Manifested by Secretary of Defense Thomas S. Gates, Jr.

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 16, 1960

Mr. ARENDS. Mr. Speaker, the recent decision on Defense Department communications announced by the Secretary of Defense, Thomas S. Gates, Jr., on May 12, is in the pattern of conduct he has established since he took office some 6 months ago. In this period Mr. Gates has left no doubt that he not only recognizes the responsibilities of the Secretary of Defense in the law and under the Constitution, but he has made it clear beyond doubt that he will meet these responsibilities head on, with timely, honest decisions. There is no question that he has sought out the problem areas, brought their issues to the surface, and moved with forceful purpose to their resolution.

The 1960 defense picture is one which opens a new era of tremendous weapons, fantastic speeds, global ranges, and technological sophistications unbelievable a few years ago. The essence of such military operations is control, and the fundamental tool of control is communications. Without communications the most modern of Armed Forces would be practically useless. The volume and

cost of long-range communications within our defense system is, thus, of great magnitude. Efficiency and economy require that we do not support unnecessary duplications in the vast and extremely expensive worldwide military communications networks. Mr. Gates' recent decision has wisely recognized this requirement and has given us a solution. His action will give us one efficiently integrated system. Wisely, it will eliminate any uncoordinated systems which might exist, and head off the future creation of any such unnecessary facilities.

Dollars, resources, and time are all vital to this Nation, and the system created by Mr. Gates will insure that we get the most out of each of these. Research and development will be pointed toward the actual requirement of our defense system, without duplication and waste. The system itself will be based only on our total needs, with no other consideration. This is truly a step in the right direction.

This action by Mr. Gates will save money, conserve our resources, and provide us with more efficient communications system—in a word, it will improve the defense and security of this Nation. It will result in dollar and materiel economy and at the same time provide enhanced military efficiency.

It is a constructive step.

It is thoroughly in keeping with the kind of sound, responsible, and exemplary leadership which has been so consistently manifested by the present Secretary of Defense, Thomas S. Gates, Jr.

Wiley Reviews Accomplishments of Congress—Outlines Major Legislative Action Needed

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, May 16, 1960

Mr. WILEY. Mr. President, as Congress hits the homestretch, we all recognize that there is a lot of work still to be done.

Recently, I was privileged to review over Wisconsin radio stations, some of the legislation not only of interest to the Nation, but of special significance to my home State. Reflecting on a part of the big job ahead, I ask unanimous consent to have excerpts from the address printed in the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

WILEY REVIEWS ACCOMPLISHMENTS OF CONGRESS—SAYS: "HARD WORK AHEAD"—OUTLINES MAJOR LEGISLATIVE ACTION NEEDED

(Excerpts of address prepared for delivery by Senator ALEXANDER WILEY, Republican, of Wisconsin, over Wisconsin radio stations)

Friends, at this time, I would like to report to you on the progress of legislation in Congress.

According to current plans, this will be a short session. Why? Well, the Democratic and Republican conventions, as you know, are coming up in July. The purpose of early adjournment would be to avoid an entanglement of our legislative work with the politicking of the conventions. Even there are many efforts to play politics with issues of significance to the country.

Despite the fact that this is an election year, however, I believe Congress should stay in session as long as necessary to get its work done.

As of now, the Senate has been in session 73 days, passed 246 measures and reported about 350 measures from the committees.

OUTLOOK FOR FARM LEGISLATION

Question. Senator WILEY, what is the outlook for farm legislation?

Answer. Frankly, the prospects for any large-scale farm bill are extremely dim.

Question. Why?

Answer. For many reasons. Fundamentally, however, there has been real difficulty in reaching agreement—even among farmers and farm organizations—as to what should be done.

Over the years, exhaustive efforts have been made to find legislative remedies for the complex problems in agriculture. Unfortunately perhaps, because these are sometimes "politically motivated" these "patent political medicines" have not succeeded in curing the patient—that is the farm economy.

As in the past, I again stress that legislative action can only provide a temporary palliative. The basic problem must be solved in accordance with sound economic principles—that is, adopting a realistic method for creating a relative supply-demand balance for dairy and other farm products.

Question. If the outlook is dim for a so-called omnibus farm bill, what legislation has a realistic chance for enactment?

Answer. First, the conservation reserve of the soil bank will in all likelihood be extended and somewhat expanded. However, the program, I believe, should be aimed—as directly as possible—at curbing production of the major farm products in surplus, that is, wheat and corn.

In addition to attempting to deal with the surplus problem, the conservation reserve, of course, benefits the country in other ways. These include: Creating a soil bank of land of enriched fertility for the future; expanding our forest reserve by tree plantings; attempting to improve the agricultural economy by reducing surpluses at less cost than the price support program has been to the taxpayer; providing an opportunity for expanding not only soil and forest resources but also carrying on watershed projects, improving habitats for wildlife and other such purposes.

Question. What is the outlook for change in price support levels, for example, for dairy products?

Answer. Earlier this session, I joined other Senators in sponsoring legislation which would increase the price support level.

Question. Annually, there is considerable pressure for modifying the tax laws relating to co-ops as well as increasing interest rates for REA and co-op loans. How does it stand at this time?

Answer. The Ways and Means Committee—the taxwriting body of Congress—has held extensive hearings on these controversial issues. As yet, however, the views are so wide apart that such legislation—which constitutionally must originate in the House of Representatives—has not yet been forthcoming; nor does it look like it will.

Question. Are there any other legislative proposals to be considered in the farm picture?

Answer. Yes. Legislation (along the lines of a bill I introduced earlier) for extending and expanding the school milk program has been approved by Congress and signed by the President.

Currently, also, there is pending before the Senate a bill, S. 690, to expand research for utilization of farm commodities for industrial purposes. I would hope that expeditious approval be given this measure providing new use through industry utilization, which may well be one of the answers to our production-exceeding problem.

Incidentally, I am continuing to urge action on my bill for establishing a much needed dairy research laboratory at Madison, Wis., to find better ways of processing, distributing, and utilizing dairy products.

I would hope, also, that the bill I proposed for establishing a Country Life Commission would be enacted. As you may know, the purpose would be to make a long-range evaluation of the social, economic, and technological revolution in agriculture, and propose recommendations to enable the farmer to better adjust to these changes.

Question. What about the recent warnings—almost "public scares"—by the Food and Drug Administration relating to utilizing chemicals, antibiotics, and other products for animal health and crop protection?

Answer. Over the years, the American farmer has—in good faith—attempted to provide the consuming public an abundant supply of good, healthful foods. In this effort, chemicals and other products have been utilized.

According to recent investigations, however, it now appears that use of some of these may be questionable. Naturally, our first obligation is to protect the public health. However, I do not believe that the Food and Drug Administration should engage in sensationalism.

Instead, the American farmer deserves a fair break. I have contacted the FDA to stress the need for working out reasonable, effective ways to assure utilization of only safe products that will serve the purposes of our farmers; at the same time, adequately protect the public health.

OTHER ISSUES OF INTEREST TO WISCONSIN

Question. Now, turning to other fronts, what's the outlook for legislation in other fronts of particular interest to Wisconsin?

Answer. Well, that's a big order. Briefly, however, I'd like to review with you a few of the major issues. These include: First, authorization of a realistic rivers and harbors bill to carry forward work on flood control projects as well as deepening and improving our port and harbor facilities.

As you will recall, President Eisenhower vetoed a measure last year because he considered it too much of a "pork barrel" nature. The task now is to get enactment of a realistic piece of legislation—one that will fulfill our development needs but at the same time can avoid a Presidential veto.

In view of the real need for carrying forward such projects—many of which are now under way in our port cities, I believe that Congress should act expeditiously. Currently, the appropriations bill, H.R. 7634, is pending before the Senate Appropriations Committee. Included in this measure are authorizations of funds for work on the following projects: Menominee Harbor and River; Kewaunee Harbor; Superior-Duluth Harbor; Ashland Harbor; and Washburn Harbor.

In the 1961 budget, also, maintenance funds would be provided for the following projects: Green Bay; Manitowoc; Milwaukee; Port Washington; Racine; Sheboygan; Sturgeon Bay and Lake Michigan; Ship Canal; Two Rivers; and others.

Secondly, there is a need to keep close watch on the efforts to enact the so-called

water steal bill that would threaten to divert dangerously large volumes of water from Lake Michigan and thus lower the water levels of the lake.

As you may know, I have voted against the enactment of this legislation. Currently, the matter is still pending before the Foreign Relations Committee.

Question. Are there any new developments?

Answer. Yes, the "pushers" of this water-diversion legislation are now trying an end run, so to speak. Under the guise of proposing a $12 million antipollution program for the Great Lakes generally, an effort is being made to earmark specific funds for dealing with the pollution at Chicago and in the Illinois Waterway—the same objective as contained in the water-diversion bill itself, H.R. 1.

Now I want to say this: I am fully in favor of carrying out any necessary and effective antipollution study needed in the Great Lakes. However, let's not be fooled by this ruse for attempting to increase diversion of water from the Great Lakes.

Currently, this issue is before the Senate Appropriations Committee. As a result, the pushers of the water diversion bill now have measures before two Senate committees to accomplish their objectives.

Consequently, you can well understand the need for staying "on the alert" to head off such forthright, and round-about, efforts to divert more and more water from the Great Lakes—dangerous to commerce for Wisconsin and the rest of the Lake States.

OTHER PROGRAMS AHEAD

Now, what is some of the other "unfinished business" of Congress?

As President Eisenhower recently urged, we should also: (1) remove—or at least "adjust"—the ceiling on U.S. Treasury bonds to enable the Treasurer to better carry on the financing for meeting the obligations of the Federal Government; and (2) we also need to strengthen our judicial system by creating about 40 new judgeships. Regrettably, Congress, for political reasons, has, for too long, been "sitting on" this proposal. In a splendid bipartisan action, however, President Eisenhower has offered to fill such judgeships with an equal number of Democrats and Republicans. Today, our Federal courts are logjammed with thousands of cases requiring up to years for consideration. The Congress, I believe, should act immediately.

NEEDED: PUBLIC UNDERSTANDING OF UNCLE SAM'S BUDGET PROBLEMS

In considering legislation—particularly spending programs—we, of course, need to adopt wise, realistic policies. Not only Congress—but each of you, as citizens, need to be aware of Uncle Sam's budgetary problems.

Often, in the vast volume of mail flowing into my office—amounting to hundreds of letters daily—I receive strangely contradictory letters: Some say: "I want this program for myself"; others say, "I want that program"; still others say, "I want this, but don't do anything for the other fellow."

However, Uncle Sam is not a fountainhead from which flows an increasing stream of gifts, handouts, and Federal support. To the contrary, every penny spent on grants or assistance programs comes out of the taxpayers' pockets—and that means you and me.

CONCLUSION

This, then, is a brief review of only a small part of the workload ahead of us in Congress.

As these, or other issues, in which you are particularly interested, come up for consideration, I shall, as always, be glad to hear from you to get your suggestions and recommendations on problems of significance to our State and Nation.

Thank you for listening.

This Is Our Michigan

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1960

Mrs. GRIFFITHS. Mr. Speaker, the Michigan congressional delegation wishes to call attention to the book "This Is Our Michigan," copies of which have been mailed to all Members of the Congress in connection with the 1960 observance of Michigan Week, being celebrated this week.

We commend this book for your reading, for it tells the story of our water wonderland State in a way which makes clear why we do have the honor of serving it in this Congress are so tremendously proud of our State.

"This Is Our Michigan," is an easy-to-read narrative of a sturdy people who have pioneered, persevered, and prospered. It is the story of people whose productive genius in World War II made Michigan known and respected as the arsenal of democracy, and in whom the spirit of American democracy burns today with unceasing fervor.

The book is an authoritative recital of the attributes, resources, and achievements of a richly endowed and energetic State which a century ago produced the lumber to build many of America's cities and the iron ore to build its railroads, and whose automobile factories in a later era put the Nation on wheels.

It is also the story of a State whose scientific research and whose inventive and productive talents have helped prepare this Nation of the conquest of space.

The author of "This Is Our Michigan" is Willard Baird, an experienced newspaperman in our State capital at Lansing and chief of the State capital bureau for Federated Publication, Inc., which publishes the State Journal in Lansing and the Enquirer and News in Battle Creek. His years of painstaking research and compilation of data for this project culminated in a series of 59 articles written for those two daily newspapers early this year.

So great was the interest in the articles elsewhere in Michigan that Federated Publications, Inc., made the material available as a public service to all other Michigan dailies and weeklies. Altogether, it was published by more than 150 Michigan newspapers.

Now, as an additional public service endeavor, Federated Publications, Inc., has published the entire series in an attractive book which will be widely used as a reference work by the schools and libraries of our own State and, we hope, by similar institutions in other States.

In it you will find, briefly yet clearly narrated, the history of Michigan from Indian days through the French and British colonial periods, territorial times, and early statehood to the present day. You will find in it also the story of Michigan's tremendous natural resources, its industrial eminence, its impressive records in agriculture, its fame as a tourist and resort State, and its many cultural achievements.

It is a story we in Michigan are pleased to share with the rest of the Nation, and one we hope you will enjoy reading.

The Summit Conference

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1960

Mr. PHILBIN. Mr. Speaker, the action of the Soviets in scuttling the summit conference and withdrawing the invitation for President Eisenhower to visit the Soviet Union next month, while sensational, is not particularly surprising.

It was also most disappointing to many people who felt the conference might possibly help to ease current tensions and promote peace.

The Marxist formula, being followed by the Soviet, does not desire the easing of tensions or the establishment of peaceful conditions. It is compounded of diplomatic strategy and propaganda tactics designed to encourage and arouse as much agitation, turmoil, and disorder in the world as possible.

We are presently witnessing a large number of incidents, some of them in our own hemisphere and Nation, which indicate the widespread influence of the world Marxist movement.

It is unfortunate that some way cannot be found, through dispassionate discussion and exchange of views, to eliminate some of the basic causes of friction, but so long as the Soviets are intent upon using Marxist tactics and pursuing Marxist goals, we are not likely to develop in diplomatic councils that good faith and that sincerity of purpose which always must be indispensable ingredients of any successful worthwhile diplomatic conference.

Perhaps the breaking up of the conference at this time, if it is broken up as reported, may bring some good results. It would at least avoid a woeful waste of

time and energy on the part of our representatives and negotiators and would remove a most important source of communistic propaganda activity leveled against the free world, and particularly against the United States.

It is a real pity that the nations cannot sit down together in an earnest effort to hammer out an agreement for disarmament, control of nuclear energy through inspection safeguards, and the liberation of subject and enslaved peoples.

Until these great questions are resolved, there can be no lasting peace in the world. And Mr. Khrushchev will have to take the grave responsibility for this unhappy and dangerous situation.

There are other encouraging aspects, namely, our great military and economic power and our unwillingness to knuckle under Communist threats.

Barring constructive agreements, this power and strength will continue to be the real deterrent to large-scale war and, I hope, to small-scale ones as well.

I hope that the President will speak out strongly for freedom and let Mr. Khrushchev and the world know, by unequivocal language, that we intend to protect our security and our liberties, and we are willing to talk with any nation that honestly and sincerely wants to talk peace and justice.

Airlift Modernization

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 16, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an interview with Representative L. MENDEL RIVERS, of South Carolina, chairman of a Special Subcommittee on the National Military Airlift, as it appeared in the Christian Science Monitor:

AIRLIFT MODERNIZATION—A CAPITAL INTERVIEW WITH REPRESENTATIVE RIVERS

(By Courtney Sheldon)

WASHINGTON.—Representative L. MENDELL RIVERS, Democrat, of South Carolina, veteran member of the House Armed Services Committee, with airplanes a special personal interest, and chairman of an influential Special Subcommittee on the National Military Airlift, says: "Everybody has been going hog wild on pushbutton warfare and forgetting what the Army has been saying. * * * Everybody else has overlooked the possibility of a limited war."

He estimates "It will take a billion dollars" to modernize the Military Air Transport Service.

Question. Sir, in your report you state that "within the first 20 days of either a general war without warning or limited war under any current assumptions for planning purposes, strategic airlift capabilities are seriously inadequate." Could you elaborate on what you mean by "seriously inadequate"?

Answer. The source of this information is classified. I'll just have to say it is inadequate for the reason that we would have terrific difficulty in getting people of highest priority to the right place at the right time. Those people would have to be carried in military aircraft because of the classified nature of their positions and of the equipment that they would have to operate. Transportation of them would tax every single thing that MATS now has. And there would be a deficiency.

Question. What has happened to MATS's capability?

Answer. They have only 31 airplanes that are modern out of 400-odd planes. I don't want to minimize what MATS is doing with their inventories. They have done a monumental job. Their exercise Big Slam-Puerto Pine was fantastic for the inventories they have. Most of their planes are from 7 to 10 years old; yet they carried out that operation without one serious casualty.

I just don't understand why we spend $42 billion a year for defense and only possess second-class planes to do a first-class job.

Question. Well, how did we arrive at this situation of such obsolescence?

Answer. I think that everybody has been going hog-wild on push-button warfare and forgetting what the Army has been saying. The Army has been like a voice crying in the wilderness. Everybody else has overlooked the possibility of a limited war, and they have all thought that airplanes would phase out and missiles would take their place. This is the situation in a nutshell.

Question. In respect to the Army needs you just mentioned, you said in your report that STRAC (Strategic Army Corps) is one of a very few major commands in all the services that has not acquired its own airlift. Do you feel that they should have one or that some part of MATS should be predesignated for Army airlift?

Answer. Our report says it should be MATS on equal priority with the other services. Now we have recommended that MATS' name be changed to MAC—Military Air Command. People have been shooting at MATS so long MATS has become anathema to certain ones. MATS is a command. It is part of a weapons system. People have been sniping at MATS as a competing airline. It is ridiculous. MATS is no airline.

Question. You are talking now about the complaints of the civilian aviation transport industry that MATS is unfair competition?

Answer. Yes.

Question. Now can Congress order the Pentagon to predesignate MATS planes for Army airlift?

Answer. The Joint Chiefs of the Armed Services can do it.

Question. There is no way you can force them to?

Answer. Well, I feel confident that the Joint Chiefs will do this. Our hearings were held for the purpose of helping. This is the first time the subject of airlift has ever been heard in Congress. And the information we have obtained has been helpful to the military. The Joint Chiefs are fine men. We are all in the same business—survival.

Question. In regard to your recommendations for funds for modernizing MATS, is Congress going to support you?

Answer. The House Appropriations Committee made available $300 million for immediate off-the-shelf procurement of planes of the type the Army has requested, the 130–B with extended range. That plane is already in production. The House has approved and the bill has gone to the Senate.

Question. What was the administration's request concerning airlift modernization?

Answer. The administration requested only $50 million to begin development of an uncompromised cargo plane. It recommended nothing to modernize MATS at this time. This would only be the beginning of a development.

We, too, have recommended development of the plane. It takes from 4 to 5 years to develop a plane. We need planes now. It will take many more hundreds of millions to bring MATS up to what it should be. I would venture the assertion that it would take a billion dollars to do the job.

Question. Has there been any significant opposition within Congress itself or without Congress to your recommendations so far?

Answer. I haven't found a single opponent in the Congress, not a single one. It has been remarkable how people who have been fighting MATS have joined with us and sponsored our program. I know people who have been fighting MATS terrifically, called it an airline, now they have joined us and it demonstrates a bigness of men in Congress after the facts have been obtained.

American Mining Congress

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 16, 1960

Mr. SAYLOR. Mr. Speaker, the American Mining Congress held its convention in Pittsburgh, Pa., at the Pittsburgh-Hilton Hotel during the week of May 9.

One of the outstanding addresses delivered to that convention was made by the Honorable Fred A. Seaton, Secretary of the Interior.

Secretary Seaton's speech points out many of the items which are of grave importance, not only to the coal industry, but to the Nation during the coming years. I wish to include this address, as a part of my remarks, as follows:

ADDRESS BY SECRETARY OF THE INTERIOR FRED A. SEATON, AMERICAN MINING CONGRESS COAL CONVENTION, PITTSBURGH, PA., MAY 9, 1960

The energy market, like our economy as a whole, is a highly dynamic phenomenon. Viewing its development over the last century, two characteristics stand out with particular clarity.

1. There has been a steady and very substantial rate of overall growth.

2. Within the expanding energy market, a complicated interplay of economic forces has produced an unusually high degree of fluctuation in the demand for different fuels.

The high ratio of demand for coal came in 1901, up to 90 percent of the market, before the curve turned downward under the impact of competition from oil and gas.

It is true that today, oil provides two-fifths of the energy used; coal and natural gas, about one-fourth each; with hydropower and natural gas liquids providing the remainder.

It is also true that while your industry's production in 1901 was about 293 million tons, today it is over 430 million tons.

The congressional panel on the Impact of the Peaceful Uses of Atomic Energy forecasts that overall energy consumption in the United States will reach 75,000 trillion British thermal units by 1975. Other authoritative estimates are in substantial agreement.

Thus, the professional consensus is that the United States in 15 years will be using 85 percent again as much energy as 5 years ago.

For coal this could mean an increase of some 75 percent over 1955, with estimated production levels ranging up to about 750 million tons annually.

Some believe you will do even better than hold the portion of the market you now supply. This optimism is based on the assump-

tion that increased demand for fuel in the United States will be mainly for electrical energy, a field in which coal is at its best as a competitive fuel.

For the competition which is to come, you of the coal industry have already set powerful forces in motion to work in your behalf.

You have mechanized to an astonishing degree. Preliminary estimates for 1959 put the overall average output at more than 12 tons per man per day. By comparison, very few other countries have been able to reach an output level of 2 tons per man per day. Parenthetically, these few exceptions do not include Russia.

It is highly significant that at a time when your industry has progressed to the highest efficiency level in the world, you also enjoy the best record for health and safety.

The high plane of sound labor-management relations in your industry has provided a dependable supply of coal at competitive prices. It has also fostered cooperation in your industrial operations, marketing, and public relations.

Through such cooperation, notwithstanding significant increases in the cost of labor, equipment, supplies, and the general effects of inflation, the average price of coal f.o.b. the mine has been less than $5 a ton throughout the past decade.

On the industrywide organizational front, you have made it clear that you will continue to attack your problems in an aggressive manner. Indicative of that is the work of such organizations as the American Mining Congress, which is our host today.

Important as these achievements are, the master keys to what you have been able to do, in my opinion, have been the varied and imaginative scientific and technologic research in which you have engaged, and the individual initiative you have displayed. It is obvious that without research, the degree of mechanization you now have would still be a dream, not a reality. Without mechanization it would have been absolutely impossible to hold the cost line. Without initiative and the willingness to accept change, you would now be trying to compete in a 20th century market while using the 19th century mining methods.

For an industry in a field as competitive as yours, a continuation, even an acceleration, of research activity is an absolute necessity. I assure you that the Department of the Interior wants to be both helpful and effective in your endeavors.

That pledge isn't mere talk. We mean it and our actions prove we do. The Department now has under way comprehensive analyses of coal production, distribution, and marketing methods, as well as projects ranging from geologic mapping to the development of new uses for coal.

At this afternoon's meeting, Bureau of Mines' personnel will present a film, showing preliminary work done last fall on hydraulic mining of coal. It will indicate that given certain conditions, coal can be effectively mined by the use of high-pressure, high-velocity water jets.

Recently, Bituminous Coal Research, Inc., made available to us the coal-fired gas turbine with which it had been conducting studies at Dunkirk, N.Y. The Bureau of Mines is working to adapt this equipment to stationary powerplants. If its performance lives up to our expectations, it will greatly increase powerplant efficiency and should prove to be particularly valuable in those arid regions of the West where water is in short supply.

Much as we are doing in coal research, we want to do much more. That is why I have repeatedly urged enactment of H.R. 3375, a bill now pending in the Congress to provide the Secretary of the Interior with much-needed authority to contract for coal research.

It is my firm belief that research programs of an immediate and applied nature can be carried out most efficiently through contracts with appropriate public and private organizations.

We sincerely hope this legislation is approved in this session. I have already announced that once we have the authority, a special office of coal research will immediately be established to serve as our contracting agent.

Greater activity in the field of applied research would complete the research spectrum from the long-medium range to those of the short range, of immediate benefit to the coal industry. Such a three-pronged approach would make possible a united attack of science and technology on many of the problems of the coal industry. You and I will agree that is exactly what we must have, and the sooner, the better.

In developing this new program, the Office of Coal Research will utilize fully the guidance received from advisory committees which would include representation from all segments of your industry. Our experience in this kind of activity with the Office of Saline Water has been highly successful, and we are sure that a similar operation for coal will produce equally significant results.

As you are all aware, the Department of the Interior and the coal industry share other common interests and problems.

In March of 1959, President Eisenhower ordered the imposition of a system of mandatory controls on imports of crude oil and of its principal products, including residual fuel oil. The President made it clear that the purpose of the oil import program was to insure a healthy domestic oil industry capable of exploring for and developing new oil reserves to replace those being depleted.

Understandably, your testimony has a high degree of interest in the level of residual oil imports. One obvious reason is that many industrial installations, particularly electric utilities on the east coast, are able to switch quickly from coal to residual oil to natural gas, depending upon the price and availability of these competing fuels.

I would prefer to believe that we would all agree that the program, as it applies to residual fuel oil, cannot be administered in a manner so as to cause real shortages or result in real hardships to consumers. That would be morally indefensible, even if legally possible.

In April of this year we necessarily made an upward adjustment in the level of allocations for residual imports for the period ending June 30, in order to avert a serious shortage of residual on the east coast, however, that shortage may have been caused. That adjustment, together with the unimported portion of the original allocation for the first half of the year, made the total amount available for import in the second quarter of this year almost identical to actual imports in the second quarter of 1957, the base year for the residual part of the mandatory program.

We are engaged in an import control program, and importers and consumers alike should recognize it as just that. In establishing allocation levels we have no intention of creating a set of conditions under which unlimited quantities of residual fuel oil can be imported and sold at distress prices. Nor do we have any intention of allowing the creation of an artificial set of circumstances to accomplish the same end result.

To further strengthen the administration of the program we have, as you know, recently announced a revision in the allocation period from a semiannual to a quarterly basis.

Coal has been and is now an essential element in the fuel supply picture in the United States, and it will continue to be so in the foreseeable future. No one should forget that your industry provided the principal energy base upon which our Nation's great industrial economy was founded. No one should forget that in the face of many obstacles, you satisfied unprecedented demands for energy during two terrible and prolonged World Wars.

To me, a pound of coal means much more than a mere 16 ounces of a hard and black substance which we remove from the earth. In hundreds and thousands of ways it is important in the lives of human beings.

Coal means for those engaged in the industry, a source of livelihood for themselves and their families.

For the consumer, it means everything from heat for the home to electric power for iron lungs or television.

For those who have a role in developing our industrial might, it means a comparatively inexpensive yet reliable source of fuel for everything from chemical plants to steel mills.

For the Nation as a whole, it is one of the keystones which secures our economic system and our national defense.

No one can believe more fervently than do I that for reasons of future national security, if for no other, it is of vital importance that we work together to maintain a healthy and thriving coal industry.

There is something else I believe. At the overall rate of development and growth of this Nation, it is clear to me that we are going to need in the future all the fuel energy we can get, from whatever source.

There are obvious and clearly defined limits to the amount of hydroelectricity we can produce. There are also limits on the use of oil and gas for many purposes. And there are limits, economic and otherwise, on production and use of coal.

A thriving industry in each case is certainly desirable from a national standpoint, and I believe it is a proper function of Government to help maintain an economic environment within which efficient business enterprises may prosper and contribute to national economic strength.

But it is not, in my opinion, a proper role of government to restrict unnecessarily the right of free economic choice by American consumers of the fuels, or anything else they want to purchase and use. Any other policy can only tend to throw our private enterprise economic system out of gear, and continued in the long run, destroy it altogether.

Aside from the demands of national defense, the consumption of fuels should properly continue to be determined by such factors as relative costs at specific locations, efficiency of use, dependability of supply—in short, a combination of consumer preference and the cost per British thermal unit, delivered at the burner.

Our governmental system is one which gives equal opportunity to every citizen, according to his ability and effort. If we are to have equal opportunity, with freedom, then we cannot have an enforced or guaranteed equality without regard to ability or effort. The one is unalterably antagonistic to the other.

To me, this principle also applies to our economic system. To bind it into a straitjacket where the strings would be pulled from Washington could at best only serve to stifle initiative and progress. The logical result would inevitably be to destroy the very flexibility which is so essential if individual initiative is to be encouraged to make its impact felt.

Admittedly, your industry has some very real problems. Nevertheless coal, as a fuel and as a source material for many other uses, has a perhaps unlimited horizon of opportunities in the future. In the best tradition of economic competition, I am sure you recognize that fact and will seize those opportunities. And again, I assure you of the

Department of Interior's sympathetic and helpful interest in your present and future economic health.

A Firm Position at the Summit

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 16, 1960

Mr. PUCINSKI. Mr. Speaker, following is a letter which I sent to the President of the United States regarding the summit meeting. I believe the letter is self-explanatory.

I am happy to include a reply which I received today from the White House regarding my original correspondence. They are as follows:

MAY 12, 1960.

THE PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: Since it is quite apparent to many of us here in Congress that you are going to the summit meeting under most difficult conditions in the light of Soviet Premier Khrushchev's activities during the past few days, I thought you would like to see the results of a survey which I have just concluded in the 11th Congressional District of Illinois.

My congressional district, I believe, reflects to a great extent the thinking of most Americans. It is a representative district of the United States, and I am sending you these results with the hope that you will find comfort and strength in the knowledge that the American people support a firm position by the United States in our dealings with the Soviet Union.

Two of the questions from my survey which deal with the summit meeting, together with the replies, follow:

1. Should the United States yield to Soviet Russia's demand that we abandon our position in West Berlin? Yes, 6 percent; no, 90 percent; undecided, 4 percent.

2. Do you believe the United States should base its dealings with the Soviet Union on a firm and decisive demand that the captive nations of Europe be given the right to free elections? Yes, 85 percent; no, 9 percent; undecided, 6 percent.

Regarding question No. 2, you will recall that the House of Representatives unanimously adopted a resolution urging that the subject of free elections for the captive nations be raised by you at the summit meeting.

I am happy to advise you that out of approximately 60,000 lengthy questionnaires mailed to my constituents, about 14 percent took the trouble to respond. This response includes a much larger cross section of my constituency than many professional surveys.

May I wish you Godspeed in your difficult journey? I join with my constituents in expressing a sincere hope that your mission will be successful.

Respectfully yours,
ROMAN C. PUCINSKI,
Member of Congress.

THE WHITE HOUSE,
Washington, D.C., May 13, 1960.

The Honorable ROMAN C. PUCINSKI,
House of Representatives,
Washington, D.C.

DEAR MR. PUCINSKI: The President has asked me to acknowledge with thanks your May 12 letter and to say that he found the responses of your constituency to the questions on your survey relating to the summit meeting very heartening and helpful. Your thought in bringing this information to his attention and your good wishes for the success of his endeavors in Paris are warmly appreciated by the President.

With kind regards.

Sincerely yours,
JACK Z. ANDERSON,
Administrative Assistant to the President.

Voyage of the "Triton"

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 16, 1960

Mr. ALLEN. Mr. Speaker, the accomplishment of Capt. Edward L. Beach, the officers and men of the *Triton* will always stand out as one of the greatest Naval expeditions in history—in keeping with the highest traditions of the U.S. Navy.

President Eisenhower hailed the unprecedented feat in a special White House ceremony, at which time he conferred the Legion of Merit on Capt. Edward L. Beach.

The White House proudly announced the journey, which began, February 16 and closely followed Magellan's course of 441 years ago.

This achievement gave me great personal satisfaction because it was my privilege and honor to have appointed, Lt. Comdr. Robert W. Bulmer of Sterling, Ill., to the U.S. Naval Academy. Lieutenant Commander Bulmer served as the operations officer on the nuclear submarine *Triton* on this historic voyage.

When I appointed Robert Bulmer to the Academy in 1945, I was convinced that he would not only be a credit to himself, but also a credit to the U.S. Navy. He has always justified the confidence I placed in him.

Representative Bizz Johnson and the 1960 Winter Olympics

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Monday, May 16, 1960

Mr. ENGLE. Mr. President, I was delighted to read an editorial recently in the Sacramento Union commending California's able Representative from the Second District—HAROLD T. "BIZZ" JOHNSON. BIZZ JOHNSON played a very significant role in getting the 1960 Winter Olympics held in California, and the editorial commends him for not lagging in his interest in winter sports once the games were over. It makes the important point that BIZZ JOHNSON does not regard the Winter Olympics as a fait accompli, but rather as a logical step toward popularizing the great California winter sports industry.

I take pleasure in bringing the editorial to the attention of my colleagues, and ask unanimous consent that it be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A CONGRESSMAN REPORTS

Congressman HAROLD T. (BIZZ) JOHNSON of the Second District doesn't regard the winter Olympics at Squaw Valley as a fait accompli, but rather as a logical step toward popularizing the great California winter sports industry. In this viewpoint JOHNSON is to be commended.

"More than a million persons visited Squaw Valley before, during, and after the winter Olympics," declares JOHNSON, "but more impressive to me is that more than a million persons visited other snow sports areas of the State as well. I took a survey of California's national forests and parks to see what was happening in this recreation field. Everywhere officials reported the business of going down hill on skis and sleds is zooming."

Isn't this what California bargained for in underwriting the rather expensive spectacle of the winter Olympics? But here is a State investment, seemingly, which is paying off. Let JOHNSON continue:

"Many mountain areas, which once lived on summer economies, are finding the snow enthusiasts bring welcome new business. Millions of dollars have been spent in snow sports and lodge developments. And the potential still is tremendous.

"Tahoe National Forest, with the Olympics of course, led the field and Henry E. Branagh, forest supervisor, advised me that skiing was itself up 60 percent over last season with 116,500 people on the slopes. Nearly 14,000 people have used the ice rink, not counting the thousands upon thousands of spectators.

"An old standby in the winter sports field is Yosemite's Badger Pass. Superintendent John Preston writes that there have been 126,718 visitors by early April and they still were coming. An average of 500 persons use the facilities on a weekday and 1,800 to 2,600 on a typical Saturday or Sunday. This does not include 6,232 visitors who ice skated on the valley floor. Badger Pass opened in 1933 and the use has been growing constantly.

"Stanley R. Zeger, acting supervisor at Eldorado National Forest, says the year there was substandard as far as snow conditions were concerned, but that did not slow down the skiing enthusiasts. About 95 percent of the approximately 106,000 people using the Highway 50 and South Tahoe snowfields are skiers. The use was up about 7 percent. 'The last two snow seasons have been poor,' says Supervisor Zeger, 'but the trend is steadily increasing.'

"The people on the east side of the mountains are sharing in this activity and Mammoth Mountain of the Inyo National Forest is one of the fastest growing snow regions in California. Supervisor Joe Radel reports a 32 percent gain with more than 100,000 snow visits to the Inyo.

"Although skiing is a major sport at Lassen National Forest and Volcanic Park, Forest Supervisor V. A. Parker and Park Superintendent Edward Freeland say heavy family fun use attracts groups from all over northern California, including the San Francisco Bay region.

"About 22,000 traveled to Lassen Forest, half of them going just to romp in the snow with the rest doing the skiing. Another 15,000 toured Lassen Park's snowfields.

"There is a tremendous potential for future development in both the Lassen and Inyo regions as well as some of the lesser used forest lands.

"Plumas National Forest's La Porte was one of the first ski areas to develop in northern California many, many winters ago. With that facility and the new Johnsville State Park coming in, the potential winter sports development is considerable.

"I look for development of the Plumas, Cedar Pass, Union Valley, and many other regions similar to Mount Shasta's Ski Bowl in the Shasta-Trinity National Forest. Observing its second year of winter sports, Forest Supervisor Paul Stathem says Shasta Bowl use is up 25 to 50 percent this year over the initial season there and Snowman's Hill continues to provide an excellent community place to play in the snow, which means most of the increase consists of visitors from outside the immediate region.

"The reputation was spread this year to the benefit of all the Sierra Nevada, and everyone concerned must continue to work together to provide the facilities to meet this demand. The investment will be repaid many times."

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 16, 1960

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter of May 14, 1960:

WASHINGTON REPORT

(By BRUCE ALGER, Fifth District, Texas, May 14, 1960)

The Department of Agriculture appropriation bill, just enacted, presented the contradictory though not too unusual spectacle of Congressmen debating and agreeing to the expenditure of public money for a program that practically everyone, for varying reasons, thought wrong, yet the bill passed handily without a record vote. The bill called for approximately $4 billion in various agriculture subsidies. The Appropriation Committee's own report on the bill highlights the inconsistencies. Here are some quotes: "The Federal Government is now spending far more in the name of agriculture than ever before in history * * * yet farm income in 1959 was at the lowest level since World War II. * * * Since 1953 the following 'cures' have been offered, tried, and from the record found wanting, so far as solving the problem is concerned." Then are listed reduced price supports (lower assured prices), soil bank (to pay farmers for acreage left untilled), Public Law 480 (to give surpluses away at home and abroad), Agriculture Department personnel increase of 28 percent, appropriations increase of 300 percent, and production controls lowered (reduced acreage control). And still the problem remains unsolved. "The cost to the Federal Treasury since 1952 now totals $25.8 billion. * * * Farmers tend to increase their production as farm prices are reduced."

The soil bank failed, according to the report, because we paid farmers for land that already lay idle; further; that if 56 percent of all farms were retired at $10 per acre per year, costing us $2.75 billion, we would cut production only 9 percent. The problem, as the report states, "will never be solved until Congress attacks the problem at its base, which is overproduction." The report then shows that the $13.5 billion in food given away at home and abroad under Public Law 480 since 1954 has not eliminated the surpluses, but rather "has contributed to a constantly deteriorating situation for American agriculture by getting these huge surpluses out of sight abroad and thereby postponing action to prevent the increase in the surplus problem." Also, the report states that Public Law 480 "should be considered a foreign aid program and should be paid for in the mutual security bill." Speaking of acreage controls, the report states, "while efforts to control production through acreage controls have not been effective, it appears unwise to eliminate them." Under the heading, "Corrective Action Urgently Needed", we find, "the situation becomes progressively worse. * * * It is imperative the present approaches to this problem be reversed if the agricultural industry of this country is to survive and if we are to prevent a bankrupt agriculture from pulling down the rest of our economy." Yet the bill passed perpetuates the present programs.

The forthright report stopped just short of the truth. The truth is that Federal subsidy (Federal money and Federal control) will kill private enterprise ultimately. True, to a degree, industry can live on, through accumulated productive strength, against the debilitating Federal regulation, much as a ship moves despite barnacles. True, taxpayers can survive economically despite the weight of taxation much as a strong man can carry a heavy burden and still do other tasks. But in either case or in combination of the two, subsidy and taxation, free enterprise, private initiative, and individual freedom go down the drain. We are now witnessing the struggle of a dying, free industry, originally a free industry—agriculture—because of the Federal Government. The solution? Get the Federal Government out entirely. Only then can normal market supply and demand react and result in the right prices, which in turn will result in a good income to the farmer, balanced against the costs of other commodities. So the effort of Congress should be directed toward freeing the farmer, not regulating and subsidizing him deeper into trouble. The bill passed without a record vote. I voted against it and desire to be so recorded. I predict that if Congress will not take the statesmanlike position, then the people will force action, just as happened in the labor reform bill, passed despite House leadership opposition. It would be better, and hurt the farmers less, it seems to me, if the Congress and the farm industry effected the changes voluntarily than to have it forced on them.

Russia's propagandistic blustering concerning the American "spy" was answered forthrightly by the chairman of the Appropriations Committee in a floor speech. Mr. CANNON pointed out our failure to anticipate the Communists' Korean attack which cost our own unready troops dearly. So it is that for 4 years CIA (Central Intelligence Agency) by design has been sending planes over Russia to observe in order to protect ourselves, so far as possible, against buildups for surprise attacks. He likened the appropriation of funds for this work to the secret atomic work at Oak Ridge which preceded the atom bomb, unknown to all but a few of the Members of Congress. Espionage is a part of modern warfare and survival. Ours is hardly comparable to Russia's infiltration and subversive efforts. It was a refreshing statement. Russia needs to be told once and for all that we are deadly serious in our intention to protect freedom-loving nations, and if they don't like it, that's just too bad. Tough and direct action is all that blusterers understand. Only as we are strong, tough-minded, and toughtalking, will we prevent war and strengthen and attract the only kind of allies we want, specifically those equally dedicated to preserving freedom for mankind against the godless, slave-state alternative of communism.

Farm Program

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 16, 1960

Mr. DORN of South Carolina. Mr. Speaker, the following is a brief résumé of a talk I made to the Clinton (S.C.) Kiwanis Club's annual farmers night program, April 14, 1960:

FARM PROGRAM

(Address of Congressman WILLIAM JENNINGS BRYAN DORN at Kiwanis Club's annual farmers night, April 14, at Clinton, S.C.)

The most serious domestic problem facing the people of the United States is the farm situation. Farm population in the United States has dropped to 11 percent of the total, the lowest percentage in the history of the United States and the lowest of any major world power in the history of the world. This is a dangerously low percentage.

The United States was founded by men with a rural philosophy. The Declaration of Independence, the Constitution, and the Bill of Rights were largely written by rural men. Washington, Jefferson, Madison, and Monroe were all outstanding farmers. The fact that Washington and Jefferson were great farmers made them good Presidents. Nearly all of the Presidents in the history of the United States were born and reared on a farm or associated with a farm. The membership of the Congress for 130 years was overwhelmingly rural. Farmers have initiative. They are independent. They think for themselves. They cannot be herded or coerced to the polls by goons and ward bosses. It is difficult to get up a mob or overthrow the Government with busy, contented landowning farmers. A man who is busy milking cows and tilling the soil is not going to lead a march on the Nation's Capitol to overthrow representative government.

We do not find Communists and Socialists engaged in the pursuit of agriculture. Our rural areas are no breeding ground for juvenile delinquency. Rural people go to church and support good schools. The rural home is the bedrock of a democratic society.

Under the price-support and acreage-control programs, the American family-size farmer has been reduced to a state of peonage. One-half of the burley-tobacco growers in the United States, under this Government program, are permitted only one-half acre or less—in a nation that originated the culture of tobacco. Under these Government programs, cotton acreage has fallen off in the United States 60 percent since 1930. We have lost cotton markets at home and abroad. One-third of the cotton farmers in the United States grow 5 acres or less. The percentage is even greater in the Southeast. It is impossible for a farmer to clothe, support, and send his children to college with less than 5 acres of cotton or one-half acre of tobacco.

What opportunity is there for a young man with an ambition to be a farmer? He cannot possibly become a farmer unless he inherits a farm or marries into one with allotted acres. Farming is the only business in this

so-called free nation that a young man cannot go into—he is not permitted to do so by a government of free people. Under these Government programs, the situation gets worse and worse. Surpluses mount and the rural population decreases, with more and more people on the welfare rolls and more looking to Washington paternalism.

These farm programs could not have served Russia's purpose more if they had been written by the Kremlin's planners of world conquest. America's population is being concentrated in the great cities, easy to annihilate with the atomic bomb, easy to herd into political machines, and easily subjected to propaganda and agitation. In fact, the first farm program inaugurated in the United States was written by questionable characters—one of whom has since served a term in the penitentiary. The farm program was written by Alger Hiss, Nathan Witt, Frank Shea, Rex Tugwell, Lee Pressman, Henry A. Wallace, and Felix Frankfurter, presently a Justice of this notorious U.S. Supreme Court. These were principally bright young attorneys, most of whom knew nothing whatever about agriculture.

Under the programs these men inaugurated, we grow less and less, our farm population shrinks, while Russia grows more and more and every nation in the world increases her farm acreage. Soviet Russia since 1955 has added over 100 million new acres to agricultural production. Rhodesia exempts her farmers from land taxes to grow more and more. Turkey exempts her farmers from income taxes to grow more and more. In this country we passed a soil bank to get our farmers to grow less and less. Incidentally, the average farmer in Rhodesia plants 65 acres of tobacco; in Canada, 30 acres; and in the United States, may I repeat, half of the tobacco farmers are permitted to plant only one-half acre or less. The same is true with cotton and wheat. Foreign nations grow more, with American foreign aid, while we grow less. We send them marketing experts, fertilizer experts, and the net result is to put our own people out of business.

Under the cotton price-support loan program, in the year 1958 358 farmers in the State of California received $50,000 or more; Arizona, 194; Mississippi, 237; South Carolina, 1; Georgia, none; North Carolina, 2; Alabama, none. Here in the Southeast we are not only being forced and tricked off the land, but we are paying the bill for others to become bigger and bigger. The atmosphere is being carefully created so that someday a campaign of land reform will explode in the United States along the lines of China's and Cuba's agrarian reform. The only segments of our farm economy holding its own, growing, free, and with hope, are those outside of Government control and price supports—for example, livestock, pine trees, citrus fruits, and vegetables.

On my farm I grow beef, pine trees, and grass, because I can do so without Government regulation.

The pressure was put on Congress to put price supports on livestock, but I am so glad today we resisted these pressure groups. The beef surplus simply vanished through increased consumption. Livestock today accounts for 54 percent of the farm income.

Yes, we need a farm program, a new farm program, a positive program, one that looks to the future, one that will offer hope to the youth of this country, one that will beckon to the teeming millions in the crowded cities, one that can assure us food and part-time employment for the unemployed during times of depression.

1. The No. 1 plank in this farm program should be gradual elimination of price supports and all acreage controls. Our free Nation cannot long survive as long as its farm population is regimented, controlled, and paid to do less and become weaker.

2. The Government subsidizes certain business operations to stay in business, to expand, grow, and to employ more people. On the other hand, we subsidize the farmer to plant less and less, to employ fewer people and to buy less fertilizer, machinery, and supplies. We are simply paying him directly to go out of business. It would be much better for the Nation if we paid the farmer to grow more, not less, and if we paid him directly to stay on the farm instead of moving toward the overcrowded cities.

3. Get rid of the surplus by promoting markets abroad and expanding our markets at home.

4. Develop new crops and new uses through expanded research and advertising. Dr. Herty kept thousands of farmers in business by research on the pine tree.

5. Expand the rural development program.

6. Give the farmer more Federal tax advantages so he can compete with the tax exempt farmers of foreign nations. Give him a break with local taxes by making him pay less for improved rural property. The policy now is to tax a farmer if he paints his house and improves the appearance of his farm. The local taxes of many farmers have doubled since improving his place by sheer initiative and effort.

7. Imports—the farm problem could be solved in one stroke by prohibiting imports of livestock, cotton goods, and other farm commodities we already have in surplus. Over 100 million new acres could be used in the United States to produce the beef, wool, sugar, cotton, tobacco, grain, and other farm commodities now imported from foreign countries.

South Carolina needs new industry, but more than anything else we need to save our old industry which consumes cotton from our farms. We need new industry, but we also need a South Carolina Planning and Development Board for Agriculture. South Carolina's agriculture development must keep pace with its industrial development. It will be tragic for the future political and social welfare of our State if we become all industrial. We must have a balanced economy. We must preserve our South Carolina rural heritage, traditions, and philosophy.

We have a great agricultural college at Clemson. Clemson's agricultural program needs the full support and backing of all of our citizens, both urban and rural.

Through research and planning, South Carolina was able to switch from indigo to rice, to cotton, and now to livestock and pine trees. South Carolina must and can continue to be largely agricultural.

A Good Example To Follow

EXTENSION OF REMARKS

OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1960

Mr. PUCINSKI. Mr. Speaker, last week I had the pleasure of attending what I believe was a historic meeting of Local 1031, International Brotherhood of Electrical Workers Union, in Chicago, whose president is Mr. Frank Darling.

So far as I know, local 1031 is the first union in America to provide for its retired members hospital and surgical insurance, which they otherwise could not afford and which will be paid for out of union dues.

Much has been said in the recent past about the lack of democracy in unions. On the basis of my own personal observations, no such charge could be lodged against local 1031, which used 29 voting machines to conduct a secret election on a proposal to raise the union's dues 50 cents a month with which to provide this insurance for its retired members.

The proposal was approved by an overwhelming vote of approximately 6 to 1, and it is indeed encouraging to see the members of a union show such humane concern for their retired members, who otherwise would be denied surgical and hospital care in their older years.

The membership of this union is fully aware that Congress is now studying various proposals to provide surgical and hospital care for our senior citizens. I think it can be an inspiration to all of us to see that this organization did not wait for the Federal Government to act, but rather until such time as a Federal program is agreed upon, it has undertaken the responsibility of providing for the care of its retired members through its own resources.

In discussing the proposal, Mr. Darling made it eminently clear that many small unions throughout the country are not financially capable of taking similar action and that the action of his own union was in no way intended to serve as a deterrent to the responsibility which rests with Congress to provide a plan for our Nation's senior citizens. But it is refreshing to see this union recognize its responsibility to its older members without waiting for Federal action.

I recall the many assaults against decent unions that were voiced here in this Chamber last year during the debate on the labor-management reform bill. I wish that every Member of Congress could have seen democracy at work at this meeting of local 1031, when each member's individual right to express himself in a secret ballot on this proposal was respected by the union's leadership.

I believe Mr. Darling is to be congratulated for initiating this action in his union. It was obvious to me in observing the voting on this proposal that the large turnout of members who participated in this meeting reflects the high regard the members of local 1031 have for Mr. Darling and the rest of the officers of his local.

Those who have been so severe in their criticism of the labor movement and who have repeatedly refused to acknowledge the fact that the abuses of the few in no way reflect the decent conduct of the overwhelming majority of unions in this country, could learn a great deal by observing the conduct of local 1031.

Together with my remarks I should like to include an excerpt from a bulletin put out by Harry C. Herman, of New York, entitled "Executive's Labor Report" which is published weekly for the Nation's top industrial executives. This publication caters primarily to the Nation's largest industries and could hardly be called a prolabor publication. Significantly, in this bulletin of May 2, the "Executive's Labor Report" describes Frank Darling as "one of labor's most original innovators."

Here is how this particular publication described the action of Mr. Darling's union regarding surgical and medical care for its senior citizens:

The Darling plan, which is the first to our knowledge in America for a major industrial union, provides hospitalization and medical care upon retirement for the rest of the members' lives. It starts in 1960.

But this is not the astonishing part.

Here is the big twist:

The entire and complete cost of this program will be borne by the union. No dues during this time or any other costs are required.

In order to qualify to receive such hospitalization and medical care, a member must have a total membership period of 10 years or more, be employed in any local 1031 shop after reaching the age of 60, be 65 years old or more, and retire at 65 or more.

The proposed insurance coverage is to be $15 per day hospital expense, up to $300 surgical expense, up to $150 for medicines, X-rays, ambulance, etc., and doctor visits of $5 for each visit a doctor makes to either the member's home or a hospital, and $3 for each visit the member makes to a doctor's office starting with the third such visit and with a maximum of 50 visits in any illness.

The plan will apply to any member who has paid dues to local 1031 for 10 years or more, regardless of the number of companies any such member may have worked for during that period.

It further provides that local 1031 will give any member who otherwise qualifies and retired during 1959, who was 65 or more, such an insurance policy at no cost to the retired member even though the plan does not formally go into effect until 1960.

When checking around the country for the effects of such a plan among labor leaders and industrialists, it was interesting to this observer that reaction was unanimously enthusiastic by both.

The bulletin quite appropriately includes a salute to Frank Darling, "Chicago's most unusual labor man—we need more like him."

This action taken by local 1031, I believe, will undoubtedly inspire other unions to take similar action until such time as Congress recognizes its responsibility and provides an adequate program to care for the Nation's senior citizens.

I should like to add my own warm congratulations to Frank Darling and to his membership, which showed such good judgment in solving a serious problem for its senior members. I feel confident that the action taken by local 1031 will provide a stimulus for other organizations to follow suit.

Continental Fuels Policy

EXTENSION OF REMARKS

OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1960

Mr. ASPINALL. Mr. Speaker, last week the American Mining Congress at its coal convention in Pittsburgh featured a panel discussion on a national fuels policy. My observation is that the series of presentations provided emphatic evidence of the urgent necessity for a study to determine whether a national fuels policy is needed. If the answer is yes, then it must also be determined whether legislation is needed to adopt or implement a policy.

As one of the participants in the discussion, I was especially interested in the remarks of the gentleman from Pennsylvania [Mr. SAYLOR], who suggested that the possibility of a continental fuels policy should be considered. With the development of Canada's rich mineral resources, and with increasing fuels traffic between the Dominion and the United States, I feel that the point raised by the ranking minority member of the Committee on Interior and Insular Affairs should receive careful attention.

From a selfish position, I might be inclined to stand pat on my resolution to confine the study to this Nation's energy resources, supplies, and requirements. Although already more than half a billion tons of bituminous coal have been extracted from Colorado's mines, at least 49 billion tons of minable reserves remain within our borders—enough to supply the entire Nation for more than a century at present rates of production. We have enough oil shale to provide through synthesis all the liquid and gaseous fuels that America could use in many, many years. Petroleum, natural gas, water power, and atomic energy are well represented in Colorado's soil.

Canada, and Mexico as well, have important fuel reserves. They are our good neighbors and we all want to encourage commerce among these great nations to whatever extent is mutually beneficial. I am interested in the idea of a continental fuels policy. I believe that it should be explored assiduously. I ask that Congressman SAYLOR's remarks to the American Mining Congress be inserted at this point:

AN ADDRESS TO THE AMERICAN MINING CONGRESS, MAY 9, 1960, BY HON. JOHN P. SAYLOR

At the start I should like to congratulate Mr. Julian Conover and the American Mining Congress for making this forum possible. Discussions of this kind can go a long way toward developing a public awareness to the need for a fuels policy. Perhaps the idea will also appeal to the oil and gas industries when they hold association meetings. When all considerations—pro and con—have been thoroughly threshed out, maybe we will find that we have a common meeting ground on this issue.

I will say at the start that I have no particular pride of authorship with respect to the fuels policy study that I have introduced in the House. If someone has a better approach to the problem—be he a Democrat or Republican—from Texas, Louisiana, West Virginia, or anywhere else—you may be sure that I will go along with it. Just keep religion out of it—that's all anyone can ask.

The first mention of a national fuels policy study produced tumultuous repercussions. I was reminded of the minister describing the Day of Judgment.

"Thunder will boom," he boomed. "Lightning will strike. Rivers will overflow. Flames will shoot down from the heavens. There will be storms, floods, earthquakes."

A little girl looked up eagerly at her parent.

"Mommy," she whispered, "will we get out of school?"

A representative of a competing fuels industry rushed up to my office protesting violently the idea of a fuels policy study. "We already have a fuels policy," he insisted. When I asked him if there was anything wrong in studying existing Government programs, he hesitated, then merely said that there was no necessity for it.

Acknowledging that we have a semblance of a fuels policy in the form of the various laws and agencies that effect energy production and supply, it appears that opposition to a study would come exclusively from industries, companies, or individuals fearful that the results of an investigation might serve to discomfort their own particular interests. There are three sound reasons why the proposed study should be undertaken as soon as possible. Any one of the reasons is enough to justify the project; in the aggregate they make it a mandatory undertaking. Let us examine them, although the order in which they are listed does not necessarily indicate their degree of importance.

(1) Conservation: As an admirer of Teddy Roosevelt and Gifford Pinchot for many years, I have devoted considerable time in Congress to the matter of proper use of all natural resources. God was very generous in filling our cupboards with ample supplies of the raw materials that a people must have in order to make the most of human resources, inventiveness, and ambition. To use our natural resources extravagantly without considering the needs of the generations to follow is immoral.

Is America exercising proper frugality in the production and utilization of energy deposits? I think it is time that we find out. Eight years ago the President's Material Policy Commission, known as the Paley Commission, warned against extravagant use of natural gas. I have repeated this warning numerous times, because I believe that it would be unfair for us to deprive unnecessarily our children and their children of a supply of this special fuel.

Natural gas spokesmen raise a hue and cry when the suggestion is made that the principles of conservation should be applied to their relatively scarce product—natural gas. However, the Federal Government has already taken legislative steps to conserve the extremely scarce and valuable product, helium, and this has been done without any implication of undue imposition of Federal controls * * * and without any allegations of damage to the free enterprise system. Natural gas is disappearing and should not be wasted. It is valuable and the same principles of conservation will eventually—why not now—have to be applied. It is my view that conservation should be exercised now, to use a metaphor, rather than in the future attempt to lock the distribution door when the natural gas horse has already been stolen.

(2) National security: Last Tuesday morning newspapers contained an item, "Dateline Tokyo," stating that Russia has 100 submarines operating in the Pacific. On many occasions we have been alerted to the fact that Red underwater craft infest Atlantic waters. Naval experts have warned us that major ports on both coasts could be demolished through coordinate enemy submarine action in the event of a major war. For that matter, oceangoing tankers would have little need for port facilities in an age when Russia has 400 submarines. Germany started World War II with only 60, yet was able to disrupt completely tanker traffic in the Gulf of Mexico as well as along the Atlantic seaboard.

So, in an emergency we could not depend upon foreign oil to help our domestic mobilization activities. To what extent the country can lean upon foreign fuel in peacetime merits close study. A Cabinet Committee looked into this phase of the defense structure and recommended the import restrictions that were the basis for the mandatory control program established by the

President last year. This control order could be regarded as a phase of a national fuels policy. I see no reason why it should remain apart from the general study which we propose.

(3) The general economy: The Natural Gas Act, another of the many Federal laws affecting the oil and gas industries, was adopted 22 years ago when the Nation was using just 20 percent of the amount of natural gas that is being consumed at the present time. Quite a few of us in Congress have asked repeatedly that this obsolete legislation be updated. From what has been appearing in the newspapers of late, a growing number of Americans agree that the Natural Gas Act should be revised to meet present day requirements.

The natural gas industry is protected by public utility status. Under present conditions, a gas transmission line may make its product available to industrial consumers at less than half the cost that residential patrons are charged. Pittsburghers are complaining about constantly increasing rates. I have some figures here which may be of interest. The last available tables are for 1958, but they are sufficiently recent to spotlight a despicable situation. The average cost of natural gas to homeowners in Pennsylvania was a little more than $1 per thousand cubic feet in 1958. In the same year the same product was being sold to electric utilities in Pennsylvania for 31.2 cents—or less than one-third of what householders had to pay for it. Mainline industrial users were charged a little more * * * they paid 47.1 cent per thousand cubic feet, but still less than half of what we the people were charged.

This discrimination is reprehensible. I think that a national fuels study could result in its elimination.

Needless to say, the practice of dumping gas into industrial markets at whatever price is necessary to undersell coal is costing the bituminous coal industry many millions of tons per year. Although we have enough coal in America to last for more than 1,000 years, at present rates of production, and though the natural gas life index is set at less than a quarter of a century, this valuable product is flowing freely into whatever industrial and utility markets will take it. As a consequence, many mines are closed, mineworkers are idled, railroaders who depend upon coal traffic for a livelihood are laid off, and economic stagnation extends in communities up and down the line. Certainly we need a fuels study.

Gentlemen, I could cite 101 cases to support my proposal for a fuels study. I assure you that I shall continue to exert every effort to induce Congress to undertake this work. I repeat that I will not stand by my own resolution if a more logical one is advanced.

As a matter of fact, I have been giving serious thought to the possibility of recommending that the fuels study be extended so that it will be continental in scope rather than limited to our own boundary. For a number of years I protested the proposal to import natural gas from Canada into the Midwest. Among other reasons, I feel that it would place our consumers at the mercy of international gas interests. Within the past several months both the Canadian Energy Board and the U.S. Federal Power Commission have issued the necessary certificates for the line from the Dominion into and through Minnesota. I noticed about 10 days ago that the National Coal Association has asked that the case be reopened, so as yet the final decision must be considered uncertain.

Unless Congress or the tariffmaking authorities in the State Department do an abrupt about-face, any gas entering this country from Canada would be duty free. In contrast, Canada imposes a 50-cent-per-ton tariff on all U.S. coal that moves northward across the border.

If there is any reciprocity in this arrangement, I do not detect it. Perhaps a continental fuels policy could also bring about a solution to this inequity.

Michigan—Your Opportunity

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 16, 1960

Mr. RABAUT. Mr. Speaker, the title I have given my remarks today—"Michigan—Your Opportunity"—is also the slogan for Michigan Week, 1960. The seventh annual observation of Michigan Week commenced yesterday, May 15, and will run through the remainder of this week. In general, the purpose of Michigan Week is to promote the great State of Michigan throughout the Nation. More specifically, the purposes of Michigan Week are three: First, to advance the economic and social progress of Michigan; second, to promote among Michigan residents and the people of the United States a better understanding of the advantages Michigan offers as a place for living, working, enjoying recreation and doing business; and, third to get all Michigan residents working together to make the State an even better place in which to live, work, and enjoy life. As a native and life-long resident of Michigan, I am happy to take part in this Michigan Week effort and to assist in advancing these fine purposes which I have just enumerated.

As a matter of fact, Mr. Speaker, it is comparatively easy for me to do this because the State of Michigan is replete with such a wealth of natural resources, commercial opportunities, and other advantages that I could go on virtually ad infinitum in extolling them.

Michigan is the largest State east of the Mississippi. The Upper Peninsula alone is equal in size to Connecticut, Delaware, Rhode Island, and Massachusetts combined. Both the Upper and Lower Peninsulas have been richly endowed by nature. Indeed the State motto: "If you seek a pleasant peninsula, look about you" is well justified. The economy of Michigan rests firmly upon the three main pillars of industry, agriculture, and the tourist trade. During World War II, the magnificent performance of Michigan's automotive industry earned for our State the title "Arsenal of Democracy." Our State continues today to be one of the foremost producers of military vehicular equipment and is also in the forefront of the vast new development and rapid expansion in the manufacture of ballistic missiles—awesome and terrible weapons of the new space age.

The automotive industry, however, is only one among many in which Michigan is a leader. On the basis of value added by manufacture, Michigan also ranks first in boatbuilding, output of internal combustion engines, mobile homes, steel springs, hardware, industrial patterns, special dies and tools, and conveyors. Michigan is also known far and wide as an outstanding producer of furniture, breakfast foods, drugs and chemicals, sporting and athletic goods, steel, chemicals, salt, and paper products.

Michigan boasts of many new and up-and-coming fields. One of these is the production of chemicals. The value added by manufacture in the chemical industry is even now in the neighborhood of $600 million. The wealth of raw materials available within the State gives every prospect of boosting Michigan to one of the Nation's top producers of chemicals. In general, overall diversification of industry has proceeded at such a rapid pace that of the 453 industries classified by the U.S. Bureau of the Census, Michigan has 369—or 81 percent of the total.

What is more, industry is continuing to flock to Michigan in droves. For the 6-month period ending last month, April 1960, Michigan led all other States in industrial growth. During that time 94 new industrial facilities came to Michigan. This is far more than the second ranked State. Of these 94 new facilities, 74 were in the Detroit metropolitan area, including Ann Arbor. This means that this single metropolitan area acquired more new industrial facilities than any other single State. And it should be duly noted that these figures do not even include companies which leased or expanded into existing industrial facilities. These figures represent new facilities only. In short, during the 6 months ending April 1960, building permits were issued for 94 new industrial projects costing a total of $111,121,209. Of this total more than $62 million was in the city of Detroit and eight suburban communities. This Detroit figure does not include some $20 million for expansion of 214 industrial plants and 87 industrial warehouse facilities during the same 6-month period. Nor do any of these figures include any of the approximately $150 million in new facilities announced or started in the previous 6-month period. It is easily seen, Mr. Speaker, that Michigan's tremendous attractiveness to industry has not diminished at all. To the contrary, it is on the upswing.

One of the main reasons for this attractiveness, of course, is the tremendous treasury of raw materials of which the State of Michigan can so justly boast. It is said that "whatever a manufacturer may need in the way of materials, it is probable that he will find them in Michigan." A study of a resources map of the State readily bears out this great abundance of nature's bounty.

Starting with Upper Peninsula, which is part of the greatest iron ore producing region of the world—the Lake Superior District, we find very extensive iron ore deposits—Michigan's most valuable mineral resource. These deposits place Michigan second among all iron ore producing States. Since 1854, Michigan mines have shipped a tonnage of ore equal to the total excavation of the Panama Canal. Between 1860 and 1890 Michigan led the Nation in the production of lumber. Michigan lumber helped

to build 19th century America. Although the forests have been largely cut over, Michigan is still a major lumbering State. In all, the State of Michigan boasts 19 million acres of forests, yielding about 1 million cords annually. It is expected that Michigan's lumber harvest will be considerably increased as the second stand of timber grows in, for the lumbermen of the State are applying their knowledge of modern conservation methods to insure a continuing supply of wood. The hardwoods are basic to our furniture industry, while the softwoods underwrite Michigan's well-known paper and pulp industry.

Michigan is well endowed with many other natural resources. She is noted for her limestone. She is first in the production of salt in the Nation, furnishing about 20 percent of the Nation's supply. Of all the States, Michigan has easiest and greatest access to the bountiful supply of fresh water in the Great Lakes, by far the largest reservoir of fresh water in the world. Michigan annually ranks fourth in production of cement. She ranks high in the annual production of oil—over 10 million barrels per year. She is always very high, usually sixth, in the production of copper. Michigan has the world's largest limestone quarries and deposits of gypsum. Nationally Michigan is first in gypsum production and second in all stone production, including limestone. Michigan is second in the production of iron ore, supplying about 13 percent of the Nation's need.

Michigan's Lower Peninsula has extensive quantities of sand and gravel. Michigan's fine highways are built of her own native materials. The mention of highways brings to mind Michigan's wonderful traffic safety record. Although Michigan is high up among the States with the highest traffic volume, yet she has the second lowest number of traffic fatalities per 100 million miles traveled. In addition to industry, Michigan is a top notch agricultural State. The value of her agricultural products exceeds $730 million each year. For example, Michigan annually produces: 42 million pounds of strawberries with a value of $6.1 million; 65 thousand gallons of maple syrup worth $350,000; 6,000 acres of peppermint worth $800,000; 3,000 acres of spearmint, a crop worth $600,000. The Lower Peninsula of Michigan produces some 97 percent of the Nation's crop of navy beans. Beans may be baked in Boston, but they are raised in Michigan. The State also leads in the production of tomatoes, cucumbers, and cultivated blueberries. She is third in the production of apples, fifth in peaches, fourth in pears. In addition, Michigan is the largest producer of red tart cherries and is third in the production of sweet cherries. Celery and corn are also large crops. In all, 44 different fruit and vegetable crops are grown commercially in Michigan.

Recreation is also an important "product" for Michigan. The lakes, streams, and woodlands of the State combine to provide the perfect setting for vacationers. Ten million tourists annually roam the beauty spots in Michigan. The State's tourist and resort industry which caters to these millions accounts for a yearly revenue of some $700 million. This great influx of visitors makes Michigan the fourth most popular vacation spot in the Nation, accounting for some 6 percent of the domestic tourist trade.

With all of these assets bestowed by nature, with the tremendous diversity of commercial activity and opportunity and with this great magnetism for tourist, it is readily obvious that the great State of Michigan is richly deserving of an eminent place among her sister States. I feel sure that she has been accorded such a position and I am equally sure that she will continue to earn and deserve the pride of the Nation and the respect of her sister States. I ask you, Mr. Speaker, and all other Members of this House to join me in saluting the great State of Michigan during this—Michigan Week, 1960.

SENATE

TUESDAY, MAY 17, 1960

The Senate met at 12 o'clock meridian, and was called to order by Senator MIKE MANSFIELD, of Montana.

The Chaplain, Rev. Frederick Brown Harris, D.D., offered the following prayer:

Eternal Father, Thou only art the fountain of our being; Thou art the light of all our seeing. Our puny mortal strength alone is unequal to the tests and tasks of the terrific times which are upon us. We dare not trust our own devices and councils.

To those who through the treacherous seas of this violent era pilot the Nation's course, give, we pray Thee, a revealing and steadying remembrance of the altars dedicated to spiritual verities at which the Founding Fathers knelt, and the moral standards to which they were committed.

For the radiant dream which we call America, hear our vow as we pledge our all as security for freedom's greatest venture against freedom's deadly foes now loose on the earth.

We ask it in the name above every name. Amen.

DESIGNATION OF ACTING PRESIDENT PRO TEMPORE

The legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., May 17, 1960.

To the Senate:

Being temporarily absent from the Senate, I appoint Hon. MIKE MANSFIELD, a Senator from the State of Montana, to perform the duties of the Chair during my absence.

CARL HAYDEN,
President pro tempore.

Mr. MANSFIELD thereupon took the chair as Acting President pro tempore.

THE JOURNAL

On request of Mr. JOHNSON of Texas, and by unanimous consent, the reading of the Journal of the proceedings of Monday, May 16, 1960, was dispensed with.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Maurer, one of its reading clerks, announced that the House had passed the bill (S. 2611) to amend the Small Business Investment Act of 1958, and for other purposes, with amendments, in which it requested the concurrence of the Senate.

The message also announced that the House had passed the following bills, in which it requested the concurrence of the Senate:

H.R. 7480. An act to amend the Federal Food, Drug, and Cosmetic Act, with respect to label declaration of the use of pesticide chemicals on raw agricultural commodities which are the produce of the soil;

H.R. 9792. An act to amend section 4111 of title 38, United States Code, with respect to the salary of managers and directors of professional services of Veterans' Administration hospitals, domiciliaries, and centers;

H.R. 10500. An act to amend the Career Compensation Act of 1949 with respect to incentive pay for certain submarine service;

H.R. 11602. An act to amend certain laws of the United States in light of the admission of the State of Hawaii into the Union; and for other purposes;

H.R. 11706. An act to authorize an extension of time for final proof under the desert land laws under certain conditions; and

H.R. 11985. An act to make American nationals eligible for scholarships and fellowships authorized by the National Science Foundation Act of 1950.

HOUSE BILLS REFERRED

The following bills were severally read twice by their titles and referred as indicated:

H.R. 7480. An act to amend the Federal Food, Drug, and Cosmetic Act, with respect to label declaration of the use of pesticide chemicals on raw agricultural commodities which are the produce of the soil; and

H.R. 11985. An act to make American nationals eligible for scholarships and fellowships authorized by the National Science Foundation Act of 1950; to the Committee on Labor and Public Welfare.

H.R. 9792. An act to amend section 4111 of title 38, United States Code, with respect to the salary of managers and directors of professional services of Veterans' Administration hospitals, domiciliaries, and centers; to the Committee on Post Office and Civil Service.

H.R. 10500. An act to amend the Career Compensation Act of 1949 with respect to incentive pay for certain submarine service; to the Committee on Armed Services.

H.R. 11602. An act to amend certain laws of the United States in light of the admission of the State of Hawaii into the Union, and for other purposes; and

H.R. 11706. An act to authorize an extension of time for final proof under the desert land laws under certain conditions; to the Committee on Interior and Insular Affairs.

LIMITATION OF DEBATE DURING MORNING HOUR

Mr. JOHNSON of Texas. Mr. President, under the rule, there will be the

usual morning hour; and I ask unanimous consent that statements in connection therewith be limited to 3 minutes.

The PRESIDING OFFICER (Mr. CHURCH in the chair). Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

On request of Mr. MANSFIELD, and by unanimous consent, the Subcommittee on Investigation of the Committee on Agriculture and Forestry; the Subcommittee on Flood Control—Rivers and Harbors, of the Committee on Public Works; the Communications Subcommittee of the Committee on Interstate and Foreign Commerce; and the Subcommittee on Patents of the Committee on the Judiciary, were authorized to meet during today's session of the Senate.

EXECUTIVE SESSION

Mr. JOHNSON of Texas. Mr. President, I move that the Senate proceed to the consideration of executive business, to consider the nomination on the Executive Calendar.

The motion was agreed to; and the Senate proceeded to the consideration of executive business.

The PRESIDING OFFICER. If there be no reports of committees, the nomination on the calendar will be stated.

U.S. MARSHAL

The Chief Clerk read the nomination of Lyle F. Milligan, of Wisconsin, to be U.S. marshal for the eastern district of Wisconsin for the term of 4 years.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of this nomination.

The PRESIDING OFFICER. Without objection, the President will be notified forthwith.

LEGISLATIVE SESSION

Mr. JOHNSON of Texas. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to; and the Senate resumed the consideration of legislative business.

THE NEWS FROM PARIS ON INTERNATIONAL AFFAIRS

Mr. JOHNSON of Texas. Mr. President, the news from Paris will cause a wave of regret and disappointment all over the world. Apparently the prospects of any kind of a successful conference at the summit are virtually dead.

At no time were the prospects of great accomplishment from the summit conference better than 50–50. But the abrupt manner in which they seem to be coming to an end foreshadows a period of greater tensions and greater agony for a war-weary world.

Inspired stories from Communist sources seem to be indicating already that the world may be plunged into a crisis over Berlin. For whatever reason, the Communist leaders seem bent on forcing issues, rather than seeking to resolve them.

It is evident that the determination and the unity of the American people are going to be tested as never before in our history. The so-called cold war puts a heavy strain on the nerves and the hearts of people everywhere in the world.

This is definitely a time for Americans to unite, because something very precious is at stake—freedom in this world.

If there have been mistakes, responsibility will be assessed coolly and objectively. But one mistake that we cannot afford to make is to weaken the free world by division within our own ranks.

America should try to keep open every channel of communication, because it is always better to talk than to fight. But keeping open every channel of communication in good faith does not mean that we should relax our determination to maintain freedom as a way of life.

Mr. MANSFIELD. Mr. President, I should like to join in the statement which has been made by the distinguished majority leader. His statement exhibits his well-known pattern of statesmanship and responsibility, and especially so in the grave crisis which confronts all of us at the present time.

CONVICTION OF RUDOLF IVANOVICH ABEL—OPINION OF THE SUPREME COURT

Mr. DIRKSEN. Mr. President, yesterday the Supreme Court of the United States affirmed an earlier action in the case of one Rudolf Ivanovich Abel, who was indicted and tried in New York. He was convicted; and the court of appeals affirmed the conviction on July 11, 1958. The Supreme Court affirmed the conviction on March 28, 1960; and the Supreme Court on May 16, 1960, refused further review.

Rudolf Ivanovich Abel on August 7, 1957, was indicted on three counts charging him with having conspired from about 1948 to the date of the indictment, first, to communicate and transmit to the Soviet Union information relating to the national defense of the United States—conspiracy to violate 18 United States Code 794(a)—second, to obtain documents and other materials connected with the national defense of the United States for the purpose of transmitting such documents to the Soviet Union—conspiracy to violate 18 United States Code 793—and third, to act in the United States as an agent of the Soviet Union without prior notification to the Secretary of State—conspiracy to violate 18 United States Code 951.

The petitioner was convicted and sentenced to a total of 30 years and to pay a fine of $3,000. The conviction was affirmed by the court of appeals, and then was appealed to the Supreme Court.

On October 13, 1958, the Supreme Court granted certiorari. Briefs were filed, and the case was argued on February 17 and 18, 1959. The questions presented to the Court were first, whether the fourth and fifth amendments to the Constitution are violated by a search and the seizure of evidence without a search warrant, after an alien suspected and officially accused of espionage has been taken into custody for deportation, pursuant to an administrative Immigration Service warrant, but has not been arrested for the commission of a crime; and second, whether the fourth and fifth amendments are violative when articles so seized are unrelated to the Immigration Service warrant and, together with other articles obtained from such leads, are introduced as evidence in a prosecution for espionage.

Mr. President, in this connection, I should like to include in my remarks a complete copy of the indictment. If there is anything that stands at this moment as eloquent evidence of the kind of espionage carried on in this country by agents of the Soviet Union, this is it. After going through all the courts of the land, and twice to the highest court, the conviction has been affirmed; and the defendant will go to the Federal penitentiary for a period of 30 years, where he rightly belongs.

I should like to have both the Congress and the country know—since such items in text form do not always come to the attention of those who read the press and the magazines—just what is involved in this case. Therefore, I wish to have a copy of the complete indictment printed in the CONGRESSIONAL RECORD so the people generally can see whether espionage by agents of the Soviet Union is taking place in the United States.

There being no objection, the indictment was ordered to be printed in the RECORD, as follows:

U.S. DISTRICT COURT, EASTERN DISTRICT OF NEW YORK—UNITED STATES OF AMERICA *v.* RUDOLF IVANOVICH ABEL, ALSO KNOWN AS "MARK" AND ALSO KNOWN AS MARTIN COLLINS AND EMIL R. GOLDFUS, DEFENDANT

The grand jury charges:

COUNT ONE

1. That from in or about 1948 and continuously thereafter up to and including the date of the filing of this indictment, in the eastern district of New York; in Moscow, Union of Soviet Socialist Republics; and elsewhere, Rudolf Ivanovich Abel, also known as "Mark" and also known as Martin Collins and Emil R. Goldfus, the defendant herein, unlawfully, willfully and knowingly did conspire and agree with Reino Hayhanen, also known as "Vic"; Mikhail Svirin; Vitali G. Pavlov; and Aleksandr Mikhallovich Korotkov, coconspirators but not defendants herein, and with divers other persons to the grand jury unknown, to violate subsection (a) of section 794, title 18, United States Code, in that they did unlawfully, willfully and knowingly conspire and agree to communicate, deliver and transmit to a foreign government, to wit, the Union of Soviet Socialist Republics, and representatives and agents thereof, directly and indirectly, documents, writings, photographs, photographic negatives, plans, maps, models, notes, instruments, appliances and information relating to the national defense of the United States of America, and

particularly information relating to arms, equipment and disposition of U.S. Armed Forces, and information relating to the atomic energy program of the United States, with intent and reason to believe that the said documents, writings, photographs, photographic negatives, plans, maps, models, notes, instruments, appliances and information would be used to the advantage of a foreign nation, to wit, the Union of Soviet Socialist Republics.

2. It was a part of said conspiracy that the defendant and his coconspirators would collect and obtain, and attempt to collect and obtain and would aid and induce divers other persons to the grand jury unknown, to collect and obtain information relating to the national defense of the United States of America, with intent and reason to believe that the said information would be used to the advantage of the said foreign nation, to wit, the Union of Soviet Socialist Republics.

3. It was further a part of said conspiracy that the Government of the Union of Soviet Socialist Republics and certain of the coconspirators, including Aleksandr Mikhailovich Korotkov and Mikhail Svirin, being representatives, agents and employees of the Government of the Union of Soviet Socialist Republics, would by personal contact, communications and other means to the grand jury unknown, both directly and indirectly, employ, supervise, pay and maintain the defendant and other coconspirators for the purpose of communicating, delivering and transmitting information relating to the national defense of the United States to the said Government of the Union of Soviet Socialist Republics.

4. It was further a part of said conspiracy that the defendant and certain of his coconspirators would activate and attempt to activate as agents within the United States certain members of the U.S. Armed Forces who were in a position to acquire information relating to the national defense of the United States, and would communicate, deliver, and transmit, and would aid and induce each other and divers other persons to the grand jury unknown, to communicate, deliver, and transmit information relating to the national defense of the United States to the Government of the Union of Soviet Socialist Republics.

5. It was further a part of said conspiracy that the defendant and certain of his coconspirators would use shortwave radios to receive instructions issued by said Government of the Union of Soviet Socialist Republics and to send information to the said Government of the Union of Soviet Socialist Republics.

6. It was further a part of said conspiracy that the defendant and certain of his coconspirators would fashion containers from bolts, nails, coins, batteries, pencils, cuff links, earrings and the like, by hollowing out concealed chambers in such devices suitable to secrete therein microfilm, microdot and other secret messages.

7. It was further a part of said conspiracy that the said defendant and his coconspirators would communicate with each other by enclosing messages in said containers and depositing said containers in prearranged drop points in Prospect Park in Brooklyn, N.Y., in Fort Tryon Park in New York City, and at other places in the eastern district of New York and elsewhere.

8. It was further a part of said conspiracy that the said defendant and certain of his coconspirators would receive from the Government of the Union of Soviet Socialist Republics and its agents, officers and employees large sums of money with which to carry on their illegal activities within the United States, some of which money would thereupon be stored for future use by burying it in the ground in certain places in the eastern district of New York and elsewhere.

9. It was further a part of said conspiracy that the defendant and certain of his coconspirators, including Reino Hayhanen, also known as "Vic," would assume, on instruction of the Government of the Union of Soviet Socialist Republics, the identities of certain U.S. citizens, both living and deceased, and would use birth certificates and passports in the name of such U.S. citizens, and would communicate with each other and other agents, officers and employees of the Government of the Union of Soviet Socialist Republics through the use of numerical and other types of secret codes, and would adopt other and further means to conceal the existence and purpose of said conspiracy.

10. It was further a part of said conspiracy that defendant and certain of his coconspirators would, in the event of war between the United States and the Union of Soviet Socialist Republics, set up clandestine radio transmitting and receiving posts for the purpose of continuing to furnish the said Government of the Union of Soviet Socialist Republics with information relating to the national defense of the United States, and would engage in acts of sabotage against the United States.

In pursuance and furtherance of said conspiracy and to effect the object thereof the defendant and his coconspirators did commit, among others, in the eastern district of New York and elsewhere, the following:

Overt acts

1. In or about the year 1948 Rudolf Ivanovich Abel, also known as "Mark" and also known as Emil R. Goldfus and Martin Collins, the defendant herein, did enter the United States at an unknown point along the Canadian-United States border.

2. In or about the summer of 1952 at the headquarters of the Committee of Information (known as the KI) in Moscow, Union of Soviet Socialist Republics, Reino Hayhanen, also known as "Vic," a coconspirator herein, did meet with Vitali G. Pavlov, a coconspirator herein.

3. In or about the summer of 1952 at the headquarters of the Committee of Information (known as the KI) in Moscow, Union of Soviet Socialist Republics, Reino Hayhanen, also known as "Vic," a coconspirator herein, did meet with Mikhail Svirin, a coconspirator herein.

4. On or about October 21, 1952, in New York City, Reino Hayhanen, also known as "Vic," a coconspirator herein, did disembark from the liner "Queen Mary."

5. In or about October 1952, Reino Hayhanen, also known as "Vic," a coconspirator herein, did go to Central Park in Manhattan, New York City, and did leave a signal in the vicinity of the restaurant known as the Tavern-on-the-Green.

6. In or about 1952, Reino Hayhanen, also known as "Vic," a coconspirator herein, did go to the vicinity of Prospect Park in Brooklyn within the eastern district of New York.

7. In or about November 1952, Reino Hayhanen, also known as "Vic," a coconspirator herein, did go to Fort Tryon Park in New York City and did leave a message.

8. In or about December 1952, Reino Hayhanen, also known as "Vic," a coconspirator herein, did meet and confer with Mikhail Svirin, a coconspirator herein, in the vicinity of Prospect Park in Brooklyn within the eastern district of New York.

9. In or about the summer of 1953, Mikhail Svirin, a coconspirator herein, did meet and confer with Reino Hayhanen, also known as "Vic," a coconspirator herein, in the vicinity of Prospect Park in Brooklyn, within the eastern district of New York, and did give to Hayhanen a package of soft film.

10. On or about December 17, 1953, the defendant Rudolf Ivanovich Abel, also known as "Mark" and also known as Emil R. Goldfus and Martin Collins, did rent a studio consisting of one room on the fifth floor of the building located at 252 Fulton Street, Brooklyn, within the eastern district of New York.

11. In or about August or September 1954, the defendant Rudolf Ivanovich Abel, also known as "Mark" and also known as Emil R. Goldfus and Martin Collins, did meet with Reino Hayhanen, also known as "Vic," a coconspirator herein, in the vicinity of the Keith's RKO Theater, Flushing, Long Island, within the eastern district of New York.

12. In or about the summer of 1954 the defendant Rudolf Ivanovich Abel, also known as "Mark" and also known as Emil R. Goldfus and Martin Collins, and Reino Hayhanen, also known as "Vic," a coconspirator herein, did go by automobile to the vicinity of New Hyde Park, Long Island, within the eastern district of New York.

13. In or about March or April 1955, the defendant Rudolf Ivanovich Abel, also known as "Mark" and also known as Emil R. Goldfus and Martin Collins, and Reino Hayhanen, also known as "Vic," a coconspirator herein, did proceed by automobile from New York City to Atlantic City, N.J.

14. In or about the spring of 1955, Reino Hayhanen, also known as "Vic," a coconspirator herein, did proceed by automobile from New York City to the vicinity of Quincy, Mass., at the direction of defendant Rudolf Ivanovich Abel, also known as "Mark" and also known as Emil R. Goldfus and Martin Collins.

15. In or about December 1954 or January 1955, Reino Hayhanen, also known as "Vic," a coconspirator herein, did proceed by rail transportation from New York to Salida, Colo., at the direction of the defendant Rudolf Ivanovich Abel, also known as "Mark" and also known as Emil Goldfus and Martin Collins.

16. In or about the spring of 1955, the defendant Rudolf Ivanovich Abel, also known as "Mark" and also known as Emil R. Goldfus and Martin Collins, and Reino Hayhanen, also known as "Vic," a coconspirator herein, did proceed from New York City to the vicinity of Poughkeepsie, N.Y., for the purpose of locating a suitable site for a shortwave radio.

17. In or about the spring of 1955, the defendant Rudolf Ivanovich Abel, also known as "Mark" and also known as Emil R. Goldfus and Martin Collins, in the vicinity of 252 Fulton Street, Brooklyn, N.Y., within the eastern district of New York, did give a shortwave radio to Reino Hayhanen, also known as "Vic," a coconspirator herein.

18. In or about 1955 the defendant Rudolf Ivanovich Abel, also known as "Mark" and also known as Emil R. Goldfus and Martin Collins, did bring a coded message to Reino Hayhanen, also known as "Vic," a coconspirator herein, and did request him to decipher said message.

19. In or about February 1957, the defendant Rudolf Ivanovich Abel, also known as "Mark," and also known as Emil R. Goldfus and Martin Collins, did meet and confer with Reino Hayhanen, also known as "Vic," a coconspirator herein, in the vicinity of Prospect Park, Brooklyn, within the eastern district of New York, and did then and there give to Hayhanen a birth certificate and $200 in U.S. currency. (In violation of 18 U.S.C. 794(c).)

COUNT TWO

The grand jury further charges:

1. That from in or about 1948 and continuously thereafter and up to and including the date of the filing of this indictment, in the eastern district of New York, in Moscow, Union of Soviet Socialist Republics; and elsewhere, Rudolf Ivanovich Abel, also known as "Mark," and also known as Martin Collins and Emil R. Goldfus, the defendant herein, unlawfully, willfully, and knowingly did conspire and agree with Reino Hayhanen, also known as "Vic"; Mikhail Svirin; Vitali G.

Pavlov; and Aleksandr Mikhailovich Korotkov, coconspirators but not defendants herein, and with divers other persons to the grand jury unknown, to violate subsection (c) of section 793, title 18, United States Code, in the manner and by the means hereinafter set forth.

2. It was a part of said conspiracy that the defendant and his coconspirators would, for the purpose of obtaining information respecting the national defense of the United States of America, receive and obtain and attempt to receive and obtain documents, writings, photographs, photographic negatives, plans, maps, models, instruments, appliances, and notes, of things connected with the national defense of the United States, knowing and having reason to believe at the time of said agreement to receive and obtain said documents, writings, photographs, photographic negatives, plans, maps, models, instruments, appliances, and notes of things connected with the national defense, that said material would be obtained, taken, made, and disposed of contrary to the provisions of chapter 37, title 18, United States Code, in that they would be delivered and transmitted, directly and indirectly, to a foreign government, to wit, the Union of Soviet Socialist Republics and to representatives, officers, agents, and employees of the said Union of Soviet Socialist Republics, and the said defendant intending and having reason to believe that the said documents, writings, photographs, photographic negatives, plans, maps, models, instruments, appliances, and notes of things relating to the national defense of the United States of America, would be used to the advantage of a foreign nation, to wit, the said Union of Soviet Socialist Republics.

3. It was further a part of said conspiracy that the said defendant and his coconspirators would make contact with persons to the grand jury unknown, who were resident in the United States, and at places to the grand jury unknown, and who, by reason of their employment, position or otherwise, were acquainted and familiar with and were in possession of or had access to information relating to the national defense of the United States of America.

4. It was further a part of said conspiracy that the defendant and certain of his coconspirators would activate and attempt to activate as agents within the United States certain members of the United States Armed Forces who were in a position to acquire information relating to the national defense of the United States, and would communicate, deliver and transmit, and would aid and induce each other and divers other persons to the grand jury unknown, to communicate, deliver, and transmit information relating to the national defense of the United States to the Government of the Union of Soviet Socialist Republics.

5. It was further a part of said conspiracy that the defendant and certain of his coconspirators would use short-wave radios to receive instructions issued by said Government of the Union of Soviet Socialist Republics and to send information to the said Government of the Union of Soviet Socialist Republics.

6. It was further a part of said conspiracy that the defendant and certain of his coconspirators would fashion containers from bolts, nails, coins, batteries, pencils, cuff links, earrings, and the like, by hollowing out concealed chambers in such devices suitable to secret therein microfilm, microdot, and other secret messages.

7. It was further a part of said conspiracy that the said defendant and his coconspirators would communicate with each other by enclosing messages in said containers and depositing said containers in prearranged drop points in Prospect Park in Brooklyn, N.Y., in Fort Tryon Park in New York City, and at other places in the eastern district of New York and elsewhere.

8. It was further a part of said conspiracy that the said defendant and certain of his coconspirators would receive from the Government of the Union of Soviet Socialist Republics and its agents, officers, and employees large sums of money with which to carry on their illegal activities within the United States, some of which money would thereupon be stored for future use by burying it in the ground in certain places in the eastern district of New York and elsewhere.

9. It was further a part of said conspiracy that the defendant and certain of his coconspirators, including Reino Hayhanen, also known as "Vic," would assume, on instruction of the Government of the Union of Soviet Socialist Republics, the identities of certain U.S. citizens, both living and deceased, and would use birth certificates and passports in the name of such U.S. citizens, and would communicate with each other and other agents, officers, and employees of the Government of the Union of Soviet Socialist Republics through the use of numerical and other types of secret codes, and would adopt other and further means to conceal the existence of said conspiracy.

10. It was further a part of said conspiracy that defendant and certain of his coconspirators would, in the event of war between the United States and the Union of Soviet Socialist Republics, set up clandestine radio transmitting and receiving posts for the purpose of continuing to furnish the said Government of the Union of Soviet Socialist Republics with information relating to the national defense of the United States, and would engage in acts of sabotage against the United States.

Overt acts

In pursuance and furtherance of said conspiracy and to effect the object thereof, the defendant and his coconspirators did commit, among others, within the eastern district of New York and elsewhere, the overt acts as alleged and set forth under count one of this indictment, all of which overt acts are hereby realleged by the grand jury (section 793, title 18, United States Code).

COUNT THREE

The grand jury further charges:

1. That throughout the entire period from in or about 1948 and up to and including the date of the filing of this indictment, the Government of the Union of Soviet Socialist Republics, through its representatives, agents, and employees, maintained within the United States and other parts of the world a system and organization for the purpose of obtaining, collecting, and receiving information and material from the United States of a military, commercial, industrial, and political nature, and in connection therewith recruited, induced, engaged, and maintained the defendants and coconspirators hereinafter named and divers other persons to the grand jury unknown as agents, representatives, and employees to obtain, collect, and receive such information and material for the said Government of the Union of Soviet Socialist Republics.

2. That from in or about 1948 and continuously thereafter up to and including the date of the filing of this indictment in the eastern district of New York; in Moscow, Union of Soviet Socialist Republics; and elsewhere, Rudolf Ivanovich Abel, also known as "Mark" and also known as Martin Collins and Emil R. Goldfus, the defendant herein, unlawfully, willfully, and knowingly did conspire and agree with the Government of the Union of Soviet Socialist Republics, and with agents, officers, and employees of the said Government of the Union of Soviet Socialist Republics, including Aleksandr Mikhailovich Korotkov, Vitali G. Pavlov, Reino Hayhanen, also known as "Vic," coconspirators but not defendants herein, and with divers other persons to the grand jury unknown, to commit an offense against the United States of America, to wit, to violate section 951, title 18, United States Code, in the manner and by the means hereinafter set forth.

3. It was a part of said conspiracy that the defendant and Reino Hayhanen, also known as "Vic," and other coconspirators to the grand jury unknown, none of whom were included among the accredited diplomatic or consular officers or attachés of the said Government of the Union of Soviet Socialist Republics or of any foreign government, would, within the United States, and without prior notification to the Secretary of State, act as agents of the said Government of the Union of Soviet Socialist Republics, and would, as such agents, obtain, collect, and receive information and material of a military, industrial and political nature, and as such agents would communicate and deliver said information and material to other coconspirators for transmission to the said Government of the Union of Soviet Socialist Republics. It was also a part of the said conspiracy that coconspirators residing outside the United States would direct, aid and assist the defendant and certain coconspirators as aforesaid to act as such agents within the United States and would receive and transmit the said information and material to the said Government of the Union of Soviet Socialist Republics.

4. It was further a part of the said conspiracy that the said Government of the Union of Soviet Socialist Republics and its officers, agents and employees would employ, supervise and maintain the defendant and Reino Hayhanen, also known as "Vic," within the United States as such agents of the said Government of the Union of Soviet Socialist Republics for the purpose of obtaining, collecting, receiving, transmitting and communicating information and material of a military, commercial, industrial and political nature.

5. It was further a part of the said conspiracy that the defendant and certain of his coconspirators would receive sums of money and other valuable considerations from the Government of the Union of Soviet Socialist Republics, its officers, agents and employees, in return for acting as said agents of the Union of Soviet Socialist Republics within the United States for the purpose of obtaining, collecting, receiving, transmitting and communicating information, material, messages and instructions on behalf and for the use and advantage of the said Government of the Union of Soviet Socialist Republics.

6. It was further a part of said conspiracy that the said defendant and his coconspirators would use false and fictitious names, coded communications, and would resort to other means to the grand jury unknown to conceal the existence and purpose of said conspiracy.

Overt acts

In pursuance and furtherance of said conspiracy and to effect the object thereof, the defendant and his coconspirators did commit, among others, within the eastern district of New York and elsewhere, the overt acts as alleged and set forth under count I of this indictment, all of which overt acts are hereby realleged by the grand jury. (In violation of sec. 371, title 18, United States Code.)

WILLIAM F. TOMPKINS,
Assistant Attorney General.
LEONARD P. MOORE,
U.S. Attorney.

THE NEEDS AT THE PARIS CONFERENCE

Mr. MANSFIELD. Mr. President, at this point it appears unlikely that the summit meeting will continue. The need to save face may well prevail over

the need to save civilization. There is still a possibility, however, that Mr. Macmillan and President de Gaulle will be able to impress upon Mr. Khrushchev the need for these meetings to go on to the end that a greater measure of stability may be brought about in the international situation, before the little stability that is left disappears entirely.

The problem at Paris is not the U–2 incident; it is world peace. The blunders involved in that incident and—let us use the correct word in all honesty; let us call a spade a spade—the blunders in that incident and its handling are for this Nation to face. Responsibility for dealing with them rests, not with Mr. Khrushchev, but with the politically responsible President, with the politically responsible Congress, and with the American people who hold both accountable.

At the proper time, we shall trace the chain of command, or lack of it, which set in motion the U–2 flight, which has undercut the deep-seated desire of the people and policies of the United States for peace.

At the proper time, we shall find out what lies beneath the confusing zigzags of official pronouncements of the past fortnight. We shall find out why, on one day, the Congress and the people of the United States are told by the Secretary of State that, in effect, it is the policy of the United States to sanction the continuance of reconnaisance flights across the borders of another nation and why the Vice President, on a TV appearance last Sunday, confirmed this policy. We shall find out why this happens at one time, and then, subsequently, in Paris, the President tells Mr. Khrushchev and the world that such flights had already been halted last Thursday by his order and are not to be resumed. Why these conflicting statements? Why the delay in making clear that in official policy the United States sustains international law, and that this policy is established by the President, and the President alone speaks for this Nation?

These are grave questions, for they suggest that there is not one administration, but two, not one official policy but two, with the stature and safety of the Nation and the continuance of peace torn between them.

I repeat: At the appropriate time, these questions and others will be asked. They must be asked. The people of the United States will demand that they be asked and answered, for they go to the heart of our system of responsible popular Government. They go to the heart of the question of our survival as a free Nation. But, I repeat: It is for us, not for Mr. Khrushchev, to ask and answer them.

It is for Mr. Khrushchev and the other participants at Paris to get down to negotiation, to serious negotiation, on the critical differences which divide mankind.

It is to be hoped that President de Gaulle will assume leadership in bringing about these negotiations. He stands outside the immediate crisis between the United States and the Soviet Union. As host to the conference, as a man with a profound depth of understanding of the great need for peace in an anxious Europe and a troubled world, he may yet bring a measure of sanity, a measure of reason to this conference which is otherwise destined to be stillborn.

May I say, further, that it is to be hoped that if these talks do go on, the administration will seriously consider inviting the chairman of the Foreign Relations Committee to Paris to join the American delegation. We are all in this together, Democrats and Republicans. We are all bound by a common responsibility for what may transpire at this critical moment. I would respectfully suggest, in this connection, that the able and distinguished Senator from Arkansas, the chairman of the Committee on Foreign Relations [Mr. FULBRIGHT] who is now in the Middle East, be summoned forthwith to serve in an advisory capacity to the President in Paris.

Mr. President, I recognize that responsibility for the conduct of foreign policy rests with the President of the United States. In making these remarks, I do not speak for any other Member of this body on either side of the aisle. I speak only as a Senator from Montana, responsible to the people of Montana, to the Nation, and to my own conscience.

I make these remarks with the greatest reluctance and in full realization that the hour is desperately late. I make them because I do not believe it is simply a game of renewed cold war which will ensue if this conference fails. It is more likely, in my opinion, to be the beginning of a deepening of the crisis in Germany and elsewhere which sooner or later must bring this Nation, the Soviet Union, all peoples to the edge of catastrophe. That may be inevitable and if it is we must all face it together. But I would not be keeping faith with my State, with the Nation, and with my conscience if I did not now state my feelings as plainly and bluntly as I am able, if I did not urge the four statesmen in Paris once more to recognize, before the long night begins to close in upon us, that they are in every sense the principal guardians of humanity's highest hopes, perhaps of the human species itself and to act in accord with that sacred trust.

Mr. AIKEN. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. AIKEN. Although I join with the Senator from Montana in expressing our deep regret at the apparent failure of the summit conference in Paris, I would, however, be willing to leave it to history and future revelation to fix the responsibility for this failure. At some time perhaps we may get to the bottom of some of the mysteries that have surrounded the circumstances of the last 2 weeks.

I join the Senator from Montana in expressing the hope that General de Gaulle, President of France, and host to the conference, will be able to exert enough leadership to pull the Western allies back into unanimity, if there is a lack of such unanimity at the present time, and also to get the summit conference under way again, so that we may salvage some results from the great effort which has already been put into preparation for this conference.

Mr. Khrushchev has apparently made compliance with some impossible conditions a condition to the resumption of the conference in Paris. I would not expect the President of the United States to apologize to Russia for the U–2 incident unless Mr. Khrushchev is willing to apologize to the world, to every other country in the world, for maintaining tho most elaborate espionage system the world has ever known.

There is a question in our minds—perhaps not so much of a question—as to whether Mr. Khrushchev ever desired the Paris conference to produce any degree of satisfactory results; but what I think we ought to make clear at the present time, and make clear to the people of Russia, the people of Western Europe, and the people of all the world, is that the people of the United States are still very earnestly desirous of making such agreements on an international scale as will lessen the danger of a terrible conflict such as could conceivably result, although I would not agree that it is imminent; and we ought to continue our efforts toward securing agreements on disarmament, as well as on other matters which relate to the relationships between the different countries of the world.

We must have world peace, and we must let the people of the world know of our desire for world peace.

There is some question now as to whether the people of Russia are fully informed by their own Government as to what the situation is. It is believed that whatever they are told, they are given in a prejudicial manner, and one which would reflect against the people of the Western World.

I join with the Senator from Montana in expressing the opinion that we should not give up hope, and that President de Gaulle and his associates will exert every effort possible to secure a renewal of the Paris conference, or the summit conference, as it is called.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to proceed for an additional minute, so that I may comment on what the distinguished senior Senator from Vermont has said.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Montana? The Chair hears none, and it is so ordered.

Mr. MANSFIELD. Mr. President, as always the distinguished Senator from Vermont [Mr. AIKEN] shows the hallmarks of statesmanship and common sense. I agree with every word he has said.

The Senator from Vermont has mentioned the resumption of the Disarmament Conference at Geneva. I should like to see it resumed, as well as the Conference on Nuclear Testing and also the Conference on Surprise Attack, which I understand is technically still in existence even though no meetings have been held, if my understanding is correct, since December of 1958.

I will say to the Senator also that if the summit meeting at Paris fails, we

will all know whom to blame for the debacle, and we will know how to pinpoint it, because of events up to the present time.

I sincerely hope, in the interest of mankind as a whole, that these statesmen on whom the world depends will forget anything which might affect them personally, will think of the people all over the world, and will do what they can to bring about a degree of stabilization and, if at all possible, a modicum of peace as well.

I thank the Senator from Vermont, who has said in fewer words than I what the present situation is, what our hopes are, and what we devoutly pray will be accomplished.

Mr. WILEY. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. WILEY. I wish to place in the RECORD at this point a bit of information which Drew Pearson got the other day from Mr. Adenauer, when he was in Bonn. Mr. Pearson spoke to Chancellor Adenauer about the situation, and I quote from what he has said:

> I asked the vigorous Chancellor of West Germany if the so-called spy incident hadn't played into Khrushchev's hands and got the summit conference off to a bad start. He brushed it aside with, "It isn't remotely comparable to the spying Russia has been doing against the West. Russian planes fly over Germany all the time. The Communist bloc countries have 1,000 agents in Germany alone. Khrushchev has exaggerated the incident out of all proportion."

I should like to make a comment in relation to that matter. I think Chancellor Adenauer has really brought to the summit what we might call the factual situation facts. Khrushchev never intended to have this meeting. Why? Because he needed to "shoot off" his mouth for the benefit of home consumption.

Those are not my words, but those are substantially the words of an American commentator in the Near East, who is acquainted with the conditions as they exist.

In other words, this was a diversionary tactic on the part of Mr. Khrushchev. Of course, if he can call a conference later on, when conditions at home have been smoothed over, and probably when the people in Russia who are feeling the ferment all over the world for a better standard of living have been put to sleep in one way or another, he may think it will be more opportune to hold a conference then. Then, if the conference is held, will we permit him, by his ways and means, to give us a sleeping pill?

I think the particular issue right now in America is that we be alert, be adequate, and put ourselves in a position where we will know what is going on.

In the article to which I have referred the point is brought out that Khrushchev has known what has been going on, but because the Russians happened to shoot down this young American, Khrushchev had a chance to blow up the incident and to scuttle the summit meeting.

I am not one of those who thinks war is "right around the corner," so long as we are adequate and so long as we are prepared for any emergency, of which fact Khrushchev will be made aware. He, of course, is the prime actor on the world stage. He can pull most any stunt and get the publicity he desires.

I agree with the commentators of last evening. The general consensus was that Khrushchev is not getting by with this, that the common people in the various countries recognize him for what he is.

THE SUMMIT CONFERENCE

Mr. JAVITS. Mr. President, I wish to address myself to the same subject on which the distinguished Senator from Montana [Mr. MANSFIELD] just spoke, and to one or two different points.

One thing which stands out from what is occurring in Paris now with its serious impact upon the peace of the world is that Chairman Khrushchev seemingly has made a completely wrong estimate of the spirit of the American people. It has been reported that when he visited the United States he went away with the feeling that we were soft. This is a dangerous and unwarranted assumption. I do not believe it is shared by the Russian people; and if there is a public opinion in the Soviet Union, Chairman Khrushchev has by now driven matters so far that even it might assert itself.

What is important to us is that Chairman Khrushchev's bid to determine the result of our 1960 elections by outbursts or intransigeance in Paris or Moscow—or by saying, in effect, he wants to negotiate with a new President—will inevitably fail. The American people, as they have already shown, close ranks in the face of any such obvious maneuver. Not only must we close ranks at home, as has already been demonstrated in the Senate and in the House of Representatives, but we must not put all our eggs in the summit basket, which is the mistake our country could make, one which, perhaps notwithstanding the recent tragic events, we may have been saved from making. We cannot put all our eggs in the summit basket. That much is clear.

What is really the issue for us "the morning after" is the renewed effort to integrate the free world itself and to create a rule of law in the world in which the United Nations must be a prime mover. Right now we have much to be desired on both counts.

Mr. President, I join with the sentiment of the Senator from Montana [Mr. MANSFIELD]. I compliment him in expressing the hope which we all express that, everyone having had a chance to sleep over what occurred yesterday, we shall continue the negotiations in Paris, and that President de Gaulle may be the happy instrument for bringing that about. Certainly we all devoutly wish it.

We cannot in the meantime waste our lives in frustration, whatever Chairman Khrushchev's propaganda may bring, or whatever direction it may take.

So I suggest two things as well worthy of our attention. I urge upon the President right now at Paris, and thereafter, in order to utilize our time to the full: First, the integration of the free world in problems of trade, aid, immigration, refugee resettlement and travel with respect to which we face serious failures of cooperation. An example of that is the European trade conflict which was threatened, and now seems to be lessened in intensity, between the Inner Six and the Outer Seven. We have enormous difficulties right now in the growing sentiment for increased tariff protection against imports in the United States. Also there is the danger of impending meat ax cuts in the mutual security program in the Congress, and the difficulty of getting other nations to carry their share of the cost or burden of the common defense, and additional difficulties in liquidating archaic colonialist positions.

The free world needs to make a massive effort to aid less developed areas; to improve technical, professional, educational, cultural, athletic and other exchanges; to deal with extreme fluctuations in primary commodity prices, and to develop broader and more prosperous internal markets through establishing further common market and free trade areas.

The free world need not and should not exclude the Communist bloc, but it should utilize this opportunity of a probable interregnum in the effort to come to closer accord with the Communist bloc to more effectively unite its elements, and marshal its own resources for the peace struggle. Whatever may be the storm of the moment, observers believe that it will gradually subside and that something resembling competitive coexistence may develop, but this time we hope with far fewer illusions about the desirability of a relaxation in tensions as an end in itself, and with better understanding of the fact that "competitive coexistence" means the most intensive kind of struggle on every level short of nuclear war.

The United Nations has an important role to play in this situation. It is not yet standing up to its opportunity as the agency demanding a rule of law in the world. Its diplomacy still requires "playing it safe." This is the real significance of Secretary General Dag Hammarskjold's mild statement on boycotts and blockades of the Suez Canal by President Nasser, notwithstanding violations of international treaty commitments, international law, and President Nasser's explicit promises of 1956 made directly to the United Nations itself.

Mr. President, the Secretary General is doing the best he can, and his attitude is very understandable. His attitude is the natural result of a fear that the necessary two-thirds of the nations will not back a strong moral and legal position, and therefore of thinking of the United Nations more as a trade association to be held together at any cost than as an agency to secure justice in world affairs.

The real difficulty appears to be that Chairman Khrushchev and his associates have the idea that they are about to leapfrog the whole world in terms of basic productive strength and capability. The free world needs to make a bound forward to restore the perspective of the Soviet leaders. This can most effectively

be done by major means to unite the free world and integrate its resources, and by strengthening the machinery for undertaking the rule of law in the United Nations. It is for this reason that President Eisenhower's proposal for aerial surveillance will become so important. Let us utilize our time now to advantage, not in useless recriminations of the what-might-have-been.

Mr. President, I address this request to our President. Let him in Paris now—even if Mr. Khrushchev will not participate—continue the summit conference for the purpose of uniting and strengthening the free world. This will in the ultimate prove to be far more potent than endeavoring to continue negotiations with a man who refuses to negotiate for whatever reasons he may have. This means no derogation of our love for peace and no derogation of our respect for the Russian people. It means only that we move to strengthen the free world at a time when its strength will determine whether or not there shall really be peaceful coexistence, or whether the Communists will so completely overestimate their own situation as to bring us to the brink of some holocaust. Chairman Khrushchev shows that negotiations with the Communist bloc are likely to prove fruitful only when we have proved the economic superiority of our system. In the meantime we should talk and negotiate at every opportunity but without illusions.

Mr. KEATING. Mr. President, I wish to associate myself with the very fine remarks made by the distinguished Senator from Montana [Mr. MANSFIELD], the distinguished Senator from Vermont [Mr. AIKEN], and others with regard to the episode which the world witnessed yesterday, and commend them for the views they expressed.

Certainly, for all-around arrogance, it would be extremely difficult to outdo yesterday's performance by the world's highest ranking blusterer, Mr. Khrushchev. It was not enough that he had already received assurance that American reconnaissance flights over the Soviet Union had been suspended since the U–2 incident and would not be resumed, but he wanted more. He wanted a public humiliation of the President of the United States. He wanted apologies, punishments, and guarantees as his price for remaining in Paris, and as an added insult, he withdrew his invitation to President Eisenhower to visit the Soviet Union.

The height of his insult was reached in his effort to interfere with the electoral processes in the United States, in the statement that a new administration might have a different method of dealing with him. Then he threw into it, for good measure, some very insulting remarks about the President of the United States.

I do not believe that Mr. Khrushchev will be successful in influencing the people of this country with respect to their selection of candidates for high office. I rather anticipate also that Mr. Khrushchev will learn before he is through that the people of this country are very well united in their method of dealing with him. Certainly this effort on his part to interfere with our electoral process was a gratuitous insult of the first order.

He had the consummate gall to demand American punishment for all those concerned with the U–2 flight. He failed to tell us what punishment, if any, has been meted out by the Soviet Union to the spies, both Russian and American, who have left this country and disappeared behind the Iron Curtain in Russia, some of them now holding high positions in that country. I know of no case in which anyone has been punished in Russia for his acts in syping on our country.

I suppose Khrushchev expects Congress to impeach the President of the United States and sentence Allen Dulles to 20 years at hard labor. In that connection, Mr. Khrushchev had better think twice.

Millions and millions of people in this country and all over the world prayed that the summit conference would resolve issues or, at least, take an important step in that direction. It is still the hope of many, including myself, that the summit talks will continue, although certainly a heavy cloud has been cast over that hope.

What can possibly be the motives of a man who deliberately seeks to wreck the conference on its very first day? Clearly this is not something that was thought out on the moment. It was preconceived in Moscow. The reaction of thinking people in the free world can only be one of utter disgust. It is obvious that Mr. Khrushchev wants the cold war to continue. The world now knows that his pious pleas for peace were as phony as an aluminum half dollar.

As for his crude withdrawal of his invitation to the President, this is one of the rare cases in history when inhospitality has been used as a weapon. Khrushchev apparently is disposed to feel that he cannot run the risk, not of hostile demonstrations, as he has indicated, but friendly demonstrations toward our President by the Russian people. In the light of President Eisenhower's triumphal visits to India and Pakistan and South America, this is perhaps understandable.

The militarily realistic Soviet people cannot be sold the idea that spying is the act of the Devil, as Khrushchev has put it, because spying is an accepted policy of the Soviet Government. Fundamentally this is not a positive move on Khrushchev's part; it is a negative move, and a move of retreat. The thin armor plate of moral indignation he has assumed does not become this man whose past does not bear complete unveiling. While his colonies of spies range all over the world, and not only go unpunished, but are honored, we are asked to make a public show of penitence because one of our intelligence agents was apprehended by the Soviets.

Mr. President, the world knows that President Eisenhower is a truly dedicated man of peace, more dedicated to the maintenance and preservation and furtherance of peace in this world than any other individual, and that he has done as much as he honorably can do to hold the summit together. If the summit disintegrates, the responsibility will rest squarely upon Nikita Khrushchev.

Mr. SCOTT. Mr. President, will the Senator yield?

Mr. KEATING. I yield.

Mr. SCOTT. I thank the distinguished Senator from New York for yielding to me. Does not the Senator agree with me that Mr. Khrushchev is fighting a certain intangible which he cannot beat, and which he can never hope to beat? I refer to the fact that he has indicated he does not want President Eisenhower to appear in Russia. A statement given out by his aides strongly indicates that his purpose is to take a chance on the next election, and thereby hope that under those circumstances a future President might come to Russia under conditions which he thinks would be more favorable to him; whereas the next President of the United States, no matter who he is, will go not only as President, if he goes to Russia, but also as the symbol of something that Mr. Khrushchev cannot lick, and that is the symbol of freedom. If he goes, he will be cheered. If he goes, the hearts of the Russian people will go out to him, as the people of the satellite countries gave their hearts to the leaders of America, and as the peoples of the world gave their hearts to Eisenhower. They stand and cheer and they stand and weep, because they see before them the symbol of the free peoples of the earth.

Does not the Senator agree with me that what Mr. Khrushchev is hoping for is that someone will get him off the hook, from which he cannot extricate himself because he is the head of a slave system?

Mr. KEATING. What the Senator says is true. Khrushchev will be fooled. In the first place, the most insulting move I have ever heard of is the attempt to tell the American people whom they should name or what party they should name to control the destinies of this country.

Secondly, I do not believe it will be of any effect in this country, because our Nation stands united, no matter who our President is. If the President ever went to Russia, he would go with the backing of the American people. Certainly we do not propose to let Mr. Khrushchev be successful in indicating who he thinks that President should be.

He may not like the present administration, and may not, as he has indicated very clearly, like the President or the Vice President personally. However, he will find, I anticipate, that whoever is the President, he will stand four-square for the things we believe in.

Mr. SCOTT. Exactly. My point is that whether the President is a Democrat or a Republican, Mr. Khrushchev has nothing to hope for in that direction, if he seeks to divide us or to smother the symbol of freedom and equality and courageous defense of those fundamental principles which our next President, whoever he may be, will surely exemplify.

Mr. KEATING. I am sure that is so. I appreciate the remarks of the distinguished Senator from Pennsylvania.

PROPOSED AMENDMENTS TO THE BUDGET, FISCAL YEAR 1961, DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE (S. DOC. NO. 97)

The ACTING PRESIDENT pro tempore laid before the Senate a communication from the President of the United States, transmitting proposed amendments to the budget for the fiscal year 1961, involving an increase in the amount of $20,138,000, for the Department of Health, Education, and Welfare, which, with an accompanying paper, was referred to the Committee on Appropriations and ordered to be printed.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the ACTING PRESIDENT pro tempore:

A concurrent resolution of the Legislature of the State of New Jersey; to the Committee on Finance:

"CONCURRENT RESOLUTION MEMORIALIZING CONGRESS TO ENACT LEGISLATION PROVIDING HOSPITAL, SURGICAL, AND NURSING HOME BENEFITS TO OLD-AGE AND SURVIVORS INSURANCE RECIPIENTS

"Whereas 500,000 New Jersey men and women, having passed the age of 65, require more than 2½ times as much hospitalization as the general population; and

"Whereas more than half of the aged population have incomes of less than $1,000 per year; and

"Whereas access to the highest quality health care should be the right of the elderly under circumstances which promote self-respect and encourage independence; be it

"Resolved by the General Assembly of the State of New Jersey (the Senate concurring):

"1. The Congress of the United States is memorialized to enact amendments to the Social Security Act so that old-age and survivors insurance recipients will receive hospital, surgical, and nursing home benefits as a benefit right;

"2. An authenticated copy of this resolution be forwarded to the U.S. Senate and House of Representatives;

"3. Copies of this resolution be forwarded to the President of the United States and to the Members of Congress elected from New Jersey.

"MAURICE A. BRADY,
"Speaker of the General Assembly.

"Attest:

"MAURICE F. KARP,
"Clerk of the General Assembly.

"GEORGE HARPER,
"President of the Senate.

"Attest:

"HENRY A. PATTERSON,
"Secretary of the Senate."

CONCURRENT RESOLUTION OF THE SOUTH CAROLINA LEGISLATURE

Mr. JOHNSTON of South Carolina. Mr. President, on behalf of myself and my colleague, the junior Senator from South Carolina [Mr. THURMOND], I send to the desk a concurrent resolution of the General Assembly of South Carolina memorializing the Congress to request the U.S. Treasury Department to mint a sufficient number of half dollars commemorating Old Ninety Six Star Fort.

I ask that this concurrent resolution be printed at this point in the RECORD and appropriately referred.

There being no objection, the concurrent resolution was referred to the Committee on Banking and Currency, and, under the rule, ordered to be printed in the RECORD, as follows:

CONCURRENT RESOLUTION TO MEMORIALIZE CONGRESS TO REQUEST THE U.S. TREASURY DEPARTMENT TO MINT A SUFFICIENT NUMBER OF HALF DOLLARS COMMEMORATING OLD NINETY SIX STAR FORT

Whereas the general assembly is cognizant of the historical importance of Old Ninety Six as an Indian trading post on the Cherokee Path in the 17th century, the farthest English settlement from the coast, the site of a fort for the protection of settlers in the Cherokee war, and the seat of justice for huge Ninety Six District, comprising the later districts of Abbeville, Edgefield, Newberry, Laurens, Spartanburg, and Union; and

Whereas in the American Revolution, renown was added to Ninety Six as the scene of two outstanding military events, and the village was also a focal point of violent patriot-Tory strife which rent the up country with bitterness, destruction, and sorrow through the war years; and

Whereas the general assembly believes that historical sites in South Carolina should be preserved reverently as evidence of our way of life in the past, and should be passed on to posterity with a distinct feeling of pride in the great advancement and achievements of our State; and

Whereas the general assembly desires that an investigation be made with a view to restoring the town and Star Fort and such other historical ruins as may be practical to something of their former likenesses and preserving them as historical shrines by erecting suitable markers thereon and by providing for adequate protection to insure their preservation for the future; and

Whereas the general assembly believes that such investigation should include a conference with the present owners of the site with a view toward the acquisition and restoration of the fort; and

Whereas funds may be raised from the sale of a commemorative issue of half dollars, all of which issue would be purchased from the U.S. Government by the Greenwood County Historical Society as a means of financing such acquisition and restoration: Now, therefore, be it

Resolved by the house of representatives (the senate concurring), That Congress be memorialized to request the U.S. Treasury Department to have minted a sufficient number of half dollars commemorating Old Ninety Six Star Fort and that the special issue be sold to the Greenwood County Historical Society to be used for the purpose of acquisition and restoration of Old Ninety Six Star Fort; and be it further

Resolved, That a copy of this resolution be forwarded to the clerk of the U.S. Senate, the Clerk of the U.S. House of Representatives, and to each member of the South Carolina congressional delegation.

RESOLUTION OF RESOLUTIONS COMMITTEE OF CITY COURT OF BUFFALO, N.Y.

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the RECORD a resolution adopted by the resolutions committee of the city court of the city of Buffalo, N.Y.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION ADOPTED BY THE RESOLUTIONS COMMITTEE OF THE CITY COURT OF BUFFALO, BUFFALO, N.Y.

At the annual observance commemorating the adoption of the Polish Constitution of the 3d of May, held at Dom Polski Hall, 1081 Broadway, in the city of Buffalo, N.Y., on May 8, 1960, the following resolution was unanimously adopted:

"Whereas the year 1960 marks the 169th anniversary of the adoption of the Polish Constitution of May 3, 1791, which documented for all time the respect of the Polish people for the dignity of the individual and their lofty aspirations for freedom; and

"Whereas today the desire of all people, regardless of color or national origin, the world over, is to breath the air of freedom and to possess the right to decide for themselves a government of their liking which shall conduct their internal affairs; and

"Whereas a summit meeting is scheduled between our President Dwight D. Eisenhower and Premier Nikita Khrushchev, commencing May 16, 1960, and which will be attended by the leaders of the Western Powers; and

"Whereas we feel that a lack of a positive and affirmative position on the part of our American State Department and support for the retention of Poland's western boundaries at the Oder and Niese Rivers places the people of Poland in the position of reliance upon the Soviet bloc as the sole guarantor of its western boundaries: Now, therefore, be it

"Resolved, That as Americans dedicated to the cause of freedom for all nations, we feel dutybound in the name of international justice and morality to appeal to our State Department to be firm in the forthcoming summit meeting of world powers in order to preserve world peace; and be it further

"Resolved, That we appeal to the State Department for a declaration that the U.S. Government is in favor of retention of Poland's boundaries at the Oder and Niese Rivers; and be it further

"Resolved, That we commend our great President Dwight D. Eisenhower on his actions, personally undertaken by him, to resolve many of the crises that have arisen on the international forum, for his dedication to the cause of a just world peace, for his efforts to create good will for the United States throughout the world; and be it further

"Resolved, That we Americans who are of Polish ancestry, assembled at this observance, pledge our allegiance and our loyalty to our great and beloved country, and that we voice these appeals in regard to the land of our forefathers, Poland, as good Americans, reflecting the opinion of our fellow Americans who believe in the dignity of man; that Poland, historically our ally at all times of our country's need, should be afforded better treatment in view of the great sacrifice made by her people; and be it finally

"Resolved, That copies of this resolution be sent to our President Dwight D. Eisenhower, Secretary of State Christian A. Herter, our New York State Senators, Hon. Jacob Javits and Hon. Kenneth Keating, and our Representative in Congress, Hon. Thaddeus Dulski."

RESOLUTION OF THE BOARD OF EDUCATION, YONKERS, N.Y.

Mr. KEATING. Mr. President, I want to call attention this morning to a resolution of the board of education of Yonkers, N.Y., concerning the excise tax on general telephone service. The resolution provides for the levying of this tax at the State level for educational purposes.

Mr. President, I ask unanimous consent that this resolution be printed in the RECORD, and appropriately referred.

There being no objection, the resolution was referred to the Committee on Finance, and ordered to be printed in the RECORD, as follows:

Whereas on April 8, 1960, Governor Rockefeller signed into law chapter 418 of the Laws of 1960; and

Whereas this chapter authorizes the imposition of a tax for school purposes on general telephone services on a countywide basis; and

Whereas additional funds are urgently needed by the board of education of the city of Yonkers to provide more adequately for the educational program in the public schools, and

Whereas the city of Yonkers is presently within $10,326.14 of its constitutional tax limit of 2 percent, and is thereby restricted in providing additional funds for the educational program, and

Whereas the board of education of the city of Yonkers, in order to serve more adequately the educational needs of the more than 25,300 pupils enrolled in the Yonkers public schools, wishes to utilize the revenues from this source beginning September 1, 1960, in the event that the Federal Government does not reimpose this tax: Now, therefore, be it

Resolved, That the board of education of the city of Yonkers, pursuant to chapter 418 of the Laws of 1960, hereby requests the imposition of a local tax for school purposes on general telephone services as specified in article 24 of the tax law, a public hearing having been held on the imposition of said tax on the 5th day of May 1960; and be it further

Resolved, That the said board of education hereby requests that the said tax become effective during the calendar year 1960; and be it further

Resolved, That certified copies of this resolution be filed with the commissioner of education of the State of New York, the mayor, the city manager, the members of the common council, the comptroller and city clerk of the city of Yonkers, the county clerk of Westchester County, the Honorable KENNETH B. KEATING, the Honorable JACOB K. JAVITS, and the Honorable ROBERT R. BARRY.

Resolution sponsored by:

ANITA F. WOLFE,
Member, Board of Education.

Superintendent of Schools.

RESOLUTION OF DISTRICT 500, ROTARY INTERNATIONAL

Mr. LONG of Hawaii. Mr. President, district 500 of the Rotary International has forwarded to me a resolution adopted unanimously by the Rotary District 500 Conference in support of the establishment of an International Center at the University of Hawaii. Richard E. Mawson, district governor, requested that I bring the resolution to the attention of the Members of the Senate. I therefore ask unanimous consent that the resolution be printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION ADOPTED BY THE ROTARY DISTRICT 500 CONFERENCE TO SUPPORT THE ESTABLISHMENT OF AN INTERNATIONAL CENTER AT THE UNIVERSITY OF HAWAII

Whereas Hawaii has had a long history of interracial harmony, cooperation, and friendship among those who live here; and

Whereas Hawaii possesses outstanding resources to bridge the gap between the East and the West; and

Whereas thousands of foreign visitors from all over the world who have been in Hawaii have already been highly impressed by Hawaii, its governmental services, its technological know-how, its cultures, heritage, and its spirit of aloha: Now, therefore, be it

Resolved, That district 500, Rotary International, through its conference, assembled on the Island of Maui, April 22–23, 1960, go on record as favoring the establishment of an International Center at the University of Hawaii for the interchange of cultural and technical ideas between the East and the West; and be it further

Resolved, That a copy of this resolution be sent to each member of the U.S. congressional sponsors of the bill for the establishment of such a center, to the U.S. Secretary of State, to the Governor of the State of Hawaii, and to the president of the University of Hawaii; and be it further

Resolved, That the district governor of Rotary district 500, Rotary International, be empowered to give this resolution and the accompanying conference action the widest possible publicity.

K. C. LEEBRICK,
Resolutions Committee Chairman.
E. MARION SEXTON,
Conference Secretary.

REPORTS OF A COMMITTEE

The following reports of a committee were submitted:

By Mr. EASTLAND, from the Committee on the Judiciary, without amendment:

S. 1454. A bill for the relief of Keitha L. Baker (Rept. No. 1375);

S. 2113. A bill for the relief of George K. Caldwell (Rept. No. 1376);

H.R. 1600. An act for the relief of Francis M. Haischer (Rept. No. 1377);

H.R. 3107. An act for the relief of Richard L. Nuth (Rept. No. 1378);

H.R. 7036. An act for the relief of William J. Barbiero (Rept. No. 1379);

H.R. 8217. An act for the relief of Orville J. Henke (Rept. No. 1380);

H.R. 8806. An act for the relief of the Philadelphia General Hospital (Rept. No. 1381);

H.R. 9470. An act for the relief of E. W. Cornett, Sr., and E. W. Cornett, Jr. (Rept. No. 1382);

H.R. 9752. An act for the relief of K. J. McIver (Rept. No. 1383); and

H.R. 10947. An act for the relief of Aladar Szoboszlay (Rept. No. 1384).

By Mr. EASTLAND, from the Committee on the Judiciary, with an amendment:

S. 817. A bill for the relief of Freda Feller (Rept. No. 1386); and

H.R. 6081. An act for the relief of M. Sgt. Emery C. Jones (Rept. No. 1385).

PROTECTION OF CERTAIN COMMUNICATIONS FACILITIES

Mr. EASTLAND, from the Committee on the Judiciary, reported an original bill (S. 3560) to amend section 1362 of title 18 of the United States Code so as to further protect the internal security of the United States by providing penalties for malicious damage to certain communications facilities, and submitted a report (No. 1387) thereon; which bill was read twice by its title and placed on the calendar.

BILLS AND JOINT RESOLUTIONS INTRODUCED

Bills and joint resolutions were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. LONG of Hawaii:

S. 3558. A bill to authorize and direct the transfer of certain Federal property to the Government of American Samoa; to the Committee on Armed Services.

(See the remarks of Mr. LONG of Hawaii when he introduced the above bill, which appear under a separate heading.)

By Mr. JOHNSTON of South Carolina:

S. 3559. A bill to amend section 201 of the act of September 21, 1959 (73 Stat. 610), to provide for the nutritional enrichment of rice distributed under certain programs; to the Committee on Agriculture and Forestry.

(See the remarks of Mr. JOHNSTON of South Carolina when he introduced the above bill, which appear under a separate heading.)

By Mr. EASTLAND:

S. 3560. A bill to amend section 1362 of title 18 of the United States Code so as to further protect the internal security of the United States by providing penalties for malicious damage to certain communications facilities; placed on the calendar.

(See reference to above bill when reported by Mr. EASTLAND, which appears under the heading "Reports of Committees.")

By Mr. JACKSON (for himself and Mr. MAGNUSON):

S.J. Res. 193. Joint resolution to authorize the construction of a hotel and related facilities in Mount Rainier National Park; to the Committee on Interior and Insular Affairs.

(See the remarks of Mr. JACKSON when he introduced the above joint resolution, which appear under a separate heading.)

By Mr. MAGNUSON (by request):

S.J. Res. 194. Joint resolution to authorize the use of surplus grain by the States for emergency use in the feeding of resident game birds and other wildlife, and for other purposes; to the Committee on Interstate and Foreign Commerce.

(See the remarks of Mr. MAGNUSON when he introduced the above joint resolution, which appear under a separate heading.)

TRANSFER OF CERTAIN PROPERTY TO GOVERNMENT OF AMERICAN SAMOA

Mr. LONG of Hawaii. Mr. President, I introduce, for appropriate reference, a bill to authorize and direct the transfer of certain Federal property to the Government of American Samoa. The purpose of the bill is to transfer to Samoa land, buildings, and equipment held by the U.S. Navy in Samoa prior to 1951, when the Navy's responsibility for the administration of Samoa ended. Since that time this property has actually been used by the Government of American Samoa.

The property involved consists of some 215 acres of land, plus the buildings and docks on the land. This proposed legislation is required to transfer title, since existing law does not permit such transfer without reimbursement.

Since the property has not been used or needed by the United States for 9 years, and since it is essential to the conduct of the Government of American Samoa, I urge passage of the bill. Such action is recommended by the Department of the Interior and not objected to by the Bureau of the Budget.

The ACTING PRESIDENT pro tempore. The bill will be received and appropriately referred.

The bill (S. 3558) to authorize and direct the transfer of certain Federal property to the Government of American Samoa, introduced by Mr. LONG, of Hawaii, was received, read twice by its title, and referred to the Committee on Armed Services.

NUTRITIONAL ENRICHMENT OF CERTAIN RICE

Mr. JOHNSTON of South Carolina. Mr. President, last year the Congress enacted legislation providing for the enrichment of cornmeal, corn grits, and flour so as to meet the regulations promulgated under the Federal Food, Drug, and Cosmetic Act. These food commodities, which are distributed to school lunch cafeterias over the entire Nation, have contributed much to the welfare and well-being of the Nation's schoolchildren. Before last year these foods were not enriched before they were sent to the schools. The legislation last year has very capably caused these foods to meet minimum standards before they reached the children. However, rice, one of the very basic food commodities in practically every State, was not included.

Practically every State has laws requiring the enrichment of rice but the Federal Government has, since the inception of the School Lunch Act, distributed unenriched rice to the schoolchildren.

I introduce, for appropriate reference, proposed legislation which would provide for the nutritional enrichment of rice distributed by the Federal Government. The cost will be very small compared to the value received. I hope the Senate will see fit to pass this proposal at an early date.

The ACTING PRESIDENT pro tempore. The bill will be received and appropriately referred.

The bill (S. 3559) to amend section 201 of the act of September 21, 1959 (73 Stat. 610), to provide for the nutritional enrichment of rice distributed under certain programs, introduced by Mr. JOHNSTON of South Carolina, was received, read twice by its title, and referred to the Committee on Agriculture and Forestry.

CONSTRUCTION OF FACILITIES IN MOUNT RAINIER NATIONAL PARK

Mr. JACKSON. Mr. President, on behalf of myself and my distinguished senior colleague from the State of Washington [Mr. MAGNUSON], I introduce, for appropriate reference, a joint resolution to authorize the construction of a hotel and related facilities in Mount Rainier National Park jointly by the Federal Government, the State of Washington, and philanthropic interests.

At the outset, I wish to point out that there have been overnight accommodations inside Mount Rainier National Park since 1884. But present facilities are in an advanced state of deterioration and will be abandoned soon.

The National Park Service, in its mission 66 program, has determined that all future overnight accommodations be located at the lower elevations of the park, just inside or just outside the park boundaries.

The Senators from Washington and hundreds of organizations and individuals who testified before the Senate Interior and Insular Affairs Committee on this question feel that to abandon overnight facilities in the heart of the park is detrimental to the park, to the region, and to hundreds of thousands of Americans who have come from all parts of the United States to vacation there.

At the request of the Senators from Washington, the National Park Service and Jackson Hole Preserve, Inc., the Rockefeller family's philanthropical organization which has made substantial investments in our Nation's national parks, undertook studies of replacement facilities.

The Park Service study concluded only that an overnight facility in the heart of the park could not be operated at a break-even point at reasonable rates if interest and depreciation on the initial investment are taken into consideration.

The Jackson Hole Preserve, Inc., study substantiated this finding but—very importantly—reached these additional conclusions:

First. Existing accommodations inside and outside the park are inadequate to tourist needs.

Second. If new and more adequate hotel accommodations are provided, tour agencies could book many more people into the park.

Third. The fullest enjoyment of this scenic area can best be accomplished by providing a variety of use facilities, including a hotel with comfortable, first-class accommodations.

Fourth. The most spectacular displays of beauty within the park occur during the early morning and late evening hours, and can be enjoyed only by those who stay overnight in the park.

Fifth. The most desirable site for such a hotel is in the Paradise area, where existing deteriorating facilities are about to be abandoned.

Sixth. The lower level accommodations suggested in the mission 66 report would have little appeal to the visitor.

Seventh. An adequate hotel and related facilities could be constructed at a cost of $6,878,000.

Eighth. Such a hotel could produce an operating profit, at reasonable rates, sufficient to maintain the property, provide for necessary replacements of furniture, furnishings, and equipment, but would produce little or nothing to meet repayment of the investment in fixed assets or interest thereon.

Mr. President, our joint resolution provides for a cooperative venture in Mount Rainier National Park. It specifies that the Federal share of the hotel and related facilities shall not exceed 50 percent. The balance is to come from the State of Washington and from philanthropical funds which may be committed to this worthwhile purpose.

Already the Governor of the State of Washington, the Honorable Albert D. Rosellini, has indicated his desire to participate in such a joint venture. The attorney general of the State of Washington, the Honorable John O'Connell, has rendered a legal opinion stating that the State legislature may authorize and appropriate funds for such a purpose.

Ownership of the facility, of course, would be vested in the United States, and operation would be in accordance with well-established National Park Service policies and regulations.

This is admittedly a new approach to fuller development of our national parks for the benefit of all our people. We urge its adoption for two purposes: first, to get on with a necessary job; and, second, to serve as a model which may have application elsewhere in our Nation in the future.

Mr. President, I ask unanimous consent that the full text of this joint resolution be printed in the RECORD.

The ACTING PRESIDENT pro tempore. The joint resolution will be received and appropriately referred; and, without objection, the joint resolution will be printed in the RECORD.

The joint resolution (S.J. Res. 193) to authorize the construction of a hotel and related facilities in Mount Rainier National Park, introduced by Mr. JACKSON (for himself and Mr. MAGNUSON), was received, read twice by its title, referred to the Committee on Interior and Insular Affairs, and ordered to be printed in the RECORD, as follows:

Whereas the national parks have been established to provide for the enjoyment and inspiration of the American people; and

Whereas Mount Rainier National Park is one of our Nation's most scenic attractions, visited by more than one million persons annually; and

Whereas there have been overnight accommodations inside the park since 1884; and

Whereas existing overnight accommodations inside the park are in an advanced state of deterioration and due soon to be abandoned; and

Whereas the National Park Service has determined that replacement facilities in Mount Rainier National Park cannot be operated on a profitable basis if interest and depreciation on the initial investment are taken into consideration; and

Whereas the National Park Service, in its Mission 66 plan, envisages moving all overnight accommodations to lower elevations outside the park or just inside the park boundaries; and

Whereas the Senate Interior and Insular Affairs Committee has conducted hearings both in Washington, D.C., and in Washington State which establish the desire of a genuine cross section of individuals and groups for continued overnight accommodations inside the park; and

Whereas an independent study of the problem has been made by Jackson Hole Preserve, Inc., which has issued a Report on Survey of Need for and Economic Feasibility of Hotel Facilities in Mount Rainier National Park; and

Whereas said report finds existing accommodations inside and adjacent to the park inadequate to tourist needs; and

Whereas said report finds that the fullest enjoyment of this scenic area by the public can best be accomplished by providing a variety of use facilities, one of which should be a hotel with comfortable, first-class accommodations; and

Whereas said report finds that the most spectacular displays of beauty within Mount Rainier National Park occur during the early morning and late evening hours and can be enjoyed only by those who stay overnight in the park; and

Whereas said report finds that if new and more adequate hotel accommodations than now exist were provided in the park, tour agencies could readily book many more people in the park; and

Whereas said report finds the most desirable site for such hotel to be in the Paradise area, and that the lower level locations suggested for overnight accommodations in the Mission 66 report would have little appeal to the visitor; and

Whereas said report finds there is genuine need for hotel accommodations and recommends a sizable hotel of from 250 to 300 rooms with related facilities, integrated with day-use facilities at the same general location, with all operations controlled by one concessionnaire; and

Whereas such hotel would cost an estimated $6,878,000; and

Whereas such hotel could operate most successfully, economically, during a season of 90 days in the summer, with potential for future winter operation; and

Whereas said report concludes that the operation of a 250-room hotel in the Paradise Valley area will produce an operating profit sufficient adequately to maintain the property, provide for necessary replacements of furniture, furnishings and equipment, but will produce virtually nothing to meet repayment of the investment in fixed assets or interest thereon; and

Whereas no private or public body has indicated a willingness to undertake the necessary capital investment unilaterally but various elected officials of the State of Washington, including the Governor have indicated a willingness to consider such State's participation in a joint undertaking; and

Whereas it is evident that the much-needed facilities will not be built inside the park unless the necessary capital is provided by a source or sources which do not require repayment of the capital investment; and

Whereas it is possible that the necessary capital investment could be acquired in part each from a number of sources, public and private: Therefore be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That, subject to the provisions of section 2 of this joint resolution, the Secretary of the Interior is authorized to construct, in the Paradise area of Mount Rainier National Park, a hotel and other related facilities for the care and accommodation of visitors to the park.

SEC. 2. (a) The cost of constructing the building and related facilities authorized by the first section of this joint resolution shall be paid for one-half by the United States and one-half by donated funds. The Secretary of the Interior may take action with respect to the construction authorized by the first section of this joint resolution when commitments satisfactory to him have been made to assure that donated funds are available for purposes of paying one-half of the cost of such construction.

(b) Any hotel and related facilities constructed pursuant to the first section of this joint resolution shall be constructed substantially in accordance with the standards set forth in the report made by the Jackson Hole Preserve, Incorporated, referred to as the Report on Survey of Need for and Economic Feasibility of Hotel Facilities in Mount Rainier National Park. All right, title and interest in any such hotel and facilities shall be vested exclusively in the United States.

SEC. 3. The National Park Service, under the direction of the Secretary of the Interior, is authorized (1) to enter into a contract, consistent with the laws relating to the National Park Service and the established practices and regulations of such Service, with one or more concessionaires to operate any hotel and related facilities constructed pursuant to this joint resolution in accordance with such terms and conditions as may be prescribed by the National Park Service; and (2) to accept donations or commitments from public or private sources and to expend such donations for the purposes of this joint resolution.

SEC. 4. Any hotel and other related facilities constructed pursuant to this joint resolution shall be administered by the National Park Service, under the direction of the Secretary of the Interior, in accordance with the provisions of this joint resolution and the Act entitled "An Act to establish a National Park Service, and for other purposes", approved August 25, 1916 (39 Stat. 535).

SEC. 5. There are hereby authorized to be appropriated such sums as may be necessary to carry out the provisions of this joint resolution.

Mr. MAGNUSON. Mr. President, I wish to associate myself with the remarks of my distinguished colleague from the State of Washington [Mr. JACKSON] concerning our joint resolution to authorize the construction of a hotel and related facilities in Mount Rainier National Park.

Mr. President, more than 1 million tourists a year are now visiting Mount Rainier National Park. This is considerably in excess of the projected estimates of visitors under the mission 66 program. These visitors deserve an opportunity to enjoy the park to the fullest, from the best vantage point, and with the minimum of inconvenience. Only a hotel facility in the heart of the park will make this possible.

My colleague has explained how the Jackson Hole Preserve, Inc., study shows that Mount Rainier can be enjoyed fully only during the early morning and the late evening hours, and because of distances can be so enjoyed only by those who stay overnight inside the park.

This fact has been recognized since 1884 when the first overnight facilities went into the park. I am convinced, and my conviction is supported by substantial testimony before the Interior and Insular Affairs Committee, that we must continue to provide overnight lodging in the heart of the park if its function is to be fully and properly executed.

We accept the findings of both the Park Service and the Jackson Hole studies that such accommodations cannot be operated at reasonable rates except at a loss, if interest and depreciation on the initial investment are taken into consideration. What we are attempting to do is to capitalize on the avowed interest of the State of Washington, expressed by the Honorable Albert D. Rosellini, in financial cooperation which will ease the impact on the Federal Government of providing a necessary public service. Our resolution also opens the door for contributions, for philanthropic individuals or organizations to participate, also.

Mr. President, I consider this a sound approach to a difficult problem. I urge its acceptance by the Congress, for I believe that thousands upon thousands of Americans in every State in the Union will reap the benefits of this proposed legislation for years and years ahead.

STATE USE OF SURPLUS GRAIN FOR EMERGENCY FEEDING OF RESIDENT GAME BIRDS AND OTHER WILDLIFE

Mr. MAGNUSON. Mr. President, by request of the Secretary of the Interior, I introduce, for appropriate reference, a joint resolution to authorize the use of surplus grain by the States for emergency use in the feeding of resident game birds and other wildlife, and for other purposes. I ask unanimous consent that the letter from the Secretary of the Interior, requesting the proposed legislation, be printed in the RECORD.

The ACTING PRESIDENT pro tempore. The joint resolution will be received and appropriately referred; and, without objection, the letter will be printed in the RECORD.

The joint resolution (S.J. Res. 194) to authorize the use of surplus grain by the States for emergency use in the feeding of resident game birds and other wildlife, and for other purposes, introduced by Mr. MAGNUSON, by request, was received, read twice by its title, and referred to the Committee on Interstate and Foreign Commerce.

The letter presented by Mr. MAGNUSON is as follows:

U.S. DEPARTMENT OF THE INTERIOR,
Washington, D.C., May 12, 1960.

HON. RICHARD M. NIXON,
President of the Senate,
Washington, D.C.

DEAR MR. PRESIDENT: Enclosed herewith is a draft of a proposed joint resolution to authorize the use of surplus grain by the States for emergency use in the feeding of resident game birds and other wildlife, and for other purposes.

We recommend that this proposal be referred to the appropriate committee for consideration, and that it be enacted.

This proposed legislation is designed to provide a means whereby the States would be enabled to use surplus grain to provide feed to wildlife that is threatened by starvation. By the terms of this proposal, upon a finding by the Secretary of the Interior that any area of the United States is threatened with serious damage or loss to wildlife from starvation, the particular State involved would be authorized to request from the Commodity Credit Corporation grain acquired by that Corporation through price support operations. The State would be required to pay the cost of transportation and packaging of the grain.

We have become increasingly aware in recent years of the interest of certain State fish and game agencies and other local

organizations in providing a method whereby surplus grain could be used to feed resident game birds and other wildlife that at certain times of the year may be in danger of starvation as a result of adverse weather conditions. These State agencies are particularly concerned with the welfare of resident game in time of emergencies, such as severe ice and snow conditions, or drought. They wish to provide supplemental food when natural food is considered to be in short supply. This proposal contains a safeguard which would require the Secretary of the Interior to determine that conditions exist which would warrant this kind of emergency feeding. While our experience has been that there are relatively few emergency situations where local or regional game populations are in jeopardy of starvation, we believe that standby authority of this kind may prove valuable in certain circumstances. We believe the mechanics of any grain feeding program of this kind, once a decision has been reached that such a program is called for, should be one for the particular State fish and game department to work out with the assistance of the Commodity Credit Corporation along procedural lines indicated in this proposal.

While no precise estimate can be given concerning the value of the grain that may be required to carry out the purposes of this proposal, we believe it is unlikely that the value of the grain that may be required for an average year would exceed $100,000.

We have been advised by the Bureau of the Budget that there is no objection to the submission of this proposed legislation to the Congress.

Sincerely yours,

FRED A. SEATON,
Secretary of the Interior.

AMENDMENT OF COMMUNICATIONS ACT OF 1934, RELATING TO COMMUNITY ANTENNA SYSTEMS—AMENDMENT

Mr. ALLOTT submitted an amendment, intended to be proposed by him, to the bill (S. 2653) to amend the Communications Act of 1934 to establish jurisdiction in the Federal Communications Commission over community antenna systems, which was ordered to lie on the table and to be printed.

AMENDMENT OF INDIAN LONG-TERM LEASING ACT—ADDITIONAL COSPONSOR OF BILL

Mr. ANDERSON. Mr. President, on March 14, 1960, I introduced for myself and the Senator from Arizona [Mr. GOLDWATER] Senate bill 3198, to amend the Indian Long-Term Leasing Act. The distinguished senior Senator from Nevada [Mr. BIBLE] wishes to be associated with the proposed legislation.

I am delighted to have the Senator join with us on this bill and, therefore, I ask unanimous consent that when S. 3198 is next printed the name of the senior Senator from Nevada may be included as a cosponsor of it.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

HEARINGS ON CERTAIN NOMINATIONS BEFORE COMMITTEE ON THE JUDICIARY

Mr. EASTLAND. Mr. President, on behalf of the Committee on the Judiciary, I desire to announce that public hearings have been scheduled on the following nominations, for 10:30 a.m., Tuesday, May 24, 1960, in room 2228, New Senate Office Building:

Oren R. Lewis, of Virginia, to be U.S. district judge, eastern district of Virginia, vice Sterling Hutcheson, retired; and

Roy L. Stephenson, of Iowa, to be U.S. district judge, southern district of Iowa, vice Edwin R. Hicklin, retired.

At the indicated time and place all persons interested in these nominations may make such representations as are pertinent. The subcommittee consists of the Senator from South Carolina [Mr. JOHNSTON], the Senator from Nebraska [Mr. HRUSKA], and myself, as chairman.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows:

By Mr. JAVITS:

Letter addressed to Mr. Robert Lovett, New York, N.Y., written by Senator MUNDT, and reply thereto, relating to testimony of Mr. Lovett, before the Subcommittee on National Policy Machinery of the U.S. Senate; and article entitled "How To Make a Shoe Fit Any Foot," written by Arthur Krock, published in the New York Times of April 14, 1960.

THE TRAGEDY AT PARIS—INTERPRETATIONS BY WALTER LIPPMANN

Mr. CHURCH. Mr. President, Walter Lippmann thinks. Thin are the ranks of those who do. But Walter Lippmann has other strengths besides—a rare combination of courage which gives him a fierce independence, and integrity which impels him to state the facts as he sees them, regardless of how unpleasant, unpopular, or unpolitic they may be. These attributes have made him the giant of American journalism.

Walter Lippmann's interpretations of the reasons for the tragedy at Paris are, characteristically, quite different from the commonplace excuses now being widely circulated in the press. But when historians search for the hard truth concerning the debacle at the summit meeting in Paris, they are more likely to find it in two articles he has written during the past week, than in all the rest of the explanations offered from all other sources.

I ask unanimous consent that these two articles, published in the Washington Post on May 12, 1960, and May 17, 1960, may be printed in proper sequence at this point in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Post, May 12, 1960]

THE SPY BUSINESS

(By Walter Lippmann)

In the whirl of incidents following the capture of the spy plane the administration has ventured, perhaps the right word for it would be stumbled, into an untenable policy which is entirely unprecedented in international affairs. Our position now seems to be that because it is so difficult to collect information inside the Soviet Union, it will henceforth be our avowed policy to fly over Soviet territory, using the territory of our allies as bases.

Although the intention here is to be candid and honest and also to make the best of a piece of very bad luck, the new policy—which seems to have been improvised between Saturday and Monday—is quite unworkable.

To avow that we intend to violate Soviet sovereignty is to put everybody on the spot. It makes it impossible for the Soviet Government to play down this particular incident because now it is challenged openly in the face of the whole world. It is compelled to react because no nation can remain passive when it is the avowed policy of another nation to intrude upon its territory. The avowal of such a policy is an open invitation to the Soviet Government to take the case to the United Nations, where our best friends will be grievously embarrassed. The avowal is also a challenge to the Soviet Union to put pressure on Pakistan, Turkey, Norway, Japan, and any other country which has usable bases. Our allies are put on the spot because they must either violate international law or disavow the United States.

Because the challenge has been made openly, it is almost impossible to deal with this particular incident by quiet diplomacy.

The reader will, I hope, have noticed that my criticism is that we have made these overflights in avowed policy. What is unprecedented about the avowal is not the spying as such but the claim that spying, when we do it, should be accepted by the world as righteous. This is an amateurish and naive view of the nature of spying.

Spying between nations is, of course, the universal practice. Everybody does it as best he can. But it is illegal in all countries, and the spy if caught is subject to the severest punishment. When the spying involves intrusion across frontiers by military aircraft, it is also against international law. Because spying is illegal, its methods are often immoral and criminal. Its methods include bribery, blackmail, perjury, forgery, murder, and suicide.

The spy business cannot be conducted without illegal, immoral, and criminal activities. But all great powers are engaged in the spy business, and as long as the world is as warlike as it has been in all recorded history there is no way of doing without spying.

All the powers know this and all have accepted the situation as one of the hard facts of life. Around this situation there has developed over many generations a code of behavior. The spying is never avowed and therefore the Government never acknowledges responsibility for its own clandestine activities. If its agent is caught, the agent is expected to kill himself. In any event, he is abandoned to the mercies of the government that he has spied upon.

The spying is never admitted. If it can be covered successfully by a lie, the lie is told.

All this is not a pretty business, and there is no way of prettifying it or transforming it into something highly moral and wonderful. The cardinal rule, which makes spying tolerable in international relations, is that it is never avowed. For that reason it is never defended, and therefore the aggrieved country makes only as much of a fuss about a particular incident as it can make or as it chooses to make.

We should have abided by that rule. When Mr. K. made his first announcement about the plane, no lies should have been told. The administration should have said that it was investigating the charge and would then take suitable action. We should then have maintained a cool silence.

This would have left us, of course, with the unpleasant fact that our spy plane had been caught. What really compounded our trouble, and was such a humiliation to us, is that before we knew how much Mr. K. knew we published the official lie about its being a weather plane. Then, finding ourselves trapped in this blatant and gratuitous lie, we have tried to extricate ourselves by rushing into the declaration of a new and unprecedented policy.

[From the Washington Post, May 17, 1960]

THE U–2 IN PARIS

(By Walter Lippmann)

As of Monday afternoon, eastern time, there is only the faintest chance that the summit meeting will not break up. It is certain that the President will not go to Russia, the invitation having been withdrawn. Thus, the attempt to arrive at a truce in the cold war, and to relax the tensions has, unless there is a diplomatic miracle, ended in a tragic fiasco.

The issue on which the conference has been disrupted is the flight of the U–2, or more precisely the position taken by the President and his administration. We must remember that when the plane was captured, Mr. Khrushchev opened the door to the President for a diplomatic exit from his quandary: He did not believe, said Mr. K., that Mr. Eisenhower was responsible for ordering the flight.

Undoubtedly Mr. K. knew that Mr. Eisenhower must have authorized the general plan of the flights but he preferred to let the President say what in fact was a sorry kind of truth, that he did not authorize this particular flight. The diplomatic answer would have been to say nothing at the time or at the most to promise an adequate investigation of the whole affair. Instead, Mr. Eisenhower replied that he was responsible, that such flights were necessary, and then he let the world think even if he did not say so in exact words that the flights would continue. This locked the door which Mr. Khrushchev had opened. It transformed the embarrassment of being caught in a spying operation into a direct challenge to the sovereignty of the Soviet Union.

This avowal, this refusal to use the convention of diplomacy was a fatal mistake. For it made it impossible for Mr. Khrushchev to bypass the affair. Had he done that, he would have been in a position of acknowledging to the world, to the Soviet people, to his critics within the Soviet Union, and to his Communist allies, that he had surrendered to the United States the right to violate Soviet territory. No statesman can live in any country after making such an admission.

The news from Paris on Monday shows that Mr. Eisenhower had already realized that his making an avowed policy of the flights was a crucial mistake which had to be corrected. On Saturday there was, it appears, a briefing of the correspondents to tell them that we had never meant to say that the flights would continue. On Sunday in a broadcast in this country Mr. George V. Allen said the same thing. And on Monday the President told Mr. Khrushchev that the flights over Russia have been suspended "and are not to be resumed." A week ago this might have sufficed to quiet down the affair.

The withdrawal was, however, late, and it may prove to have been too little. For during the past week the flight and the way it was handled have given the Soviet Government a rich opportunity to weaken the ring of America's allies around Russia. Those who say that Mr. K. has seized upon the opportunity solely in order to make propaganda have not, I think, realized the gravity of the disaster which has befallen us. For the Soviet Union there is in this much more than propaganda. There is an instrument for disturbing if not disrupting the encircling alliance.

It would be wishful thinking to suppose that the Soviet Government will not seize this opportunity to push countries like Norway, Iran, Pakistan, Turkey, and Japan into pledges and into measures which in some considerable degree neutralize them as American airbases. Morally and legally these allies of ours are defenseless against these Soviet demands.

The Soviet Government is at least as interested in neutralizing our allies around her borders as she is in neutralizing West Berlin. We dare not hope that the Soviet Government will not make the most of the opportunity which has so unexpectedly and so unnecessarily been opened up to her.

Before the affair of the plane there had been, as Mr. Reston wrote on Monday from Paris, a strong indication that Mr. Khrushchev was very uneasy about the prospects of the summit meeting. I myself was one of those who talked to his personal emissary, Mr. Zhukov, when he came to Washington in April. The burden of Mr. Zhukov's complaint was that about March 15 American policy had suddenly hardened against a negotiation about the status of West Berlin, and that this was a reversal of the understanding given to Mr. K. by the President at Camp David.

Almost certainly, therefore, the affair of the plane offered Mr. K. an opportunity to make a diplomatic gain against the small encircling allies from Norway to Japan. If he was stymied in Berlin, he had the chance to recoup elsewhere. We have not heard the last of the troubles of the encircling allies.

There is not much comfort for us in this. For our own blunders provided Mr. K. with his opportunity.

At this writing it is still conceivable that a way will be found to carry on in Paris. Let us hope so.

ALA LOTO ALOFA—THE ROAD OF THE LOVING HEART

Mr. BYRD of West Virginia. Mr. President, in Samoa, one of the far-off south sea islands, any native or traveler may read on a tablet on a mountainside this inscription:

Remembering the great love
Of His Highness Tusitala
And his great love
When we were in prison
And sore distressed,
We have prepared him an enduring present—
This road, which we have dug forever.

Tusitala in the Samoan tongue means "teller of tales."

Years ago a man came from Scotland, weary, sick, and distressed, hoping that in the south sea islands he might find health or a quiet place to die. On the island of Samoa he bought 400 acres on a mountain to which he gave the name of Vailima, meaning "five rivers." There he built a house, where his mother came from old Scotland to live with him and his wife, and where he welcomed the natives in most friendly hospitality. The natives also came in great numbers to him for counsel, and he became their hero and friend.

One time he heard of chiefs who had been imprisoned unjustly, and visited them, bringing them comfort and cheer. As he was good and kind to all, the natives wished to thank him. They built for him a road from the harbor up to his home on the side of Mount Vaea, laboring for long days in the torrid heat of that land. When at last it was finished they presented it to him. He called it Ala Loto Alofa, or "the road of the loving heart."

Not long after, Tusitala, the "teller of tales," their white chief, died.

At his funeral one chief said, "The day is no longer than his kindness." Then the chiefs carried him to the top of the hill that he had loved so well, and kneeling down with bared heads and uplifted faces they softly said, "We place him here that he may be forever in the sunlight."

Who was this man for whom "the road of the loving heart" was made? He was Robert Louis Stevenson. His verses, gathered together in his "Child's Garden of Verses," are loved by all. Upon the monument at the end of "the road of the loving heart" are carved in English these words, which he composed a dozen years before his death, December 3, 1894:

Under the wide and starry sky,
Dig the grave and let me lie;
Glad did I live and gladly die,
And I laid me down with a will.
This be the verse you grave for me;
Here he lies where he longed to be;
Home is the sailor, home from the sea,
And the hunter home from the hill.

ELIMINATION OF POTOMAC RIVER POLLUTION

Mr. BUTLER. Mr. President, the attainment of some sound, workable program to clean up the pollution of the Potomac River is essential to the millions of people living in the broad expanse of the Potomac River Valley. Pollution abatement is of particular concern to those residing in the Washington Metropolitan area, as this is the section primarily responsible for the pollution of the river, as well as that which would be primarily benefited by an effective pollution abatement program.

In 1957, a group of private citizens representing widely divergent interests and backgrounds, but with one common interest, the development of the Potomac River Basin in a manner best suited to serve the needs of the people affected, as well as the Nation as a whole, established a coordinating committee on the Potomac River Valley. In the months and years subsequent to the establishment of this committee, a thorough study of the Potomac has been made and the committee is now in the process of publishing a report on its findings, together with appropriate recommendations. This report reflects the time and money which the private citizens' committee members have expended in an effort to further the interests of those living in the Potomac Valley. It is my hope that appropriate governmental officials, State and local, as well as Federal, will give immediate attention to the coordinating committee's report in our efforts to determine a sound, realistic program to save the Potomac River.

Mr. President, in connection with my remarks, I ask unanimous consent to have included in the RECORD an outline of the coordinating committee's report,

entitled "Potomac Prospect," which is to be made public in its entirety in the near future.

There being no objection, the outline of the report was ordered to be printed in the RECORD, as follows:

REVIEW OF "POTOMAC PROSPECT"

(A study and report with recommendations for action concerning water supply, water needs, pollution, flood moderation, recreational areas, and the preservation of the natural environment of the Potomac River waterways prepared by the Coordinating Committee on the Potomac River Valley)

The Potomac River rises in the Appalachian Mountains and flows for 383 miles in a northeasterly to easterly direction and then southeasterly to the Chesapeake Bay. Divided by nature into two distinct portions—a fast-flowing upper river, frequently narrow and rocky with precipitous tributaries, becomes a broad, sedate waterway as it meanders past Washington and gently laps the corn and tobacco fields of tidewater Virginia and Maryland—the Potomac River basin embraces over 14,500 square miles of land.

As American rivers go, the Potomac is relatively small. In comparison with western and midwestern rivers, it might be classed as merely a large tributary. But, considered in relation to the other rivers of the North Atlantic slope, it is second in size, exceeded only by the Susquehanna.

Throughout most of its length, the Potomac is open to the general public—the canoeist, the hiker, the angler, the hunter, the summer cottager, and the year-round homeowner. It is one of the few rivers not harnessed and hobbled to industrial use. It winds through pleasant valleys and hills steeped in the history of our country from the earliest days.

Capt. John Smith explored the tidal reaches of the Potomac up to Little Falls in 1608. Towering forests lined the banks, he reported. Perch, alewives, and black bass abounded in the crystal-clear depths. The fish about his boat were "lying so thicke with the heads above the water" that his men amused themselves by dipping them out.

Into the Potomac in 1634 sail the *Ark* and the *Dove*, bearing Leonard Calvert and his brother "with near 20 other gentlemen of very good fashion and 300 laboring men well provided in all things." Among the passengers was a Jesuit missionary, Father Andrew White, who called the Potomac "the sweetest and greatest river I have ever seene."

But 300 years have passed, and the Potomac has suffered at the hands of man—from siltation as erosion from farm and pasture swept away topsoil and subsoil, from industrial and mine wastes, from sewage of urban populations.

Today the Potomac, as it flows past Washington, is an open cesspool. In places the river bottom is covered with solid sewage 10 feet deep. As a District health officer recently described it: "It is sick unto death, for it carries, as it courses along, all the man-made filth that he is able to bestow * * * a sickly portrait of a noble river." Enough raw and partially treated sewage is dumped into the Potomac and its tributaries each year to fill 150 Pentagon buildings.

Visitors to Washington, the capital of the world, might reasonably expect to find a recreational mecca with fine bathing beaches, neat marinas, and wholesome fishing grounds. They find instead a natural sewage lagoon.

Visitors to European capitals, particularly in Scandinavia, are impressed by the contrast between the present condition of the Potomac and the dramatic development of other waterfront capitals, where the cleanliness of the water is a matter of national pride and the waterfront regarded as a showcase.

The Potomac could be Washington's greatest recreational asset, as valuable as Seattle's Lake Washington or Miami's gold coast. Instead it gets dirtier with each passing day. But though the river is sick, the illness is not hopeless. The causes of the malady are known. With the right approach, a great and sweet Potomac can be found again. The first and most essential measure is an end to pollution.

Piecemeal solutions have been tried in the past, but the solutions have never caught up with the growing problem. The asset of a clean stream would be shared by all. The problem of a dirty stream is shared by all. The solution must be shared by all.

The Coordinating Committee on the Potomac River Valley, composed of private citizens representing widely divergent interests and backgrounds, has just completed a 3-year study of the problem Potomac. Members of this civic-minded group, working without remuneration, interviewed 50 experts in related fields and logged thousands of man-hours in research and study before issuing their report, "Potomac Prospect."

Committee members share one common bond: Guiding the development of the Potomac River basin in a fashion best suited to serve the needs of those directly affected and the needs of our Nation as a whole.

The committee's plan is essentially a "clean river plan." It is based on the premise that the Potomac, the Patuxent, and all their tributaries, into the most remote headwaters, must be made clean and kept clean. The plan would achieve five objectives:

1. The gradual elimination of all pollution—and at no additional net cost per capita for sewage treatment than present costs for the general standard of 80 percent effectiveness.

2. The conservation of water—our most vital natural resource.

3. An adequate and safe supply of water without the necessity for any dams and at any increase per capita over present costs.

4. The preservation of large areas of our natural environment.

5. Waterways throughout the basin safe for swimming, all forms of water sports, waterfowl, and fish life.

The elimination of pollution would be accomplished progressively over a period of 40 years by the attainment of the following four-point program:

1. No raw sewage from any source shall be discharged into the waterways of the Potomac or Patuxent basins after the year 1975.

2. All sewage treated by sewage plants in the Potomac or Patuxent basins shall be given complete treatment (primary, secondary, and chlorination of the effluent) by methods which will remove at least 90 percent of all contamination by the year 1975, at least 95 percent by the year 1990, and 100 percent by the year 2000.

3. No industrial wastes or water used in industrial processes which contain any contamination shall be discharged into the waterways of the Potomac or Patuxent basins.

4. All farming, urban development, and timbering within the Potomac and Patuxent basins shall comply with modern soil conservation techniques and reforestation practices by the year 1970.

The above goals are politically realistic and economically feasible to attain. Achievement should be based on State legislation and municipal ordinances preceded and followed up by educational and promotional campaigns.

The committee is aware that while increased efficiency of present sewage treatment methods results in the reduction of contaminating elements in the effluent, it does not appreciably reduce the quantity of dissolved mineral salts. Up to the present, the volume of water needed to flush pollution past Washington has been adequate to provide a sufficient dilution of the mineral salts and to prevent the undue growth of algae in the upper estuary. But it is impossible to tell with certainty at just what point the natural flow of the river might be inadequate to provide the necessary dilution of these mineral salts.

Therefore, to assure proper dilution, the committee's plan provides for the possible construction of few impoundment reservoirs in the headwater areas which would provide a supplemental flow of water sufficient to assure adequate dilution. These dams would be built progressively, if and when the need for supplemental water for dilution purposes were definitely indicated.

The committee holds that by the year 2000 domestic sewage will be treated by evaporation-distillation techniques, such as are now being perfected for the economic distillation of fresh water from salt water, and that industrial wastes will be treated by this technique or some other effective method. This would result in a 100 percent pure sewage effluent—one that would contain no organic or inorganic materials—no bacterial, chemical or radioactive contamination. Hence, there no longer would be even the problem of adequate dilution. Actually, the addition of evaporation-distillation facilities to sewage treatment plants would have commenced well before the year 2000 under the committee's plan, and the requirement for water to dilute the mineral salts in the effluents from conventional sewage plants would have been steadily diminishing.

Once pollution is thus completely eliminated, there will be adequate water for all reasonable purposes without the necessity for constructing huge impoundments and destroying the natural environments of our waterways.

The quantity of water in the streams and rivers of the Potomac basin depends upon the amount of rainfall over the area. During the past 88 years, since accurate records have been kept, the average long-term precipitation has been more or less constant in amount, the average annual precipitation for the last 22 years being approximately equal to the average for the past 88 years.

This is reflected by the flow of the Potomac which shows that, for the past 65 years, during which accurate records have been kept, the flow has been relatively uniform, on a cyclic basis.

Thus, there is good evidence that a water crisis from progressively diminishing rainfall is not in prospect for the future. If the daily river flows of the Potomac, Patuxent and Occoquan equaled at all times their average daily flow of 7.5 billion gallons, such flows would be adequate to supply the requirements of the Potomac basin for all foreseeable time. But such is not the way of rivers. During drought conditions, the flow of the Potomac drops to less than a billion gallons per day in the Washington area.

At any of the above times, the water that would be needed by Metropolitan Washington in excess of the river's natural flow would be available in the upper estuary—75 billion gallons of it—as by such time, under the committee's plan, it would be virtually free of contamination. All that would be required would be an adaptation for pumping out the tidewater side of the diversion dam below Little Falls as well as for pumping the natural flow from the upriver side of the dam.

The solution advanced by the Corps of Engineers is to flush pollution past Washington. To assure water for this purpose in

progressively increasing quantities to be released in periods of low river flow, the corps proposes the impoundment of billions of gallons of supplemental water by means of a series of large dams and reservoirs above Washington.

For the record, the corps has no official plan as yet, as it is still in the throes of studying the problem. It commenced its latest study about 2 years ago and has received appropriations for it of nearly $1 million to date. Another half million has been requested for the corps to carry on and complete its study and to come up with official recommendations.

But from time to time representatives of the Corps of Engineers have strongly advocated the flushing theory and the building of huge dams and impoundments, at a cost of many millions. Their schemes are so unimaginative as to be unworthy of the atomic and space age.

Damming the Potomac would be an economic folly, a human tragedy. Damming the river would mean destroying the scenic Potomac Gorge above Great Falls. It would mean flooding thousands of acres of good farmland on the tributaries. It would mean inundating many miles of the historic C. & O. Canal and other areas rich in wildlife, rich in the diversified flora of mountain, piedmont, and coastal plain.

No dams are needed to convert tidewater Potomac at Washington into a mecca for aquatic enthusiasts. In the early 1920's bathers lolled on a sandy beach and swam in the tidal basin not far from where the Jefferson Memorial now stands.

Let the river be cleaned of pollution, and the Potomac, from its source to the Chesapeake, will extend an invitation surpassing anything to be found behind dams.

Frankly, it is incomprehensible how any enlightened citizen of our country can, in this day and age, contend that untreated sewage, contaminated sewage effluent, polluted industrial wastes, and the valuable topsoils of our farmlands should continue to be dumped or washed into the waterways of our Nation, especially in the historic and scenic river flowing through the very heart of the Nation's Capital City. As highly civilized and as wealthy as is this Nation, these practices are both barbaric and intolerable.

Only recently a U.S. Senator stated: "From the back porch of the White House one can see the Potomac River flowing only a few hundred yards away. It is one of our most famous, most scenic, most important rivers. It is in addition the most polluted river west of the Nile, one of the most neglected."

However, should the residents of the basin choose to live with polluted waterways as the Corps of Engineers' plan would have them do, then the coordinating committee offers as an alternative to the corps' plan a plan based upon a limited number of impoundments located exclusively in the headwater areas. Under such a plan an annual supplement of 144 billion gallons of water would be provided to meet the demand as of the year 2000 should there be a recurrence of the low record flows of 1930 at such time. This can be accomplished by 10 possible impoundments, all in the headwater areas.

The conclusion of the committee is that the costs of full treatment under its plan—the elimination of pollution—will be infinitely less than the costs of the dams. One hundred percent treatment has the merit of solving the problem. Flushing from dams would merely mitigate it, and poorly. Funds would be spent on a half-way measure, and the real problem would have been evaded.

The final comparison between the plans should be made on a dollar-and-cents basis. It shows dramatically that if this were the only criterion, the clean river plan would be the winner—way out in front.

The coordinating committee's clean river plan, when compared with the "dirty river plan" of the Corps of Engineers, will save taxpayers $165.6 million in costs to the year 2000 and $298.6 million if projected to the year 2100.

With all pollution eliminated and the waterways virtually pure, there would be water for all reasonable purposes for the residents of the Potomac basin—whatever their number might be—for all time to come.

The goal is clear—a clean river and a healthy land. The remedial measures at hand leave only the need for a will to act.

Copies of the coordinating committee's full report are available at room 709, Wire Building, 1000 Vermont Avenue NW., Washington 5, D.C.

Dr. Ira N. Gabrielson, chairman; Stanley N. Brown, Arthur B. Hanson, Rear Adm. Neill Phillips, U.S. Navy (retired), Anthony Wayne Smith, vice chairmen; Mrs. Andrew Parker, Treasurer; Charles J. Durham, secretary.

The officers and the following committee members constitute the executive committee: Elting Arnold, Washington I. Cleveland, Grant Conway, William J. Cox, William E. Davies, W. W. Rapley, Vice Adm. Ralph S. Riggs, U.S. Navy (retired), Waverly Taylor.

PEACE THROUGH STRENGTH—ADDRESS BY SENATOR BRIDGES

Mrs. SMITH. Mr. President, the senior Republican Member of the U.S. Senate—the senior Senator from New Hampshire [Mr. BRIDGES]—delivered an address on May 14, 1960, at the Kittery-Portsmouth Navy Yard which merits the attention of all Americans. It was the kind of address that is needed very much these days.

I say this because in it the senior Senator from New Hampshire put the accent where it should be put—he put the accent on the positive instead of putting it on the negative. For too long now there have been far too many utterances that put the accent on the negative when speaking of the status of the national defense of our country.

It was indeed refreshing to listen to a Senator, who knows what he is talking about from his service as past chairman and as ranking Republican on the Senate Appropriations Committee, and as the senior Republican member of the Senate Armed Services Committee, and ranking Republican on the Senate Space Committee, speak in confident tones about the security of the United States.

I ask unanimous consent that his remarks be printed in the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PEACE THROUGH STRENGTH

(Address by U.S. Senator STYLES BRIDGES at the launching of the nuclear Polaris submarine, the *Abraham Lincoln*, Portsmouth, N.H., May 14, 1960)

As a U.S. Senator and a member of the Senate Committees on Armed Services, Space Sciences, Appropriations, and the Preparedness Subcommittee, I participated in the legislative program necessary in the development of this mighty weapon of defense. So, for me, as for the Navy, and especially for the shipbuilding men of the Portsmouth-Kittery Naval Shipyard, this is a day of fulfillment.

I refer deliberately to this great defense installation as the Portsmouth-Kittery Yard, because, as you know, we are privileged to have with us today my distinguished colleague, the Honorable MARGARET CHASE SMITH, senior U.S. Senator from the State of Maine. Senator SMITH and I enjoy a friendly rivalry as to whether this historic naval base belongs to New Hampshire or Maine. Today, at least, I would like to think of it as belonging to both—in recognition of the many significant contributions which Senator SMITH has made to the defense of our country. Indeed, she has been a good and stalwart friend to this yard.

The realization of the dual concept of a nuclear powered submarine armed with long-range missiles might very well be reckoned the outstanding naval achievement of our time. I know Senator SMITH agrees with me that this ceremony today is another tribute to the skill and craftsmanship of New England's shipbuilders.

The *Abraham Lincoln* represents many great technological advances. She is a far cry from the tiny L–8, which in 1914 started this shipyard in the field of submarine building. Many of the features of the *Abraham Lincoln* would have seemed like fantastic dreams to the men who sailed the L–8 nearly 50 years ago.

WILL CARRY LINCOLN'S NAME TO THE SEVEN SEAS

This great ship is named for a man who is known the world over as a humanitarian. Yet he had a duty to lead his Nation through its bloodiest war to preserve freedom and his country. He belongs to all men, and to the ages. This new submarine will carry his name to the seven seas. True to the name she bears, her mission is one of peace, not war.

THE CONCEPT OF PEACE THROUGH STRENGTH

Peace through strength is one of nature's immutable laws. The elephant, the mightiest animal in the jungle, is the most peaceful for the simple reason that no other animal dares attack him.

Even in plantlife, the weak flower or tree succumbs to insect or blight. The strong survives to grow in strength and beauty; to glorify God and man.

It is both strange and tragic that man, supposedly the most intelligent form of life, often ignores the lessons of nature.

The American Republic has learned the meaning of peace through strength by hard experience. We learned at Pearl Harbor and we got another lesson when the Communists invaded South Korea.

The *Abraham Lincoln* is evidence for the world to see, that we have learned and shall never forget: The key to lasting peace is overwhelming strength.

ONE OF GREATEST ADVANCEMENTS

This submarine is one of the most advanced machines ever built by man. Her nuclear powerplant makes her a real undersea craft, almost completely independent of surface operations. Her ability to move freely beneath the waters was demonstrated when our submarines sailed from the Pacific to the Atlantic under the polar icecap. With this ability, there is no place on the face of the earth that is beyond reach of her power. She will be constantly moving, and, submerged, she cannot be "zeroed in" by enemy missiles.

The Polaris missile system itself is a great advance in the development of weapons. Propelled by a solid fuel, they will be instantly ready, safe to handle, and quick to fire if they are ever needed.

The *Abraham Lincoln* has 16 missile launching tubes. A single salvo would launch greater destructive power than all the bombs dropped by both sides during World War II.

This ship was built by a nation that loves peace enough to build the strength to prevent war. Her primary purpose is to deter

the threatened aggression of dictators. The *Abraham Lincoln*, along with her sister ships, should help convince our potential enemies that our freedom is not to be trifled with.

THE RECORD OF SOVIET DISHONOR

We are living in a time of peril. The international Communist conspiracy directed from Moscow poses the threat of world domination by force.

By word and deed, they have proved their readiness to destroy freedom when and if they are able.

We are about to engage in summit conferences. Our President will sit at the bargaining table with other world leaders representing both East and West.

Our earnest desire is that differences will be resolved and peace assured. We hope that Khrushchev and his satellite leaders are similarly sincere. But, regardless of the immediate outcome of the conferences, we cannot forget that the Russians have violated practically every international agreement to which they have been party over a period of 30 years.

Now they want to talk disarmament. But let us at the onset resolve not to be disarmed by words.

If they agree to lay down one weapon, let us agree to lay down one weapon of similar capability, but only if the agreement calls for adequate inspection. Otherwise, we disarm at our peril, for we have no proof that they would honor the compact.

Until such time as disarmament can be carried out with foolproof inspection, our best insurance for peace is strength.

UNITED STATES NEEDS VARIETY FOR DEFENSE

We need balanced forces in order to keep the potential enemy off balance. With limited strategy and only a few types of weapons, our enemy could concentrate his energy and resources. We need a broad range of defense capability.

The *Abraham Lincoln* is further evidence that the United States will not be placed in the position of relying on one or even a few weapons. To do so would be fatal.

We need land-based mobile missiles. We need modern bombers and fighter planes. We need Polaris submarines. We need modern aircraft carriers and a capable and well-equipped Army and Marine Corps. Each contributes its competence and experience to our overall Defense Establishment.

Submarines are by nature creatures of cunning. They are hidden beneath the surface and can be scattered over the vast oceans of the world. It is no easy task to find a single submarine at sea. It's virtually impossible to find all of them.

THE FIFTH POLARIS SUB

When the *Abraham Lincoln* loads her Polaris missiles, she will be the fifth of her type to join this Nation's seagoing deterrent. Her 16 missiles—immediately ready for action—will bring the total of weapons of destruction around the nerve center of the enemy's homeland to 80. This will mean a total of 80 targets that an aggressor must be prepared to see destroyed if he should decide to attack. This number will steadily increase as additional sister ships are completed.

This is why this ship is so essential and why this work here in Portsmouth is so important to every citizen of the United States. My sincere congratulations to all of you who have played a part in the construction of this fine ship.

I wish success to those who are to man this ship as she moves through the seven seas in the performance of her assigned mission. The officers who will soon command this magnificent warship might bear in mind one of Lincoln's observations: "Let us have faith that right makes might, and in that faith let us to the end dare to do our duty as we understand it." With this guidance—still so meaningful after almost a century—for the men who man her, a new *Abraham Lincoln* can soon go forth on the seas to support the principles of freedom and liberty which this Nation holds so dear.

MINNESOTA HIGH SCHOOL RESIDENTIAL SEMINAR

Mr. McCARTHY. Mr. President, the Minnesota High School Residential Seminar on Latin America recently issued their final report on their discussion of the problems of Latin American countries and of the policies which the United States might usefully adopt with respect to these countries.

These students from the high schools of Minnesota should be commended for their interest in foreign policy, particularly in our relations with our Latin American neighbors, I ask unanimous consent that it be printed in the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

FINAL REPORT, MINNESOTA HIGH SCHOOL RESIDENTIAL SEMINAR ON LATIN AMERICA, APRIL 7, 8, AND 9, 1960

The members of the seminar have spent 2 days in stimulating discussion of problems of Latin American countries and of policies which the United States might usefully adopt with respect to them. The resolutions which follow express the general consensus of the group. They do not imply that complete agreement was reached; occasionally there were minority dissenting opinions.

The seminar was organized under the sponsorship of the Center for Continuation Study, University of Minnesota, and the Minnesota World Affairs Center, with the support of the Hill Family Foundation, St. Paul, and the Winton Fund, Minneapolis. The members wish to express their appreciation for the opportunity these organizations have given them to conduct their discussions under especially favorable conditions. The careful selection of participants, the able guidance of a distinguished faculty, and the efficient organization and congenial atmosphere of the conference, have all contributed to this.

I. THE PRESENT SITUATION

1. The policy of the United States with respect to Latin American problems must be considered in the light of the evolution of an American community of which this country is one member. The objectives of this community have been to assure peace by a hemispheric security system and to promote the development of free and prosperous societies in all American States. The attainment of these objectives is a matter of mutual interest and benefit for all Americans. It should be pursued as a common effort involving joint planning and cooperative programs. The United States, as well as every other American State, has a great deal to gain from the success of such efforts. Failure to secure the peace and prosperity of any part of the Americas would be potentially dangerous to us. In view of these community objectives it should be a matter of concern to the United States that the feeling of hemispheric solidarity which prevailed during and immediately after the Second World War has sensibly diminished during the past decade. This has been due to the fact that preoccupation of the United States with military and economic assistance programs and development programs designed to counter Communist expansion in Europe and Asia has not been matched by an equal attention to problems of development in the Latin American States. The people of these states have felt with some reason that problems of the American community deserve an equal emphasis in the policy of the United States.

II. ECONOMIC AND SOCIAL DEVELOPMENT

2. Objectives: Stability in Latin American countries requires a closing of the gap which exists in most of them between classes—on the one hand a wealthy class of metropolitan entrepreneurs and semifeudal rural proprietors who control the economy and the Government, on the other hand a large class of uneducated and impoverished agricultural laborers and unskilled city workers. The development of a middle class is linked with (a) the expansion and diversification of economies and (b) the development of education, communications, and social services. We must therefore consider what steps the United States can take to help in these directions.

3. Economic development:

(a) Raw material production:

(1) Diversification: Many Latin American countries have been overly dependent upon market fluctuations and economic conditions in other countries because of failure to diversify production. This has also made it difficult for them to develop a skilled labor force or business group and hence to develop a middle class. Many of these countries could expand their economies greatly and secure stability by introducing new products and seeking new markets for them. For a time the transition might cause loss of income and dislocation of labor. The United States, in cooperation with Pan American organizations, could make a useful contribution by assistance in planning complementary diversification, providing training for enterpreneurs and labor, and extending loans to cover initial losses. For example, such diversification can be encouraged by continuation and expansion of the point 4 program.

(2) Marketing: The United States could assist in stabilizing markets for Latin American products by removing arbitrary tariff protection for U.S. products which can readily compete with corresponding products of Latin American countries, and in some cases by import quotas. The United States should avoid dumping of its excess produce on the world market at prices far below the market price or as gifts except in cases where this may be a necessary measure of relief in a disaster situation. Because producers of non-American countries may also enter the market, control by production quotas or price fixing should ordinarily be undertaken in the form of international commodity agreements involving all producing countries. Common market agreements among American States are possible in some cases and may prove increasingly useful as more diversified raw material and industrial production develops.

(b) Industrialization:

The capacity of Latin American countries for industrialization (which depends upon sources of power, raw materials, labor supply, transport, and markets) varies widely. Brazil and Mexico are already developing heavy industry and are able to move forward rapidly. Considerable potential exists in Venezuela and Chile. Most countries could develop light industries. In doing this there is great need for investment capital and technical assistance. The provision of capital for specific projects should be primarily a function of private investment. There are many projects which will be not only economically sound but likely to yield attractive profits within a reasonable period. Where projects require very large or long-term investment before reasonable profits can be anticipated, there may be need for occasional public loans. It is also true that in a few industries, e.g. petroleum, Latin American

countries may consider a raw material asset so essential to the development of the whole economy that the national interest will not permit private development. Where there is evidence that this is not a rationalization of a scheme of personal control and self-enrichment of political leaders, it seems wise to accept this view and not to try to impress private enterprise upon them.

(1) Conditions of private investment: The conditions of investment should be framed in a cooperative spirit. Corporations formed in the United States for operations in Latin American countries should expect as a condition of permission to do business that they must assume a position approximating that of Latin-American corporations. They should be willing to give assurances that they will employ and train a substantial Latin-American labor force, giving opportunity for advancement to higher posts; submit to the jurisdiction of local courts without invoking diplomatic interventions or claims by the United States on their behalf except where general standards of justice are violated; accept a fair share of responsibility for support of community and national services; engage in fair competition. The United States could encourage its companies to initiate or expand enterprises in Latin American countries in a manner consistent with these principles by developing a plan of Government insurance of such companies against losses resulting from expropriation or revolution, restricting such benefits to companies which undertook to improve production, compete equitably, benefit the local economy, and conduct their business in a manner compatible with the business and cultural traditions of the countries in which they operated.

(2) Conditions of Government assistance: Most public support of industrialization ought to be in the form of technical assistance programs whereby expert personnel for planning of projects or training of personnel is provided. In the few cases where long-term, low-interest Government loans are required for industrial development it would be preferable to channel these through regional development organizations which can provide some supervision and review of expenditures without arousing fear of economic imperialism. Loans should be made only for specific projects, carefully defined by agreement between the governments.

4. Social services: Capital and technical assistance are also required for programs of education, public health, housing, land reform programs, roads and transport, and other social services. Without this a trained labor force and a politically alert middle class cannot develop. Financing must necessarily be by long-term low-interest loans, which can be provided preferably by inter-American development banks or funds, or directly by the United States. Appropriations for such purposes should be substantially increased. To assure effective planning and utilization of funds it is desirable that surveys and planning by regional or international agencies be undertaken and that periodic reports upon progress be made by them. Facilities for this might well be provided by the Organization of American States. Consideration might also be given by it to inclusive long-term planning of such programs, so that resources can be efficiently allocated. An expanded technical assistance program will be necessary to provide expert guidance and training in such programs.

5. Political obstacles to development programs:

(a) Dictatorship: It is certainly desirable to avoid the funneling of money lent for development purposes into the pockets of local dictators. However, it would not solve the problem to try to draw a simple distinction between dictatorial and democratic governments, refusing aid to the former. Political control is far more confined to a small governing class in most Latin American countries than in the United States. Although in some cases it will be difficult to assure the cooperation of the group in control, the best approach appears to be through careful earmarking of loans for specific projects, substantial publicity to the aid programs, and regular review of progress. Such a review could best be undertaken by a regional agency. Continued misuse of funds might then become a ground for refusal to make further loans. Care should also be taken to avoid loans for projects to which a dictator might point as evidence of U.S. support of his regime.

(b) Nationalism. Nationalism is a natural sentiment which need not prevent an intelligent common effort on a regional basis. There is an exaggerated form of economic nationalism which demands artificial creation of uneconomic industries. The object is to free the country from dependence upon other states, a reaction against unscrupulous exploitation. The United States was not free from fault in this. The best way to overcome the bad effects of such nationalism in Latin American states is to pursue consistently over a long period a shared program of development along the lines suggested herein.

6. Education: The development of cultural relations through student and faculty exchanges, improvement of communications and press coverage, supervised travel, and general education can also do much to increase sympathetic appreciation of the institutions and problems of other American countries. Such exchanges must be a two-way street. Americans, both North and South, need more knowledge of each other.

III. COMMUNISM

7. Character: We need to be cautious about attributing to leftist movements in Latin America all the characteristics of Russian or Chinese communism. In countries where there is a pressing need for social and economic reform, opposition to government policy may be a sign of intelligent desire for social democracy rather than of communism. These movements, although they may be labeled communistic, may be national movements neither stimulated by nor associated with international communism. A predisposition to find communism in social reform movements or even in palace revolutions has led us into serious mistakes in estimating past situations, e.g., the Guatemalan revolution of 1954. Careful, independent reporting by well-trained career officers, and attention to their reports by the Department of State, are essential in determining the facts.

8. Extent: There appears to be little immediate threat of control of Latin American countries by international communism. Russian and Communist Chinese policy has been directed primarily toward driving a wedge between Latin America and the United States by creating in the former a distorted image of U.S. imperialist exploitation and opposition to social reform. However, some beginnings of economic penetration are also apparent. Although not an immediate danger, international communism is certainly a potential danger in any countries where sharp social and economic stratification continues. If it can gain control of social reform movements, communism may twist them to its own patterns. It is therefore essential that we try to avoid this by removing the causes of social and economic unrest through a common American program.

9. Remedies: Where there is not clear evidence of international Communist control there should be no interference in social revolutionary movements in American states. In such situations great patience and forbearance need to be shown even when economic interests of the United States or its citizens are injured. Sympathetic consideration should be given to assisting programs of social reform. Limited trade relations between American governments and Communist states should not cause great concern. We commend the restraint thus far shown by the United States in dealing with the Castro government.

If there is evidence of danger from international communism this should never be taken to justify unilateral intervention by the United States. Investigation to develop the facts should be undertaken by the Organization of American States, and any program to protect American security should be jointly developed and executed.

The most effective way to counter communism will be the support of positive programs of economic development and social reform, to which reference has already been made.

IV. SECURITY

10. Disarmament; regional police: Common action of American States in the preservation of hemispheric security is an accepted principle for which consultative apparatus is provided in the Organization of American States. This principle must command the continued support of all American States. However, it would be consistent with this to take steps which would partially relieve the pressure upon national budgets of maintaining the present military establishments of Latin American States. If these states wish to initiate a program of national disarmament and demilitarization of national forces, substituting an adequate regional police force under the Organization of American States to maintain order in Latin America, the United States ought to give full and prompt support to such a proposal. This would not seriously affect defense of the hemisphere against external attack, for the principle of solidarity does not imply the necessity of large forces from Latin American countries. The burden of meeting an attack by great non-American powers must necessarily fall very heavily upon the United States. Such an arrangement would also relieve this country from the burden of military assistance to Latin American States and from the danger which now exists that such assistance might strengthen political regimes which we do not care to support.

11. Panama Canal: It would be an evidence of wholehearted acceptance of the principle of common action likely to be deeply appreciated by other American States if the United States would consent to regional administration of the Panama Canal. The genuine community of interest of all American States in the security of the Canal would assure that such administration would be responsibly undertaken.

V. SOCIAL PROBLEMS

12. Reference has been made to the existence in many American states of social and economic stratification which perpetuates the poverty, illiteracy, and dependency of large segments of the population. There is urgent need for land reform which will distribute independent holdings more widely and reduce peonage, for large programs of public education especially in rural areas, for public health and sanitary services, for training in improved agricultural methods, for building of better systems of communication and transport, for more equitable tax structures, for diversification of production and introduction of industries. The security and welfare of all American countries is involved in the success of such undertakings.

VI. PRINCIPLES OF COOPERATIVE ACTION

13. In urging that the United States give increased support to such programs we wish to make clear that we appreciate the need for certain limitations upon our action.

There must be no intervention or pressure by the United States alone even to secure good ends. This can best be avoided by common planning and common execution of plans. The use of the servicio de cooperación ténica suggests that institutions can be developed which will permit joint action without inefficiency and perpetual negotiation. Reliance upon regional institutions in planning, supervision, and review may often avoid misunderstanding of motives. Especially we should help to develop and expand the services of the Organization of American States for these purposes. It is in a position to formulate authoritatively regional standards upon such matters as expropriation, protection of the interests of nonnationals, international claims, and compensation; and to coordinate and give effective direction to the common efforts of American states to improve economic and social conditions. The creation of standing financial institutions or funds for development loans which function outside political channels will prove helpful. Continued effort to make clear the cooperative spirit in which we wish to participate in development programs is needed. In particular we must attempt to understand specific development problems not in terms of our tradition but of the tradition which produced them, and must use ingenuity and flexibility in planning reforms. If we fully accept for ourselves the principle of common effort as members of a community we can expect that we will come to be identified with progressive tendencies in government and economics and that our assistance will be sought.

YOUTH APPRECIATION WEEK

Mr. KEATING. Mr. President, on March 30 of this year I introduced Senate Joint Resolution 181, to designate the second week in November as Youth Appreciation Week. I was joined by five of my colleagues in proposing this significant salute to our young people.

Strong backing for this idea has come from Optimists International, that fine organization which is dedicated to carrying out its motto: "Friend of the Boy." The Optimists have been leaders in observances of Youth Appreciation Week all over the country, and this November the organization will be sponsoring its fourth annual program. In 1959 more than 1,400 of 1,800 Optimist Clubs actively participated in the program.

I recently had the pleasure of conferring with officials of Optimist International, including President Nicholas C. Mueller, about the wonderful work being done in this field. They pledged full support for Senate Joint Resolution 181.

In viewing the importance of giving congressional support to Youth Appreciation Week, it is vital to consider the outstanding work which has already been done during observances of this week all across the Nation.

Meeting the ever-present problem of juvenile delinquency with a positive approach has led Optimists to give more than 17,200,000 youth of North America a pat on the back during the Youth Appreciation Week program.

The idea of lauding youth for their desire to become good citizens was conceived 5 years ago by a North Carolina businessman. With the aid of his Optimist Club members and the State's Governor, Youth Appreciation Week became a reality for the youth of the Tarheel State, and within 2 years this dream became a pilot project with Optimist International. In 1957 the first international Youth Appreciation Week program was conducted. This past year the program has increased tremendously in size and scope. Here is how Optimists have given youths a pat on the back.

Executive proclamations were issued in almost every State, province, and city in which an Optimist Club operates.

Billboard companies, newspapers, radio and TV stations, eager to commend the good works of our younger generation, joined in the program wholeheartedly, contributing many hundreds of column inches and hours of broadcasting time to the effort. Their generosity and sympathy with the program have helped youngsters realize that they do not have to be bad to be noticed.

Eminent speakers, such as Dr. George W. Crane, joined the ranks of those who believe that praise is more valuable than punishment in the raising of good citizens. And law enforcement agencies throughout North America agreed with the Optimist theory that this program, if continued and expanded, would help reduce future advances in delinquency.

Optimists, realizing the growing need for advanced education, set up scholarships during Youth Appreciation Week at various colleges and universities.

Youth in Government Day, observed during the week, was a huge success everywhere. The program has been especially designed to show youngsters the problems they will face when they become the voting citizens of the community. It is further arranged to demonstrate how the various city offices are conducted. Those fortunate enough to live in the vicinity of New York City visited the United Nations and watched world government in action.

Courtesy driver awards were made in many communities, several clubs using Youth Appreciation Week to sponsor and promote the activities of youth driving clubs. And other machines were brought into play, too. Numerous clubs conducted sewing contests for the girls of the community.

Sports and food—two of youth's biggest interests—provided many clubs with the highlight activity of their Youth Appreciation Week. Luncheons, dinners, barbeques, hot dog roasts, formal banquets, and old-fashioned family picnics marked this special week. Sporting events of every variety were held, indoor and outdoor, depending upon the locale and the temperature.

Knowing full well that the development of mind and body are of equal importance for the future of our country, clubs presented playgrounds with new equipment and high school science laboratories with experimental facilities.

And youth, eager to demonstrate to their elders their appreciation for this recognition, participated in numerous activities of charity and devotion. Throughout the land, ministerial and lay students were in charge of church services on Youth in Church Day.

Art displays and hobby shows seemed to sprout up everywhere, and in several communities youth, finding hobbies in common, joined together to form new Junior Optimist Clubs.

Young people themselves banded together to give recognition to their fellow youth who have worked unrewarded and unknown for months and years at hospitals for the physically and mentally ill.

Another group, realizing one of the community's biggest problems was a lack of street lights, stenciled numbers in phosphorescent paint on the curbs of every home in the community as a measure of safety and convenience.

And in one school, the youth picked up the theme of appreciation and turned the tables on the faculty. Knowing that their teachers were responsible in great part for their future, they produced a program of teacher appreciation.

Mr. President, the fine work which has already been done by Optimists International clubs all over America augurs well for the success of a congressionally sanctioned Youth Appreciation Week. I am extremely hopeful action will be forthcoming soon on this proposal, so that all of us can join in a salute to our young people.

Mr. PROXMIRE. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MOSS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Bartlett, one of its reading clerks, announced that the House had passed, without amendment, the following bills and joint resolution of the Senate:

S. 684. An act for the relief of Gerald Degnan, William C. Williams, Harry Eakon, Jacob Beebe, Thorvald Ohnstad, Evan S. Henry, Henry Pitmatalik, D. LeRoy Kotila, Bernard Rock, Bud J. Carlson, Charles F. Curtis, and A. N. Dake;

S. 2317. An act for the relief of Mary Alice Clements;

S. 2523. An act for the relief of Harry L. Arkin;

S. 2779. An act relating to the election under section 1372 of the Internal Revenue Code of 1954 by the Augusta Furniture Co., Inc., of Staunton, Va.; and

S.J. Res. 166. Joint resolution authorizing the Architect of the Capitol to permit certain temporary and permanent construction work on the Capitol Grounds in connection with the erection of a building on privately owned property adjacent thereto.

ENROLLED BILL AND JOINT RESOLUTION SIGNED

The message also announced that the Speaker had affixed his signature to the following enrolled bill and joint resolution, and they were signed by the President pro tempore:

S. 3338. An act to remove the present $5,000 limitation which prevents the Secretary of

the Air Force from settling certain claims arising out of the crash of a U.S. Air Force aircraft at Little Rock, Ark.; and

H.J. Res. 640. Joint resolution to authorize and request the President to issue a proclamation in connection with the centennial of the birth of General of the Armies John J. Pershing.

EXTENSION OF LIBRARY SERVICES ACT

Mr. MOSS. Mr. President, a robust library system is just as fundamental to America as a strong highway or educational system. For this reason I deemed it a privilege to join in cosponsoring the measure introduced by the senior Senator from Alabama [Mr. HILL] to extend for 5 years the Library Services Act of 1956.

It is impossible to estimate the number of people throughout the country who have been drawn into the wonderful world of books by the library services program. Traveling bookmobiles and the addition of library books to permanent and newly established libraries have helped millions of Americans to learn more, to be challenged and entertained, and to be carried off on the high road of adventure. The program has made more libraries possible, and has established loan and reference programs, workshops, and moving picture film services. Its benefits have flowed into rural America in all sections of the country.

My State of Utah entered the program on July 10, 1957, and by December had both temporary quarters and a State director, Mr. Russell L. Davis. During the 2 years and 5 months the program has been in operation it has proved of genuine grassroots value.

Four bookmobiles have been purchased, and three, including an exhibitmobile, are in operation. The exhibitmobile has been in all but three of Utah's counties, and in practically every town of the State. The three counties include Salt Lake County, which has several bookmobiles of its own. A station wagon to deliver books completes the State library fleet.

A staff of 14 is operating from State library headquarters, completed in August 1958. Headquarters consists of 7,200 feet of floor space and 2,900 running feet of shelving. Forty-one thousand two hundred and twelve books were cataloged and ready for use by the beginning of this year. The staff has conducted many public meetings in every county in the State.

As a result of these activities, Mr. Davis reports the following accomplishments:

San Juan County, which encompasses a large and remote area bordering on Colorado, New Mexico, and Arizona, has created a county library and has purchased a bookmobile and 6,000 books, which the State library cataloged. The entire county now has library service and is planning two library buildings.

Kane, Garfield, Piute, Sevier, and Duchesne Counties have established county library boards to contract with each other or with the State library to maintain continuing library service.

Iron, Wayne, Rich, Tooele, and Weber Counties are participating in bookmobile demonstrations operated from the State library and have not made final decisions on their programs as yet.

Many books have been loaned to small libraries throughout the State, bringing new or improved service to almost 100,000 people in Utah.

There is still much to be done, according to Mr. Davis. Fourteen other counties in Utah need help to start providing adequate service to all residents of the county.

Of the 10 counties now being served by the State library, 8 will need continuing aid to bring them up to minimum standards of service.

To provide complete library coverage of the State, Utah should have between 20 and 22 bookmobiles. Salt Lake City has ordered 2 new bookmobiles, which will bring the total in the State up to 11—Salt Lake County 4, Salt Lake City 2, San Juan County 1, State library 4.

Mr. Davis reports that the people of Utah are so "book hungry" that the present State library book stock is exhausted, and that more books could be used to great advantage. Additional funds are also needed for bookmobiles so that additional counties can be reached.

Mr. President, the Library Services Act has proved its worth many times over. Surely it is as noncontroversial as legislation can be. The bill has now been reported by the Committee on Labor and Public Welfare, and I hope it will be quickly passed by the Senate.

COMMUNITY ANTENNA SYSTEMS

Mr. MOSS. Mr. President, a parliamentary inquiry.

The ACTING PRESIDENT pro tempore. The Senator from Utah will state it.

Mr. MOSS. Has the morning hour been concluded?

The ACTING PRESIDENT pro tempore. Is there further morning business? If not, morning business is concluded.

Without objection, the Chair lays before the Senate the unfinished business.

The Senate resumed the consideration of the bill (S. 2653) to amend the Communications Act of 1934 to establish jurisdiction in the Federal Communications Commission over community antenna systems.

Mr. MOSS. Mr. President, I desire to express——

The ACTING PRESIDENT pro tempore. Would the Senator from Utah accept a suggestion from the Chair to the effect that the Senator suggest the absence of a quorum?

Mr. MOSS. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BIBLE. Mr. President, I ask unanimous consent that the previous order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. Moss in the chair). Without objection, it is so ordered.

PROPOSED REDUCTION OF AIR STRENGTH IN ALASKA

Mr. GRUENING. Mr. President, some weeks ago, the Department of the Air Force informed me and my colleague, the senior Senator from Alaska [Mr. BARTLETT], that the 449th Fighter Interceptor Squadron at Ladd Air Force Base was to exchange its F–89 aircraft for F–101B's. The information was that a superior, more modern, faster, and more effective type of aircraft, in harmony with the presumed steady improvement of our defense equipment and our defense needs, would replace the F–89 fighters at this base near Fairbanks, Alaska. On May 10, after hearing rumors of a different plan, which contemplated reduction, instead of either maintenance or improvement of our armed strength, in what is our Nation's northernmost air base on this continent, in company with my able colleague and Alaska's Representative in the House, the Honorable RALPH J. RIVERS, I visited the Pentagon. Our Alaska delegation considered the reports so alarming and so unbelievable that we wanted to get the fullest information at firsthand. We met in the Office of the Under Secretary of the Air Force, Dr. Joseph V. Charyk. Present were also Gen. Curtis LeMay, Vice Chief of Staff of the Air Force, Maj. Gen. Thomas C. Musgrave, Director of Legislative Liaison of the Air Force, and several colonels.

We were informed that, far from substituting superior planes for the existing ones, it was planned to phase out the entire 449th Fighter Interceptor Squadron, and that it would cease to exist by August of 1960. This meant the abolition of 25 planes and the reduction of the force of 500 men, pilots, mechanics, and other personnel.

Mr. President, this is a shocking abandonment of a vital sector of our first line of defense in an area of maximum strategic importance. I would be more than remiss if I did not voice most vigorously, and with all the emphasis at my command, the protest which I feel is more than justified, to a proposal I deem to be the height of folly.

For all intents and purposes, Ladd Field is to be abandoned as an airbase. We were told that the only Air Force facility scheduled to remain there would be the Arctic Aero Medical Laboratory. We were given some indication that an attempt to cover this area from Elmendorf Field, 300 miles to the south, or Eielson Field, 29 miles to the east, would be made, but that actually Alaska could be protected by planes flying from the older 48 States in the event of an emergency. That might be to prepare us for the removal of the 32 fighters now at Elmendorf, leaving Alaska wholly without fighter planes.

We were likewise told that conversations were in progress between the Air Force and the Army in Alaska, with a view to seeing whether some of the living quarters at Ladd might not be utilized

by the Army. But there is to be no increase in Army strength or personnel. So it is clear that, whatever the allegations and attempted justification, this announced action represents a sharp reduction in our defensive strength on our northernmost and westernmost fronts. In short, it is a budgetary cut, and similar to those in our national defense which the administration is making elsewhere.

Instead of cutting some of the fat out of the defense expenditures, instead of stopping the utterly inexcusable triplication of purchasing that takes place in the three armed services, instead of eliminating the waste which reaches shocking proportions in the conduct of the armed services, the Eisenhower administration, which was once hopefully looked to as the one which might achieve a true unification of the armed services, which might obviate waste, and which might strengthen the national defense, is, instead, cutting at the vitals of our national security.

Recently, that excellent daily, the Wall Street Journal, published an article "Military Managers," with a subheading, "They Waste $2 Billion or More Every Year," with a further subhead telling how desk job airmen get flight pay, whereas actual flyers in Alaska are being grounded. It does not begin to tell the whole story of military waste. If that were told, the total would be nearer $5 billion than $2 billion.

I ask unanimous consent that this article, telling of the needless waste of billions of dollars in our armed services, be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MILITARY MANAGERS—THEY WASTE $2 BILLION OR MORE EVERY YEAR, CIVILIAN CRITICS SAY—MORE DESK-JOB AIRMEN GET FLIGHT PAY; NEW HOSPITALS ADD TO A SURPLUS OF BEDS—SAGA OF 30,017 FOOTLOCKERS

(By Alan L. Otten)

WASHINGTON.—The Army is resisting all attempts to make it sell 72 acres of Hawaii's lovely Waikiki Beach. It maintains that GI's need the tract, valued at $40 million, for swimming and sunbathing.

The cost of operating planes for desk-bound airmen who put in a few hours a month of practice flying time to collect bonus flight pay has risen so high that the administration is considering awarding the men the extra pay without requiring the flying. There's hardly a thought of cutting out this bonus; it has become so ingrained in military pay scales that removal would bring an uproar that military men wouldn't like to face.

The San Francisco area already has four miltary hospitals with total capacity of 5,235 beds, of which less than 2,850 are in use, and there's an inactive 775-bed hospital nearby. Yet the Army and Navy are proposing to build new hospitals to replace two of the four.

Civilians who have worked for years on the military budget—in the executive branch, in Congress, in private life—produce these examples of what's wrong with management of the Nation's defense effort. Any top-notch impartial management expert, they say, would agree on the need for reform. Such practices, they maintain, flout widely accepted principles of efficiency and economy. And they involve no hotly controversial issues of defense policy, such as emphasis on missiles versus manned aircraft or preparedness for big or limited war.

MOST REFORMS ARE BLOCKED

Yet most of the reforms proposed by management experts are blocked by pressure—pressures from empire-building officers within the services, pressures from Congressmen and local businessmen intent on keeping military payrolls in their districts, pressures from patriotic and veterans' organizations who see some broad national defense issue in the simplest procedural changes.

"Good management changes, on which any right-minded man should be able to agree, can save $2 billion to $3 billion a year in the military budget, and produce a better defense effort," asserts one top Government official who has labored for many years to hold down service outlays. Military spending now runs about $41 billion annually, over half the total Federal budget.

Most of the critics of military management agree the fairly new Defense Secretary, Thomas Gates, is the kind of man needed to bring some order out of chaos; he has worked in the Pentagon for 7 years and knows the political maneuvers of the services in and out. But they say even a man like Mr. Gates needs time to build up a loyal and knowledgeable staff and to bring a change in the atmosphere. And with this administration nearing a close, time is what Mr. Gates doesn't have.

"Talk to people who don't live with it every day and they refuse to believe what you tell them," declares one observer of the defense setup. "It's the most complex organization ever developed, and you can't change it overnight. Change must come slowly. But it must come if we are to support this huge Military Establishment for much longer without breaking the country."

BUILT-IN RESISTANCE

"Resistance is built into the system," declares another critic of Pentagon ways. "You don't get promoted for being a good manager or efficient spender, but for the job you hold and the time you put in and the number of people under you. The Defense Department is one of the finest collections of individuals you can find anywhere, but the system just doesn't let them function. No lieutenant colonel is going to tell his superior what's wrong or go over his head. No Air Force officer temporarily assigned to the staff of the Secretary of Defense is going to be too rough on the Air Force so long as he must get his promotions in the Air Force and go back there some day."

But, the critics agree, changes can be made to improve the situation immediately and pave the way for more basic overhaul later on. The changes would involve disposing of valuable real estate the services don't need, eliminating duplication in supply and servicing, keeping better track of what's on hand, doing a better job of placing new orders and getting rid of surpluses, overhauling sacred cow fringe benefits, and making dozens of other big and little alterations.

Air Force flight pay, many experts believe, is coming close to scandal proportions, as the Air Force switches increasingly to missiles and more and more fliers descend to ground jobs. About 110,000 Air Force pilots, navigators, flight surgeons and other airmen now get some $200 million a year in bonus flight pay. Provided originally as compensation for hazardous combat flights, the pay can now be earned for flying as little as 4 hours a month and 100 hours a year. Most flight personnel, even if desk-bound, make sure they log that much time. Many are taking special jet training so they can continue to get flight pay when few nonjet planes remain. None of these is ever likely to fly jets as a main job. Meantime, there's a mounting outlay to provide, maintain, service and repair the planes these men use for their minimum flying activity.

Smaller matters prove equally sticky. The Army, Air Force, and most civilian Government agencies pay their employees every 2 weeks. Navy blue-collar workers, however, have long been paid every week—and despite the clear prospect of a $2 million-a-year saving in bookkeeping costs, the Navy refuses to change.

THE FOOTLOCKER STORY

Supply distribution, management experts say, betrays Pentagon muddling at its worst. Witness the "horror story" of an order for 300 footlockers by the Air Force base at Bitberg, Germany. As received at the Quartermaster Depot at Philadelphia, the order had somehow grown to 30,017 footlockers. Without questioning the need for more than 30,000 footlockers at a base of 400 men, the depot had the trunks shipped from Texas and Tennessee supply points. While they were on the high seas, the error was discovered—too late to save some $100,000 in excess shipping costs.

That's not all. When the footlockers did arrive, the base obligingly took 702, more than double its original order. The rest went to the Army supply depot at Giessen, Germany; it already had on hand several thousand footlockers, from which the Bitberg order could have been filled in the first place.

An area where the greatest economy progress could be most painlessly made, the critics say, is in the disposal of unneeded military real estate. The services now have land, factories, and other buildings that cost $33 billion to acquire or build, and recently they've been adding about $1.5 billion to $2 billion a year and getting rid of practically nothing. The maintenance cost creeps up. "It's eating us out of house and home, leaving us less and less for strictly military spending," one official complains. Some experts figure the Pentagon could easily take in $1 billion from sale of unneeded real estate and save some $200 to $300 million a year on upkeep.

Consider these unrealized possibilities for savings:

The Presidio, 1,343 acres of prime San Francisco real estate overlooking the Golden Gate, serves as the sprawling headquarters of the 6th Army. The headquarters, critics say, could operate far more economically and efficiently in one compact office building.

Fort Hamilton in Brooklyn is now used chiefly to process dependents of service families going overseas or returning to the States. The processing, economizers agree, could easily be done at other military installations around New York, and higherups in the Pentagon and White House have pressed the Army to yield this land to civilian use. But the Army refuses. Recently, when the New York Triborough Bridge Authority needed a strip of the fort for the approach to the new Narrows Bridge, the Army gave up a small piece of land—on condition the Authority replace the land at another point and also replace the building which had been on the ceded land.

The services not only refuse to yield real estate but persistently try to do more with what they have. The Army recently proposed reactivating its nearly idle Cleveland and Lima, Ohio, ordnance plants and its Detroit arsenal. The Cleveland plant was to be used to produce lightweight combat vehicles, and the Detroit and Lima plants to produce medium-weight combat vehicles—all satisfactorily produced by private firms. The Army argued its plants could produce the vehicles more cheaply and better. Top Pentagon officials vetoed this plan as too sweeping, but expect the Army to come back shortly with a more modest proposal.

When the services do get ready to dispose of installations, they frequently run into stormy opposition. Local merchants like the military payrolls. Southern Wisconsin took months to quiet down not long ago when the

Air Force decided to discontinue construction of the new Bong Airbase and dispose of the land. Right now Maryland and Virginia Congressmen of both parties are teaming up again, as in past years, to pressure the Navy into revising plans to cut back Washington's naval weapons plant with its 5,500 employees. The plant makes a variety of missile control devices, antisub gear and other items which management specialists agree could be better produced elsewhere.

PROBLEM OF DUPLICATION

Elimination of military duplication is considered another huge area of potential savings, and here too there is marked resistance to change within each service. Each has its own medical, communications, supply, contracting, auditing, and weather forecasting systems—and each aims to keep them as long as it can.

A congressional staff study recently estimated Armed Forces medical costs at over $400 million a year, with some 185 hospitals in the United States and 90 overseas. The hospitals have a total capacity of about 105,000 beds and average occupancy of less than 40 percent. They employ about 145,000 people, about 75 percent military and 25 percent civilian.

"It is difficult to conceive," the report said, "of an area that would more readily lend itself to consolidation than medical care. The conditions which require medical service, the facilities for treatment, and the professional standards for medical personnel are virtually indistinguishable among the services."

At Denver, a 350-bed hospital at Lowry Air Force Base keeps only 100 beds in use to care for an average load of 51 patients. Six miles away, Fitzsimons Army Hospital, with 2,078 beds, operates about 900 of them to care for an average of 684 patients.

At Langley Air Force Base in Virginia, a 217-bed hospital keeps 100 beds in use to care for 62 patients, on the average. Six miles away, at the Army's Fort Monroe, there is a 141-bed hospital, in which 35 beds are maintained to care for an average 20-patient load.

DEPOTS DO SAME JOB

Supply distribution is an area of rampant duplication, experts say. In the Southeastern United States, one congressional investigation has found, the Army's Atlanta and Memphis depots, the Air Force's mobile depot, the Marine Corps supply center in Albany, Ga., and four Navy stock points are all supplying their respective services with the same supplies. Army supply operates through seven different technical services—Ordnance, Chemical, and the like—each with specific types of material assigned it. This results in no less than 24 separate Army supply control points in the continental United States—several for each of the 7 services—when 5 to 8 could handle the job nicely, according to one management expert.

Military overbuying, lack of standardization, bad inventorying, and slow and costly surplus disposal habits long have been favorite congressional targets. Some progress has been made, budget scanners say, but much remains to be done.

This year the Navy has begun buying extra plane engines on the basis of having a 150-day supply in the pipeline; previously, it insisted on a 210-day supply. Though the shorter cycle would save millions, it took the General Accounting Office, Congress' spending guardian, two long battles to get the Navy to change.

Attempts to standardize military footwear have so far eliminated 752 different types and finishes, but 339 types remain. Pentagon experts recently attempted to prescribe a black low men's shoe as standard for all services. The Marine Corps insisted on keeping its mahogany shoe because it matched the bill on the Marine caps, and the Navy insisted on keeping a brown shoe for its fliers because it has been traditional—ever since late in World War II.

MANY ITEMS DIFFER ONLY SLIGHTLY

Over 1.3 million common supply items, according to congressional investigators, differ among the services in such relatively minor respects as color, finish, or even just names. Defense officials estimate they could save about $1 million a year in management expenses alone—not counting procurement savings from placing larger consolidated orders—for every 1,000 items eliminated from the supply system.

The Defense Department has been ballyhooing its single manager system as the answer to many of its buying problems. Under this system, one service buys all supplies of one kind for all the services; the Navy does all the fuel purchasing, for instance. But management experts say it's only a step in the right direction.

For one thing, the Pentagon is installing the system very slowly; seven supply categories were put under single managers in 1955 and 1956, but only two more minor categories have been added since then. More important, though, the single manager has authority only to consolidate and place the orders he's given. He has no power to standardize equipment, redistribute excess stocks, or cut back orders.

"If we can extend its use, and raise it to a higher level of command where it can really accomplish more, the single manager system might some day pave the way for a separate single supply service," one would-be reformer wistfully asserts.

FRINGE BENEFITS

Perhaps one of the touchiest areas of theoretical saving in the entire military establishment is the vast number of "fringe" benefits which military personnel now enjoy. Many have grown out of all proportion to the original intent, and now seem beyond uprooting.

Commissaries are a prime example. These food supermarkets were supposed to be set up where there were no private facilities selling at reasonable prices convenient to the post. Now there are over 250 commissaries in the continental United States, many in cities such as Washington and New York.

The right to buy there is now extended not only to people living on the posts, but to military families off the post, reserve and retired personnel, and Public Health officials. Less than 20 percent of the people holding permits to buy at U.S. commissaries now live on the base where the store is located. In Washington, customers at the Walter Reed Army Hospital commissary include such off-base types as a National Institutes of Health neurologist and a World War II Navy nurse, now a reservist, who is the mother of seven children and extremely unlikely ever to return to active duty.

The Government not only employs 9,000 people to man the commissaries, but supplies the buildings, equipment, light, heat and other services. The customers pay only the original cost of the food, plus transportation charges, and a highly inadequate 3 percent markup to cover all else. Military experts figure the annual running subsidy is $75 million, not counting depreciation on the buildings and equipment.

The Government also provides medical care and hospitalization for military men and their dependents, including veterinary care for pets; a retirement plan completely Government-financed; quarters, often including all or much of the furniture; in many areas, free libraries and even bus service to public schools; in many cases, subsidized laundry service; free personal travel on military planes and ships if space is available; and burial in Government-owned cemeteries, including plots for pets.

"The military life," comments one administration official, "is marked by growing socialism and paternalism, literally from the cradle to the grave."

Mr. GRUENING. It is difficult to understand the performance of this administration. Two years ago, it insisted that the strategic and military importance of Alaska was so great that virtually the northern half of Alaska—the entire area north of the Yukon and Porcupine Rivers, and some to the south of it, including most of the Alaska Peninsula and the 900 miles of Aleutian Islands—had to be set aside as an area which could be withdrawn wholly or in part for defense purposes. This is an area of over 225,000 square miles, an area larger than California, and almost as large as California and Oregon combined.

I have here in the Chamber a map which I borrowed from the office of my able colleague [Mr. BARTLETT], which shows the Eisenhower line dividing Alaska practically in half. All that area above the red line is the area which the President insisted must be withdrawn for defense purposes, and that unless such a provision were included in the statehood bill he could not approve the bill. I call the attention of my colleagues to the tremendous extent of that area.

Alaskans, and the Alaska delegation, saw no justification for this proposal, but were told officially that this would be a prerequisite to getting Presidential approval of the Alaska statehood bill. So we agreed, and section 10 and subsections A, B, C, D, and E thereof of the statehood act provided for the drawing of a so-called Eisenhower line, ostensibly in the interest of national security, in this strategic area. There has been nothing like it in previous American history. The constitutionality of this provision was challenged during the Senate debate on the statehood bill. But these objections were overborne by the assumption that such a huge potential excision from the 49th State was deemed indispensable for the future security of our Nation by the Commander in Chief. Now, in effect, the offensive and defensive strength of northern Alaska is to be largely withdrawn.

How can these two contradictory actions of the Eisenhower administration be reconciled? Let us not delude ourselves that Alaska is now adequately defended. It is not. It can become another Pearl Harbor. A few months ago, our excellent theater commander in chief of the Alaskan command, Lt. Gen. Frank Armstrong, called attention to the total lack of missile bases in Alaska. He felt so strongly on the subject that he expressed this view publicly. But his warning and plea were ignored by the administration. The Pentagon informed us the other day that he was not even consulted about this latest proposed slash in Alaska's fighter strength.

Mr. President, since the discovery by the Russians of our observation plane on its espionage mission, and the announcement by the administration that we intend to continue to send planes into Russia on spying missions—a statement made by the Vice President over the weekend, but later countermanded by the President—there is no reason to assume that the Russians will not do likewise.

As a matter of realism the administration might reverse its stand again. Why should they not if they can get away with it? And why should they not add this form of spying to the other forms they practice, since the United States has done it and proposes to continue to do it? However, when Russian planes come into northern Alaska on spying missions, the fighter strength to bring them down will have been abolished. Nor are there any missile installations there to protect us against such espionage from the air or the offensive sorties which may follow.

Twenty-five years ago a great and courageous Army officer, a pioneer flyer, the late William "Billy" Mitchell, testified before a House Committee on Military Affairs:

> Alaska is the most central place in the world for aircraft and that is true either of Europe, Asia, or North America. I believe in the future he who holds Alaska will hold the world, and I think it is the most important strategic place in the world.

Billy Mitchell's great wisdom about the importance of aircraft in war was scorned at the time by the high military commands of both the Army and Navy. Indeed Billy Mitchell, for his vision, for his courage, and his unflinching determination to safeguard the military strength of our country, was crucified on what we might call a cross of brass. He was, in fact, cashiered and driven out of the Army. But after his death, his vision about the importance of the airplane as an instrument of combat came to be appreciated. The high command of that day was proved wrong. It was wrong, however, at a time when the consequences of its shortsightedness and its wrongness were not as they are and could be now. We did not then face a ruthless, determined, and unprecedentedly powerful totalitarian enemy which makes no secret of its purpose to conquer the free world and to substitute its Communist way of life for ours. Our relations with Russia, which have never justified the slightest letdown of our guard, are moreover further strained by the recent U–2 episode and what has since developed in Paris.

Nor was Billy Mitchell's wisdom about the strategic value of Alaska appreciated, despite the pleas of Alaskans, notably those of our late Delegate in the House, Anthony J. Dimond, and, consequently, Alaska's defenselessness caused it to be the only area in North America during World War II that was invaded and for a time held in part by the enemy. There was some subsequent improvement thereafter in Alaska's defenses, notably because of Alaskans' protests, including the protests of our succeeding delegate in the Congress, my present colleague [Mr. BARTLETT], but for a long time the inadequacy of Alaskan defenses continued, and they have never been adequate. As General "Hap" Arnold wrote in his book, "Global Mission":

> Through to this day, Alaska has never received the attention in national defense planning that it deserves.

And further:

> Alaska had always been and no matter what happened in any theater of war, always remained, to me privately, a high priority. But we were never able to get the money or allocations for the air force that we really needed there to give us the kind of bases we required then—and need more than ever now.

Those words, although written 11 years ago, are certainly no less and possibly more true today.

Mr. President, there was, as I have said, for a time an improvement in the defenses of Alaska, but they have never been sufficient. At the same time, we have been spending billions of dollars on bases all over the world. Many of these are, figuratively speaking, built on quicksand. Some of them we hold at the dubious pleasure of dictators. And even in the free world, our tenure of some bases, which have cost billions of dollars, is most uncertain. I do not wish to embarrass the administration by citing these examples specifically, as I could, or going into detail about some of the strategems and the expenditures—if we can use that polite euphemism—which have had to be employed to persuade other governments to permit us to keep our bases within their borders. By contrast what we build in Alaska, on American soil, is not built on political quicksand, not amid peoples of doubtful sympathy with our cause, not in areas subject to the dangers of subversion and sabotage, not in countries whose tolerance of our presence must be ever reconfirmed and rebought, but instead is built on the solid rock of American terrain, amid an American population militantly loyal, patriotic, and alert. So we have just another example of this Administration's double standard, which I have pointed out repeatedly in other aspects of the so-called mutual security program. While we spend lavishly abroad on establishments of dubious validity and permanence, we are jeopardizing security within our own borders, to the detriment of our safety and of our economy, by a budgetary policy that is the height of folly.

To return to the latest blow at our actual defensive strength in Alaska, there are some strange contradictions and anomalies in the Air Force's action.

Testifying before the Subcommittee on Military Construction of the Senate Armed Services Committee as recently as April 13 last, less than 1 month after which we were told of the liquidation of the entire fighter force at Ladd Air Force Base, Under Secretary Charyk testified that subsequent to the Air Force submission of its fiscal 1961 construction program, major changes in the previously programed air defense system were approved, and he named three necessary revisions. They were, first, a more timely completion of an improved defense against air-breathing enemy weapons; second, an acceleration of systems designed to provide ballistic missile warning; and, third—and kindly note this, Mr. President—an improved deterrent posture.

Just how is our deterrent posture, which Under Secretary Charyk says is one of the Air Force's objectives, improved by the elimination of the entire fighter force north of the Alaska Range, and nearly 50 percent of our total fighter force in Alaska—for at Elmendorf Field, 300 miles to the south, is the balance of our Alaska fighter force consisting of 33 fighters?

And even more amazing—in view of the Air Force's proposed action—is the statement, a few sentences later, by Under Secretary Charyk, to be found on page 319 of the printed hearings:

> To complete the picture, we also plan a revised and improved fighter-interceptor force.

Just how is the total elimination of our fighter force at our northernmost airbase and nearly half of Alaska's present total fighter force, a revised and improved fighter-interceptor force?

Either Under Secretary Charyk had adopted "Newspeak," in which words mean the opposite of what they say, or a fundamental change in Air Force program and policy had again occurred in the less than 30 days between Under Secretary Charyk's appearance before the committee and our delegation's visit to the Pentagon on May 10. The Nation is entitled to an explanation of a defense policy that is so radically changed within a few weeks that it is changed once after the submission of the 1961 construction authorization program and changed again after that program is testified to before the Senate committee.

Moreover, later that same day, April 13, just a little over a month ago, Colonel Parkhill, presented by General Curtin as the Air Force spokesman for the line items, testified as follows:

> The Alaskan Air Command is responsible for providing early warning in the Alaskan area in case of attack against the United States. It is also responsible for the air defense of Alaska, and furnished operational and certain logistical support for the Strategic Air Command, the Military Air Transport Service, the Command of the Alaskan Sea Frontier, and the U.S. Army. To provide for the accomplishment of these missions, the command supports three major operational bases, Eielson, Elmendorf, and Ladd.

So, less than a month earlier, Ladd Field was referred to as one of the three operational Air Force bases in Alaska, but now it is reduced to an aero medical laboratory, a hospital, and some housing which it is hoped the Army in Alaska may be induced to occupy, although its forces are not to be increased by a single soldier.

Mr. President, even before the world-shaking events that have come to us from Paris, even before the prospects of improvement in international tension had been rudely shattered at the summit, the discussion on the floor of the Senate last Friday, in connection with the adoption of the military construction bill, shows how little justification there was for these rapid changes by the Air Force. Let me point out that in the new authorization for the military construction program totaling $1,074 million, the Air Force received well over half—some $726 million—far more than the Army, Navy, and other parts of the Defense Establishment received.

The able junior Senator from Mississippi [Mr. STENNIS], chairman of the

subcommittee of the Armed Services Committee, who is in charge of the bill, stated:

Prior to the time the committee could complete consideration of the bill * * * the Department of the Air Force again drastically revised its air defense planning, although no testimony had been presented to indicate any major change in the air defense threat since the submission of the revised plan in June 1959.

And Senator STENNIS added:

The committee has not been able to reconcile the cancellation of these long-range ground-to-air defense missile sites located on the perimeter of our country while continuing those of shorter range primarily designed for last-minute protection of our cities and military installations.

And he says further:

Most of us felt all the time that too much money was being put in ground-to-air missiles at the expense of the affirmative or purely offensive weapons.

In view of all this, and much else that I will not bother to repeat, for it can be found in the CONGRESSIONAL RECORD of last Friday, Senator STENNIS reported that the committee has requested that the revised air defense plan be again reviewed in detail by the Joint Chiefs of Staff and the Secretary of Defense.

And finally, Senator STENNIS said—and this was last Friday:

The committee is still very uncertain as to exactly what the present situation is and certainly dissatisfied with the situation in its present state.

I do not wonder that it is dissatisfied. The entire Congress and the American people should be dissatisfied.

Still later in the discussion, our distinguished colleague from the State of South Dakota, FRANCIS CASE, a member of the committee, gave his view that the bill—to quote his words—is "to some extent, out of date"; and he stated that this was the case "because our military posture has been built around certain deployments abroad and because the present situation inevitably will affect the availability of some of the bases and fields that have been developed."

Senator CASE was referring to the consequences of the discovery of the U–2 mission over Russia. But his comment took place before Nikita Khrushchev had virtually ruptured his relations with the President and with the summit meeting.

If the military situation in regard to the Air Force was cause for dissatisfaction on the part of the members of the Armed Services Committee last Friday, there is infinitely more cause for even greater dissatisfaction and for immediate revision, and revision upward, now.

Mr. President, we do not, to date, know what foreign bases the United States will be allowed to retain by the government of the countries in which they are located. We do not know whether our bases ringing Russia from which our spying missions have originated will be permitted to continue. But the one thing that we can be certain of is that whatever bases, whatever offensive or defensive strength we have in Alaska, will continue, if only our military have the vision and understanding to reverse their incredible latest decision. Indeed, they should not merely carry out the plan of a month ago of replacing the 25 F–89 fighters at Ladd with more modern fighters, but actually by adding to the present fighter strength additional fighter planes.

I call upon the Armed Services Committees of both Houses and the Appropriations Committee immediately to look into this situation and to insist that the Air Force, at the very least, reverse its position and restore the fighter squadron to the northernmost American air base and the American air base nearest to Russia.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point in my remarks, the story of our meeting at the Pentagon with the Air Force officials, as published in the Anchorage Daily Times, and written by Mr. A. Robert Smith, its Washington correspondent, as well as two editorials from the Fairbanks News-Miner, from the issues of May 12 and May 13, respectively, entitled "Is Now the Time To Reduce Our Defenses?" and "Are We Expendable?" a letter from Gov. William A. Egan to the Secretary of Defense dated May 14, 1960, and the first page of a newsletter by Mary Lee Council, administrative assistant to my colleague, which summarizes the situation as he saw it coming from the Pentagon.

There being no objection, the articles, editorials, and letters were ordered to be printed in the RECORD, as follows:

[From the Anchorage (Alaska) Daily Times, May 11, 1960]

ALASKAN DEFENSES CUT; STATE SAID "NO LONGER KEY OUTPOST"—25 FIGHTERS AT LADD TO LEAVE; SOLONS SHOCKED

(By A. Robert Smith)

WASHINGTON.—Air Force officials have bluntly told the Alaska congressional delegation they no longer regard Alaska as a key defense outpost of the free world.

This was revealed today at a press conference held jointly by Senators BARTLETT, GRUENING and Representative RIVERS to disclose the outcome of a lengthy meeting they had late yesterday at the Pentagon. They disclosed that:

1. The 25 fighter-interceptor aircraft of the 449th Squadron at Ladd Air Force Base will all be removed from Alaska, starting in August and ending by January 1.

2. The Army may take over use of Ladd, but this will not mean any increase in Army strength in Alaska, only some shifting.

3. There is no plan for the Defense Department to build offensive or defensive missile bases in Alaska as was urgently recommended last year by Lt. Gen. Frank A. Armstrong, the Alaska commander.

4. The upshot of these developments is that Alaska's defensive strength will be reduced 25 percent, according to Gen. Curtis LeMay, deputy chief of staff.

But BARTLETT contended it means a reduction of nearly 50 percent, inasmuch as the cut of 25 fighters at Ladd leaves only 33 fighters in Alaska, all based at Elmendorf Air Force Base.

5. When asked by GRUENING whether he didn't agree with Gen. Billy Mitchell's estimate of the strategic importance of Alaska for defense, LeMay replied: "Frankly, no."

BARTLETT termed these disclosures "dreadfully shocking" considering the state of world affairs.

"Peace hasn't been established with Russia," he added.

GRUENING and his colleagues vowed to oppose these plans by attempting to arouse public and congressional sentiment against them, but they indicated little hope of success in overturning this military decision. The verdict has been made, the military officials said.

"This is obviously an economy move," observed GRUENING, "directed by the Bureau of the Budget." When he asked why they didn't cut out fat and waste instead of reducing strength, LeMay said he "didn't think the American people wanted to cut out fat."

In support of its supposition that this was an economy move, the delegation noted that not long ago the Air Force announced it would substitute a superior, faster aircraft, the VooDoo, for F–89 fighters at Ladd which are becoming obsolete.

This indicated to the Alaskans that up until recently it was thought militarily wise to give Alaska improved interceptors, but that now it is no longer necessary to have them at all.

This unexplained shift was thought by the delegation to have been forced by budgetary limitations which caused the Air Force to take its choice rather than to deploy as much strength as it might have wished.

LeMay said the Air Force constantly bucks up against resistance to reducing its operations by congressional pressure such as the Alaskans put on, reported Gruening, inferring the General presumed they were interested only in the effect of the cut on the economy of Fairbanks.

"It isn't just the money, it's that those people are awfully close to Siberia and they are bound to get uneasy," said BARTLETT.

Withdrawing the squadron will reduce the military personnel by 500 officers and men, plus supporting civilian employees. The delegation said it would have hurt the Alaska economy and the morale of all Alaska.

BARTLETT reported the Army is still studying the possibility of using Ladd, but no decision is expected until July 15. The Air Force plans to continue using some of the housing at the base for personnel at Eielson Air Base, 26 miles away, because Ladd's facilities are superior. The Arctic Aero Medical Lab at Ladd will not be affected.

The Alaskans were visibly incredulous at the news they were bluntly handed by the Pentagon, and particularly by the expressed attitude of LeMay, the tough, cigar-smoking former commander of the Strategic Air Command.

RIVERS said he pointed out Armstrong had feared the threat of 27 missile bases Russia had built in nearby Siberia. LeMay, he reported, said he didn't think Russia is doing much there. Asked what they thought LeMay meant, BARTLETT blurted out:

"God knows what he meant by anything he said."

BARTLETT recalled Armstrong's plea for missiles and more defense for Alaska. He said LeMay brushed it off as just the desires of a theater commander who had been overruled.

Was Armstrong consulted about the wisdom of the elimination of 25 fighters?

"Probably not," BARTLETT quoted LeMay as answering.

How will the mission of the 449th Squadron be handled after its removal?

"We can operate from the U.S. west coast with long-range airplanes just as well as from Alaska," BARTLETT quoted LeMay as saying.

LeMay was asked what he thought would happen if Soviet bombers came over Alaska, as Armstrong envisioned in a public speech last year in which he said the Russians could knock out Alaska and move on to hit deep into the interior of the other States.

LeMay was reported to have replied he didn't think Soviet attacking aircraft would strike the United States via Alaska. He said that would be foolish because they would risk earlier detection on that route, presumably by the DEW line radar network.

BARTLETT said LeMay stated he thinks Eielson, the base from which SAC bombers are ready to strike back if necessary, is now of subordinate importance if Alaska is not of great importance any longer in the defense strategy of the United States.

GRUENING observed with irony that the White House just a few years ago thought Alaska so important for defense that it insisted that the whole northern section be set aside for possible military use as a condition for granting statehood.

BARTLETT observed, "This process of whittling down Alaska's defenses" has been underway for several years, bit by bit.

GRUENING also questioned the wisdom of cutting back on domestic bases while depending upon bases in foreign lands where America may have only a tenuous hold. He said LeMay brushed this off by saying that foreign bases were important.

LeMay also told the delegation he thought conditions were unfavorable in Alaska for military operations because the weather goes down to 60° below zero and the transportation costs are unusually high.

GRUENING scoffed at both contentions. He noted that when Alaska Steamship Co. recently announced increased freight rates, Alaskans were unable to get the armed services to join them in protesting this increase.

BARTLETT, a member of the Senate Armed Services Committee, was particularly disturbed by these developments. Last fall he toured military bases along the Pacific rim from Alaska to Japan and returned convinced that U.S. defenses needed boosting rather than reducing. His pleas to that effect have fallen on deaf ears here.

[From the Fairbanks (Alaska) Daily News-Miner, May 12, 1960]

IS NOW THE TIME TO REDUCE OUR DEFENSES?

Yesterday's News-Miner had two front page headlines: "Military Cuts Strength Here," followed by "Khrushchev May Not Want Visit From Ike."

The first headline preceded an announcement by Gen. Curtis E. LeMay, Vice Chief of Staff of the U.S. Air Force, that one of the two fighter squadrons stationed in Alaska would be eliminated within the next few months; that before the year is out, the 449th Fighter Group, manning America's and Alaska's farthest north defense post, will move south.

The fighter base closest to Russia will be abandoned as a fighter base. America's first line of defense will retreat southward several hundred miles.

Ladd Air Force Base, home of the 449th, and Ladd's host city of Fairbanks will no longer be the first line of defense.

Result of this action, in plain language, is that Ladd and Fairbanks will be left as sitting ducks out in the middle of no man's land, between the Soviet armed forces concentrated in strength a relative few miles north and west, and America's shrunken farthest north defense post at Elmendorf Air Force Base to the south.

It is ironical that on the very day announcement is made of America's first-line defense post is to be wiped out, Soviet Premier Khrushchev baldly indicates a worsening relationship with the United States with a clearcut insult to President Dwight D. Eisenhower.

Taking into account Premier Khrushchev's current statements, circumstances would seem to indicate strengthening of our defense posts closest to Russia as the Soviets maintain their belligerent status.

Public announcement America is cutting defensive strength of Alaska's formidable air patrol in the far North hardly seems the most effective way to soften Russia's present hard-nosed belligerency. Why should the bully slow his blustering when his proposed opponent is running away? Is blustering Khrushchev going to be intimidated when he sees our air defense retreating several hundred miles? We think not.

In yesterday's announcement, General LeMay, longtime plain-talking boss of SAC, Air Force offensive arm, took a position diametrically opposed to many other able top Air Force commanders. From the time of Gen. Billy Mitchell to today's Alaska top commander, Lt. Gen. Frank A. Armstrong, Alaska has been given top priority in world air strategy.

General LeMay's present position appears to be a casual writeoff of Alaska's strategic importance in defense of the United States.

We disagree with General LeMay.

We particularly disagree when results of his decision will not only reduce defensive strength of America's first line of defense by approximately 50 percent, but will in the process leave Fairbanks and Ladd Air Force Base sitting out in the middle of no man's land like ducks in a shooting gallery.

[From the Fairbanks (Alaska) Daily News-Miner, May 13, 1960]

ARE WE EXPENDABLE?

Gen. Curtis LeMay, Deputy Chief of Staff of the Air Force, would have us believe that, militarily, Alaska is expendable.

He is quoted as saying that Alaska is no longer of great importance in the defense strategy of the United States. This statement was given to Alaska's congressional delegation in justification of the Air Force's plans to cut the strength of Ladd Air Force Base by withdrawing the 449th Fighter Interceptor Squadron.

The action comes at a most inopportune time—a time when world tensions have reached a high peak—a time when every facet of defense needs strengthening instead of weakening.

It is hard to believe that General LeMay's dogmatic view on Alaska's strategic importance is shared widely in military circles.

Starting with Gen. Billy Mitchell's evaluation of the importance of Alaska as key to the continent's defense to similar views expressed more recently by Lt. Gen. Frank A. Armstrong, Alaska's present military commander, Alaska's vital role in the military picture has never been minimized.

On March 17, 1958, Franklin L. Orth, Deputy Assistant Secretary of the Army told the Anchorage Chamber of Commerce he considers Alaska "the keystone in the arch of our defensive system."

Orth added: "Alaska has now become the strongest defensive link in our outpost of freedom."

Lt. Gen. J. H. Atkinson, formerly commander in chief of the Alaskan command, told the Alaska Chamber of Commerce: "As we all know, Alaska is an outpost of our continental defense, and I cannot overemphasize its importance in the strategic picture. It is a shoulder of the Polar Basin, that most critical area which separates us from Siberia and from the heartland of Russia itself."

In a later speech, General Atkinson declared: "It is logical to assume that if Alaska is a desirable location strategically from which to fly manned aircraft against enemy targets, it will be an equally desirable strategic location from which to launch unmanned aircraft—namely, missiles."

General Atkinson based his remarks on the contention that range will always be an important factor in that it is cheaper to send an aircraft or missile 500 miles than 5,000 miles.

It is even more surprising and shocking as Senator BARTLETT says—that after all these views on Alaska's value to American defense from responsible military leaders we are told that Alaska is expendable.

It is even more surprising and shocking for taxpayers in Alaska and elsewhere to be told that the millions of dollars spent to construct strong military outposts in Alaska are now construed to be in vain and useless.

We are not military men, nor have we made a thorough study of military concepts and strategy. Yet we cannot see the wisdom of weakening and neutralizing the one American State which is closest to America's greatest potential enemy.

We cannot see the wisdom of deciding that more than 200,000 Americans in America's largest State are expendable and apparently to be left without adequate defenses.

We wonder if the Russians would apply the same sort of thinking to the vast reaches of Siberia, the Kamchatka Peninsula or other key points in their defense system?

We still believe—and we are convinced our view would have firm support in military circles—that Alaska is a highly important segment of our national military picture. We believe that from a standpoint of continental defense, our Government should retain Alaskan defenses at a high level. We believe that instead of stripping Alaska of her defenses, these changes should be augmented with both missiles and aircraft.

America's national security should not be sold down the river so casually.

To weaken Alaska now would be to create an inviting "Pearl Harbor" which would prove extremely tempting to our potential enemies, and harmful to our national security.

Is Alaska expendable? We must disagree most emphatically with those who feel it is. Alaska is not only not expendable—it is America's most important shield against an aggressor.

Loss of Alaska could prove a crippling blow to the entire defense of America.

STATE OF ALASKA,
Juneau, May 14, 1960.

Hon. THOMAS S. GATES, Jr.,
Secretary of Defense,
The Pentagon, Washington, D.C.

DEAR MR. SECRETARY: This is to protest, in feelings stronger than words can convey, the recently disclosed decision of the Air Force to deactivate the 449th Fighter Interceptor Squadron at the Ladd Air Force Base.

I do so because of my deep concern with the effect of this reduction, predicated, apparently, solely on budgetary considerations, upon the Nation's defenses.

It is my understanding that the 449th represents more than 40 percent of the existing fighter strength in Alaska. With its departure, Alaska—the first line of resistance in event of attack—would be left with a defending force of 33 fighter planes.

For many months it has been public knowledge that the Russians have more than two dozen bases along the coast, which could easily be reached by medium-range ballistic missiles. Military officials familiar with the situation have implored that offensive ballistic missile sites be constructed in Alaska.

Instead of strengthening Alaska's already inadequate defenses, however, the military has followed a policy of steady retreat. First Nome, then the Aleutian Islands have been abandoned, ostensibly in line with the so-called heartland concept. Now, apparently, this concept, too, has been abandoned, and the few thousand military personnel remaining in Alaska, not to mention the residents of an integral part of the Nation, are to be considered expendable.

There is to my mind a glaring lack of evidence that either the United States or Russia is now prepared, or will be prepared for some period of time, to conduct a push-button war.

To contend that the role of the Air Force can be conducted as well from the west coast as from Alaska—a theory attributed in news reports to Gen. Curtis LeMay, Air Force Vice Chief of Staff—is contrary to all reason.

Millions of dollars have been spent in Alaska and across northern Canada in the construction of warning systems premised on the knowledge that additional minutes would be gained to prepare for an aggressor. Now, in this latest reversal of form, the Air Force would cut back by more than 40 percent the very interceptor units that could gain additional precious minutes for preparation.

Is it a far-fetched interpretation of General LeMay's theory to suggest that the American people should now prepare themselves for word that the United States is withdrawing its forces from West Germany because they are too close to East Germany? Under this premise, could not the aerial strength stationed throughout Europe operate just as well from the east coast of the United States?

I do not intend to dwell on the fact that this announced reduction in deterrent strength comes at a time when Premier Khrushchev is daily giving forth with ever more menacing threats of attack against nations whose bases are used by the United States in spy missions which the President has stated publicly will continue. Are these statements a mere bluff, or do they reflect intent? I would not presume to know the answer. I know only that it would appear to be a most illogical time to slash the strength of the defensive forces closest to the probable line of attack.

Nor have I dwelt upon the undeniably crippling effect which such a drastic curtailment will have on the economy of the nearby city of Fairbanks, although it will be extreme.

I know I speak for the majority of Alaskans when I say we are appalled at the apparent disregard reflected by this decision not only for the safety of Alaska but of the United States. In the light of the present condition of those defenses, as well as world tensions, such a course of action appears foolhardy, if not irresponsible.

This then is to strongly request your early action either to revoke the Air Force decision in event it has not come before you, or to reconsider that action in the light of its dangerous and demoralizing implications.

Sincerely,

WILLIAM A. EGAN,
Governor.

LADD AIR FORCE BASE

(Washington news letter by Mary Lee Council, administrative assistant to Senator E. L. (BOB) BARTLETT, May 13, 1960)

In a week which had President Eisenhower stating that the secrecy policy of the Soviet Union makes it essential that we watch that country every way we can and that in Russia a large-scale surprise attack could be launched and we must guard against this in every feasible way, the Alaska congressional delegation was told by Air Force officials that the only fighter-interceptor squadron north of the Alaska range would go out of existence in August of this year.

In a meeting with Under Secretary of the Air Force Joseph V. Charyk, Gen. Curtis E. LeMay, Air Force Vice Chief of Staff, and other officers, Senator GRUENING, Representative RIVERS, and Senator BARTLETT were advised that rumors which had been gathering strength recently that the 449th Fighter-Interceptor Squadron at Ladd Air Force Base was pulling out were true. This means that some 500 military personnel will depart, leaving as Ladd's Air Force mission a hospital, an air medical laboratory, and a weather reconnaissance squadron.

The action, which the Air Force has taken, is based, the Alaska delegation was told, on factors involving high transportation costs, bad conditions making it difficult to operate in low temperatures, and other expenses of operation.

The strategic position of Alaska was downgraded by General LeMay in responding, "Frankly, no," when Senator GRUENING asked him if he didn't agree with Gen. Billy Mitchell's estimate that Alaska's geographical position was of high strategic importance. General LeMay also said he thought Eielson Air Force Base was now of subordinate importance.

Senator BARTLETT recalled unsuccessful efforts made several months ago to place missiles in Alaska when Alaska's commander in chief of the Alaskan Command, Lt. Gen. Frank A. Armstrong, Jr., urged their installation in pointing out that some 27 Russian bases exist in Siberia. At that time, General LeMay stated that the Strategic Air Command could operate from the west coast with long range airplanes just as well as from Alaska, a statement which he repeated in the meeting this week. This is the attitude taken, the Alaska delegation pointed out, despite the fact that such flights could take several hours while fighter-interceptor planes based in Alaska could be in the air in minutes. The Alaska delegation asked General LeMay what would happen if Russian bombers came over Alaska aimed at the other States and received the reply that the Russians would be foolish to come over Alaska.

Senator BARTLETT recalled testimony given in January of this year by Gen. Thomas D. White, Air Force Chief of Staff, before the House Appropriations Committee that "the Soviet Air Force is the U.S.S.R.'s most dangerous weapon. Approximately 10 percent of its aircraft strength is in its long range air force of about 1,200 modern heavy and medium bombers." General White added that the Soviet has a "rapidly growing intermediate and intercontinental range ballistic missile force." Assuming that the threat of Soviet missiles is a growing threat, Senator BARTLETT pointed out, it is clear that the major immediate threat is that of Soviet manned aircraft and contended that reductions of the strength at Ladd would diminish this country's capabilities to deter attacks by manned aircraft.

In stating they will do everything they possibly can to ward off the action at Ladd, the Alaska delegation pointed out that no one person, civilian or military, has the answer on any possible Soviet plans and that the announced Ladd decision to diminish the military strength in Alaska because of economic reasons could be dangerous to the military security of the United States. "The decision announced this week is especially perplexing," Senator BARTLETT stated, "in view of the fact that in March we were told that 18 F–101B jets would be assigned to Ladd in April. Now we are advised they are not needed and that small groups of fighters from Elmendorf will be assigned to Ladd on a rotational basis. What this really means is that the fighter-interceptor strength of Alaska has been cut almost in half."

Mr. BARTLETT. Mr. President, will the Senator yield?

Mr. GRUENING. I yield with pleasure to my distinguished colleague.

Mr. BARTLETT. Mr. President, the apprehension and even the alarm which has been expressed by my colleague from Alaska is fully shared by me. A concern has been expressed from all sections of Alaska over the announced cut in the Alaska air defenses, and I hope that when the story has been told the entire Nation will react, because whatever weakens air defenses in the 49th State weakens the entire defense structure of the United States.

My colleague has in his informed address given an excellent statement of what has occurred. It is accurate. It reflects exactly what we were told at the Pentagon on May 10. As he states, it seems incredible even yet, because it was only last March 22 that we were informed of the Air Force decision to augment the fighter strength at Ladd Air Force Base near Fairbanks by substituting F–101B aircraft for the less modern fighters which had been stationed there. What could have happened in the interim to cause that decision to be completely reversed? Is it that our relations with Soviet Russia have taken such a decided turn for the better? There is no evidence of such improvement. In fact, there is massive evidence to the contrary.

What is happening in Alaska? Over the period of the past several years, in respect to defense, what has transpired is highly discouraging and dangerous for the security of our country. Those defenses have been whittled away piece by piece, man by man, plane by plane, until little is left.

We have a unified command in Alaska, with an Air Force officer in command of Air Force, Army, and Navy components. At the same time under the existing arrangement, that commander is not much more than a glorified housekeeper, because he does not have command over the operational situation, and is merely there, it would seem, to house and feed the men on the several bases.

As my colleague has stated, we were informed at the Pentagon a week ago today of the proposed inactivation of the 449th Fighter Interceptor Squadron, and on May 11, subsequent to our meeting at the Pentagon, a letter was delivered to each of us—to Representative RALPH J. RIVERS, Senator GRUENING, and me—announcing the decision to remove this squadron from this highly strategic Air Force base. No reason for this abrupt change was given to us, and no real reason has been given yet by anyone to anyone.

Only in January, or at least in the forepart of this winter, General White, Chief of Staff of the Air Force, testified before the House Appropriations Committee. He was queried by Chairman MAHON in these words:

> You have told us that the U.S.S.R. air power is the most dangerous weapon confronting us. Is that true as of January 1960?
>
> General WHITE. In my opinion, it is.

So the highest officer in the United States Air Force is reported as testifying before the House Appropriations Committee that Soviet air power is the most dangerous weapon confronting us.

In the face of this, the Air Force decides to reduce drastically, radically, and dangerously, the strength of the air fighter defenses in Alaska. With one exception, every high officer of the United States Armed Forces has said now and in the years gone by that Alaska is a strategic area of paramount importance and consequence in the defense of the United States.

What ought to be done—and nothing should be permitted to stand in the

way—is the building up of our defenses of all kinds. In this connection I must refer to a charge made against Senator GRUENING, Representative RIVERS, and me by a candidate for political office in Alaska, who was quoted in a front-page story appearing in the Anchorage Daily Times for May 12 as having charged us with "release of classified information by revealing the number of fighter aircraft in Alaska."

That is a most serious charge. It is most serious to charge anyone with a breach of security. I feel it is only proper that I should read into the RECORD at this point a letter from General Kingsley, deputy director, legislative liaison, U.S. Air Force, dated today:

In response to an inquiry, this is to advise you that the information which had been given you relative to the scheduled deactivation of the 449th Fighter Interceptor Squadron at Ladd Air Force Base became unclassified information as of May 10, 1960. Consequently there appears to be no security violation in your notifying the press that 25 aircraft would be withdrawn from Alaska, but that the augmented squadron of 33 planes would remain at Elmendorf Air Force Base.

In the summer of 1959 a determined effort was made by Lt. Gen. Frank A. Armstrong, commanding general of the Alaskan Command—that is the unified command—to have intermediate missiles stationed in Alaska. He made urgent recommendations, as I understand, upon that point. Those recommendations were rejected by higher authority here. Among other things, it was said that General Armstrong merely wanted to do that which is described as the ambition of every local commander, to augment his own strength and his own authority. He was accused of being almost parochial in this. General Armstrong is a distinguished officer of the U.S. Air Force. He has an outstanding record in war and in peace. I assert here that his recommendations for intermediate range missiles, for IRBM's, were made out of his sincerest conviction that this was essential, not so much for the protection of Alaska, but for the protection of the entire Nation, which he has a part in guarding.

Some very interesting statements relating to General Armstrong's desire to have missiles placed in Alaska were made in the magazine Flying for December 1959. The article to which I now refer asks this question:

Is Alaska expendable? Are Alaska's defenses adequate for its survival in case of sudden attack from across the Bering Strait? The startling reply to these vital questions came from none other than the commander of Alaska's joint services defense force, Lt. Gen. Frank A. Armstrong, Jr.

The veteran airman and air strategist spoke forcefully thus: "As things now stand, it would take only two enemy bombers to put Alaskan bases out of action. If these attacks were followed up with paratroop landings, Alaska would be lost.

"With Russians in the Fairbanks and Anchorage areas, President Eisenhower would have to decide quickly whether to bomb Alaska or leave the rest of the country open to close range attack from Red troops along the Yukon."

He followed with this dire prediction: "If Alaska doesn't get IRBM (intermediate range ballistic missiles) soon, we're going to be in one hell of a fix."

Further in the article, Mr. President, General Armstrong is quoted as follows:

As it stands today, our mission is to alarm the United States, not to defend it.

The article continues:

According to the best military analysts, the threat to this top of the world area, the growing strength of Red bases in neighboring Siberia, is such that the Red forces can well choose their own good time and method of attack. They can literally push the United States off this strategic and sensitive polar position at will, leaving its northward flank exposed and defenseless. Alaska is strategic because of its commanding location. Changing military strategy being brought about by the advent of missiles, satellites and jet transports, makes it imperative that this factor be given proper importance in Defense Department development of our pattern for security.

At the moment there are 26 bases in Siberia armed with aircraft missiles that are capable of striking at the heart of the United States from the top of the world. They are reportedly growing in strength every day.

In the event of a surprise attack, these same experts estimate that our own Strategic Air Command bomber force would be able to immobilize only eight of these Red bases leaving the rest to launch second wave destruction upon the United States.

I continue to quote from the article entitled "Is Alaska Expendable?" published in the magazine Flying for December 1959:

Again the military men estimate that the first provocation or hot war action would trigger retaliatory strikes upon all Siberian bases within 20 minutes. They say the firing of U.S.-based missiles and launching of manned nuclear bombers would require 3 to 4 hours to reach the targets—much too long to stop second- and third-wave missile or bomber assaults upon U.S. industrial centers.

Mr. President, that is why General Armstrong urged—although unsuccessfully—that IRBM's be located in Alaska. He did not want the inevitable time lag to occur in the event of war, which would occur if missiles were not available, and bombers had to fly from distant points.

I continue to read from the article:

Although the Air Force's Armstrong asks only for IRBM's and one-man bombers, others carry his appeal further by calling for intercontinental ballistic missiles (ICBM's) such as the SAC-manned Atlas and the forthcoming USAF Minuteman.

The article concludes with a searching question, the question which needs to be asked today more than ever. That question is:

Is Alaska expendable?

It may be, if the decision to deactivate the 449th Fighter Interceptor Squadron is imminent. It ought not to be. That decision should be reversed forthwith. This is more important than dollars.

A few minutes ago, I alluded to the contention made by a politician in Anchorage, Alaska, that the members of the Alaska congressional delegation had violated security. I rebutted that contention by reading a letter from Brigadier General Kingsley, which stated that the material we of Alaska's congressional delegation had given to the press last week in this connection was not classified. Additionally, the very article from which I have been quoting gave the number of fighter squadrons in Alaska; and within reasonably close limits, any spy would know the number of airplanes in a squadron. So this material was published, in effect, long since.

During our conversation at the Pentagon, my colleague from Alaska [Mr. GRUENING] referred to the Wall Street Journal article about Defense Department waste, which he mentioned in the illuminating speech he delivered only a few minutes ago. We were told by one of the participants in that meeting that actually the country does not want this waste to be stopped. It was hinted to us—or more than hinted, I should say—that our presence in the Pentagon on the mission which had taken us there was proof of this, because, it was implied, we were there chiefly—or perhaps altogether—to prevent damage being done to the economy of Fairbanks, the community nearest Ladd Air Force Base.

I resented that implication, and I resent it still. I imagine the State of Alaska will survive economically even without the presence of the comparatively few men who comprise the interceptor squadron. But it could have been, and it was, a more important, a more patriotic, and a more meaningful motive which took us from Capitol Hill to the Pentagon to seek to reverse this decision. We had in mind almost altogether the need for shoring up Alaska's defenses, instead of sitting supinely by while they were being reduced. We entertained then, and we entertain now, the opinion that our action was not only in the best interest of Alaska, but of the whole Nation, as well.

Alaska is the northern shield. If it should be taken, havoc could be wrought upon the other States by manned bombers. I submit that the Air Force decision to deactivate the 449th Interceptor Fighter Squadron is a faulty judgment, a wrong judgment, and a risky judgment. It is a judgment that should be corrected without delay.

Mr. President, it was less than a year ago that General Armstrong called for intermediate range missiles in Alaska. But now, in the spring of 1960, we discover that those recommendations have been rejected almost out of hand, it would seem; and we also discover—lamentably—that the conventional defenses shielding us from the multiplicity of Soviet bases in Siberia, which are so close to Alaska, have been diminished.

Mr. President, I hope and pray that an aroused public will demand that Alaska's defenses be strengthened, instead of being cut further.

Mr. GRUENING. Mr. President, will my colleague yield for a question?

Mr. BARTLETT. I am happy to yield.

Mr. GRUENING. Were not we told by one of the Air Force experts at the conference that, actually, Alaska could be adequately defended, in case of attack or other emergency, by planes coming from the west coast or from some of the other 48 States?

Mr. BARTLETT. That is true; we were told that defense would be easier, simpler, and perhaps better if done in that fashion. But we were not given an explanation in regard to how fighter aircraft, with their limited range, would get there.

We were also told by one participant in the conference that Billy Mitchell, Hap Arnold, and all the other high strategists in the Air Force through the years were wrong, and that Alaska is really of subordinate strategic importance.

Mr. GRUENING. If that premise of the contemporary Pentagonians were logical, there would be no reason even to keep the 33 remaining fighter planes at Elmendorf Field, near Anchorage, would there?

Mr. BARTLETT. I could not agree more fully with my colleague. If Alaska has no strategic importance, as a shield or otherwise, there would be no reason to have any military personnel or military equipment in Alaska.

Mr. GRUENING. Does my colleague believe that we would be justified in accepting the claim, as made by some of those now in the Pentagon, that Air Force bases in Alaska are of little strategic value? In other words, if it is true—as claimed by some of those in the Pentagon—that Alaska has little usefulness for either offensive or defensive bases, and that the same purpose can be adequately served by using planes dispatched from the mainland of the United States, can my colleague state why our administration has found it necessary to have military bases all over the world—in Turkey, in Morocco, in Spain, in Pakistan, in Saudi Arabia, in Iceland, in Britain, in Japan, and elsewhere—if all that might need to be done can be done from bases located in the 48 States? If that is true, what justification is there for our tremendously expensive around-the-world system of airbases?

Mr. BARTLETT. I cannot answer that question, because I departed from the Pentagon in a very high state of confusion, and I have not as yet been able to adjust myself entirely, because I kept dwelling on the fact that on March 22 we were told that new and more modern fighter airplanes were to be sent to Alaska; and we had a right to assume, and we did assume, that that was because they were needed there for the defense of Alaska and for the defense of the entire United States. But now, less than 2 months later, orders to remove the entire squadron have been issued. I cannot understand it.

Mr. GRUENING. Does my colleague believe the relationship of the United States with Russia has improved greatly since the time—30 days ago—of the decision to base those better and faster fighter planes in Alaska, and the decision, last week, not to have any of our fighter planes at all based there?

Mr. BARTLETT. Most regretfully I say that every bit of evidence which has accumulated during that period is to the contrary. Indeed, the evidence of the last 48 hours in this regard is as tragic as it is disconcerting.

Mr. GRUENING. I thank my colleague.

Mr. BARTLETT. Mr. President, I yield the floor.

LEGISLATIVE PROGRAM

Mr. MANSFIELD. Mr. President, I wish to notify the Senate that there will be at least one yea-and-nay vote today, and there may be others. So I express the hope that the attachés of the Senate will notify Senators on both sides of the aisle accordingly.

RIOTS AT SAN FRANCISCO HEARINGS OF HOUSE SUBCOMMITTEE ON UN-AMERICAN ACTIVITIES

Mr. THURMOND. Mr. President, on Saturday, May 14, I was in San Francisco, Calif., where a sorry and distressing spectacle occurred. A subcommittee of the House Committee on Un-American Activities was holding hearings in San Francisco, as a part of its continuing effort to document the activities of Communists and subversives in our country. During the course of the hearings on Friday, there was a riot; and strenuous efforts by the police were required, in order to subdue the riot. Sixty-four persons were arrested.

The persons who participated in that riot were, for the most part, students. Undoubtedly, the riot was inspired and incited by Communists or fellow travelers. That display was a sad commentary on the lack of self-discipline and moral training of the young people involved. It also illustrated the degree to which enemies of our Government, whether they be Communists or fellow travelers, are distorting American concepts and are twisting and warping the minds of many of the young people in the United States.

Mr. President, that incident should serve to impress on our minds the fact that Communist efforts to misdirect and mislead the formative minds of the youth of the United States are every bit as dangerous, if not more so, than Communist spying and espionage activities in this country. We should spare no effort to rid our educational institutions and our whole society of those who exert such un-American influences, and to counter—by our own examples and teachings of patriotism and moral stamina—such subversive efforts.

In this regard, Mr. President, I ask unanimous consent to have printed at the conclusion of my remarks an excellent editorial about this incident. The editorial is entitled "Storm Trooper Tactics"; and it appeared in the May 16, 1960, issue of the News and Courier, of Charleston, S.C.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Charleston (S.C.) News and Courier, May 16, 1960]

STORM TROOPER TACTICS

Storming of a House Un-American Activities subcommittee hearing in San Francisco by a jeering mob of 200 demonstrators is an outrage and a challenge to the authority of the U.S. Government.

We are sure that the good people of California are shocked that this Communist-style protest was directed against a subcommittee of the Congress. Who incited and organized the demonstration should be the first objective of police agencies, which should include California officials and the FBI. For years, the House Un-American Activities Committee has been a target of Communist abuse. Because this committee exposes Soviet agents and fellow-travelers, the Communist conspiracy in this country long has had abolition of the committee as one of its primary targets.

In considering the ugly attack on the subcommittee, which might have resulted in physical harm to Members of Congress, Californians should bear in mind the recent abuse heaped on the committee by U.S. Representative JAMES ROOSEVELT, Democrat, of California. He is to some degree responsible for the climate of opinion that made possible the storming of the subcommittee hearing.

Fortunately, San Francisco authorities were prompt in sending policemen to protect the congressional subcommittee, which represents the American people. But the presence of youthful stormtroopers in this great American city is a shame that distresses all patriotic citizens.

FREEZING OF ASSETS OF LOCAL 371 BY INTERNATIONAL TEXTILE WORKERS' UNION

Mr. THURMOND. Mr. President, last year Congress passed a bill in the labor-management field, for the purpose, at least in part, of insuring more democracy in labor unions. Despite the difference which existed in the Congress over the specific provisions which should be written into the act, Congress was almost unanimous in recognizing the need and desirability for individual labor union members to have more power and authority in the conduct of the affairs of their own labor organizations. It should now be obvious to all of us, as it was to some of us last year, that our legislative effort was inadequate, at best.

In today's issue of the Washington Post there appears a news article which reports that Local 371 of the AFL–CIO Textile Workers is facing expulsion from the parent union. Already the international union has taken control of the local, and has frozen the assets of the local union.

The action of the international against local 371 does not stem from any difference between the local and the international on matters affecting collective bargaining. The difference between the local and the international, on the contrary, arises from a basic difference in philosophy between the members of local 371 and the officers of the international union, with respect to the question of school segregation. The members of local 371 live in Front Royal, Va., and have expressed themselves clearly in favor of private segregated schools, rather than to submit to integrated public schools under court order. As an indication of their preference, the members of local 371 of Front Royal, Va., contributed $48,000 during the 1958–59 school year to help pay the cost of a private high school when the Supreme Court of the United States ordered the races to be integrated in the public high school.

The International Union of the AFL–CIO Textile Workers, on the other hand, is a militantly liberal organization that

has backed strongly the school desegregation decision of the U.S. Supreme Court. The international has been one of the leading advocates of immediate integration of the races in the public schools, and it has backed its advocacy both vocally and financially.

It seems to me an intolerable situation that would allow the international union under these circumstances to seize control of the local union and take over the assets accumulated by the members of local 371. I congratulate the members of local 371 of Front Royal, Va., for remaining stanch in support of their views and for their continuing support of the ideas in which they believe, despite the pressures which can be brought against them by the bosses of the international union. I sincerely hope that the local will be able to regain control of the assets of the union through court action, if necessary, and I urge the Congress to take the necessary legislative action to remove the weapon of economic control over a local by the bosses of the international union.

Mr. President, I ask unanimous consent that the article from the Washington Post of Tuesday, May 17, entitled "Front Royal Union Faces Ouster Vote," be printed in the RECORD following these remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FRONT ROYAL UNION FACES OUSTER VOTE

Members of a defiant Textile Workers local in Front Royal, Va., may soon discover that they have been spinning themselves out of their international union.

For 2 years the local and the international have been in bitter disagreement over the local's support of segregated public schools.

A showdown between Local 371 of the AFL–CIO Textile Workers and the officers of the parent union may come on Thursday in Front Royal.

If the showdown does not materialize then, it surely will develop at the union's convention which begins next week in Chicago.

On Sunday it was disclosed that the international had taken over the control of the local and frozen its assets. The local sought to use $8,000 of its funds to purchase bonds being sold by a private high school, set up following the desegregation of the Warren County High School in 1958.

The international charged the local with using union funds for a nonunion purpose in violation of the Textile Workers constitution.

The Textile Workers, a former CIO union, is a militantly liberal organization that has backed strongly the school desegregation decisions of the U.S. Supreme Court.

Local 371, which represents 2,000 workers at the American Viscose Corp. plant in Front Royal, is militantly segregationist.

When the Supreme Court ordered the desegregation of the Warren County High School in Front Royal 2 years ago, the local immediately became one of the leaders in the community's efforts to set up a private high school.

During the 1958–59 school year the members of the local contributed $48,000 to help pay the cost of a private high school which hurriedly established classrooms in five private buildings throughout Front Royal.

This year the Warren County Educational Foundation has been operating a high school in the Virginia Gentleman Restaurant and Club.

About 435 students are attending the Virginia Gentleman classes. Another 420 students are going to the desegregated Warren County High School.

Most of the cost of operating the private school is being met through State tuition grants given to students who attend private, nonsectarian institutions.

The $8,000 in school bonds which the local tried to buy would be used to help pay for the construction of a building for the private school.

The projected John A. Mosby Academy would cost $225,000. H. H. Marlow, president of Front Royal Academy, Inc., said that $85,000 in bonds already have been sold to local residents and businessmen.

Officials of neither the international nor the local union would comment yesterday on what is likely to be the outcome of the hearing on Thursday or any action that might be taken at the union's convention in Chicago.

But one distinct possibility is that the local may find itself—voluntarily or involuntarily—segregated from its international.

COMMUNITY ANTENNA SYSTEMS

Mr. PASTORE. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Rhode Island will state it.

Mr. PASTORE. What is the pending business?

The PRESIDING OFFICER. The bill pending before the Senate is Senate bill 2653, a bill to amend the Communications Act of 1934 to establish jurisdiction in the Federal Communications Commission over community antenna systems.

Mr. PASTORE. I thank the Chair.

The Senate resumed the consideration of the bill (S. 2653) to amend the Communications Act of 1934 to establish jurisdiction in the Federal Communications Commission over community antenna systems.

Mr. PASTORE. Mr. President, Senate bill 2653, as proposed to be amended, places community antenna television systems—CATV's—under the jurisdiction of the Federal Communications Commission and empowers the Commission to issue requisite certificates of public convenience and necessity for the construction and operation of a CATV. In order to avoid any misunderstanding, the bill specifically declares community antennas not to be common carriers. Only the appropriate sections of title III of the Communications Act affecting regular broadcasters are specifically made to apply to the CATV's. Where it is suitable, the same provisions of the Communications Act that apply to broadcasters are made applicable to CATV's.

Generally the bill provides as follows:

First. The first subsection is an amendment to the definition section of the Communications Act defining a community antenna television system as a facility for performing the service of receiving and amplifying the signals transmitting programs broadcast by one or more television stations and redistributing such programs, by wire, to the subscribing members of the public.

Second. Section 3(h) of the Communications Act is amended by the second subsection by specifically declaring that a community antenna system is not a common carrier.

Third. Title III of the Communications Act is amended by inserting a new section 330 that is entitled "Community Antenna Television Systems."

(a) Subsection (a) of this new section specifically provides no person shall operate a community antenna television system except under and in accordance with a license granted by the Federal Communications Commission, but permits the CATV which is in operation on the date of the enactment of this bill to continue in operation until the Federal Communications Commission issues a license. The bill requires such a CATV system to file its application not later than 120 days after the bill is enacted.

(b) Under subsection (b), the bill designates the specific provisions of the Communications Act that shall apply to the community antenna system regulation. It is to be noted that section 325(a), which presently requires any broadcasting station rebroadcasting the program or any part thereof of another broadcasting station without the express authority of the originating station, does not apply.

(c) Subsection (c) is the so-called grandfather provision. It holds that the community antenna system operating on the date of the enactment of this bill shall be deemed to be operating in the public interest, and therefore entitled to a license subject to such conditions as the Commission may impose under subsection (d).

(d) Under subsection (d), a local television station assigned to a community in which a community antenna television system serves subscribers and is granted a grandfather license has 30 days within which, after the grant of a license or renewal thereof, to file a petition with the Commission requesting that the license of the CATV contain such conditions on the CATV's operation as will significantly facilitate the continued operation of a television station which is providing—and I wish to have Members of the Senate note this—the only available locally originating broadcasting program service. It should be noted that the filing of the request for imposing conditions is limited to the licensee of the television station who is concerned about the continued operation of his television station which is providing the only available locally originating television broadcast service. Procedures are established so that the community antenna system is afforded an opportunity to file a response to such petition, and that the Commission then shall determine whether, with due regard to services rendered by the community antenna television service and by the television station, the public interest, convenience, or necessity would be served by the adoption of the proposed operating conditions. If the television station or community antenna system requests public evidentiary hearings, the Commission is required to grant such a request, and, in addition, may order hearings on its own motion.

(e) This subsection would authorize the local television broadcast station to file an application requesting the community antenna television system to carry the programs of such local broadcast station which is assigned to a community in which a community antenna system operates if the Commission finds that this would be in the public interest. This subsection authorizes the FCC to promulgate rules and regulations so as to assure that reception of such programs as redistributed by community antenna television systems would be reasonably comparable in technical quality to other programs redistributed by the community antenna television system.

(f) This subsection would require the FCC to prevent, by appropriate regulations, duplication by a community antenna television system of programs of a television station assigned to a community served by the community antenna system.

Mr. President, I want Senators to remember that we are talking about community antenna systems and the only available local TV station. Those are the two standards in this proposed legislation.

This is not an important issue in my own State of Rhode Island. It makes very little difference to my State whether this proposed legislation is enacted or not. However, because I am privileged to be the chairman of the Subcommittee on Communications of the Committee on Interstate and Foreign Commerce, and because this task was assigned by my subcommittee, we held protracted hearings in order to afford an opportunity to be heard to all people concerned with the problems, with the hope of reaching some practical and reasonable solution.

I visited the various States which are affected by this situation. I want the Members of the Senate to know that this indeed, insofar as the junior Senator from Rhode Island is concerned, in fact soon became a labor of love.

Many, many parts of our country, because of topography—because of hills, valleys, mountains, and other features—contain communities which are very hard to service.

This bill is not directed in any way toward injuring CATV as such. We seek merely to place CATV systems under regulation in order to protect their rights, and also to protect the rights of the only available broadcasting station, which may perish and go out of existence unless proper reforms are taken now of a very moderate nature.

In this country there are many sparsely inhabited areas. In a valley there may be four or five farmers who live within a radius of 5 or 10 miles. These people have no opportunity to receive a direct television signal. What happens? They build a little "kitchen" booster on top of a hill. Through that medium they take the signal from the nearest local broadcasting station, which may be located miles away and rebroadcast it. That is the only opportunity they have to receive and see one signal.

What is happening now? CATV is rendering a noble service. CATV came into existence at the time of the freeze. What does that system do? It builds a large antenna and takes out of the air three or four signals, which originate miles and miles and miles away. After these signals have been captured from the air, then by a process of amplification and microwaves, the signal is moved on, finally, to a cable system which runs along a street, on a wire on the street poles, then to be brought to the individual home.

Initially a fee is required in order to install the service, and thereafter a monthly rate is charged for the use of the equipment.

This bill in no way seeks to supervise or to affect the fees which are charged. If those fees are exorbitant, if they are moderate, if they are reasonable, or if they are too low, this bill would not affect them at all. We have no interest, under the terms of the bill, of watching over the profits of the CATV systems. That is the reason why we have said expressly in the bill that this CATV system shall not be considered a common carrier, so that the system will not fall within the formula of a public utility company. That is the first point.

Point No. 2 is that we are granting grandfather rights to these systems and they shall continue to operate pending the disposition of any request for the imposition of conditions. They must serve the public interest, the public convenience, and the public necessity.

There is a case now pending in court. I want all those who are opposed to the bill to pay close attention. There is a serious question today as to whether the people who are capturing this program out of the air have a right to do so without paying for the programs. There is a serious question in that regard, and there is litigation now pending in the courts.

When the bill was originally introduced there was a provision in the bill, as there is a provision in the Communications Act, to the effect that once these systems were licensed they would have to get the permission of the people who are originating the signal. Now, that would have been quite unfair. That would actually be saying to these people, "Go back and pay for something you have not been paying for up to now." Naturally, the broadcaster who would have to be approached for permission would say, "If you are obliged to come to me to get my permission, then I have a right to charge a fee." The broadcaster could charge $1,000, or could charge $1 million if he wanted to, depending upon whether to put the CATV system out of business or to keep the system in business.

I will tell Senators how fair the subcommittee was. We thought that was an unreasonable provision at the time we considered it, so we made an exception. We eliminated it from the bill. We have said that insofar as CATV is concerned, we will not disturb the present practice. However, there is a case pending in court.

Let us assume, for instance, that these systems are not put under regulation. Let us assume that the Senate defeats the bill today. What will happen if the Supreme Court should decide that these systems have to get the permission of the broadcasting station before they can take the program out of the air? Do Senators know what will happen? There will be chaos. We will deprive a lot of people of CATV service, because the fees may be prohibitive and there will be no authority which can say, "Look, these people are operating in the public interest, in the public convenience, and in the public necessity, and you have to be reasonable as to what you charge them; otherwise you will put them out of business."

I say that is most important. When Senators begin to think of voting against the bill, I think they should consider the matter very seriously. Let me tell the Senators what has happened.

In Montana this situation became so serious that there was introduced a bill putting CATV under local statutory authority. That bill passed the house, and it passed the senate, but the Governor vetoed it.

Let me tell Senators what was done in Utah. In Utah the situation became so bad that the legislature passed a law authorizing each municipality to borrow money to set up its own television service, so that the people could get the picture free, and have the charge put on the tax bill under "Recreation."

That illustrates what is happening throughout the country. I am saying that unless something is done promptly, many of those interested people in the galleries today will be surprised. These people have barraged the Senate with telegrams. They have been coming to town in large numbers. They have been walking up and down the corridors of the Old Senate Office Building and the New Senate Office Building. They have been saying that the bill is aimed at the little fellow.

I will say this: This is a bill to protect and to help the little family, which has no opportunity to view television free.

The CATV systems are claiming they are being made the underdog in this fight. That is not true at all. We have drawn up a moderate bill. We have taken everything into account.

Let me recount how far we have gone. We asked the attorney for this association to come before our committee, and we quizzed him point by point. The Senator from Wyoming [Mr. McGEE] will subscribe to this. Finally I said, "All right; what do you want us to do with this?" I took that man through the bill point by point by point. Finally, we agreed on practically everything he wanted.

Well, these men are in the corridors today and they are saying, "We do not agree with our lawyer."

I do not like to be personal about this matter, but this problem has been pending since 1958. So far as the junior Senator from Rhode Island is concerned, the proposal does not make any difference to him or to my State. It does mean much to the little people all over the country who can get only one signal. Those are the people we are trying to protect.

What are we saying? Take a situation where there is CATV in a locality and the community is being serviced by one local broadcasting station—if there are two, the criteria about the only local live television station does not apply—that one station might go out of business if this situation is not handled correctly. When the broadcaster applies to the FCC and can show that there is a contract with the broadcasting network with an obligation to show a picture—let us say it is "I Love Lucy" or "Gunsmoke" or any picture which is desired—on a Monday night, because it is being placed on a film, if the CATV system is taking this picture out of the air on Sunday night for broadcast on Sunday, we simply say this is unfair competition and the question of duplication is then raised.

This duplication should be avoided. There are two other channels available. Let them have three signals. In that case, why not wait until Monday night to show a picture which is going to be shown by the local station on Monday night? If the viewers do not like it, they can still turn off that channel and turn on either of the other two channels. That is all we are asking them to do. Yet these people are walking through the corridors of the two Senate Office Buildings trying to tell us we are attempting to put them out of business. What the bill does is to save that only existing local originating broadcasting station. It does not go much beyond that.

I have talked with many CATV owners. They come in to me and say, "We want to be under Federal regulation," but when the matter is investigated, we discover they do not want to be regulated. After all, if they are to be regulated, certain rules must be followed. This, I repeat, is a very modest, a very moderate, and what I consider to be a very fair bill.

I repeat that it makes no difference to the State of Rhode Island, but it makes a big difference to the State of Colorado. It makes a big difference to Arizona.

Let me state what will happen in Arizona. There are four commercial broadcasting stations in Phoenix, which is more than a hundred miles from Yuma. Yuma has one local broadcasting station. There is an hour's differential in time between Phoenix and Yuma. I ask the Senator from Arizona [Mr. HAYDEN] if that is correct?

Mr. HAYDEN. That is correct.

Mr. PASTORE. The local Yuma TV station must get its program from California and pay for it, but it gets the program an hour later than does Phoenix.

Unless these two systems are brought together on the one program which is to be shown at Yuma before the CATV program is brought in, the local broadcasting station will be showing yesterday's news. Who wants to see "Gunsmoke" on Monday night if he can see it on Saturday night? That is what it amounts to. All we are saying in that particular instance is that through the rules of the FCC—and everything is to be done through the order of the FCC—duplication must be avoided of the local picture, if it is in the public interest. This is necessary so that the local station will not vanish, and so that these little people will still have their one little signal, and will not have to throw their television sets into discard.

That is all we are doing. I submit to the Senate that we could not be any fairer than we are, and any attempt to defeat this legislation at this time would do irreparable harm to many little people, none in Rhode Island, but located throughout the Midwest.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. PASTORE. I yield to the Senator from Montana

Mr. MANSFIELD. I should like to ask some questions, but before I do so I should like to state that I was engaged in a colloquy with the distinguished minority leader last Friday, at which time he asked me what the schedule for this week would be. I told him I thought we would bring up the CATV bill, the Stella bill, and another bill which the majority leader had previously announced would be considered shortly. The minority leader asked that the CATV bill not be brought up on Monday. I replied, "Fine, we will bring it up as soon thereafter as possible."

On Saturday I received many telegrams from the State of Montana, 12 of which I have here, all identically worded, from my hometown of Missoula, Mont. I almost put them in the RECORD, but I do not believe I shall do so, because I do not wish to embarrass anyone in my home State. But I have 12 telegrams, identically worded, from the same town.

Mr. PASTORE. Mr. President, I ask the Senator whether he received any telegrams from the little people in Montana.

Mr. MANSFIELD. I do not know exactly in what stratum these people are, but altogether I must have received 60 telegrams, and I was visited by 4 representatives from my State. They had a right to visit me. They were interested in cable TV. I told them that if they would give me a list of the questions they wished to ask, I would try to get the answers in black and white. But before I get to their questions, I should like to ask some questions of my own.

Mr. McGEE. Mr. President, will the Senator yield at that point?

Mr. MANSFIELD. Is it possible to yield when I have been yielded to?

Mr. PASTORE. With my permission it is possible.

Mr. McGEE. I thank the distinguished chairman of the subcommittee. I should like to state that in connection with the point just made by the Senator from Montana [Mr. MANSFIELD], I have in my hand a telegram which reads as follows:

SALINAS, CALIF., *May 16, 1960.*

Mr. HARRY BUTCHER,
DuPont Plaza Hotel,
Washington, D.C.:

Our attention has been called to a flood of telegrams from Carmel, Calif., in opposition to S. 2653 regulating CATV systems. Upon checking we find all telegrams identical, with different signatures sent by one man and billed to one man. Upon further checking we find two of the signatures knew nothing about the telegrams and doubt that others did either. It seems the telegraphic attempt to persuade Senate not to pass this bill is a hoax. On legislation so vital to the future orderly growth of TV it is regrettable that the proponents of an unregulated CATV system should resort to such doubtful tactics.

JOHN C. COHAN,
President, KSBW TV, Salinas, Calif.

On the same point, if it bears on the issue the Senator from Colorado was raising here, I have in my hand a message——

Mr. PASTORE. From where?

Mr. McGEE. From Rhode Island. Excuse me. When there are two such distinguished Senators on the floor at the same time, the junior Senator from Wyoming can be pardoned for being confused.

Mr. PASTORE. The Senator from Wyoming does not have to look as far to see me as he does to see the Senator from Colorado. I cannot understand why he made that mistake.

Mr. McGEE. I have a pair of bifocals which it may be in order to use.

Mr. President, I hold in my hand a set of instructions described "Legislative program in regard to S. 2653." These instructions have apparently been given to a host of individuals who have come to visit us in Washington over this weekend. I think the instructions bear out very much of what the Senator from Montana [Mr. MANSFIELD] was alluding to in his comment to the chairman of the committee. The instructions read in part as follows:

No. 1. Please make a personal visit to the office of the two Senators from your State on Monday, May 16. Senators are very busy and your visits should be brief but to the point.

I believe that is a commendable instruction. It recognizes how busy Senators are.

No. 2. When talking with your Senator, ask him to take action for you. Ask him first to oppose the bill. If he cannot agree to oppose the bill and vote against it, ask him to vote to send the bill back to the Senate Interstate and Foreign Commerce Committee. Reasons why the Senators should do this are prepared for you on another sheet that is in your kit.

I have heard the expression "kit and caboodle." They have left out the "caboodle" side of their instructions, but the kit is there.

They finally say, "Tell your Senator that you intend to watch the proceedings from the gallery while you are in town."

May I suggest to my chairman, the Senator from Rhode Island [Mr. PASTORE], and the distinguished junior Senator from Montana [Mr. MANSFIELD], that I have the feeling that not only are we being watched, but we are surrounded, and I think that fact ought to be called to the attention of this body. This is not the first time this has happened in the Senate, nor will it be the last, but I think what has been indulged in here ought to be made a matter of public record.

If it is permissible, I ask unanimous consent to include in the RECORD at this point the full content of these marching orders.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

LEGISLATIVE PROGRAM RE S. 2653

BACKGROUND

The CATV bill, known technically as S. 2653, is scheduled for action Tuesday, May 17, and probably will be voted upon on that date.

A motion may be made to resubmit the bill to the Senate Interstate and Foreign Commerce Committee for further study.

ACTION

(1) Please make a personal visit to the office of the two Senators from your State on Monday, May 16. Senators are very busy and your visit should be brief but to the point * * * they will appreciate it. Arrange your visit in advance by telephone, if possible, starting as early in the morning as 8 a.m. * * * Senators are available until 6 p.m., or later, and don't stop until you have talked with them both.

(2) When talking with your Senator, ask him to take action for you. Ask him first to oppose the bill. If he cannot agree to oppose the bill and vote against it, second, ask him to vote to send the bill back to the Senate Interstate and Foreign Commerce Committee. Reasons why the Senators should do this are prepared for you on another sheet that is in your kit.

(3) Ask the Senator to arrange for a visitor's gallery pass; tell him that you intend to watch the proceedings while you are in town.

(4) Offer your help in obtaining any additional information or facts the Senator or his office may want.

(5) Report back to NCTA legislative headquarters. Give the legislative committee representative on duty in the Concord Room a brief verbal report of your visits not later than 10 p.m., Monday, May 16. For telephone contact with the headquarters, the Mayflower Hotel's telephone number is DI 7-3000; the hotel operator will know the extension.

(6) Be present in the Senate gallery on Tuesday morning, May 17, to watch developments on your bill. Your presence will be effective, and noticed by your Senators.

Mr. PASTORE. I thank the Senator.

Mr. MANSFIELD. Mr. President, I am quite certain the delegation from Montana is in the gallery, as I invited them to attend, and listening to every single word I say. As I mentioned earlier, I did ask them, if they so desired, to raise some questions which I should like later in the proceedings to call to the attention of the distinguished Senator from Rhode Island, the chairman of the subcommittee which held the hearings on the bill.

What is the name of the lawyers who represent this association in Washington?

Mr. PASTORE. I believe the name of the lawyer is Mr. Smith.

Mr. MANSFIELD. Mr. Stratford Smith?

Mr. PASTORE. Yes. He is a very nice young man, very courteous, and an attorney well qualified.

Mr. MANSFIELD. On page 3783 of the television inquiry hearings held in May and July of 1958, Mr. Smith states that—

The community antenna television industry born in the so-called freeze imposed by the Federal Communications Commission on the licensing of television stations on order issued in September 1948, and the industry grew since that time but was "more or less ignored" by the Commission until the "freeze" was lifted.

Is it correct that the Federal Communications Commission has failed to bring about proper regulations to give stability to the television industry as a whole, so that all forms of television can exist properly?

Mr. PASTORE. Well, that is a very difficult question to answer. I have been very critical of the FCC at times. Of course, if we are to go off on tangents, in trying to determine whether the FCC has done its work properly in giving us a competitive system throughout the Nation, that will lead us into many detours, and it will lead us into many arguments that can be made on both sides.

I have been critical of the FCC. The following is not in criticism of CATV. It is true that CATV came into existence at the time of the so-called freeze. They have done a good job. There is no criticism of the people in CATV, as such. They have a right to live and to do business. I say that sincerely, Mr. President. I have told them so. I told them so when they appeared before the subcommittee.

What they do is to take three or four signals out of the air and bring them home to a community which may not have had any TV. Where there is only one signal, they can bring in that signal. They charge for this service, of course. They have a right to make a charge. They charge a fixed fee, too, for installation.

Some people think that they charge too much. Some think that they have become quite wealthy at it. Well, after all, even Henry Ford, after he created his automobile, became a very wealthy man—and deserved to be wealthy. This is not a bill to circumvent anyone's business activity. These people have a difficult, important, and useful job to do.

I have been to Helena, and held hearings there, in order to see what the problem was in Montana, and I have visited locations where there are probably only a half dozen people involved. I remember one case of a man in Idaho, I believe, who lived on the other side of a mountain. A half dozen farmers got together and they put up a series of boosters to get a picture brought to them. They can get only one picture. They depend completely on the continuation of the TV station that supplies that signal. If anything happens to that only local TV station, we put their sets into complete darkness. We are trying to protect them. We are trying to give these people a chance to enjoy the TV station that needs a chance to live.

Mr. MANSFIELD. Mr. President, will the Senator yield further?

Mr. PASTORE. I yield.

Mr. MANSFIELD. Has not the Senator stated on a number of occasions that he felt that this country could have all kinds of television if the business were properly regulated, and that this responsibility should be under the Federal Communications Commission?

Mr. PASTORE. That is correct. That is why I believe CATV ought to be put under the Federal Communications Commission. After all, this is television we are talking about. Television is now under the control of the FCC, under existing law. The Federal Communications Commission has a right to grant licenses for microwaves. However, they do not go into questions the effect such grants will have on the other operations authorized by the Commission—the public interest.

Inasmuch as we are dealing with television, inasmuch as there is somewhat of a conflict here, inasmuch as they have a situation which in time might result in people being placed in total darkness, I am saying that now is the time to put CATV under supervision. There is nothing in the bill that does CATV any harm. There is nothing in the bill that does CATV the slightest injury. I say that, no matter what the protestations may be.

Mr. MANSFIELD. Mr. President, will the Senator yield further?

Mr. PASTORE. I yield.

Mr. MANSFIELD. Does the Senator feel that the committee has taken all due care in the preparation of this bill; that is, does he feel that the committee has done a thorough job in considering all the factors involved?

Mr. PASTORE. I not only feel that, but I say we have visited locations involved, and have sat one afternoon in Senator FULBRIGHT'S office going over amendments. I have talked to CATV representatives in the corridor, at the behest of the distinguished Senator from Pennsylvania [Mr. SCOTT], and I have explained the situation to them. I have talked with everyone who wanted to explain his position with regard to this proposed legislation. I do not believe that any bill ever came before the Senate that had been studied as exhaustively as has this bill.

Mr. MANSFIELD. Mr. President, will the Senator yield further?

Mr. PASTORE. I yield.

Mr. MANSFIELD. Is it not correct to say that the Chairman of the Federal Communications Commission and other Commissioners have requested authority on numerous occasions within the last 2 or 3 years to conduct on-the-site investigations?

Mr. PASTORE. That is correct.

Mr. MANSFIELD. It has been rumored that this bill is geared to put television cable operators out of business. Is that true?

Mr. PASTORE. No; that is not true. I have already said that the Federal Communications Commission was rather lukewarm with regard to whether they should assume the responsibility of implementing the bill. They appeared before us and they said so. They published one or two directives to that effect. Finally, at the urging of our committee, they sent a man out into the field to investigate the situation. Let me disclose what the Commission submitted to the House committee yesterday. May I have the Senator's indulgence to read the testimony into the RECORD at this point? I believe it will in part answer his question.

Mr. MANSFIELD. Certainly.

Mr. PASTORE. I read:

Thereafter, the Commission initiated a field inquiry into the general subject of TV repeater services and particularly into the problems encountered by local stations in communities served by a CATV system. This inquiry was made by a member of the Commission and staff officials during August 1959 in the States of Colorado, Idaho, Montana, Washington, and Wyoming, and the views of various organizations and individuals who reflected all sides of the local station-CATV controversy were obtained. As a result of its further consideration of this problem in the light of the information obtained since the issuance of its report and order in Docket No. 12443, the Commission is in accord with the approach taken in subsection (g) of the proposed legislation as it looks to the prevention of the duplication of local station programs by a CATV system. It would appear that the ability of CATV systems, operating without any Federal statutory restrictions, to intercept first run programs broadcast by stations in large metropolitan areas and to redistribute them to subscribers in a small community in advance of the broadcast of that same program by the local station, gives rise to an inequitable competitive disadvantage which the local station is unable to overcome by any reasonable means within its control.

Can anything be clearer than that? The FCC, after being lukewarm on this subject, sent a Commissioner and a staff member out into the field. They talked to every interested individual possible. They made an inspection on the subject of the location of these antennas and of these CATV systems, and they came back and said that we ought to have some Federal control. They said that without some Federal control we would put the local broadcasting stations at a disadvantage, which they could not meet through any reasonable means at their disposal.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. MANSFIELD. The Senator will recall that in 1958, after the other members of the Montana delegation and I had received thousands of communications concerning free television, the Senator from Washington [Mr. MAGNUSON], as chairman of the full Interstate and Foreign Commerce Committee, granted our request to conduct hearings. The Senator will further recall that on May 28, when I personally appeared before the committee, I introduced the people from my State who represented television stations, and television cable operators, and requested at that time that everyone be given an opportunity to state his case. As a result of those hearings, the committee made four recommendations to the Federal Communications Commission. As a result of these recommendations, FCC asked Congress for legislation to carry them out.

Is S. 2653, which is now before the Senate, one of the bills introduced as the result of the request from FCC for legislation?

Mr. PASTORE. Well, it is a bill which was fashioned after we listened to the various witnesses and studied all the pending bills. Is the Senator asking whether the Commission itself suggested this particular bill?

Mr. MANSFIELD. Was it one of the recommendations that a bill of this nature be drawn up?

Mr. PASTORE. The FCC's original bill was limited to the consent provision. I daresay, from what I have read to the Members of the Senate, it would take many of our proposals today.

Mr. MANSFIELD. When I appeared before the committee on the bill in 1958, I mentioned that it was my understanding that Stratford Smith, an attorney, would present the views of the television cable operators, and I believe he did. Is Stratford Smith one of the individuals with whom the Senator from Rhode Island or the committee members have met to discuss the bill?

Mr. PASTORE. On several occasions he appeared before our committee, and we went over the bill point by point. I asked him what, specifically, was bothering him, and what suggestions he had to make. I think we debated practically all of them. But, as it is with human nature, after they changed some things, they now think it is better strategy to attempt to defeat the proposed legislation completely.

That is a natural reaction. However, after all, it is our responsibility to meet the public needs. We not only have CATV to be concerned about; we have the little people to think about and to protect as well. Somewhere in between we must do something about the matter. If we turn our backs completely on the question, it will deteriorate completely into chaos.

I know the Senator from Arizona is concerned about it. The Senator from Utah, the Senator from Colorado, the Senator from Idaho, and the Senator from Montana—Republicans and Democrats alike—are concerned about it. The Senator from Kansas is waiting to give his views. This is not a question which is separated by the middle aisle. It has to do with people. People want to look at a little signal. We do not attempt to say to the CATV, "We want to put you out of business." No; we want to keep them in business.

Mr. MANSFIELD. Mr. President, will the Senator further yield?

Mr. PASTORE. I yield.

Mr. MANSFIELD. Can the Senator from Rhode Island state whether Stratford Smith is one of the individuals who advised him, through the Senator from Arkansas [Mr. FULBRIGHT], that if Senate bill 2653 were amended, the cable operators would accept the bill?

Mr. PASTORE. I would not like to answer that question. I think it would be improper for me to do so. I do not remember that he did. I do not believe he put his statement in that form. I think he is too smart a lawyer to have made such a statement. I myself think that after he got through agreeing to take what the Senate offered, he would fight it in the House, that would be quite natural. But I do not believe we ought to be guided by Mr. Smith's or his colleagues' judgment, one way or the other.

I simply say—and I challenge anyone to refute my statement—that we went over the bill with Mr. Smith in committee, step by step. We sat in the office of the Senator from Arkansas [Mr. FULBRIGHT] and went over it step by step. When we left that office, it was agreed that the Senator from Arkansas [Mr. FULBRIGHT] would offer certain amendments and that I would consider them.

After they were worked out the first thing I knew, we were told that they were no longer going to push the amendments. I understand that the Senator from Arkansas [Mr. FULBRIGHT] is no longer interested in sponsoring the amendments.

I know that somewhere along the line someone became a little displeased with the tactics being employed.

Frankly, I am a little bit irritated about the way we were treated, but I do not desire to vent that feeling or that emotion upon the proposed legislation. I am still predicating my argument upon the substance of the legislation and the need for it in this country.

Mr. MANSFIELD. Mr. President, will the Senator further yield?

Mr. PASTORE. I yield.

Mr. MANSFIELD. Last August, when S. 1886, affecting TV boosters, was before the Senate and passed, S. 2653 was called up, but at the request of the Senator from Arkansas [Mr. FULBRIGHT], it was passed over. Is not that a correct statement?

Mr. PASTORE. I believe it is correct. I know it was passed over, but I do not know at whose request.

Mr. MANSFIELD. Does the Senator from Rhode Island recall whether the request of the Senator from Arkansas was that the Senate delay action so that representatives of the National Community TV Association, Inc., could submit amendments?

Mr. PASTORE. That seems to be correct. That is precisely what happened in the office of the Senator from Washington.

Mr. MANSFIELD. Did not the Senator from Rhode Island, who now has the floor, agree to the request, which other Senators and I made, that he personally conduct hearings in States like Montana, Wyoming, Colorado, Idaho, and Utah?

Mr. PASTORE. That is correct.

Mr. MANSFIELD. Those hearings were conducted, and the Senator heard individuals representing the cable operators, did he not?

Mr. PASTORE. Yes.

Mr. MANSFIELD. Did the Senator from Rhode Island hear the testimony of TV boosters, and TV station representatives, as well as of television viewers?

Mr. PASTORE. We heard the testimony of many of them.

Mr. MANSFIELD. Is it correct to state that since that time the Senator from Rhode Island has met with such persons on a number of occasions to try to agree on these amendments to the bill?

Mr. PASTORE. The Senator is correct.

Mr. MANSFIELD. Would the Senator from Rhode Island say that this is the first time a chairman of a subcommittee has ever reconsidered amendments to a bill which had already been

voted upon in committee and has been pending on the calendar since last August?

Mr. PASTORE. I do not know whether this proposal is unprecedented. But that is precisely what I have done. I understand a motion will be made this afternoon to recommit the bill. I do not know how far an individual should go in carrying out the functions and responsibilities of a subcommittee.

I made public declarations that if there were any amendments which might be proposed, I would be perfectly willing to look at them and consider them. I made that statement yesterday. I was asked with whom they should get in touch. I said they should get in touch with Mr. Zapple of our staff who would show them to me. I have received no proposed amendments.

The difficulty is that the bill is not wanted. The desire now is to have the bill recommitted, to be refined further. It cannot be refined further.

As a matter of fact, I said we would consider any amendment that might be proposed; I went so far as to say that they should be brought to the floor, and I would consider them on the floor. But the fact is that the bill is not wanted. The desire is to have the bill sent back to committee. Why? To let it die.

Mr. MANSFIELD. Mr. President, will the Senator from Rhode Island further yield?

Mr. PASTORE. I yield.

Mr. MANSFIELD. Is my understanding correct that the bill was reported unanimously by the committee?

Mr. PASTORE. I do not know. There was a great amount of discussion. I would not go so far as to say that it was reported unanimously. I assume that Senators like the distinguished junior Senator from Oklahoma [Mr. MONRONEY], who is a member of the committee, never agreed with it.

Mr. MANSFIELD. Is my understanding correct that after the amendments were agreed upon, and notice was given that the bill would be called up, the Senator from Rhode Island learned, only on Thursday or Friday of last week, that it was the intention of the representatives of the cable operators to oppose the bill?

Mr. PASTORE. It is my impression that they are going to oppose it. I do not think that is decisive.

Mr. MANSFIELD. My next question has been answered by the Senator from Wyoming. Does the Senator from Rhode Island know of a communication instructing the people in the States to send telegrams of such protest? I refer again to the 12 identical telegrams sent to me from Missoula, Mont. Each one of the senders seems to have the idea that I support S. 2653. I have never made a public statement about the bill, but each one of the telegrams states: "I oppose your support of S. 2653." How they got information that I support the bill, I do not know, because I have not made any statement about it, public, private, or otherwise, which would convey that fact. Nevertheless, it is interesting to receive telegrams of this kind, each having the same words, and coming from the same city.

Mr. PASTORE. I hope Senators will attend to my statement. This has been a blitz campaign. I ask Senators who perhaps are not too familiar with the bill, How many of them were approached by these CATV people months and months ago? The bill has been on the calendar for almost a year. The Senate has been considering the measure for almost 2 years. How many people who now say they are opposed to it have appeared before the committee? I daresay not many. But now, at the 11th hour, when the bill has been called up for action on the floor of the Senate, we are subjected to a blitz in the form of telegrams and of personal appearances in an attempt to make Senators believe that the bill will destroy—yes, destroy—their business. That is not true.

Mr. MANSFIELD. I met yesterday with four citizens of my State and suggested to them that if they had any questions concerning the bill I would appreciate having them and would try to get the answers to them, so that they would have them in black and white. Here are the questions they gave me:

Am I correct in my understanding that one of the effects of the bill would be to prevent CATV systems from receiving stations which broadcast programs scheduled by local stations located in the same community as the CATV system?

Mr. PASTORE. Only if it is done by edict of the Federal Communications Commission; if the practice would be more or less "getting a jump," for lack of a better word, on the program to be shown later by the local television station, and where it is thought that such a practice might jeopardize the existence of a local television station. Then the Federal Communications Commission could make rules and regulations to the effect that the CATV system would have to show that particular program at the same time, or the CATV would have to show the program along with the local television station, including several others it was already showing.

Mr. MANSFIELD. Is there anything in the proposed legislation which would exempt community antennas from this particular requirement if the same programs that are being duplicated by the CATV system are also available in the community by means of off-the-air television reception from television stations in other communities?

Mr. PASTORE. That is a loaded question. As a matter of fact, the Senator from Montana gave me a copy of his questions an hour ago. Every question is a loaded question. They are like the old question asked around court houses: When did you stop beating your wife? Whether the answer is yes or no, the person who answers is in trouble. They all lead to the same thing; they all aim in the same direction. Take a situation where there is one available television broadcasting station in a community, and in the same community a CATV system operates, which has the advantage of showing three, four, or five signals, the TV broadcaster petitions the Federal Communications Commission and shows that unless its particular program is shown also on the CATV, as one of the three it shows, at the same time when the TV station shows it, that will be a disadvantage to the TV station inasmuch as the TV station lives on advertising, and inasmuch as the CATV serves only the congested areas, because it does not pay it to extend its lines to sparsely settled areas, unless something is done, the TV station will have to close, and then will lose its license, and then will have to close up shop permanently. That is the situation. Senators can ask me a thousand times; but if I have said it once to the members of the CATV organization, I have said it 100 times, and they understand the situation.

However, they say they will do it by agreement. If they are willing to do it by agreement, what is wrong with doing it under the supervision of the Federal Communications Commission? That is all the bill does.

Mr. MANSFIELD. Mr. President, will the Senator from Rhode Island yield further?

The PRESIDING OFFICER (Mr. MUSKIE in the chair). Does the Senator from Rhode Island yield further to the Senator from Montana?

Mr. PASTORE. I yield.

Mr. MANSFIELD. Will the Senator from Rhode Island call me up short if I get out of bounds? I ask him to remember that the questions I am submitting are not my questions but questions which I have asked the CATV people from Montana to prepare for me.

Mr. PASTORE. Mr. President, I am not saying the Senator from Montana is out of bounds. But all these questions are drawn in such a way that if I answer them by saying categorically "yes" or "no," someone can get into an argument about my answers. [Laughter.]

Mr. MANSFIELD. Mr. President, will the Senator from Rhode Island yield further to me?

Mr. PASTORE. I yield.

Mr. MANSFIELD. Would any provision of the bill require the Federal Communications Commission to impose the same regulations against VHF boosters and UHF translators bringing programs into the same community in which a local station and a community antenna system are operating side by side?

Mr. PASTORE. There, again, I cannot imagine that the Federal Communications Commission would operate in a way that would be inimical to the public interest. But if it did, we should get rid of the Commission members. After all, all of the activities under the bill are to be placed under the aegis and the supervision of the Federal Communications Commission. Have we lost faith in the Commission? Do we think it is bent on putting anyone out of business? I do not think it is.

Does this bill apply to a community in which there are two broadcasting stations? No, it does not.

Does the bill apply to a television station which has less than 50 service subscribers? No, it does not.

Does the bill apply to anyone who puts an antenna on top of an apartment house, and serves all the tenants of the apartment house? No, it does not.

So we have taken care of practically every situation; and if there are any which we have not taken care of, I ask

Senators please to submit amendments in regard to them, and we shall take care of them, too.

Mr. MANSFIELD. Mr. President, will the Senator from Rhode Island yield further to me?

Mr. PASTORE. I yield.

Mr. MANSFIELD. Has the Senate passed, or is there being considered, any other legislation which would require the Federal Communications Commission to treat translators, boosters, and CATV systems on the same basis, insofar as avoidance of duplication of programs is concerned?

Mr. PASTORE. I thought that was the previous question.

Mr. MANSFIELD. All right.

Will the Senator from Rhode Island yield for another question?

Mr. PASTORE. I yield.

Mr. MANSFIELD. Is it not possible, then, that under this legislation, CATV systems might be prohibited from duplicating programs scheduled by local stations, whereas other auxiliary television reception devices in the same community could duplicate them?

Mr. PASTORE. I could answer that question in the same way. The word "duplication" runs all through these questions. I have explained what we mean by "duplication." You see, in many parts of the country there are no live television programs. For instance, if a program originates in New York, and if it is shown in Arizona, because of the difference in time, if it is on a direct line the program can come live or by tape by means of what is called kinescope. For instance, if live television were shown in Phoenix, let us say, and if the CATV were able, through microwave or a good antenna, to capture the picture coming from Phoenix, then the CATV would catch the picture while it was still "live"; and in that event, a poor fellow in Yuma who was waiting to get the program on Wednesday night would be at an insurmountable disadvantage, because by means of CATV many of the people in that community—including those who watched television in taverns or other public places—would be able to see the program on Tuesday night. In that event, the station which scheduled the program for Wednesday night would not be able to obtain advertisers. The prospective advertisers would feel that by Wednesday night any impact of the program would have been lost, and thus to advertise on the program on Wednesday night would be like trying to sell last Sunday's newspaper today. Who would buy it?

So this should be synchronized in such a way that if a local broadcasting station which can show only one signal is in conflict with CATV, there must be a plan, under the jurisdiction of the Federal Communications Commission, to have the picture shown in that community, and at a time which will be convenient and satisfactory as the Commission will find to be appropriate.

Mr. MANSFIELD. Mr. President, will the Senator from Rhode Island yield further to me?

Mr. PASTORE. I yield.

Mr. MANSFIELD. I should like to state my next question, although it will not require an answer, because it, likewise, has to do with duplication. The question is this: Under this legislation, is it not possible, then, that if the Commission is required to require CATV to avoid duplicating programs where there is a local station, CATV could be destroyed by its inability to provide the public with the same services that boosters, translators, or out-of-town stations can provide?

My next question is as follows: If this is so, is there not a serious possibility that under the provisions of the bill there is a constitutional discrimination which, in the last analysis, might make it impossible for the Federal Communications Commission to enforce the provisions of the bill?

Mr. PASTORE. Well, Mr. President, when we talk about constitutionality, it works both ways. That is what the broadcasters are invoking against the CATV people. They say, "We go to great expense to show a program, and we have to charge our affiliates who show it. But those who use CATV can erect an antenna and can take the picture out of the air, and do not pay for it. Then they transmit it to others, and charge those others for the privilege of seeing the picture which we originate."

After all, constitutionality works both ways.

Mr. MANSFIELD. Am I correct in my understanding that, under the provisions of the bill, the Federal Communications Commission can require community antenna systems to receive the signals of a local television station in the same community if the local station wishes to be received?

Mr. PASTORE. If the public interest is to be served, of course.

Mr. MANSFIELD. Mr. President, will the Senator from Rhode Island yield further?

Mr. PASTORE. I yield.

Mr. MANSFIELD. Does the Federal Communications Commission have authority to require a community antenna system in the same town as two local stations to receive both local stations upon application of both local stations?

Mr. PASTORE. The proposed bill should not apply. In any event this is a detail that is left to the FCC under f(1).

Mr. MANSFIELD. Mr. President, will the Senator from Rhode Island yield further?

Mr. PASTORE. I yield.

Mr. MANSFIELD. If, in fact, it is intended that a CATV system be required to carry only one local station, would not the carriage by CATV of the first local station work discrimination and undue hardship on the second or third local station which might not be received on the CATV system?

Mr. PASTORE. Only if the Federal Communications Commission were asleep and were not doing its job.

Mr. MANSFIELD. Mr. President, will the Senator from Rhode Island yield further to me?

Mr. PASTORE. I yield.

Mr. MANSFIELD. Would not it be better to make it clear that whenever a second station comes into a community which is served by a CATV system, none of the provisions of the bill will apply?

Mr. PASTORE. I think that is abundantly clear, by means of the provisions already in the bill. But we can state, as a matter of history, that it is not the intent of the Congress to have the criteria apply. But I do not think we have to write in such a provision; I think we have made that abundantly clear. The hearings indicate it, and the report indicates it, and the bill indicates it.

So I think that is a rather specious argument; and I do not believe it has any place here.

But if some think there is any substance to such an argument, let me say here, unequivocally, that in that particular case the bill would not apply, because in the bill we use the words "the only available facility."

Mr. MANSFIELD. Mr. President, I wish to express my thanks to the distinguished Senator from Rhode Island for his patience and his courtesy; and I express the hope that in asking these questions I have not worn out the patience of my colleagues in the Senate.

Mr. CHURCH. Mr. President, will the Senator from Rhode Island yield?

Mr. PASTORE. I yield.

Mr. CHURCH. Let me say to the distinguished Senator from Rhode Island how much I appreciate the service he has rendered to the States of the West which are faced with this general problem.

At my request, the Senator will recall, he came to Idaho during the past recess, and he conducted a very fine and much appreciated hearing at Idaho Falls. It seems to me it is clearly in the interest of CATV to be licensed, and the provision in the pending bill which would require the CATV system to include in the local broadcasting station is, I think, something which neither they nor, indeed, anyone else can fairly object. But I do have some questions about the final provision of the bill which I would appreciate having clarified.

As the Senator knows, in my State there are community antenna television systems in Lewiston, in Soda Springs, and in places that are within reach of larger cities like Salt Lake City in Utah and Spokane in Washington. In Lewiston, for example, we have one available local television station. I am wholly in accord with the principle that the law should provide proper safeguards to preserve the local television stations; but there are about 3,000 families in the Lewiston area who are anxious to obtain programs broadcast by the Spokane stations, and they are paying customers of the local community antenna television system. One reason why they are willing to pay the fees is that they have the variety the local station cannot furnish, but another reason, it seems to me, may be the inducement that some programs they want to see at the time the event occurs can be purchased through this service, but cannot be seen at the time of occurrence, on the local broadcasting station.

Take, for example, the world's series. Let us assume that these many people in

Lewiston are anxious to see the world's series, and, through their connection with the community antenna television system, they can see the world's series as the games occur.

As I read the provisions of the pending bill, under subsection (g), there is to be found the following language:

> The commission shall prescribe appropriate rules and regulations in order to avoid the duplication of programs broadcast or scheduled to be broadcast by a television station * * * which is assigned to a community in which a community antenna television system serves—

Reading that far, it would appear to me that the effect of this provision would be to prohibit the community antenna system from broadcasting the world series, as it occurs, to the people of the Lewiston area, if the local station intends to obtain a kinescope of the games and play it back a day or two later.

Am I correct in my interpretation of this provision?

Mr. PASTORE. No; the Senator is not correct. In the first place, let me say this. I cannot imagine a situation in which, for example, a world series game played on Sunday is shown on the Tuesday following, when it has been read about and heard on the radio. That situation was given as a hypothetical question, I understand; but let me say this. The original bill which was introduced provided specifically that, at the request of a broadcaster, they had to show the broadcaster's signal. I thought that right should not be left up to the broadcaster; I thought it should be within the province of the Federal Communications Commission The committee agreed with me. That section reads in part:

> The Commission shall prescribe appropriate rules—

I am telling the Senator, very frankly, if that situation arose and the Federal Communications Commission had a regulation which blacked out the program, it either ought to repeal the regulation or be called before our committee to explain why it had adopted such a rule.

I suppose, under any given situation, one could imagine a condition which would be unwise, and sometimes even ridiculous. That is one reason why we are leaving this regulation within the province of the Federal Communications Commission. I would hope the Commission would make reasonable rules.

Mr. CHURCH. So it is the opinion of the Senator from Rhode Island that the FCC, in implementing this provision, will take into account the fact that some programs should be broadcast at the time the event occurs, and will not prohibit the community antenna station from so doing. Is that correct?

Mr. PASTORE. Either that or they will be blind to the facts of life.

Mr. CHURCH. Very well. I think this legislative history ought to be made clear.

I have one further question, if the Senator will yield. What administrative problem will be involved here for community antenna TV systems if they are prohibited not only from duplicating a program that is being simultaneously carried by the local station, but also prohibited from carrying a program which may later be scheduled to be broadcast by the local station? Is this practicable, or will it involve an administrative problem clearly beyond the ability of many CATV systems to comply with the regulation?

Mr. PASTORE. I do not think so. The distinguished Senator from Vermont and the distinguished Senator from New Hampshire are present. I do not think they are much concerned with that problem. Some localities have a scarcity of local broadcasting. Some of them did not have one station, and that has now been corrected. There is one station in Vermont on the borderline of two States where that problem was involved. There are other sections of the country where that happens. In situations of that kind, I think the procedure would be rather perfunctory.

When we consider an area such as that of the State of the Senator from Idaho, there is a serious situation in some of the valleys behind high mountains. I recall that when I came to the lovely State of the Senator from Idaho, and we met at Idaho Falls, many people came to the hearing. The courtroom was crowded. Many farmers and their children and wives wanted to have a television broadcasting system so they could have a signal. The situation would be serious in such a case. I think the FCC is sensible enough to take such a situation into account in making the rules, so that they can deal with all these different situations, and equity can be done. There are some situations, I will say very frankly to the Senator from Idaho, where all that the procedure would amount to would be the filing of an application, the granting of a license, and that would be the end of it, because there would be no interference or contest.

I was told by a Senator from one of the northern New England States that they are not interested in anything like that, that there is no such problem involved. But there are localities in the United States where some of these local stations have shut down. I cannot put my finger on it just now to prove it, but the allegation is made that the cause of it was the coming of the CATV.

The CATV says, "Prove it." It is like asking someone to prove which bullet caused the death of a man who had two fatal wounds. I do not know. There are many factors which go into the shutting down of a station. But the fact of the matter is that there is a strong suspicion that the coming in of CATV has caused it. A staff man of the Federal Communications Commission has made an investigation of the matter. I will tell the Senator very frankly that is the impression I received. If that is so, it will be taken care of very quickly; but, in the meantime, I do not think anybody's toes are going to be stepped on too hard.

Mr. MONRONEY. Mr. President, will the Senator yield for a clarifying question?

Mr. PASTORE. I yield.

Mr. MONRONEY. Would the bill require a license for only the CATV systems which the Senator has described, which the Senator alleges in several cases are in conflict with a single local TV station, or would the bill impose Federal licensing on all 760 CATV systems, most of which pose no threat to and are in no conflict with the single local TV station?

Mr. PASTORE. The bill would impose licensing upon all of them for a very obvious reason. How do we know when the Federal Communications Commission is going to grant a broadcasting license? Are we not trying to promote a competitive system? Are we not trying to insure a free system? Do we want to say that once CATV is provided, the local people will have to forget about regular TV?

Of course, this will all be under Federal control. All I say is that the parts of the bill about which there is complaint will not have any effect in those localities which have been mentioned. In those localities, coming under supervision would be a very perfunctory thing.

Mr. MONRONEY. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. MONRONEY. The bill will require these men to go before the Federal Communications Commission. They will need a counsel to represent them. Obtaining one of these licenses involves the same complex provisions and rules and regulations which apply to the granting of TV licenses. These licenses would have to be renewed every 3 years.

This is the "guts" of what these men are afraid of. It involves the recurring expense of coming back again, after all of the trouble of getting the little business organized. Many of these systems were built by these men with their own hands, yet these men are to be subjected to relicensing every 3 years and the expense and trouble of appearing before the Federal Communications Commission at any hearings which may have to be held to justify the license.

Mr. PASTORE. Well, that is not entirely so. It is true that perhaps some of these fellows built these systems with their own hands. We know of several systems which have been sold for high sums.

In the case of getting a license for the microwave, it is necessary to appear before the same Commission, or otherwise these men cannot get the microwave authority. These men have to do business with the telephone company, or otherwise they cannot get the right to use the telephone poles, and so on. These men have to deal with the municipalities, in order to get a franchise to put up the cables.

After all, this is much the same as is true in other instances. When there is no objection, the application could be sent in. Why would it be necessary to get an attorney if nobody objected to the proposal? Why would it be necessary to do that? It would operate much the same as the Consent Calendar call in the Senate. We pass a great many bills, simply because nobody objects to the passage of the bills.

Sometimes we pass a couple of hundred bills in an afternoon. However, when some Senator objects, as is the case with regard to the bill we are now considering, we are here all afternoon.

Mr. SCHOEPPEL and Mr. KERR addressed the Chair.

The PRESIDING OFFICER. Does the Senator yield, and if so to whom?

Mr. PASTORE. If the Senator from Oklahoma does not mind, I should like to yield first to the Senator from Kansas, for he has been on his feet a long time.

Mr. SCHOEPPEL. Mr. President, I will say to the Senator from Rhode Island that as a member of the Committee on Interstate and Foreign Commerce I appreciate what the Senator from Rhode Island has done while acting as chairman of the subcommittee. It has not been an easy task for the Senator. He has made a painstaking effort over a long period of time to go into all phases of the subject of the bill as they came up, and his actions have been most commendable.

I was one who voted to bring the bill from the committee to the Senate. I, like some of my distinguished colleagues in the Senate, have received within the last few days some objections, which I had never heretofore thought existed, and about which I had never heretofore heard. I had been informed by those in a responsible position, those who knew of the activities of the subcommittee and of the study which has gone into the whole matter, that most of the problems in this regard had been resolved.

I know that with respect to some proposed legislation we make a history on the floor of the Senate, as to the interpretations and a few things like that, of all of which, of course, the distinguished Senator is well aware.

Some of these matters may have been covered in part, but, as the distinguished Senator knows, I submitted to him this afternoon a series of questions which I desired to address to him. If some of the questions appear to be a duplication I shall avoid asking them. For instance, I think question No. 3 has already been answered.

If the Senator will yield for this purpose, I should like to ask him the first question.

Mr. PASTORE. I yield.

Mr. SCHOEPPEL. Is there any authority in the bill under which the Federal Communications Commission could exempt some of the smaller community antenna systems from burdensome regulation?

Mr. PASTORE. First of all, let me say that the bill specifically provides that it shall not apply to cases where there are less than 50 subscribers. I think under the general power of classifying, that could be taken even further in the public interest. As a matter of fact, we refer to that particular matter under subsection (b) on page 3, where it is said, "The provisions of sections 303"—

If the Senator will read the Communications Act, he will find that the Commission has some latitude and flexibility in promulgating rules and classifications. I think in the public interest possibly we could go further than that, but so far as the bill is concerned, there is an exemption up to 50.

Mr. SCHOEPPEL. Question No. 2: Some of the communications to my office indicate a belief that S. 2653 would require a community antenna company to obtain permission from the television broadcaster before he could distribute the television signals. It is my understanding that no such provision appears in the bill. Will the Senator comment on this point?

Mr. PASTORE. Positively. That is one of the things I have emphasized.

I will say to the Senator, that even I would not vote for passage of the bill if that were required, because I think it would be an invitation to destroy the CATV industry. I am not bent on destroying the industry.

I repeat, this group has done a wonderful service. They have brought three or four channels to people who never had them to view. Even today, those people would not have the channels were it not for this service. We are saying to them, "Keep it up. Keep doing the fine job you have been doing, but at the same time let the other fellow live."

That is all that is at issue. These men have done a fine job. This is no criticism of them. If it had not been for them and their work, there would be many people in darkness today, so far as television is concerned. However, where the people cannot receive more than one signal, in certain localities, the CATV's have come in. Through this fee system, with a moderate installation charge in some instances for hooking the service up, they have made it possible for the people to see a fine picture and a clear picture on three or four channels. I think that is a wonderful job they are doing. I find no fault with that.

Mr. SCHOEPPEL. I am in complete agreement with the Senator on that.

Question No. 4 is: S. 2653 is criticized on the ground that it is designed to protect the interests of a local television broadcaster rather than the interests of the public at large. How would the Senator answer this criticism?

Mr. PASTORE. I do not think that is so. I do not think we would write that kind of a bill, to begin with.

In the second place, the Federal Communications Commission is charged with protecting the public interest. We have to remember that all through this discussion.

Mr. SCHOEPPEL. Mr. President, will the Senator yield further?

Mr. PASTORE. The criterion we must use is the public interest, the public convenience, and the public necessity. That is woven all through this proposed legislation, as it is woven all through the Communications Act.

I do not think there is any doubt about the matter. I will say unequivocally that this service must be in the public interest. This is not to be done to satisfy the financial interests of either party. Naturally, of course, we believe the business must be protected, so that the man can continue to make a profit and so that he can continue to operate the service in the public interest.

Mr. SCHOEPPEL. If the Senator will yield further, question No. 5 is: If the natural forces of competition are left to work without Government regulation, and if, as a consequence, a local television station should go out of business, would local CATV be able to supply service to surrounding rural areas?

Mr. PASTORE. I do not think so, because it would not be profitable. That is the point.

I asked the question, "Why do you not extend your lines, especially in a State like Idaho?" That cannot be done. It would be necessary to go over the mountains and all sorts of rough and rugged terrain. These men simply cannot do that, for it would not be profitable. They have to use the microwaves. They have to tap in with the wires. They have to run the cables. Usually the cables are attached to the same poles to which the telephone wires are attached. Naturally, it is necessary to concentrate on the congested areas.

Really, these operations siphon off the cream. I am not finding fault with them, but, let us say, these men come into a town of perhaps 10,000 inhabitants, where there might be a few people—two or three thousand people—way out on the outskirts. These men hook up the congested area. That is permissible. I find no fault with that. What happens then? The minute the people are satisfied with that kind of reception the man who is operating the local TV station, who caters only to the little farmers and to the people on the outskirts, cannot make enough money from his advertising, unless he can sell to the corner grocer and to the milk man and to all the others. After all, that is what sustains the television broadcasting station. The advertising is absolutely necessary. The minute the cream is siphoned off we will find the broadcaster in trouble. Unless we do something to permit the broadcaster to keep the facilities he has, the few remaining stations will be put out of business. Therefore, we have to do something to put both parties under supervision. That is all we propose to do. We want to keep both of them alive.

Mr. SCHOEPPEL. One final question. Should a distinction be made in this legislation between CATVS that simply overcome terrain difficulties and others that have microwave relays to bring signals from hundreds of miles away? Should we make that distinction?

Mr. PASTORE. I do not know what the Senator means by the question. Does he mean, Can we draw a bill which would control CATV only in instances in which the people must depend upon a "kitchen" booster in order to get the signal?

Mr. SCHOEPPEL. Yes.

Mr. PASTORE. That is the point which was raised by the Senator from Oklahoma [Mr. MONRONEY]. That cannot be done. They must all be put under regulation. So far as procedural matters are concerned, where there is no contest or problem, issuance of a license is perfunctory. But where there is a problem, there must be a hearing at which evidence is taken and both sides

heard. That is the natural procedure. I assume that in many cases the application would be filed and that would be the end of it.

Mr. CURTIS. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. CURTIS. First, I thank the distinguished Senator for his long efforts in a difficult area. I have given very limited study to S. 2653. It appears to me that the proposed legislation places the community antenna systems under the jurisdiction of the Federal Communications Commission. To that extent there is a delegation of authority to them. Does the bill directly prohibit or outlaw any act that the community antenna systems are doing now?

Mr. PASTORE. I do not think so, aside from the fact that now they are at liberty to take a picture from a broadcasting station in Phoenix and show it in Yuma, for example. It may be earlier than the picture would be shown on the local broadcasting station in Yuma, and if the broadcasting station at Yuma made an application to the FCC, it could bring that to a stop. That would be a deprivation of some activity. That is about as far as it would go.

Mr. CURTIS. The bill grants to the Commission the right to look into that situation?

Mr. PASTORE. And to make rules and regulations.

Mr. CURTIS. To make rules and regulations.

But in the absence of action by the Commission, is there anything in the bill which prohibits what the community antenna systems can do?

Mr. PASTORE. I would not say so, unless the Senator sees something in the bill to the contrary.

Mr. CURTIS. I am not raising a particular point.

Mr. PASTORE. I would not say so. The bill involves no deprivation of rights. It merely puts the operation under the control of the Federal Communications Commission, for the specific reasons which we have enunciated in the bill. I do not think there is any deprivation of rights. We do not declare any.

Frankly there was a question about whether we should use the word "signal" or the word "program."

The lawyers suggested that we should use the word "signal," and I told them we would accept the word "signal," provided it was explained in the history of the bill on the floor of the Senate that we were using the word "signal" as synonymous with "program," as it was written in the bill as reported from the committee. I believe the reason for the request was that there is a case pending in court, and it might turn on whether or not it is a signal or a program which is involved. I believe the lawyers were trying to protect the interests of their clients. A question like that might have an effect one way or the other, and we have not tried to do anything other than I have indicated. In other words, there is nothing slippery in the bill.

Mr. CURTIS. Is it the intent of the proponents of the bill to grant authority to the Commission to regulate community antennas and the competition which arises between them and a single television station?

Mr. PASTORE. Let us assume the operators want to extend their lines, or let us assume they want to go to a neighboring city and questions of that kind arise. They would have to file an application and go through the procedures which are required by the Federal Communications Act. If they must be placed under control, they should be under control.

Mr. CURTIS. I thank the Senator.

Mr. KERR. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. KERR. I have listened with a great deal of interest to the speech of the Senator from Rhode Island. When he was talking about the little people in such an eloquent, plaintive, and effective manner, the Senator from Oklahoma sat down and wept, since the Senator from Oklahoma is allergic when little people are mistreated.

Then the thought came to me that I was weeping for somebody who was either anonymous or unknown. I now wish to ask the Senator to identify the little people about whom he was so eloquent that he had the Senator from Oklahoma in tears.

Mr. PASTORE. These little people are farmers who live in the little valleys in Idaho, farmers who have five or six children who have to walk miles and miles to go to school, who come home from school tired, but still must study. Their fathers work in the fields all day and their wives work side by side with them tilling and cultivating the soil.

Mr. KERR. Will the Senator yield?

Mr. PASTORE. The Senator from Oklahoma asked me a question, which I should like to have an opportunity to answer. Wives work side by side with them, and when nightfall comes they want to see, "I Love Lucy." Those are the little people I am talking about.

Mr. KERR. I am delighted to see the Senator's newly found interest in the farmer, but the ones I know do not spend their nights looking at "I Love Lucy," unless that happens to be the wife's name, though that is not often the case.

Mr. PASTORE. There are many "Lucys" out there.

Mr. KERR. How is that farm family with the children in that little valley—was it in Idaho?

Mr. PASTORE. Idaho, Montana, and Wyoming.

Mr. KERR. How are they protected under the bill?

Mr. PASTORE. They are protected in this way. I will repeat.

The local station, which is the only available TV station, has made the allegation that it subsists on advertising revenue in a community, which is rather small. Ordinarily the local broadcasting station in such a community uses spot announcements——

Mr. KERR. Does the Senator mean the local TV station?

Mr. PASTORE. The local TV station. The TV station subsists naturally on the advertising it gets. Sometimes the income is high, sometimes it is moderate, and sometimes it is fair. I am not going into that. Then CATV comes in. CATV can operate in very congested areas by means of cable lines. It cannot go too far out because as the distances increase, the expense becomes greater and the installation charge is higher than many people can afford to pay, and they cannot afford to pay the fee.

Even if they were in a section where CATV operates, some people cannot afford the installation charge, because it runs in some cases to $150 per installation, and in some cases the people must pay $9 a month for the privilege of viewing the station. Many farmers cannot afford that expense.

Mr. KERR. It is not compulsory upon them, is it?

Mr. PASTORE. No; but let me finish the premise I am developing. The point is that there is nothing wrong with CATV coming in and installing wires, but this is what happens. The minute a CATV station comes in with three signals, and the people can see the programs, because the CATV goes to the originating point, which is a large city—for example, in Montana they would go as far as Spokane, or if the station were in Arizona, I suppose they could go as far as Phoenix—they have the opportunity, for a fee, to see a program which takes place simultaneously at the time it is being performed or broadcast in the originating station or network.

The poor little fellow who has a small broadcasting station, and who has contracted as an affiliate of a network, has an agreement with the network to show that particular program but not on the night it originates and is shown in the large areas. He can show it only in the middle of the next week. After "Gunsmoke" has been shown on Saturday or Sunday night, whenever it appears live, there is not going to be too much attraction for the viewers and advertisers to have that same program on the following Wednesday night.

In order to cure that situation, we are asking CATV, which has three or four signals, to make a sacrifice and reduce the number to only one where the FCC, on petition of the station and decision by them, finds it is in the public interest, in order to sustain the local broadcasting station, or by such duplication is avoided. When there is a particular program which the TV operator is privileged to show on Wednesday night and can show only on Wednesday night, rather than show Gunsmoke on Sunday night, the CATV operator could be required to get something else for that channel Sunday night and wait to show his "Gunsmoke" later. That is not hard or unfair; is it? That is all we are doing.

Mr. KERR. Is that all the Senator proposes?

Mr. PASTORE. That is about all we seek to do.

Mr. KERR. I was asking the Senator from Rhode Island for whom we wept, and he told me it was the little family in the valley in Idaho and the little TV station in that area.

Mr. PASTORE. That is correct.

Mr. KERR. Is this bill limited to only those CATV's who serve in and are served by only one TV broadcasting station?

Mr. PASTORE. Because it is impossible to write a bill that way.

Mr. KERR. I did not ask the Senator that.

Mr. PASTORE. It covers all the CATV's.

Mr. KERR. Why put 760 under control in order to protect a dozen or two dozen or 100?

Mr. PASTORE. Because one never knows——

Mr. KERR. May I finish my question?

Mr. PASTORE. Certainly.

Mr. KERR. Why do that in order to protect a dozen or 100 who are in the category the Senator has described and for whom he had me weeping on the floor of the Senate, without knowing who they were?

Mr. PASTORE. I am sorry. I did not mean to have the Senator weep for anyone. I do not want him to cry on the floor of the Senate. I want him to be patient and listen to what I have to say. It might be a more practical procedure if it were possible to limit the bill to certain specific situations. However, under our philosophy, under which we wish to extend free television as far as we can go, that cannot be done. Every day the Commission is granting licenses. We are talking about free television, of course. If the Senator wishes to develop a nationwide system of pay television, we will do what the Senator suggests.

Mr. KERR. No, I do not want to develop pay television.

Mr. PASTORE. Then it is necessary to put these people under regulation, so that as new licenses are granted the Federal Communications Commission will have jurisdiction. The FCC then will be in a position to develop an orderly system of TV. However—and this must be borne in mind—insofar as harassment is concerned, or so far as a burden may be incurred, because of the duties that are imposed upon a CATV organization where there is no problem, I would assume the action of the Federal Communications Commission would be nothing more than perfunctory.

Mr. KERR. Why put a burden on one who is not guilty and make him pay all the costs of sustaining that burden to protect someone for whose benefit the legislation is enacted, but in order to protect whom the Senator would affect 760 persons who started in business, and who had a right to start in business, and for whom the Senator would sound the death knell unless they could come to Washington to hire lawyers to appear for them before the Federal Communications Commission to sustain their businesses?

The Senator said before that the bill had been refined to the extent that it could not be refined further. I must say that the Senator does not have as much confidence in his ability as I do. I believe that if he wanted to write a bill which would protect a TV station in a community where there was only one station, he could do it a little easier than he could by the pages and pages that he brings to the Senate in the pending bill, and which, I charge, no one but a lawyer fully understands.

I see the Senator from Illinois on the floor. He should have been here and heard the plea for the little people.

Mr. DIRKSEN. I did hear it.

Mr. KERR. Then why is not the Senator from Illinois weeping?

Mr. DIRKSEN. The Senator from Oklahoma has not given me a chance to weep.

Mr. KERR. Why did he not weep with me?

Mr. DIRKSEN. I am waiting to weep.

Mr. PASTORE. Mr. President, if this weeping is going to continue, I hope I will be given a chance to go home to get my rubbers, because I do not want to get my feet wet.

Mr. KERR. When the Senator gets his rubbers, I hope he will get me an umbrella.

Mr. PASTORE. Over the years we have been developing a competitive free television system. We have been assured by the Commission from time to time, even though at moments we have been discouraged and frustrated, that they are trying desperately to promote a free television system throughout the Nation. There are many sites and many areas where there are four channels. Some areas have five channels. Large cities were in on the original grants. New York, Los Angeles, Chicago, Washington, and many cities of that size have many channels. There are a great many other places where the people do not have one little television station, where the Commission is trying to work them in. There are other areas where the FCC is trying to drop them in as much as it can. This is true not only in Rhode Island but also in Oklahoma.

This whole problem of TV service and the type of service is knitted together. I know the argument the Senator is making. That argument was made in committee. I know a great deal can be made about that argument here on the floor of the Senate. One can get quite dramatic and even glamorous in the discussion. The fact is, however, that these things must be argued in proportion to their reality.

The committee has been studying them for a long time. It is not possible to separate these elements the way the Senator would like to separate them. The best we can do under the circumstances is to make legislative history to the effect that where the situation we are discussing does not exist, these people should be brought under the umbrella of this supervision, and not harass them.

Mr. KERR. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. KERR. Why is it necessary to bring in those the Senator does not wish to regulate and who he says should not be regulated, and then attempt to make legislative history on the floor of the Senate which would say that they are not affected by the proposed act, whereas the fact is that they would be required to come here every 3 years and ask for a renewal of their license? They would have to hire lawyers to defend them here.

Mr. PASTORE. That is correct; that would be protection to them, as well.

Mr. KERR. Did it ever occur to the Senator from Rhode Island that there are hundreds and thousands of American businesses in operation who are praying unto the Lord and their Government to protect them by keeping them free of regulation, rather than imposing it on them and then having them depend upon a legislative record made on the floor of the Senate which, if someone downtown whose identity we do not know, is controlled by it, will let them loose after they have paid a bunch of lawyers in Washington to come down to get them loose?

The Senator says he cannot write a bill to protect these people. Apparently the Senator does not know his own ability.

Mr. PASTORE. Will the Senator heed for a moment?

Mr. KERR. I will heed for the rest of the afternoon.

Mr. PASTORE. There was not one representative of a CATV who appeared before our committee who did not say that he wanted to be regulated. I call as my chief witness the Senator from Oklahoma [Mr. MONRONEY], who is going to make the motion to recommit the bill. As a matter of fact, Senator MONRONEY introduced a bill himself to regulate the entire industry. However, that bill is only a shell. It does put them under regulation, but it does not regulate.

Mr. KERR. Next to not being under it, that is the best shape one can be in.

Mr. PASTORE. May I finish?

Mr. KERR. Certainly.

Mr. PASTORE. I do not know of a witness who appeared before our committee who did not say that he desired to go under regulation. The man who is resisting the bill and is the chief spokesman for the industry introduced a bill to put them under regulation. Why? Because he recognized the fact that it is not possible to separate these situations. As we develop this nationwide TV competitive system, from time to time we must drop in these TV stations. The only wise and businesslike way of doing it is the way it is suggested in the bill. I realize that the Senator is fighting the bill, but even if we were to rewrite it, the Senator would still be opposed to it.

Mr. KERR. No; not at all. If the Senator will rewrite it to protect the people he is talking about, I will help to pass it.

Mr. PASTORE. I have not been flattered by the Senator's statement with regard to my capacity to do what the Senator has suggested. I vouch for the fact that the bill was given very careful consideration. We drew this bill in committee. It was decided by the subcommittee and by the full committee that this is the way the law should be framed.

Mr. BUSH. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. BUSH. If I am correct in my understanding, the point about the timing is this. If there is town A in Idaho or Montana, and station ABY, a television station operating in that town, and there is an important program, and station ABY has a contract with one of the networks, the enactment of the bill would result in deferring the telecasting of a play perhaps for 24 hours, so that station ABY will not be at a disadvantage in delivering a late show or late news item.

What about national events or international events, such as the wedding of Princess Margaret, or the Kentucky Derby, or the World Series, or the inauguration of the President of the United States? How would such events be handled? Would those news events, which the people have been reading about and have been looking forward to seeing, be laid over for 24 hours?

Mr. PASTORE. No; they would not be laid over. First of all, that matter comes under the jurisdiction of the Federal Communications Commission for the making of rules and regulations. As a practical proposition, let us assume that the local television station has a contract with ABC, NBC, or CBS. If it is one station, it might have a contract with all three networks. A conflict would not arise too often, because the other station has, perhaps, three or four signals to show. Let us assume a newsworthy picture had been made, or a spectacular public event. In that case, I assume, the FCC would make rules which would be sensible.

Mr. BUSH. If we assume that the Senator is correct in his original point, concerning the layover——

Mr. PASTORE. Under the bill, the FCC is obliged to write appropriate rules. I do not know what construction the FCC will put on "appropriate"; but to me "appropriate" means proper or reasonable. I do not know what an appropriate rule is, unless it takes care of a situation.

Mr. BUSH. In a case like that, it seems appropriate that any important news event should not be withheld from the people for 24 hours.

Mr. PASTORE. I cannot imagine that the Federal Communications Commission would ever do any such thing. I should suppose there are many hypothetical situations which we could conjure in our minds which might prove the point. After all, this matter is being placed under the supervision of a Federal agency which has jurisdiction of such matters. It understands the business. It should know the business. I assume they would have given consideration to the word "appropriate," which would mean reasonable or fair. If we have lost all faith in the FCC, then I do not think we ought to have that regulatory body at all.

Mr. BUSH. What does the Senator think about the hypothetical case I raised? After all, it is important to television viewers.

Mr. PASTORE. I should say that in a case that might be of immediate import—for instance, Khrushchev's withdrawal of his invitation to President Eisenhower. He made that statement on Saturday night. I do not believe anybody should wait until Wednesday of next week to see such an event.

Mr. BUSH. What about current news events televised every evening?

Mr. PASTORE. I do not believe there would be any conflict concerning that.

Mr. BUSH. In other words, the Senator does not believe there would be any interference which would prevent the people in the areas concerned from getting the news of the day on that day?

Mr. PASTORE. No, because the local TV broadcasting station has only one signal. The other CATV station may have three.

Let us assume the local broadcasting station is showing the NBC news——

Mr. BUSH. Yes; but it would not get it until 24 hours later.

Mr. PASTORE. Why could not the CATV be televising CBS news with another commentator explaining it in a different way? There would still be two other channels.

Mr. BUSH. If I may say so, I do not believe the Senator from Rhode Island has given me much comfort on this question.

Mr. PASTORE. Why not? I will explain it again. The CATV has three or four signals to show. It shows different signals at different times over different channels. The local broadcasting station has only one channel. I should suppose that when it came to news, they would show such programs, and the duplication provision would not apply.

Mr. BUSH. In any newscast?

Mr. PASTORE. In any newscast. I do not know how it would be handled. It may have to be studied further. I hope it will be studied, and studied properly, because everyone knows that news items are of importance at the moment they occur, and may be rather stale tomorrow.

Mr. BUSH. What about sporting events?

Mr. PASTORE. The same would be true of sporting events.

Mr. BUSH. The world's series, and the Kentucky Derby.

Mr. PASTORE. There is no need to see the Kentucky Derby a week later, when the result has already been made known.

Mr. BUSH. That is correct.

Mr. PASTORE. It would not be included.

Mr. DIRKSEN. Mr. President, I should like to inquire of the acting majority leader whether or not it is intended to have the debate continue until late in the evening, or whether we may agree on a time for its disposition tomorrow. I understand there is no other proposed legislation crowding the Senate, and I know that a number of Senators have evening engagements. I thought perhaps we might agree on a tentative time for a recess or adjournment this evening, and then have the Senate go over until tomorrow.

ORDER FOR ADJOURNMENT UNTIL NOON TOMORROW

Mr. MANSFIELD. Mr. President, I should like to have the attention of the Senate, while I propose a unanimous-consent request.

I ask unanimous consent that when the Senate adjourns tonight, it adjourn until 12 o'clock noon tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that at the conclusion of the morning hour tomorrow, 2 hours be allocated to the motion to recommit; 1 hour be allocated to the passage of the bill; and one-half hour to any motion or amendment pertaining to the bill.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

The unanimous-consent agreement, reduced to writing, is as follows:

UNANIMOUS-CONSENT AGREEMENT

Ordered, That effective on May 18, 1960, at the conclusion of routine morning business, during the further consideration of the bill (S. 2653) to amend the Communications Act of 1934 to establish jurisdiction in the Federal Communications Commission over community antenna systems, debate on any amendment, motion, or appeal, except a motion to lay on the table, shall be limited to one-half hour, and except a motion to recommit, on which there shall be 2 hours, to be equally divided and controlled by the mover of any such amendment or motion and the majority leader: *Provided,* That in the event the majority leader is in favor of any such amendment or motion, the time in opposition thereto shall be controlled by the minority leader or some Senator designated by him: *Provided further,* That no amendment that is not germane to the provisions of the said bill shall be received.

Ordered further, That on the question of the final passage of the said bill, debate shall be limited to 1 hour, to be equally divided and controlled, respectively, by the majority and minority leaders: *Provided,* That the said leaders, or either of them, may, from the time under their control on the passage of the said bill, allot additional time to any Senator during the consideration of any amendment, motion, or appeal.

Mr. DIRKSEN. Mr. President, I should like to ask a question of the distinguished Senator from Rhode Island. It is my understanding that until 2 weeks ago the Federal Communications Commission was opposed to the proposal, and that it changed its mind. Is my understanding correct?

Mr. PASTORE. I would not say the Commission was exactly opposed to it. They were rather lukewarm, I should say, but they have modified their position.

Mr. DIRKSEN. It was my understanding that after they had made a serious study of the bill they indicated their opposition, but subsequently changed their mind.

Mr. PASTORE. I read a portion of the FCC position into the RECORD.

Mr. DIRKSEN. I thought it was rather singular that there were no minority views submitted with the report. I discovered afterward, in the course of conversation with members of the committee, that evidently this was an agreed-upon measure, and that the association representing the so-called antenna group had more or less agreed to the proposal. I understand now, however, that there has been a change of heart, and that along with it they have presented, not formalized particularly, some amendments which had not been considered by

the subcommittee. Is my understanding correct?

Mr. PASTORE. Not precisely that. I would not say they agreed to the proposal. They appeared to me to be satisfied. I do not believe they would ever go on record as saying, "We are agreed on it"; but we sat with the Senator from Arkansas [Mr. FULBRIGHT] in the office of Senator MAGNUSON, where certain amendments were proposed, and we agreed to accept some of them.

It was left that way. It was understood that when the bill came to the floor the Senator from Arkansas would offer the amendments and I would accept them. Then I understand that some members of the association became displeased with the whole matter. I was told that they were dissatisfied with the way the attorney had handled the matter, and that they planned to resist the bill.

Mr. DIRKSEN. I was given further to understand that they adopted some kind of policy at a meeting in Chicago, that they had a special meeting in Chicago, and that then the so-called community group had some discussion or controversy about an interpretation of their own policy. In pursuance of that, amendments were suggested which had not been considered by the subcommittee. The association acts on the theory that the amendments are necessary to make the bill workable from their standpoint.

I thought that if there were such amendments, that certainly would be an argument for recommitting the bill, in the hope that those amendments would be considered. I am not a member of the committee. I never saw such confusion about a bill. I talked with the chairman of the committee about it. I talked with other members of the committee about it. I find an amazing division of opinion on both sides of the aisle. I confess to my own confusion about it now.

If the distinguished Senator from Oklahoma [Mr. KERR] continues longer, I shall weep about it. As I understand, the FCC was opposed to the bill until about 2 weeks ago. Now they have changed their mind. The association seemed to be agreed on the bill; now it has disagreed. Frankly, I do not know quite where we stand on the measure. I am disposed to do the right thing.

Mr. PASTORE. I realize how easy it is to say that at the 11th hour. There is nothing that cannot always be reconsidered a little more, no matter what it is, even very important matters.

This bill means very little to me. As a matter of fact, much time has been devoted to consideration of the bill. It began in 1958. We have had protracted hearings. I have visited the various States involved. I have gone through all of this measure. I have had private conversations with these people. I even suggested that they submit amendments. I sat down with the Senator from Arkansas [Mr. FULBRIGHT], when the amendments were submitted to me; and studied the amendments. We agreed to submit them.

Now the Senator from Illinois says there are new amendments—which we have not seen.

Mr. DIRKSEN. They are not new.

Mr. PASTORE. Were they submitted?

Mr. DIRKSEN. Yes.

Mr. PASTORE. To whom were they submitted?

Mr. DIRKSEN. To me. Some told me there were amendments which had not been considered. I asked where they were. They said they had not been formalized.

Mr. PASTORE. But we do not consider amendments until they are submitted; and this measure has been on the calendar since 1959.

Mr. DIRKSEN. The amendments as such were not actually formalized. The suggestion was made to the distinguished chairman of the subcommittee, and that is as far as the matter went.

I have no idea what the amendments are. But this measure involves many people and many television viewers.

Mr. PASTORE. The Senator from Illinois has said he has no idea what the amendments are. Neither have I. But certainly if this measure is sent back to the committee, the bill will be killed.

Mr. DIRKSEN. Yes; and perhaps it should be; I would not know.

Mr. COTTON. Mr. President, will the Senator from Rhode Island yield to me?

Mr. PASTORE. I yield.

Mr. COTTON. As a member of both the full committee and the subcommittee headed by the Senator from Rhode Island—which considered the bill—I wish to state that I appreciate the courtesy of the Senator from Rhode Island in yielding to me.

First, I should like to say that I think the distinguished Senator from Rhode Island is justified in being a little vehement this afternoon, because—even though I am not satisfied with the bill, and have not been satisfied with it—I happen to have worked with the Senator from Rhode Island, and I know that he exercised the greatest patience and the greatest care throughout the consideration of the bill.

He says nothing "slippery" is in the bill; and I am here to state that anyone who knows the Senator from Rhode Island knows there never will be anything "slippery" in any bill he presents—at least, not to his knowledge.

The CATV people, for whom I shall speak before this debate is over—or, at least, the CATV people in New Hampshire—were misled, and some of us on the committee were misled, into agreeing to certain provisions. But the Senator from Rhode Island was not to blame for that. He was leaning over backward in his efforts to be fair; and I want that distinctly understood before I ask some questions.

I wish to refer now to section 330, subsection (d)(1), on page 4 of the bill. It reads as follows:

> Either prior to or within thirty days after the grant of an application for a license or a renewal thereof for a community antenna television system which was in operation on the date of the enactment of this section—

And, Mr. President, if I correctly understand the English language, those words cover a situation which exists in many sections of my State where there is no local station, and where the only means by which many persons can receive television is the community antenna—

> the licensee of a television station assigned to a community—

It does not have to be a television station that is in being. One who, under this bill, would be permitted to make a protest would not even have to have ever built a station. But in my State there are communities where a channel has been assigned. Such a station would never pay, never be economically sound, and no one now in that community will live long enough to see a local station built. Nevertheless, at the expiration of 3 years, someone who has had that privilege assigned to him, in a community—

> in which such community antenna television system serves subscribers may petition the Commission to include in such license such conditions on the community antenna television system's operation as will significantly facilitate the continued operation of a television station which is providing the only available locally originated television broadcast program service.

The last words of that provision are ambiguous. They may save the bill from being a hobble, for the CATV people in a community in which they are the only ones who are bringing this service to the people of the community. But if I read the bill correctly, it is very dangerous, because every 3 years almost anyone who had the privilege of building such a station whenever he might wish to build it could put the CATV "over the jumps"; and that would not be beneficial to the people of my State who are receiving piped-in television.

Furthermore—and after I ask this question, I shall be glad to listen to what the Senator from Rhode Island will very ably say in reply, I am sure—in such instances the bill means that the CATV people will not extend their service to the surrounding communities which do not now have adequate reception. Why not? Because the CATV people will not invest their money in the gamble of moving further into other sections, when hanging over their heads will be the threat of having someone else at the end of 3 years prevent them from getting a renewal, or impose on them a series of crippling restrictions.

Let me say that I was deceived, along with the rest. They said, "I guess it is all all right, and our lawyers tell us it is all right." I say very frankly that I was deceived, along with the rest; but I share the solicitude which has been expressed by the distinguished Senator from Oklahoma. I state frankly that in New Hampshire there is not a single case in which there is a local station and a CATV; but, nevertheless, I am afraid that subsection (d) of the bill will adversely affect all installations of that sort.

I have received many communications in connection with this matter. The communications I received are not worded exactly alike. The people of my State

began to be apprehensive about the situation a very long time ago, not just last week. That is why I am apprehensive about the bill.

I cannot help but believe that the bill can be drafted or redrafted so as to avoid any such situation.

Mr. PASTORE. Mr. President, I hope the Senator from New Hampshire will be patient, and will follow my reading of this part of the bill.

Mr. COTTON. I shall do my best.

Mr. PASTORE. I shall read this provision word by word; I refer now to subsection (d) (1), on page 4:

(d) (1) Either prior to or within thirty days after the grant of an application for a license or a renewal thereof for a community antenna television system which was in operation on the date of the enactment of this section, the licensee of a television station assigned to a community in which such community antenna television system serves subscribers may petition the Commission to include in such license such conditions on the community antenna television system's operation—

And, Mr. President, next come the important words—

as will significantly facilitate—

Facilitate what?—

the continued operation—

That means it has to be in existence, in order to be able to continue. So at this point we find the words—

as will significantly facilitate the continued operation of a television station which is providing—

Not "which may provide" or "which will provide," but "which is providing." How could any words more present in their tense than those be used?

Mr. COTTON. On page 4, the bill refers to a licensee of a local television station that is in operation. But on one page the bill refers to someone who has been assigned the privilege, and on the next page the bill uses the word "continued." I am aware of the interpretation which has been made by the staff of the committee.

Mr. PASTORE. The word "assigned" is in the past tense, and means the event has already taken place. The word "continued" means it must already be in existence. Something which is not in being cannot be continued; first it must be in existence.

In addition, the bill uses the words "which is providing"; and those words are in the present tense.

I say frankly that if Senators wish to begin to tear apart the words used in the bill, any kind of argument can be made.

But for the benefit of the Senate, I say it is quite clear that the bill is written in the present tense. It uses the words "the continued operation" and the words "is providing."

Mr. COTTON. Yes; but I should like to ask the Senator from Rhode Island to yield briefly again, and then I shall not bother him further.

First, I can name a situation in my own State. I refer to page 4 of the bill. And I am still just a simple enough country lawyer so that the language to me means what it says. On page 4 it says a licensee of a television station assigned to a community. I can name examples in my State where, for several years now, there has been a channel assigned to a community. No one has as yet constructed a station. No one has produced the capital for constructing one. I do not think there should be left in this bill a provision which states that someone may have the privilege, in trying to guard his own future, should he or should his heirs or assignees sometime get the money to build the station, cannot do it.

Mr. PASTORE. I will make the Senator from New Hampshire a fair offer. If he will agree to vote for the bill, I will agree to change the word "assigned" to "operating."

Mr. COTTON. The Senator from Rhode Island has already said he is distrustful of how we can legislate to protect those who need protection. I am distrustful of any kind of measure which we bring onto the floor and then try to legislate here. And it is not the committee's fault, may I say.

Mr. PASTORE. The Senator from New Hampshire misunderstands me. I have made the history for this proposal. I am not apologizing for the word "assigned." I am not apologizing for the paragraph. With all due modesty, I believe it is beautifully written. But I do not think it is going to impress the Senator from New Hampshire. No matter how I change it, he is going to vote against the bill.

Mr. COTTON. I know the Senator from Rhode Island finds it to be a very beautiful expression; but if he will turn to page 3, he will find on that page a provision which reads:

The provisions of sections 303, 304, 307, 308, 310, 311, 312, 313, 315, and 316 relating to stations, radio stations, broadcasting stations, licenses therefor, licensees thereof, and station operators shall apply also to community antenna television systems.

Then if the Senator will turn to page 36 of the Communications Act of 1934 and read page after page of all kinds of restrictions that are going to be put on the CATV operators by the provisions of the bill, he will realize that, though it may be beautifully written, it will be a "beautiful job" done on some people. And I am not thinking of the Federal Communications Commission, but of the people.

There is nothing slippery in it, but earnestly, sincerely, and beautifully, we put something in this bill that will put an end to free enterprise. If a local station is built that is good for anything, and if there are community programs that are good for anything, nobody in his right mind is going to pay for something which he can get free. That is a part of free enterprise.

Mr. PASTORE. Will the Senator from New Hampshire answer a question? The Senator knows, having a CATV in his community, that these operators are taking a signal out of the air which originates in a rather large city; I think in this particular case possibly Boston. There is a case pending at the present time which raises the question as to whether or not a CATV can take a signal out of the air and not pay the man who goes through the expense of originating it. That case is now pending. I do not know how the case is going to be decided. But let us assume it is decided that the CATV has no right to use that signal, that he cannot take that signal without permission, and unless he gets permission, he cannot use it and redistribute the signal to the viewing public who are his clients. In a case of that kind, who does the Senator think is going to hear from the people who have gone to the expense of installing a CATV system in their homes, and of paying for a television set? Who is going to protect those people who have installed the CATV system? Are they not going to come running to the Senator to have the Federal Government umpire the unreasonable charges that might be made, that might be confiscatory of their property? What are we going to do then? I just hope the junior Senator from Rhode Island is a Member of the Senate when that happens.

Mr. COTTON. The Senator asked a question. May I answer it?

Mr. PASTORE. Yes.

Mr. COTTON. I thank the Senator. If the courts, including the Supreme Court of the United States, in another of a long line of remarkable decisions, decides to throttle this industry, put it out of business, and choke it to death, then let them do it, and we will meet the situation when it comes. There is no need of our doing it first. I doubt if it will be done.

Mr. PASTORE. But there is a serious question pending in the courts. I am only hoping that what is feared will not happen. But I have told representatives of CATV systems that one of the essential benefits of this legislation was to have them come under an umbrella of regulation. They were told that if the broadcasters who originate the signals try to charge exorbitant fees in order for them to get permission to use those signals, they will always have the FCC in a position to act as a wise umpire, and they can look to the FCC. They were much impressed when I said that. They may have changed their minds when they got out in the corridors, but they were impressed when I told them that.

Mr. COTTON. They can do it with the bill as it is.

Mr. PASTORE. No, because the consent was left out of the bill. May I yield to the Senator from Oklahoma [Mr. KERR].

Mr. KERR. Did the Senator from Rhode Island say the Federal Communications Commission, which has control of the station whose signal is being picked up, could not control them without this act?

Mr. PASTORE. I did not say that.

Mr. KERR. That is what the Senator did say.

Mr. PASTORE. I said the CATV would not have any right to go before the FCC.

Mr. KERR. Who says they would not?

Mr. PASTORE. I say so.

Mr. KERR. Who prescribes that?

Mr. PASTORE. Because the Senator says they should be put under the CATV. That is just the point.

Mr. KERR. Cannot a person go into court and ask for justice, without being set aside by the court?

Mr. PASTORE. The FCC is not a court. It is a regulatory body. We are trying to put the parties under this body with appropriate procedures.

Mr. KERR. The Senator wants to make them slaves, without provision for protection of their lives. How silly can one get?

Mr. PASTORE. I am not silly. I am talking about jurisdiction.

Mr. KERR. So am I.

Mr. PASTORE. I am talking about jurisdiction, and there is nothing silly in it.

Mr. KERR. The Federal Communications Commission does not have to be given regulatory control over any citizens to enable those citizens to go before that Federal Communications Commission and file a petition.

Mr. PASTORE. A petition to do what?

Mr. KERR. To enforce any right that an American citizen has with reference to that Commission's jurisdiction.

Mr. PASTORE. The Senator could not be more wrong than he is.

Mr. KERR. Well, the Senator has proved that one Senator can be wrong.

Mr. PASTORE. I do not know about that. I have not proved any such thing. I am merely saying to the Senator that the purpose of this bill is to put the CATV's under supervision of the FCC so they can file petitions and FCC can take appropriate action.

Mr. KERR. And I am saying they do not have to be put under the FCC.

Mr. PASTORE. And I am saying the Senator is wrong.

Mr. KERR. And I am saying the Senator does not know what he is talking about.

Mr. PASTORE. So we are at a stalemate.

Mr. BARTLETT. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. BARTLETT. I intend this to be a dampening interlude. I refer to a situation the distinguished and able and forthright Senator from Rhode Island and I last discussed several months ago, about three television stations in Alaska which originate their own signals by means of regular station television equipment.

The signal is then fed into a coaxial system and distributed to homes and subscribers who pay a monthly fee for the service. These stations do not receive or amplify signals originated by a television station. The programs provided are on film, except for certain local programs originated by the station.

I wish to ask the distinguished chairman of the subcommittee, would such stations be included in the definition of a community antenna television system, which the bill would regulate?

Mr. PASTORE. No. This bill would not apply, for the simple reason that those stations originate their own programs and are exempted from the provisions of the bill.

Mr. BARTLETT. Would the Senator have any objection to my asking unanimous consent at this time to have printed in the RECORD a very useful and explanatory letter which the Senator wrote to me on this very point on January 6, 1960?

Mr. PASTORE. I have no objection.

Mr. BARTLETT. I ask unanimous consent to have the letter printed.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

U.S. SENATE,
COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE,
January 6, 1960.

Hon. E. L. BARTLETT,
U.S. Senate,
Washington, D.C.

DEAR SENATOR BARTLETT: This will acknowledge receipt of your letter of December 29, 1959, in which you refer to S. 2653, a bill which would amend the Communications Act of 1934 to establish jurisdiction in the Federal Communications Commission over community antenna systems.

In your letter you refer to three operations which distribute television programs by wire in Sitka, Ketchikan, and Nome, Alaska. These systems, as you indicate, do not receive or amplify signals that are originated by a television station. They merely provide film programs which are transmitted over wires in a closed circuit fashion for subscribers.

In your letter you state it is clear from a reading of S. 2653, and the report accompanying it, that the bill does not intend to cover situations such as those operating in Sitka, Ketchikan, and Nome. The definition of a community television system that is intended to be regulated under the provisions of S. 2653 is as follows:

"(hh) 'Community antenna television system' means any facility performing the service of receiving and amplifying the signals transmitting programs broadcast by one or more television stations and redistributing such programs, by wire, to subscribing members of the public, but such term shall not include * * * (3) any such facility used only for the distribution, by wire, of programs for which a charge is imposed generally on all subscribers wherever located, and which are not in the first instance broadcast for reception wthout charge by all members of the public within the direct range of television broadcast stations."

You will note that it is very specific in defining a community antenna system as a "facility performing the service of receiving and amplifying the signals transmitting programs broadcast by one or more broadcast stations and redistributing such programs by wire to subscribing members of the public."

In addition, on page 12 of the committee report, the following statement with reference to the definition of a community antenna television system appears:

"This section defines the term 'CATV system' as a facility performing the service of receiving and amplifying the signals transmitting programs broadcast by one or more television stations and redistributing such programs by wire to subscribing members of the public. However, it does not include (1) any such facility which serves fewer than 50 subscribers; (2) any such facility which serves only the residents of one or more apartment dwellings under common ownership, control, or management, and commercial establishments located on the premises; or (3) any such facility used only for the distribution, by wire, of programs for which a charge is imposed generally on all subscribers wherever located, and which are not in the first instance broadcast for reception without charge by all members of the public within the direct range of television broadcast stations."

Therefore, your understanding of the legislation is correct. As you know, the bill is presently pending on the Senate Calendar and probably will be taken up soon after the session begins.

If I can be of any further assistance, please let me know.

Sincerely yours,

JOHN O. PASTORE.

Mr. BARTLETT. I thank the Senator.

Mr. MONRONEY and Mr. McGEE addressed the Chair.

Mr. PASTORE. I yield to the Senator from Oklahoma.

Mr. MONRONEY. My only reason for asking the Senator to yield at this time is that reference was made by the Senator a few moments ago to the fact that I introduced a regulatory bil.

Last year the committee had already scheduled hearings on S. 1739, S. 1741, S. 1801, and S. 1886. I then introduced S. 2303. I mention this sequence merely to show that there were four bills pending which would have done great violence to the CATV industry.

In order to have before the committee the industry's position as to the nature of the regulation, should any be required, I introduced my bill.

I will say to the Senator from Rhode Island that during the hearings the distinguished Senator did a great service for the CATV industry, by excluding from the reported bill the provision which would have permitted the original broadcaster to control the programs, as many of the bills provided. The Senator would not accept that as a part of the bill. Many other features of several of the bills would have been detrimental to the CATV industry.

After the hearings, when I was home in the late summer, I conferred with the members of this great industry in my home State. I was informed that they had considered what advantages they might receive from regulation and what disadvantages it would impose. Their position at that time was that they did not seek to be regulated and to be given licenses, even though they might be given "grandfather" licenses. At that time these men asked me to oppose the bill.

The day the distinguished Senator from Rhode Island reported the bill from the committee I filed an objection against consideration on the Consent Calendar. I am not a "Johnny come lately" who is suddenly disturbed about being "lobbied" by a few TV station owners. My objection to the bill was known to the committee and was filed on the day the bill was reported.

I think it is quite important, Mr. President, that we realize these men represent a very small industry, portions of which are operating in widely divergent areas. They felt they were led astray a bit by following the advice of some Washington lawyers, who do not think that regulation and licensing every 3 years is a very bad idea. Certainly, I do not think the average industry or the average business wishes to be licensed.

If the Senator will yield a little further, I should like to make one more thing clear.

The latest expression from the Federal Communications Commission was filed yesterday in regard to the House bill, H.R. 11041, which is exactly the same as the bill, S. 2653.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point the comments of the Federal Communications Commission on H.R. 11041.

There being no objection, the comments were ordered to be printed in the RECORD, as follows:

COMMENTS OF THE FEDERAL COMMUNICATIONS COMMISSION ON H.R. 11041, "A BILL TO AMEND THE COMMUNICATIONS ACT OF 1934 TO ESTABLISH JURISDICTION IN THE FEDERAL COMMUNICATIONS COMMISSION OVER COMMUNITY ANTENNA SYSTEMS," IDENTICAL TO S. 2653

H.R. 11041 would create a broad Federal regulatory authority over community antenna television systems by applying to them a prohibition against operation without a license from the Federal Communications Commisison, comparable to that now described in section 301 of the Communications Act with respect to radio transmission apparatus.

The bill defines a "community antenna television system" in the same manner as the Commission has suggested in legislative recommendations made in the spring of 1959 and which are now embodied in H.R. 6748. It would also except community antenna television systems from the definition of "common carrier" in section 3(h) of the Communications Act and thereby make clear that the bill does not authorize the regulation of such systems as "common carriers" under title II of the Communications Act—an objective in which the Commission fully concurs. The remainder of the bill would include in one new section of the act section 330, the text of the new provisions and a reference to those existing provisions of the Communications Act of 1934 which are to be brought into play under the proposed regulatory scheme. It is noted, however, that the bill would not apply section 325(a) to CATV so as to require them to obtain the consent of originating television stations to CATV redistribution of their signals. The application of this requirement to CATV was included in the Commission's legislative proposals so as to place community antenna television systems on the same footing as other television repeater services in this regard.

The bill includes a statutory determination that the licensing of present program services of existing community antenna television systems would be in the public interest. While this provision would "grandfather in" existing systems, their licensing would still be subject to the prohibition of section 310 against alien ownership, and licenses so granted would still be subject to the revocation and antitrust provisions in sections 312 and 313 of the present statute. The bill would permit local stations to request the Commission to subject licenses issued under this "grandfather" provision, to conditions as to CATV operations which would significantly facilitate the continued operation of the station if it is providing the only locally originated television broadcast service in the community. It would appear that the impact of these provisions is to permit the imposition on existing CATV's of appropriate operating conditions, such as a limitation on the number or source of the signals redistributed by it but not to authorize a complete denial of a license application for an existing CATV system. The bill would apply a public interest standard for the grant of licenses to new CATV systems and of modification of licenses of existing systems—that is, that findings as to the public interest and necessity of the grant shall be made with due regard for the desirability of facilitating the continued operation of a television station which is providing the only available locally originated broadcast service. However, as distinct from its effect upon existing systems, the application of this standard to requests for new systems or the addition of new program services by existing systems would authorize the complete denial of such a request. Another distinction in the bill as between existing and new systems—procedural in character but of substantive effect—would establish new hearing procedures and rights with respect to the licenses of existing systems but would make the issuance of licenses for new systems or modifications of existing ones subject to the protest procedures set forth in section 309 of the Communications Act.

The new section 330(f) which is proposed by H.R. 11041 follows the Commission's legislative proposal to require CATV's to carry the programs of a local television station upon the latter's request and would permit the promulgation of rules by the Commission to assure that reception of such programs via the CATV systems would be reasonably comparable in technical quality to other programs redistributed by the CATV.

The bill would require the Commission to promulgate rules and regulations so as to preclude the duplication of programs of a local station by the CATV system serving subscribers in the same community. In promulgating such rules under the authority, the Commission is again called upon to give due regard to the desirability of facilitating the continued operation of a television station which is providing the only available locally originating television service.

The Commission's continuing study of the CATV local station problem leads it to favor what it understands to be the basic underlying objectives of the proposed legislation. The bill would encourage local television broadcast station operation by extending some protection against inequitable competition by unlicensed television services and, at the same time, recognizes the public benefit in the provision of multiple program services by CATV systems. It may be noted that these objectives form the basis of two of the priorities set forth by the Commission in its sixth report and order for the assignment of television channels.

The Commission's earlier examination of the CATV local station problem and its views with respect thereto are reflected in its report and order in docket No. 12443, which was adopted on April 13, 1959. In that document the Commission set forth the reasons for its view that an all-encompassing jurisdiction over CATV systems, through mandatory licensing requirements under the Communications Act, was neither necessary nor desirable in the public interest. However, in an attempt to reach some of the objectives reflected in H.R. 11041, the instant bill, and to permit some adjustment of the unfair competitive situation of TV stations as against CATV systems, the Commission did recommend the enactment of legislation which would (a) require that CATV's obtain permission of stations whose broadcast signals they redistribute; (b) require that, upon request by any local TV station, the CATV system carry the program broadcast by the local station; and (c) authorize the Commission to promulgate rules to assure that in broadcasting local station programs the CATV system will take reasonable measures to provide a picture of reasonable technical quality. These recommendations were submitted to the Congress and are now embodied in H.R. 6748 and S. 1801.

Thereafter, the Commission initiated a field inquiry into the general subject of TV repeater services and particularly into the problems encountered by local stations in communities served by a CATV system. This inquiry was made by a member of the Commission and staff officials during August 1959 in the States of Colorado, Idaho, Montana, Washington, and Wyoming, and the views of various organizations and individuals who reflected all sides of the local station-CATV controversy were obtained. As a result of its further consideration of this problem in the light of the information obtained since the issuance of its Report and Order in Docket No. 12443, the Commission is in accord with the approach taken in subsection (g) of the proposed legislation as it looks to the prevention of the duplication of local station programs by a CATV system. It would appear that the ability of CATV systems, operating without any Federal statutory restrictions, to intercept first-run programs broadcast by stations in large metropolitan areas and to redistribute them to subscribers in a small community in advance of the broadcast of that same program by the local station, gives rise to an inequitable competitive disadvantage which the local station is unable to overcome by any reasonable means within its control. Although this disadvantage may not be precisely measurable, there is ample recognition of the differing commercial values of TV program transmission, based on factors of time and area, in the long established practices of the motion picture distribution and exhibition field as well as in the broadcast industry itself. Also to be considered is the fact that under a national policy which looks to the provision of as many radio services as possible to as many people as possible, the duplication within a reasonable period of time of a program broadcast or about to be broadcast to all the people of a community by a local station would appear not to be in the public interest.

While in accord with the general objectives of H.R. 11041, the Commission is of the view that broadscale legislation establishing a mandatory licensing scheme for all CATV systems may work a result far beyond its apparent purposes. The bill may well have the effect of requiring that a substantial, if not complete preference be given to a local television station against any new CATV system or any enlargement of an existing one, without adequate regard to the multiple program services which would thereby be provided. More importantly the Commission is of the view that the objectives of this bill would best be achieved; that ample protection would be afforded local stations; and that inequitable competitive disadvantages would be largely eliminated, if the Congress were to adopt legislation to—

1. Amend section 325(a) of the Communications Act so as to make it applicable to CATV systems.

2. Require that upon request by any local TV station, a CATV system shall carry the programs broadcast by the local station.

3. Authorize the Commission, by rule or order, to prescribe standards to assure that the reception of local programs via a CATV system shall be reasonably comparable in technical quality to other programs redistributed by the CATV.

4. Authorize the Commission to prescribe appropriate rules and regulations to prevent the duplication of local station programs by a CATV system.

The Commission must also note that H.R. 11041 would require the licensing and regulation not only of CATV systems which may be established in the future but also of the some 500 to 700 systems which are already in existence. CATV systems already exceed in number all the local TV broadcast stations and it's obvious that a proper administration of the licensing system established in

the bill would require substantially more personnel and appropriations. It would therefore be vital that the enactment of such broad legislation by the Congress be accompanied by supplemental appropriations sufficient to enable the Commission to handle the substantially increased tasks that would be imposed upon it. However, even were the necessary funds and staff made available, the Commission does not believe that a licensing system for CATV's could, in practice, serve the underlying objectives of the bill any more effectively than is possible, at far less cost, through enactment of the regulatory provisions listed in the preceding paragraph.

SEPARATE VIEWS OF COMMISSIONER JOHN S. CROSS

I concur with the preceding views of my colleagues with the exception of the full paragraph in the center of page 3 and with recommendation "4" on page 4.

Subsection (g) of H.R. 11041 would prevent the duplication of local television station programs by CATV systems. It would not, however, prevent similar duplication by other TV repeater services (satellites, translators, and boosters) which provide signals to the areas served by local TV stations. In my judgment, effective nonduplication of local station signals cannot be accomplished by such halfway measures; if CATV systems must not duplicate the programs of local TV stations, then all other TV repeaters should be required to protect local stations from duplication. In sum, this means simply that either all or none should be confronted with such an obligation.

Moreover, even if all TV repeaters were required to avoid duplicating local station programs, I am not convinced that compliance with such a mandate would prove practicable and workable. After an exhaustive study of this overall problem, this Commission considered the public interest would best be served by carrying out the finding and conclusions reached in its report and order of April 13, 1959, in docket 12443. I voted for the adoption of docket 12443 and nothing has occurred in the interim to persuade me that the public interest would be served by changing it. Docket 12443 has this to say on the subject (FCC 59–292, pp. 40–41):

"95. Another suggestion made by various broadcasters is that there be a rule against the CATV duplicating programs carried by the local station; sometimes this request is confined to programs being presented simultaneously, but other broadcasters request that the CATV not be allowed to present ('live' or 'first run') programs to be presented later by the local station. There are further requests that the local station be given the first refusal, as against presentation on the CATV system, of all programs of its network, and that indeed the CATV not be permitted to present any of that network's programs.

"96. We cannot agree to adopt or support any of these suggestions. Certainly, with respect to anything more than the barring of simultaneous duplication, we believe this to be an unwarranted invasion of viewers' rights to get 'live' programing if they are willing to pay for it. The suggested rules restricting presentation of the programs of the local station's network would appear to be cumbersome, if not completely unworkable, especially considering that many stations in small markets, including some of those covered in the record, present programs of two or even three networks. As to the prevention of simultaneous duplication, it is true that this would involve no loss of program service to the community; but it would appear to present substantial inconvenience, not only to viewers (who would have to keep switching channels to follow a particular network) but to the auxiliary services (presumably translators would have to be treated the same way), who would have to keep turning their installations on and off."

Mr. MONRONEY. Mr. President, I shall read a portion of the comments on the House bill.

The Commission must also note that H.R. 11041 would require the licensing and regulation not only of CATV systems which may be established in the future but also of the some 500 to 700 systems which are already in existence. CATV systems already exceed in number all the local TV broadcast stations and it is obvious that a proper administration of the licensing system established in the bill would require substantially more personnel and appropriations. It would therefore be vital that the enactment of such broad legislation by the Congress be accompanied by supplemental appropriations sufficient to enable the Commission to handle the substantially increased tasks that would be imposed upon it. However, even were the necessary funds and staff made available, the Commission does not believe that a licensing system for CATV's could, in practice, serve the underlying objectives of the bill any more effectively than is possible, at far less cost, through enactment of the regulatory provisions listed in the preceding paragraph.

Three of the purposes of the bill before us are endorsed by the Commission.

The Commission agrees that it would be desirable, upon request by a local TV station, to have a CATV system carry the programs broadcast by the local station in a one-station area. That is almost universally done, without any law requiring it.

Secondly, the Commission believes it should be authorized to prescribe standards to insure that the reception of local programs under a CATV system is reasonably comparable in technical quality to other programs redistributed by the CATV system. The technical quality of the signal of the local station over these systems is usually identical with the network station being picked up.

A third position is recommended, which these men feel they cannot follow, which has been debated at length. Perhaps a moment more will help to straighten us out on that matter.

The Commission recommends, with one Commissioner dissenting, that the Commission be authorized to prescribe appropriate rules and regulations to prevent the duplication of local station programs by a CATV system.

Why do these men object to that? It is simply that these are small businesses. The average is perhaps 400 or 500 subscribers to a system. To do as requested would require the manning of some sort of monitoring arrangement by an engineer in order to cut duplicating programs off. The man would have to have in front of him a list of programs which might be duplicating with regard to the local station.

For that reason these men feel that this would entail substantial expense for additional employees on the payroll. In the smaller type of operation this would be a considerable burden, and it would represent a large portion of the profit for many CATV systems.

The Commission believes it does not need the bill. The Commission does not wish to license every CATV, but recommends these three things, two of which are being done almost universally, without legislation.

Mr. PASTORE. Mr. President, to come back to the point of beginning, I wish to say that to my State passage of this bill means little or nothing. Handling the bill was my responsibility, and I have performed it to the best of my ability. We gave the subject long hours of consideration. We gave it intense, deep study. We came forth with a bill which met with the approval of the subcommittee and of the full committee.

I have visited the State of my friend from Colorado [Mr. ALLOTT]. I have visited the State of my friend from Wyoming [Mr. MCGEE]. I have visited in Montana. I went to the States which have the problem. There are CATV systems in those States. I visited the State of my friend from Idaho [Mr. CHURCH]. There are local broadcast stations, as well.

I have said all that I care to say. I have tried to be as persuasive as I can be. If it is the intent and the purpose of the Senate to kill the bill, that is entirely up to the Senate.

As of this moment, I think those who have the problem ought to rise and speak. I hope they will speak eloquently enough so that whatever we do we shall not affect anyone unduly. I hope we will take care of the band of little people who have only one available station, who hope that they can see one little program one little evening on some weekday in their little bailiwicks out in the Midwest.

That was the only purpose of the Senator from Rhode Island. It is the only objective of the bill. If Senators want to send the bill back to slumber forever, that is entirely the responsibility of the Senate.

Mr. KERR. Mr. President, will the Senator yield?

Mr. PASTORE. I think I have said all I care to say.

Mr. KERR. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. KERR. Why does the Senator not present such a bill and let us pass it? Why bring before the Senate a bill which would regulate 100 little people who do not want the bill, in order to protect 1 group of little people who, if they are entitled to protection, will have it without a voice in the Senate being raised in opposition?

Mr. PASTORE. The Senator from Rhode Island has explained that. I have explained it as completely as I can. That is the way it stands. That is the way it is.

Mr. KERR. Take it or leave it?

Mr. PASTORE. I do not think we can agree to the suggestion made by the distinguished Senator from Oklahoma. It has been a joy to debate this issue with the Senator this afternoon. It is always a pleasure to do so. I have always enjoyed debating with the Senator, not only today but also in the past.

I have stated how the matter stands. This is the bill approved by the committee. From now on we shall hear from the men who have problems in their own States. Then we will calmly come to a vote. Whatever is the vote of the Senate, I shall accept it with good grace. I sincerely hope that the bill will be passed.

Mr. McGEE. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. McGEE. As a spokesman for one of the States very deeply involved in connection with the bill, I should like to say, first, that if ever an individual operated above and beyond the call of duty, it has been the chairman of the subcommittee. It was my strong impression everywhere he went in that part of the world where he ordinarily had no business to be that the fairness with which he conducted the hearings and the depths to which he probed the problems involved arouse admiration on all sides. I personally can report that the people who now stand in opposition came away singing the praises of the fairness of the subcommittee's conduct. This was the on-the-spot reaction before the great mobilization began. I wish the chairman to know that those of us in the mountain West shall be forever grateful for his great scholarship, fairness, and skill in handling a difficult question ordinarily so foreign to the chairman, in the interest of our section of the country.

Never do I recall, in the 15 months which I have been a Member of the Senate, one man standing alone so eloquently and so effectively against so many. I think this demonstration will go down as one of the most effective performances in the history of the Senate. In the closing minutes of the assault a number of questions have been raised which I think ought to be set straight for the RECORD.

The distinguished minority leader asked, "Where are the amendments? What has happened to them?" I ask the Senator from Rhode Island if on every desk there is not a copy of the amendments at stake and also if each of the amendments is not printed in the CONGRESSIONAL RECORD of May 10?

This is not a sneak attack. This measure has been advertised, the amendments have been submitted, and accepted by the subcommittee. Is that not the case?

Mr. PASTORE. The junior Senator from Rhode Island is not impressed by a last-minute assertion that there are certain amendments which have not been stated. Anyone who has followed the history of the bill, anyone who has attended the hearings, anyone who has attended the conference, anyone who has talked to the people on both sides of the issue, well knows that everything pertinent has been considered. We studied the amendments suggested. We had a meeting. I believe the distinguished Senator from Wyoming attended that meeting and will recall the personal unfortunate incident which caused me to return to Rhode Island. I had to leave the meeting rather early. But we met for the purpose of considering the amendments. We agreed we would accept the amendments. We said so in the office of the Senator from Washington [Mr. MAGNUSON].

At the last minute it is said that we did not consider the amendments. That is said by Senators who are going to vote against the bill anyway. No matter how I agree to amend the bill, Senators who are opposed to it will still be opposed to the bill. We recognize that these are only arguments made on the floor, and we are not carried off by them.

I repeat: This is the bill we have presented. The bill will not be sent back to be improved. The bill, if sent back to committee, will be sent back to die. We know that. If the opponents of the measure do not want CATV to come under the supervision of the FCC, that is satisfactory to me. But I think the public interest demands it. I think for their own sake CATV would be better off if they did come under FCC. Surely in those areas of the country which are represented by the distinguished Senator from Wyoming we need this kind of measure if we are to have free television for those who cannot afford to pay the fee, who cannot afford to have to pay for television. In many instances those people live in places where, even if they could afford it, they could not get it anyway. That is a situation the bill takes care of.

Mr. McGEE. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. McGEE. The distinguished Senator from New Hampshire raised a point of interpretation of the bill itself. Is is not true that the point he raised was included and encompassed in the amendments to which we had agreed, and which are printed in the RECORD? This question is raised only as a factor tending to confuse rather than to spell out honest differences on the bill.

Mr. PASTORE. The Senator from Rhode Island is a great admirer of the distinguished Senator from New Hampshire [Mr. COTTON], and certainly I would not wish to say anything which could be construed as being in derogation of him. But the fact remains that the Senator from Rhode Island knows the Senator from New Hampshire is opposed to the bill. No matter how I might agree to amend the bill, I know he would still oppose it. Some questions were raised. I think the issue is abundantly clear. Representatives of the industry suggested a change here and there. We said, "If it will make you happy, we will accept the change, but not a change of the meaning." We were ready to make history to that effect. As a matter of fact, we were so agreeable that I think they became a little ambitious.

Mr. McGEE. At least they became a little overconfident, or maybe properly confident, as appears.

Mr. President, will the Senator yield for another question?

Mr. PASTORE. I yield.

Mr. McGEE. Is there not another aspect of the continuance of local broadcasting stations beyond the service that a single station renders in itself? Does that not stem from the interest of the booster population; that is, the group in the mountain West which must depend upon booster TV reception as their only signal?

Mr. PASTORE. That is true.

Mr. McGEE. The booster extends the range of the broadcaster's own live signal?

Mr. PASTORE. That is true. I visited a town which had a population of no more than 400 or 500 people. On top of a hill a booster had been installed. The people of the town had contributed to pay for the installation. It was a nonprofit venture. It was a kitchen-type booster. But they installed the booster at their own expense. That is how far people will go to get a signal. Those are the people who are trying to have the bill enacted. They have the booster. They amplify the signal and send it to a town of 400 or 500 people who have no other television. That is the only television they have. They have only the one signal. Those are the people we are trying to protect.

Some industry representatives are saying, "We are the little people." They are the little people who are running around in air-conditioned Cadillacs.

Mr. McGEE. Mr. President, will the Senator yield for a final question?

Mr. PASTORE. I yield.

Mr. McGEE. Is it not true that there are large centers of the West which under no circumstances can receive a TV signal? I think at once of a community in the State of the distinguished Senator from Colorado [Mr. ALLOTT], who is now standing and waiting to address the Senate. I refer to the community of Grand Junction, a city of 40,000, with one live TV station. Through boosters it serves an additional 55,000 people, nearly 100,000, all told.

Without that service, with only community antenna television, the 40,000 might be serviced, but the 55,000 are left out without service. I think of the Saratoga Valley in my own State, a community of 700, where the community antenna people refused to go in because they could not make it pay, and the people would get it in no other way than by boosters. I think of the ranching area which the distinguished Senator from Oklahoma [Mr. KERR] represents. This area would be turned down by the community antenna people because they could not afford to give them TV. I say the citizens in my State and in the State of the distinguished Senator from Colorado [Mr. ALLOTT] and, indeed, all the people of the West, have a right to be first-class TV viewers and citizens and not second or third class.

This is the great and noble cause to which the Senator from Rhode Island, who comes from the "down East" country, has labored so courageously, and I want him to know our deep appreciation.

Mr. PASTORE. I thank the Senator.

I yield to the Senator from Kansas.

Mr. CARLSON. Mr. President, I served for many years with the distinguished Senator from Rhode Island [Mr. PASTORE] when he was Governor of his

State, and during his service in Congress, and I have been greatly impressed by his presentation this afternoon of a bill that is of concern to me and to many others. I may be the only Member of the Senate who lives in a community where we have CATV piped into our own stations. There has been a great deal of discussion about the effect of the bill in communities where there is a local TV station. We live in an area where we are proud to receive and, in fact, delighted to get, CATV. As a matter of fact, until we secured it in our hometown, we could not get Kansas weather reports except through the State of Nebraska. I do not think it is unfair to state that we are paying $7 a month for it. We wish we did not have to pay, but we are delighted to pay that sum.

That is the group of people about whom I am concerned.

I have been very diligent on the floor this afternoon. I sincerely hope that nothing will be done which will interfere with the antenna TV systems, because it is only through these systems that the people can get programs in many great areas of the country.

Mr. PASTORE. Mr. President, I say with all the honesty and sincerity at my command that the bill may present a little inconvenience—because these people will have to file for licenses, but that will be perfunctory in most cases—even if the Supreme Court rules that the broadcasters have no proprietary right in the signal which they originate, insofar as the particular locality from which the distinguished Senator from Kansas comes, that locality might not be affected, even if the bill fails. The fact is that if the Supreme Court should rule that they are capturing a signal out of the air and commercializing that signal, over which the broadcasters have a proprietary right, then serious trouble can ensue. The best thing that could happen to these people, in such a situation, would be for the bill to be passed. If the bill were passed, they would be placed under the control of the Commission which not only has supervisory authority over the broadcasters, but would have authority and responsibility over CATV as well. I know that if the Supreme Court decision goes against them, they will come rushing to the Senator and to me, but then it may be too late. I hope the representatives of CATV in the galleries will listen attentively to what I am saying. I pointed this out to the representatives of CATV, and they seemed to listen attentively. I received the impression that they understood precisely what I was trying to say.

I hope the Supreme Court will not disturb the present practice. However, if the Supreme Court should rule that since the broadcasters put out the picture at tremendous cost, it is not right to take that picure without permission and commercialize it. Other people cannot take the signal of a baseball game, for example, and commercialize it without paying for it. Therefore I say that the passing of the bill could be the best thing that could happen to them.

These CATV people claim that they stick up an antenna and take the program out of the air and thereby create a business. They say that they are free to do it, and it is nobody's business what they do. That is all well and good if they are right. If they are wrong, however, then the passing of this bill, as I have said, is the best thing that can happen to them.

Mr. CARLSON. I wish to state that the Senator from Rhode Island has completed an outstanding task this afternoon in presenting this subject to the Senate. It is a matter of great concern to many of us.

Mr. MOSS. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. MOSS. I appreciate the outstanding work which has been done by the distinguished Senator from Rhode Island as chairman of the subcommittee. He came to our State of Utah and conducted hearings there. We have communities in Utah which cannot receive a signal even though they have boosters. I do not see how it can be said that with respect to an industry which is regulated by the Federal Communications Commission, so far as television stations are concerned, when the Senate has already passed a bill regulating boosters and translators, the community antenna systems should not be regulated at all. I believe all of them should come under the same Commission. They are in the same general business of distributing signals to people. Therefore I should like to ask the Senator from Rhode Island if he does not believe that the only way we can get a continuity of a system in this whole field is to bring all the mediums under the regulation of the Federal Communications Commission, which has the obligation of regulating in the public interest?

Mr. PASTORE. I hope the industry people in the galleries are listening. They too are using franchises, and poles, and stringing wires, and using the air. They could very well be classified as common carriers in their States. They could come under the public utilities commissions. They have already started to do that in Montana, and I believe also in Utah.

Mr. MOSS. We have passed a law in Utah.

Mr. PASTORE. They are doing it in Colorado, I understand. That is all right with me. I would be agreeable, if the bill does not pass, to adopting a resolution to the effect that it is the sense of Congress that this is a responsibility of the States; the States should take control.

However, because I think that there are many captive customers—people who have bought their television sets. They are charged so much a month for CATV service. I believe they should be protected. We must remember that after the system is installed, there is nothing to prevent the fee from going up to $15. These are people at the end of the line, like natural gas customers, and more or less like all utility customers. I do not say the situations are strictly analogous. The question is, Shall we put CATV operators under Federal regulation, because they are connected with the television industry, or do we wait until they are put under State regulation?

Some change is inevitable. The present condition will not exist much longer. There is the kind of situation that has been brought out with respect to Kansas. Certain localities cannot get any kind of television reception unless the people buy TV. That is pay TV. They are paying for the privilege of receiving it, just as a charge is made when a gas main is installed and a person has to pay a certain amount each month. Perhaps while business is good and the CATV operators supplying the need are satisfied with a fair return on their money, the fee may be moderate, but that fee could go up.

We took care of CATV operators in the bill. We said we will not consider them common carriers and put them under the utility formula. We placed them under the Communications Act, title III. In a large measure I think that is protection for CATV.

We have heard a great deal of talk about little people who are engaged in this business. That is largely fancy. There are those that have 40 or 50 customers, but we know of cases where a system has been sold for over a million dollars. I am not making a point of that.

Mr. ALLOTT. Mr. President, before starting my remarks on the pending bill, I must say, as others have said before this afternoon, how much I admire the very outstanding work the Senator from Rhode Island has done on the floor of the Senate with the bill.

I had the opportunity to be with the Senator from Rhode Island in Colorado at the time he held hearings in that State. The subject of the bill is one charged with great emotionalism. I believe there is far more emotionalism in it than is justified by the circumstances. I sat with the Senator in the hearings. The Senator from Wyoming [Mr. McGEE] also was present, I believe. I listened to the testimony which was given at that time. I also expressed my views. If anyone says that there is some idea which has not been considered by the committee, I would ask him to pick up the hearings which were held by the subcommittee presided over by the Senator from Rhode Island. Very few ideas and concepts, indeed, relating to this subject exist which were not discussed and considered in the hearings. Therefore, I shall confine my remarks today primarily to two aspects of the measure. One is the aspect of a reasonable approach to the question; the other is the aspect of no approach at all.

I can see no reason for anyone being against CATV per se. It is only in the areas where it becomes unfair competitively with those who are already in the area by license that the question arises. This is the first problem which must be recognized.

The first problem, linked to the second, is that of survival for the original broadcaster. I refer here to the television stations in smaller communities

which have rendered a great public service since their inception. These smaller TV stations were constructed at great risk by farsighted broadcasters who were willing to take a chance on their own future in order to enhance the future of their neighbors.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. ALLOTT. I yield.

Mr. PASTORE. Is it not true that broadcasters are under contract and must pay for the pictures they show?

Mr. ALLOTT. That is entirely correct. I intended to bring that out, but since the Senator has been so kind as to raise the question, I may say that not only have these people been entrepreneurs in the best sense of that word in seeking to establish new service for their community, but they have already subjected themselves to licensing by the Federal Communications Commission; and they have paid and must continue to pay for the services which they give to their neighbors.

How do they pay? They have to sell advertising in their own community in order to pay for it.

No more thorough investigation of this problem has been made than that which has recently been concluded by the subcommittee under the chairmanship of the distinguished junior Senator from Rhode Island [Mr. PASTORE]. They made the same kind of investigation into the booster situation, and last year the Senate passed the bill on that subject.

I do not know how anyone to whom a piece of proposed legislation means less personally than this bill means to the junior Senator from Rhode Island could possibly have devoted himself so assiduously and so objectively, and with such great fighting spirit, I may say, as the junior Senator from Rhode Island has done. For this he deserves, and will always have, the respect and the thanks of all of us who must deal with this problem.

I was privileged to make some observations when the committee was in Denver during the past fall as a part of extensive hearings. I desire to pay special recognition to the distinguished Senator from Rhode Island, whose fair and impartial approach to this complex and sometimes emotional problem has won him the respect of the broadcasting industry.

Mr. President, no more accurate description of the chasm facing these smaller broadcasters can be found than that on page 4 of Senate Report 923. The paragraph to which I refer is as follows:

> The costs of wiring a community are such that only the densely populated areas can be economically served by CATV systems. The result is that generally suburban and rural areas receive no service from such systems.

Mr. President, one point ought to be made clear. CATV systems, by the very nature of their construction and operation, cannot generally serve suburban areas, nor can they ever serve rural areas.

In essence, uncontrolled CATV would rip the heart from the market area upon which these smaller stations depend for their very existence. If these small stations fold, then a concurrent TV blackout occurs in the booster areas which these stations support. For example, in my own State of Colorado, such a local situation exists in Grand Junction. The man who owns that station installed one of the first radio stations in Colorado at a time when people said it could not be made to pay. He also installed a television station in the western portion of Colorado at a time when everyone said a TV station could not be made to pay. But he has made them pay. The TV station at Grand Junction provides news and entertainment, together with selected educational programs, not only to the city itself, but also to more than 36 boosters covering other parts of western and central Colorado and eastern Utah.

Let us see what will happen if CATV is permitted to go into Grand Junction, for example, unlimited or unproscribed by any rules of the Federal Communications Commission, without any limitation on its powers or anything else.

The Grand Junction station is able to carry the signals of three or four stations. If a CATV is permitted to enter the area unregulated, it can soon drive the local TV operator out of business. The CATV service will serve the community or the particular town or city, but on the outskirts of the community, and even in the suburban areas, there will be a blackout, because the people no longer will have any local TV station to which they can tune. That is true not only on the outskirts of the city, but as one goes into the country there are 36 booster stations which have been set up by the TV operators to pick up the signals of the particular TV station. Those booster stations are in eastern Utah and western Colorado. They are placed there to pick up the signals of the particular station in the city, but the station will be driven out of business. Therefore, all the money that has been spent on the boosters—approximately $5,000 for each of them—will have been wasted. The people will be in complete darkness, and will remain in complete darkness for any foreseeable time in the future.

To extend further the example of this station, let me describe what would happen if CATV were permitted to skim the cream from its programing without realistic consideration for the station's survival. CATV has already laid the groundwork to operate in Grand Junction with the announced intention of obtaining programing from existing Denver stations. By airing these selected programs in advance of KREX–TV, and without regard for the property rights of the Denver stations involved, a matter which I shall discuss in a moment—the CATV operator is pushing KREX–TV, together with its news and local programing, toward the edge of the chasm.

Mr. President, I readily recognize the effort made by the committee in trying to offset any such contingency. Subsection (d) of the bill provides for petition from both broadcaster and CATV operator alike so that the FCC may make some decision based upon the convenience and necessity of the general public.

Some broadcasters have evidenced alarm, however, at the provisions of subsection (c), the so-called grandfather clause. They fear that existing CATV operations could, in fact, obtain blanket approval and license and thus destroy the effect of the bill before the Senate.

Mr. President, I point out to them, and to my colleagues, the language contained in the subsection which refers to the provisions immediately following subsection (d), and to the regulations and guidelines clearly established in subsection (d) itself.

Here is the essence of protection for the broadcaster which the bill provides. The Federal Communications Commission, although permitted to grant application for existing CATV operations, must nevertheless review and consider these operations in the light of their effect upon the local broadcaster if the local broadcaster can show any significant damage from uncontrolled CATV. In other words, existing systems would be subject, and properly so, to the same criteria as future CATV applicants.

What type of people depend upon boosters and upon this type of operation? Last fall I had a unique experience. In traveling around my State, I visited a small town, one of the smaller towns in the State, and had lunch with a group of citizens. They had conceived the idea that perhaps they could do something for themselves in the television field, and they did. They had gone to the general store of the town and purchased dynamite. With their own picks, shovels, and jeeps, they had built a road to the top of a mountain, 12,000 feet high. This was a small community, having a population of not more than 200. This group had built a road to the mountaintop with their own muscles, and there they built a booster.

Mr. President, are we going to permit the CATV to blackout people of that kind? I say no. With 36 boosters operating, all dependent on one station, I say we must consider the interests of all people. That does not preclude CATV from coming into the area upon a free and equal basis with anyone else and under such regulations as the FCC may prescribe.

Mr. President, earlier I referred to the question of property rights. This is the second problem, and one which the bill overlooks. Briefly, among the broadcasters there is grave concern regarding the apparent freedom granted CATV to pluck from the air, free of charge, a signal placed there at great expense. Indeed, the same concern was shared by those who created the original act, which we seek to amend. They, therefore, included a section protecting those property rights. I refer to section 325(a) of the Communications Act of 1934. So that my colleagues may have a basis upon which to make their decision, I now read that section of the act:

> SEC. 325. (a) No person within the jurisdiction of the United States shall knowingly utter or transmit, or cause to be uttered or transmitted, any false or fraudulent signal of distress, or communication relating thereto, nor shall any broadcasting station rebroadcast the program or any part thereof of

another broadcasting station without the express authority of the originating station.

I call attention to the words—

Nor shall any broadcasting station rebroadcast the program or any part thereof of another broadcasting station without the express authority of the originating station.

Those are the concluding words of section 325(a).

The junior Senator from Rhode Island has already stated most eloquently what might happen if the Supreme Court were to rule that this clause is applicable to the present CATV situation. I predict that if the Supreme Court did so rule, the representatives of CATV would be down here as thick as locusts, requesting the enactment of legislation to free them from the burdens imposed on them by this measure.

Mr. President, at this time I send to the desk an amendment which I shall call up later in the proceedings. I ask that the amendment lie on the table and be printed, to be available tomorrow.

The PRESIDING OFFICER (Mr. LUSK in the chair). The amendment will be received and printed, and will lie on the table.

Mr. ALLOTT. Mr. President, the amendment makes amply clear that, in placing CATV within the bounds of the regulatory control of the Federal Communications Commission, CATV is not to be regarded as a common carrier. Neither are broadcasters, either radio or television. The fact is that the CATV signal is wire-carried. Notwithstanding, in the truest meaning of the operation, CATV is an integral part of the broadcasting operation. Why, then, should we not include section 325(a) as one of those applying to this new entry in the field of broadcasting?

The argument has been raised that broadcasters would price CATV out of business. I disagree, Mr. President, as do many responsible members of the broadcast industry and, I firmly believe, many responsible CATV operators, as well. I should like to emphasize that this section in no way precludes the original broadcaster from granting his consent for use of the signal free of charge. The basic issue here is that he be accorded the right of consent.

The essential point here, Mr. President, is one of moral and legal rights which this body is entrusted to protect. It is my intention, therefore, to offer at the appropriate time the amendment which I have sent to the desk, to make applicable to the operation of CATV the provisions of section 325(a) of the Communications Act. Again, I emphasize that the intent here is not to penalize CATV, but to protect the established property rights of broadcasters whose signals are being resold without having recourse.

Mr. President, it is argued that the bill, if enacted, will hold up the CATV group, or something of that sort. I point out that we cannot forget that those who today have these broadcasting facilities have constructed them, expanded them, maintained them, and operated them at great expense, and now continue to operate them. We must not forget that they broadcast, at very great expense to themselves, these signals, which they have picked up, also at great expense to themselves.

The situation would be different if only certain individual persons or small groups were concerned. But in this situation, one group proceeds, at great expense, to place a signal in the air; and another group takes the signal from the air and puts it to work for itself, without making any payment to the originator of the signal or without even obtaining the consent of the originator of the signal.

Mr. President, this measure is a very, very important one. Unless this bill is enacted into law, we shall cause widespread blackouts in areas which now receive television.

I see in the Chamber the distinguished junior Senator from Wyoming [Mr. MCGEE]. There will be such blackouts in his State, and also in Idaho and, I believe, in part of Utah; and I believe there will be widespread blackouts in Colorado.

Some Senators assume that the persons chiefly affected are those who live in cities. However, I wish to say that we must protect the property rights of all persons affected—and even if the property rights of only one person were affected.

I point out that unless a measure of this sort is enacted into law, not only will those who live in remote areas be blacked out, insofar as the reception of television is concerned, but the same situation also will apply to those who live in the fringe areas of cities.

Mr. McGEE. Mr. President, will the Senator from Colorado yield?

Mr. ALLOTT. I yield.

Mr. McGEE. Does the Senator from Colorado have any figures in regard to the areas of his State which may be dependent on single stations or on boosters? Has that information been made available?

Mr. ALLOTT. I have it here, and I can supply it for the RECORD. I know in this one area 36 stations are dependent on this one signal. In other towns in the State, there are 50-odd boosters which pick up the signal on one channel and put it out to others in those areas.

Mr. McGEE. Will the Senator from Colorado agree that it is especially difficult for those of us who represent the mountain-region States to convey to Senators from other parts of the country the fact that in our areas TV is still in the frontier stage. The people there do not have a wide choice of programs or an unlimited number of channels from which to choose.

Mr. ALLOTT. That is true. I suppose that people who live in the heavily populated East find it hard to realize how much the signals from the repeaters or the boosters mean to those who live in the sparsely populated areas of the West. The list which I hold in my hand includes the names of towns such as Coaldale, De Beque, Dolores, Eagle, Fleming, and many, many others. The significance of this matter to such areas cannot be overestimated, in my opinion.

Mr. McGEE. Is it not true that in ranching areas the people are almost entirely dependent on only one signal? Many are unable to attend the movies, or even the drive-ins; in some of these areas such facilities are not readily available. So if the one television signal which the people of those areas now receive were not to be available, they could not readily find an alternative form of entertainment or recreation.

Mr. ALLOTT. The Senator is well aware that in his State, as in mine, in the mountainous areas, particularly in the winter—in fact, almost in the winter entirely—we have great amounts of time when it is very difficult to get from one point to another. As a result, these single signal stations are of great significance to those people who have no other way or other means of getting those signals.

One of the Senators who has spoken eloquently on the other side of the question said to me yesterday there was no need for boosters in Colorado because Colorado had a CATV. He said that statement particularly applied to eastern Colorado. Well, the Senator is simply unaware of what he is saying, because eastern Colorado is pretty well filled up with boosters, according to the list I have.

Mr. McGEE. The burden of the Senator's suggestion is not that anybody should be put out of business, but that we should try to extend the coverage of this utility to as many people as possible. Is that correct?

Mr. ALLOTT. Yes.

PRESIDENT EISENHOWER'S VETO OF THE DEPRESSED AREAS BILL, S. 722

Mr. THURMOND. Mr. President, on Friday last President Eisenhower returned, without his approval, S. 722, the so-called depressed areas bill. I applaud such action by the President; and it is my hope that in the event there is an attempt to override this judicious veto, it will be soundly defeated.

Mr. President, there are many problems which confront our Nation from time to time, both domestic and foreign. It has been recognized, since the adoption of the Constitution and the establishment of our form of government, that the Federal Government was sovereign in the conduct of foreign affairs and the State governments possessed little, if any, responsibility in this area. On the other hand, in some areas of domestic affairs, the States enjoy complete sovereignty, and other areas are occupied jointly by both State and Federal Governments. It was with the apparent intention of operating within the area which is jointly occupied that the Senate enacted S. 722 during the 1st session of the 86th Congress.

Mr. President, there is a great difference between the principle that the Federal Government has a definite responsibility in promoting the fullest possible employment and legislation which seeks to substitute a federally assisted planned economy for the free enterprise system.

S. 722 is an effort by the Congress to substitute its judgment for that of the industries which had either chosen not to locate in areas in which it was found uneconomical to operate, reduced their operations in such areas, or removed their plants to areas where a more favorable economic climate existed. However, there is no substitute for the three primary and initial prerequisites for a favorable industrial atmosphere; namely, capital, business judgment, and a market for the product produced. Any attempt by Government to substitute taxpayers' funds for the lack of conditions which would insure the ability of industry to be efficient and competitive would result in an extremely unfortunate situation. True, employment may be temporarily boosted, but as soon as the competitive advantages created by the subsidy have been exhausted, those initial factors which left the community without employment in the first place will reassert themselves. The alternative will then have to be faced of either continuing the subsidy or leaving the community where it was, but for the additional burden of a staggering addition to the public debt.

An additional reason for my opposition to this legislation is the fact that it will create a new Federal agency and add an undetermined number of additions to the already awesome army of Federal bureaucrats. Those who support this measure as a temporary means of alleviating unemployment in certain areas are obviously outstandingly naive. The history of our Republic has demonstrated that "temporary" in relation to Government agencies is not contained in the Federal lexicon.

Lasting solutions to those problems which now face so-called depressed areas can be forthcoming only through the efforts of local citizens. Local participation and private financing under this bill would be held to a minimum, and the major role of the undertaking would be assumed by a newly created independent agency within the executive branch of the Government. Financing of industrial development projects by the Federal Government could go as high as 65 percent, local community participation could be as low as 10 percent, and private financing as little as 5 percent.

Mr. President, it is my firm conviction that S. 722 represents a step in the wrong direction in solving the problems of areas which are presently beset by economic difficulty. Thousands of development boards have been created by States, cities, and communities, and most, if not all of them, have diligently set about creating the conditions conducive to industrial efficiency, so that industry, recognizing these assets, would locate and thrive in the community. This local initiative would be materially inhibited by the Federal assistance provided in S. 722, and the artificial economic climate created will ultimately compound the difficulties which are sought to be glossed over by this legislation.

U.S. SAVINGS BONDS REDEMPTIONS

Mr. JAVITS. Mr. President, I have just received from the Treasury Department a monthly report on sales and redemptions of series E and H savings bonds, which I have requested be sent to me regularly, and am again deeply concerned by the continuing trend of redemptions exceeding sales. This situation has been reflected by the statistics without pause since July 1958, and with only one interruption since March of that year. During the 24-month period ending April 30, 1960, the excess of E- and H-bond redemptions over sales has totaled $2,324 million; even the increase in interest rates from 3.26 percent to 3.75 percent, which was put into effect in September 1959 following congressional action to lift the interest ceiling on these bonds, failed to stop this trend, with an excess of redemptions over sales during those 7 months of $565 million, though it did result in a slowing down of the excess of redemption.

For some time, I have been advocating that steps be taken by the Treasury Department to stop further attrition of individual holdings of these anti-inflationary bonds, which represent an important portion of the national debt, and signify the interest of every citizen in his country's fiscal situation.

At the present time of world crisis, where our Nation's economy is the frontline of the East-West struggle, it seems particularly important to take action in this field. I again urge that the Treasury avail itself of the authority granted last year by the Congress to raise interest rates on E- and H-bonds beyond the present 3.75-percent level. It should undertake a massive patriotic drive to sell to the public what we now call savings bonds, but which should be renamed "Peace Bonds"—perhaps featuring a special $25-billion issue which would seem to attract millions of new investors in a significant shift of the national debt into these securities. Irrespective of congressional action on long-term marketable bond interest rates at this session, this would reflect a shift of the debt into the longer term securities which is sought to be achieved by the administration. The suggestion of my colleague, the Senator from Delaware [Mr. WILLIAMS], for an immediate rise in the savings bond interest rate to the 4.25-percent ceiling, is a most commendable plan for the achievement of this goal. Together with my colleague from Delaware, with whom I have been working in this field constantly, I urge this course upon the administration.

I ask unanimous consent that the report of the Treasury Department may be printed in the RECORD at this point.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

THE BOMARC MISSILE: AN INTEGRAL ELEMENT IN AMERICA'S DEFENSE

Mr. BENNETT. Mr. President, I have just received word that a completely successful test of the Bomarc B missile was conducted this morning at Eglin Air Force Base. To those of us who have been following the development of this important missile, this comes as extremely good news. It is particularly significant at this time because tomorrow the Senate Appropriations Committee will begin hearings on the cuts made in the defense appropriation bill, and one of the items drastically cut by the House was the Bomarc program.

Probably the main reason why the House voted to eliminate the Bomarc program was because of the partial failures during the early tests of the Bomarc B. But since the House acted, there have now been two tests, both completely successful, which make it apparent that the Air Force's confidence in the missile is justified.

BACKGROUND OF PROBLEM

We have now invested about $600 million in the Bomarc B missile, and are now right on the brink of beginning full-scale production. The Marquardt plant in Ogden, Utah, which produces the ramjet engine for the missile, is 90 percent tooled up, and production has already begun.

On March 24 the Air Force announced its decision to reduce the number of Bomarcs previously programed in order to provide a better balance of air defense weapons within the limitations imposed by the budget.

Let me emphasize that I have no quarrel with the Air Force's decision, despite the adverse economic impact on Utah. I felt that the overruling consideration was to get the maximum amount of defense for every dollar spent, and if this involved cutting back the Bomarc program, I was willing to go along with that, as were the other members of the Utah delegation, and, I believe, most of the people of Utah.

But there is a big difference between reducing the number of Bomarc missiles to be produced and eliminating them entirely. The March 24 reduction was part of a carefully prepared plan, drawn up by military experts, intended to provide a better overall mix of defensive weapons. The House action, in contrast, was not the result of any carefully prepared plan; it was an arbitrary and, in my opinion, precipitate decision, and one which should be overruled by the Senate.

THE NEED FOR BOMARC

We have heard much during the last 2 years about our susceptibility to Russian attack between now and 1965, when our missile capability will be far greater than it is today. During this extremely critical period, the years of the so-called missile gap, the Bomarc is one of the most important defense weapons we have. It is incredible that those who claim there is a missile gap should oppose the construction of the weapons we need to guarantee safety from attack during the crucial period they are talking about.

It has been said that the Bomarc will be obsolete in several years, when Russia will have a larger force of intercontinental ballistic missiles. There are two answers to this:

First, the Bomarc is not likely to be obsolete in the foreseeable future, because even with the existence of the ICBM, the bomber threat and its associated air-to-surface missile capability will still exist, and to provide defense only against intercontinental missiles, and not against air-breathing missiles and planes, would be an open invitation to attack. Second, even though the need for the Bomarc may decrease several years hence, it is an absolute necessity at this time. There is no other weapon in existence or under development which can do the job the Bomarc is designed to do. Here again, to eliminate the Bomarc entirely is, as the Air Force has indicated, an invitation to attack.

There are three points I should like to emphasize today. The first is that the cut is wasteful. It cannot be justified from an economic standpoint, because it would leave a gap in our air defense which would have to be filled by production of additional fighter aircraft at a much greater cost.

Second, the Bomarc missile would give much better defense than would the number of F–106 fighter planes required to replace the missiles.

Third, the House action would delay the day when we will have adequate defense against attack by manned aircraft.

COST CONSIDERATIONS

With respect to the cost, Gen. H. M. Estes, Jr., Assistant Deputy Chief of Staff of the Air Force, has testified that the procurement of interceptors as an alternative to Bomarc, including operation and maintenance for 1 year, would cost $677.6 million. The Bomarc procurement costs, including operation and maintenance for 1 year, would be $466.6 million. Thus, there would be a saving of $211 million during a single year by approval of the Bomarc instead of procurement of a comparable number of fighter interceptor planes.

Maj. Gen. R. J. Friedman, Director of Budget, Comptroller of the Air Force, estimates that the cost of the Bomarc missiles will be $3.2 million each, and that the cost of the F–106 would be $4.4 million each. He has testified that it would cost about $1 billion to provide the number of fighter planes needed to replace the canceled Bomarcs. He emphasizes that replacement would have to be on a one-for-one basis.

So unless the Air Force is completely wrong in its cost estimates, it would require more money to provide the needed air defense with aircraft rather than Bomarc missiles. Now, let us consider the question of whether the two systems are really comparable.

LIMITATIONS OF FIGHTER PLANES

The North American Air Defense Command has studied the potentialities of the two systems in light of the defense mission it is assigned, and has recommended that the Bomarc program be continued for the simple reason that the Bomarc can do the job better than can fighter planes.

Obviously, a fighter plane has some advantages. It has the advantage of being under the personal control of a pilot, and it might be used more than once. And NORAD has indicated that it needs some fighter planes. It also needs, however, a goodly number of Bomarcs to give a "mix" of weapons which will provide the necessary flexibility. NORAD must be prepared to meet various tactics—mass raids, sneak raids, and low- and high-altitude attacks. Without the Bomarc, our capability to meet these varied threats is substantially diminished.

Incidentally, with respect to the advantage of control by a pilot, it should be emphasized that during the actual attack, the pilot does not control the plane. Human reflexes and human vision are too limited to permit a pilot to attack an incoming supersonic missile or plane. The plane is controlled electronically by SAGE, the same system as is used to control Bomarc, and, in fact, uses a missile to effect a kill.

REACTION TIME

The Bomarc has a much more rapid reaction time than does a fighter plane. It is in a continual state of readiness, and its reaction time of only 30 seconds is far beyond the capability of a plane.

And once in the air, the Bomarc can proceed to its target much more rapidly than the fighter plane—in fact, about twice as fast. Of course, our fighter planes, such as the F–101 and the F–106, are capable of supersonic speeds, but not in extended range operations. If they fly at these high speeds all the way to their target, they quickly run out of fuel, and if they are over the ocean, they have no chance of getting back to their base. Their range at top speed is only a fraction that of the Bomarc.

General Estes, discussing the advantages of the Bomarc, said:

> In the low-altitute regime, the Bomarc B has been specifically designed to attack targets at low altitudes. A high launching rate of missiles per base makes available an unequaled concentration of firepower that permits the defense system to cope with massed attacks or simultaneous attacks from all directions. The high launch rate, long-range and rapid reaction capabilities of Bomarc B combine to permit early engagement of bombers and thus remove the nuclear air battle from the vicinity of the targets being defended.

In response to a question about the difference between the missiles and fighters, General Estes said:

> One is altitude, sir. One is the competence that you can build into a missile system that you cannot in a fighter. For example, it is extremely difficult to put a large nuclear warhead into a fighter because you cannot escape from your own nuclear blast from your own missile. Bomarc, once it blasts, doesn't care. There is no human in it. So you have the capability of putting much larger warheads on your missile in

order to vaporize the bombs and the bomber. Therefore, it is the intention of North American Air Defense Command to use a mixed force of weapons, each of which has capabilities which are not directly attainable in the other type of weapon, to take on any attack.

It seems to me that there can be no question about the relative effectiveness of the "mix" recommended by the Air Force and a force made up only of fighter planes and short-range missiles.

BOMARC READY SOONER

But beyond all this there is another consideration, and perhaps this may be the most important of all. Even if the F–106's were completely effective, even if we could double their speed and increase their range, and provide them with more powerful warheads, all this would be academic. The fact is, we simply cannot build the additional F–106's by the time when we will need them.

Now, it is true that the F–106 has been in production for some time. But production of an airplane cannot merely be turned on or off like a faucet. Even though we have the assembly line in operation, no orders have been placed for the tens of thousands of additional parts which would be required to extend production, as recommended by the House committee. That is why the Air Force estimates that it would take about a year longer to produce the number of fighter planes needed than it would to produce the Bomarc B, which is already beginning production, and for which parts have already been ordered. And this is the time lag for the version of the F–106 now in production. An improved version would not be available until about 3 years after the Bomarc.

BOMARC TEST RECORD

Now, let me return to the Bomarc test record, which, as I indicated earlier, was a major factor in influencing the House decision.

The success of two Bomarc A missiles in firings against a supersonic missile and a drone May 12 at Eglin Air Force Base was a convincing demonstration of the effectiveness of the Bomarc. The first test of a complete Bomarc B missile on April 13 was 100 percent successful. The simulated target was intercepted. The missile was destroyed by the range safety officer at 150 nautical miles, the limit of the gulf test range. The ramjet problems which had been experienced in the early flights at Cape Canaveral have been overcome. Likewise, today's test was a complete success, with every part of the missile functioning perfectly. The missile traveled 270 miles, diving from an extremely high altitude to intercept a simulated target.

Interestingly enough, even the earlier tests of components of the Bomarc B, which were reported in the press as failures, actually were partial successes, and as a matter of fact, contributed much to the development of the missile. At this point, I ask unanimous consent to insert in the RECORD a table showing what these flights were designed to test, and the number of successes and failures on each attempt.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Test record of Bomarc B

Objectives	Test number								
	1	2	3	4	5	6	7	8	9
Solid rocket boost	OK	OK	OK	OK	OK	OK	OK	OK	OK
Ramjets	F	F	F	F	F	OK	OK	OK	OK
Flight controls	OK	OK	OK	OK	OK	F	F	OK	OK
Airframe	OK	OK	OK	OK	OK	OK	OK	OK	OK
Performance	OK	OK	OK	OK	OK	OK	OK	OK	OK
Accessory power unit	(*)	(*)	(*)	(*)	(*)	(*)	(*)	OK	OK
Range	F	F	F	F	F	F	F	OK	OK

F = Failure.
* = Not scheduled.

NOTE.—Tests Nos. 1 through 7 were conducted at Patrick Air Force Base. Nos. 8 and 9 were at Eglin Air Force Base.

Mr. BENNETT. Mr. President, certainly, in view of the remarkable success of the Bomarc in its recent firings, and of the above analysis of the earlier attempts, it appears that the Air Force is justified in its optimism about the Bomarc, and its willingness to rely on the Bomarc as a key element in our defense against aerial attack.

THE CANADIAN POSITION

A decision such as whether or not to build a particular weapon must, of course, be based primarily upon technical considerations and military needs. And it is upon such considerations that the Bomarc is justified. But perhaps it would be appropriate to invite attention to one other aspect—the attitude of our Canadian allies, who have worked with us on the Bomarc, who are helping to supply parts and bases for it, and who have the same stake as we have in effective defense of the North American Continent.

In this connection, the Honorable G. R. Pearkes, Minister of National Defense of Canada, said in the House of Commons on April 29, in discussing the House committee's action:

> This is a recommendation, of course, by the Appropriations Committee which has yet to receive the approval of the Senate and the administration. If this recommendation is approved and made final then it will not be in keeping with the arrangements which were made over a year ago between our two countries for the air defense of this continent.

I think it is apparent that the Canadians recognize the value of the Bomarc, and it is equally apparent they desire that the program be continued as recommended by the Air Force, in keeping with the agreement made between Canada and the United States.

CONCLUSION

Mr. President, on the basis of the facts available at the time the House committee acted, I am sure that I would have voted to continue the Bomarc B program, as recommended by the Air Force. But if there had been any doubts in my mind, I am sure they would have been erased by the results of the tests made since the House acted. I believe that anyone who is concerned with a sound defense for the United States during the next several years will concur in the recommendation of the Air Force and will agree that the funds needed for the Bomarc B missile should be restored.

EXTENSION OF TIME FOR THE COMMITTEE ON THE JUDICIARY TO SUBMIT CERTAIN REPORTS

Mr. MANSFIELD. Mr. President, on behalf of the Committee on the Judiciary, I ask unanimous consent that the time for the filing of reports pursuant to Senate Resolutions 54, 56, and 61, of the 86th Congress, be extended to June 15, 1960. This request concerns annual reports of certain subcommittees of the Committee on the Judiciary.

The PRESIDING OFFICER. Without objection, it is so ordered.

ENROLLED BILL PRESENTED

The Secretary of the Senate reported that on today, May 17, 1960, he presented to the President of the United States the enrolled bill (S. 3338) to remove the present $5,000 limitation which prevents the Secretary of the Air Force from settling claims arising out of the crash of a U.S. Air Force aircraft at Little Rock, Ark.

ADJOURNMENT

Mr. MANSFIELD. Mr. President, if there is no further business, I move, pursuant to the order previously entered, that the Senate stand in adjournment until 12 o'clock noon tomorrow.

The motion was agreed to; and (at 5 o'clock and 26 minutes p.m.) the Senate adjourned, under the order previously entered, until tomorrow, Wednesday, May 18, 1960, at 12 o'clock meridian.

CONFIRMATION

Executive nomination confirmed by the Senate May 17, 1960:

U.S. MARSHAL

Lyle F. Milligan, of Wisconsin, to be U.S. marshal for the eastern district of Wisconsin for the term of 4 years. (Now serving under an appointment which expired March 1, 1960.)

HOUSE OF REPRESENTATIVES

TUESDAY, MAY 17, 1960

The House met at 12 o'clock noon.

The Chaplain, Rev. Bernard Braskamp, D.D., offered the following prayer:

Psalm 31: 1: *In Thee, O Lord, do I put my trust.*

Most merciful and gracious God, may we now hallow Thy name and receive Thy help to gain the mastery in all the bitter conflicts and precarious situations of these days when we are tempted to yield to a sense of failure and futility.

We earnestly beseech Thee to gird us with moral sagacity and noble strategy as we contend with the forces of lawless violence and brutal tyranny and may it never be true that the sons of this world, in their generation, are wiser than the sons of light.

Help us to believe that we can take the fear and restlessness out of our human life by putting our trust in Thee and by reminding ourselves that Thou art our refuge and strength.

Show us how we may learn to achieve a finer skill in the art of brotherly living and attain unto the wisdom and peace of seeking one another's welfare.

Hear us in the name of our blessed Lord. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

THE SUMMIT MEETING

Mr. HERLONG. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Florida?

There was no objection.

Mr. HERLONG. Mr. Speaker, the situation in Paris calls for cool heads. I urge that we close ranks in support of the President and leave the settlement of the affair to him and his advisers. This is no time for second guessing. The President and his advisers have the information and background to deal with this crisis and I hope and pray they will handle it capably. It will be of tremendous help to them to know that we, back home, are united behind them.

This whole affair points up more clearly than ever before the need for the Freedom Academy which I proposed in my bill, H.R. 3880, introduced in the previous session. The Freedom Academy would turn out trained, dedicated men and women of the free world to work to counteract the activities of the Communist conspirators who are all about us, both here and abroad. We need a more effective method of operation in the battle to win men's minds to the peaceful ideals of the free world.

SUBCOMMITTEE ON HOUSING OF THE COMMITTEE ON BANKING AND CURRENCY

Mr. ALBERT. Mr. Speaker, on behalf of the gentleman from Alabama [Mr. RAINS] I ask unanimous consent that the Subcommittee on Housing of the Committee on Banking and Currency may have permission to sit today during general debate.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

AUTHORIZING THE ARCHITECT OF THE CAPITOL TO PERMIT CERTAIN TEMPORARY AND PERMANENT CONSTRUCTION WORK ON THE CAPITOL GROUNDS

Mr. BURKE of Kentucky. Mr. Speaker, I ask unanimous consent for the present consideration of Senate Joint Resolution 166 authorizing the Architect of the Capitol to permit certain temporary and permanent construction work on the Capitol Grounds in connection with the erection of a building on privately owned property adjacent thereto.

The Clerk read the title of the Senate joint resolution.

The SPEAKER. Is there objection to the request of the gentleman from Kentucky?

There being no objection, the Clerk read the Senate joint resolution, as follows:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) the Architect of the Capitol is hereby authorized to permit (1) the performance within the United States Capitol Grounds of excavation, temporary construction, or other work that may be necessary for the construction of a national headquarters building and other related facilities for the United Brotherhood of Carpenters and Joiners of America on the property immediately northwest of the intersection of Constitution Avenue Northwest, and Louisiana Avenue Northwest, in the District of Columbia; and (2) the use of Capitol Grounds property located west of the street curb on Louisiana Avenue Northwest, between Constitution Avenue Northwest and First Street Northwest, for purposes of ingress and egress to and from the building site during such construction. No permanent construction shall extend within the United States Capitol Grounds except as otherwise provided in subsection (b) of this joint resolution.

(b) The Architect of the Capitol is hereby authorized to permit the following improvements of a permanent nature to be made on Capitol Grounds property located west of the street curb on Louisiana Avenue Northwest, between Constitution Avenue Northwest and First Street Northwest:

(1) The removal of the existing driveway which provided access to a gasoline station which formerly occupied such site; the patching of the existing curb; and the regrading and sodding of the area comprising such driveway;

(2) The extension of existing sewers and the building of new manholes under the sidewalk along Louisiana Avenue Northwest, between Constitution Avenue Northwest and First Street Northwest, to accommodate service laterals from the proposed new building, and the installation of necessary laterals;

(3) The installation of service laterals from existing gas and water mains located on Capitol Grounds property located at Louisiana Avenue Northwest, between Constitution Avenue Northwest and First Street Northwest;

(4) The removal and replacement of existing sidewalks located on Capitol Grounds property at Louisiana Avenue Northwest, between Constitution Avenue Northwest and First Street Northwest;

(5) The planting of seven additional trees between street curb and new sidewalk along Louisiana Avenue Northwest, between Constitution Avenue Northwest and First Street Northwest, such trees to be selected by the Architect of the Capitol;

(6) The regrading and resodding of the remaining area; and

(7) The plugging and filling of a portion of the abandoned brick arch sewer located at the northeast corner of the proposed new building.

SEC. 2. The United States shall not incur any expense or liability whatsoever, under or by reason of this joint resolution, or be liable under any claim of any nature or kind that may arise from anything that may be connected with or grow out of this joint resolution.

SEC. 3. No work shall be performed within the Capitol Grounds pursuant to this joint resolution until the Architect of the Capitol shall have been furnished with such assurances as he may deem necessary that all areas within such grounds, disturbed by reason of such construction, shall, except as otherwise provided in this joint resolution, be restored to their original condition without expense to the United States; and all work within the Capitol Grounds herein authorized shall be performed under conditions satisfactory to the Architect of the Capitol.

SEC. 4. Nothing in this joint resolution shall be construed as conveying to the United Brotherhood of Carpenters and Joiners of America any right, title, or interest in or to any of the temporary or permanent improvements made by it within the Capitol Grounds pursuant to this joint resolution.

The Senate joint resolution was agreed to, and a motion to reconsider was laid on the table.

PRIVATE CALENDAR

The SPEAKER. This is Private Calendar day. The Clerk will call the first bill on the Private Calendar.

RELIGIOSA LUIGIA FRIZZO ET AL.

The Clerk called the first bill on the calendar (H.R. 3805) for the relief of Religiosa Luigia Frizzo, Religiosa Vittoria Garzoni, Religiosa Maria Ramus, Religiosa Ines Ferrario, and Religiosa Roberta Ciccone.

Mr. AVERY. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Kansas?

There was no objection.

MR. AND MRS. JAMES H. McMURRAY

The Clerk called the bill (H.R. 1433) for the relief of Mr. and Mrs. James H. McMurray.

Mr. ROBERTS. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore (Mr. ALBERT). Is there objection to the request of the gentleman from Alabama?

There was no objection.

HENRY AND EDNA ROBINSON

The Clerk called the bill (H.R. 1721) for the relief of Henry and Edna Robinson.

Mr. ROBERTS. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Alabama?

There was no objection.

MR. AND MRS. MOSES GLIKOWSKY

The Clerk called the bill (H.R. 1766) for the relief of Mr. and Mrs. Moses Glikowsky.

Mr. ROBERTS. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Alabama?

There was no objection.

GERALD DEGNAN ET AL.

The Clerk called the bill (S. 684) for the relief of Gerald Degnan, William C. Williams, Harry Eakon, Jacob Beebe, Thorvald Ohnstad, Evan S. Henry, Henry Pitmatalik, D. LeRoy Kotila, Bernard Rock, Bud J. Carlson, Charles F. Curtis, and A. N. Dake.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is hereby authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to the persons enumerated below the sums specified, in full settlement of all claims against the Government of the United States as reimbursement for personal effects destroyed as a result of the fire which occurred on October 2, 1958, at Sherman, Alaska, when the claimants were employed by The Alaska Railroad: Gerald Degnan, $286.83; William C. Williams, $755.92; Harry Eakon, $342,49; Jacob Beebe, $743.85; Thorwald Ohnstad, $1,556.32; Evan S. Henry, $199.68; Henry Pitmatalik, $472.22; D. LeRoy Kotila, $217.70; Bernard Rock, $729.79; Bud J. Carlson, $313.05; Charles F. Curtis, $1,111.69; and A. N. Dake, $93.40.

SEC. 2. No part of the amounts appropriated in this Act shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with these claims, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

PERRY LEE GORMAN

The Clerk called the bill (S. 1720) for the relief of Perry Lee Gorman.

Mr. ROBERTS. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Alabama?

There was no objection.

MARY ALICE CLEMENTS

The Clerk called the bill (S. 2317) for the relief of Mary Alice Clements.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provisions of the War Claims Act of 1948, as amended, limiting the period of time within which claims may be filed thereunder, the Foreign Claims Settlement Commission of the United States shall have jurisdiction to receive and to determine the validity and amount of the claim of Mary Alice Clements, of Washington, District of Columbia, for civilian detention benefits under subsections (a) through (e) of section 5 of such Act, and shall certify to the Secretary of the Treasury for payment out of the War Claims Fund any award made thereunder. The Secretary of the Treasury shall pay, out of such Fund, to the said Mary Alice Clements the amount of any such award so certified by the Commission.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

JOHN B. MANTHEY

The Clerk called the bill (S. 2330) for the relief of John B. Manthey.

Mr. HEMPHILL. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from South Carolina?

There was no objection.

HARRY L. ARKIN

The Clerk called the bill (S. 2523) for the relief of Harry L. Arkin.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Harry L. Arkin of Denver, Colorado, the sum of $270.90. The payment of such sum shall be in full satisfaction of all claims of the said Harry L. Arkin against the United States for (1) reimbursement for expenses, including insurance costs, incurred by him in having his automobile transported from Germany to the United States upon termination of his duty overseas with the Air Force, the said Harry L. Arkin having been denied shipment of his automobile at Government expense because of a change in Air Force policy which occurred after approval had been given by the transportation officer of the Seventeenth Air Force for the shipment of his automobile by such means, and (2) per diem allowance for the period (March 1 to March 6, 1959) he was permitted to remain in Germany, beyond his scheduled departure date, to await an official decision with regard to the shipment of his automobile: *Provided,* That no part of the amount appropriated in this Act in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

AUGUSTA FURNITURE CO., INC.

The Clerk called the bill (S. 2779) relating to the election under section 1372 of the Internal Revenue Code of 1954 by the Augusta Furniture Co., Inc., of Staunton, Va.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the election under the provisions of section 1372 of the Internal Revenue Code of 1954 made by the Augusta Furniture Company, Incorporated, of Staunton, Virginia, and mailed to the District Director of Internal Revenue, Richmond, Virginia, on December 2, 1958, shall be deemed to have been filed with such District Director on December 1, 1958.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

F. P. TOWER ET AL.

The Clerk called the bill (H.R. 1526) for the relief of F. P. Tower, Lillie B. Lewis, Manuel Branco, John Santos Carinhas, Joaquin Gomez Carinhas, and Manuel Jesus Carinhas.

Mr. CONTE. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

MRS. CORNELIA FALES

The Clerk called the bill (H.R. 6215) for the relief of Mrs. Cornelia Fales.

There being no objection, the clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Mrs. Cornelia Fales, of Metropolitan State Hospital, Waltham, Massachusetts, the sum of $10,000. The payment of such sum shall be in full settlement of all the claims of the said Mrs. Cornelia Fales against the United States for payment of the proceeds of the national service life insurance issued to her brother, the late Sam E. Seager (Veterans' Administration claim numbered XC 3466187), effective October 24, 1942. At the time of the transfer of the said Sam E. Seager to the Enlisted Reserve Corps and subsequent thereto, he indicated his intention of retaining such insurance but at the time of his death on February 10, 1944, such insurance was not in effect because an official communication from the Army, written in response to his inquiry, misinformed him about his rights with respect to such insurance: *Provided,* That no part of the amount appropriated in this Act in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and

the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

With the following committee amendment:

Page 1, line 11, strike out "XC 3466187" and insert "XC–3466817".

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MISS HEDWIG DORA

The Clerk called the bill (H.R. 6338) for the relief of Miss Hedwig Dora.

Mr. HEMPHILL. Mr. Speaker, I ask unanimous consent that this bill may be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from South Carolina?

There was no objection.

WILLIAM J. HUNTSMAN

The Clerk called the bill (H.R. 9406) for the relief of William J. Huntsman.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That William J. Huntsman is hereby relieved of all liability to refund to the United States the sum of $116.42, representing overpayments of pay and allowances received by him during his service in the United States Army for the period from September 10, 1948, to November 22, 1949, and from April 25, 1956, to November 2, 1957.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

ROBERT L. STOERMER

The Clerk called the bill (H.R. 9711) for the relief of Robert L. Stoermer.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That sections 15 through 20, inclusive, of the Federal Employees' Compensation Act are hereby waived in favor of Robert L. Stoermer, Hudgins, Virginia, and his claim for compensation and disability benefits arising out of an injury to his back alleged to have been sustained by him on May 17, 1951, while employed at Fort Eustis, Virginia, shall be acted upon under the remaining provisions of such Act if he files such claim with the Bureau of Employees' Compensation, Department of Labor, within the six-month period beginning on the date of enactment of this Act. No benefits, other than medical and hospital expenses, shall accrue to the said Robert L. Stoermer by reason of the enactment of this Act for any period before the date of its enactment.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

LOREN W. WILLIS

The Clerk called the bill (H.R. 11826) for the relief of Loren W. Willis.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Loren W. Willis, 240 Montgomery Street, Annandale, Virginia, the sum of $1,068.51, in full settlement of all claims against the United States for the loss sustained by the said Loren W. Willis as the result of damage to and destruction of his personal property and household goods in the warehouse of the Global Van Lines, Inc., in Orleans, France, by a fire which occurred on July 22, 1959, *Provided,* That no part of the amount appropriated in this act shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, any contract to the contrary notwithstanding. Any person violating any of the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MAJ. HOWARD L. CLARK

The Clerk called the bill (H.R. 11827) for the relief of Maj. Howard L. Clark.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Major Howard L. Clark, O40928, United States Army, the sum of $277.94, in full settlement of all claims against the United States for the loss sustained by the said Major Howard L. Clark as the result of damage to and destruction of his personal property in the warehouse of Allen Moving and Storage Company, 861 Estabrook Street, San Leandro, California, by a fire which occurred on February 23, 1959: *Provided,* That no part of the amount appropriated in this act shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, any contract to the contrary notwithstanding. Any person violating any of the provisions of this act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

KATHERINE O. CONOVER

The Clerk called the bill (H.R. 8606) for the relief of Katherine O. Conover.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Katherine O. Conover, Arlington, Virginia, the sum of $13,403.57. The payment of such sum shall be in full settlement of all claims of the said Katherine O. Conover against the United States for compensation for the loss of salary, annual leave, and personal property sustained by her, and for reimbursement of certain hospital charges involuntarily incurred while serving as a civilian employee of the Department of the Air Force on Okinawa. Claims for losses such as sustained are not cognizable under the provisions of law referred to as the Federal Tort Claims Act, because such claims resulted from actions initiated in a foreign country. No part of the amount appropriated in this Act shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

With the following committee amendment:

Page 1, line 6, strike out "$13,403.57" and insert "$5,632.02".

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

Mr. HEMPHILL. Mr. Speaker, I ask unanimous consent that the further call of the Private Calendar be dispensed with.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from South Carolina?

There was no objection.

LEGISLATIVE BRANCH APPROPRIATION BILL, 1961

Mr. NORRELL. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 12232) making appropriations for the legislative branch for the fiscal year ending June 30, 1961, and for other purposes; and pending that motion, Mr. Speaker, I ask unanimous consent that general debate be limited to 1 hour, the time to be equally divided and controlled by the gentleman from Washington [Mr. HORAN] and myself.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Arkansas.

The motion was agreed to.

Accordingly, the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 12232, with Mr. TRIMBLE in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

Mr. NORRELL. Mr. Chairman, I yield myself 5 minutes.

Mr. Chairman, we bring you today the legislative branch appropriation bill for 1961. As usual, the bill has been written not by me, but by the members of the committee and particularly of the subcommittee, composed of Messrs. KIRWAN and STEED on the Democratic side and Messrs. HORAN and BOW on the Republican side with the able assistance of the chairman, Mr. CANNON, of Missouri, and the ranking minority member, Mr. TABER.

Mr. Chairman, a summary of the amounts involved in the bill is on page 2 of the committee report. The itemized tabulation by appropriation paragraphs begins on page 12 of the report.

The bill for 1961, as reported, carries a total of $100,317,660. Following the custom of the past, the bill omits appropriations for the Senate and also omits certain items under the supervision of the Architect which pertain solely to that body. Items will be added when the bill reaches the other body.

The bill is below both the budget request and appropriations to date for fiscal year 1960. Specifically, the committee recommends a total which is $3,754,360 below budget requests of $104,072,020, and $781,280 below appropriations to date for comparable items of $101,098,940.

It is not practicable, as Members know, to make large reductions in this bill which is the legislative housekeeping bill. Most of the provisions are statutory and cover necessary expenses of running the legislative establishment and maintaining its physical plant and do not fluctuate widely from year to year. As a practical matter, the committee is powerless to realistically reduce certain items such as, for example, statutory salaries, congressional printing, expenses of investigating committees, and things of that sort.

By way of summary, $42,492,485 is included for items under the House of Representatives; $3,483,875 for certain joint offices and items; $23,009,800 for items under the Architect of the Capitol, excluding, as I indicated, items pertaining solely to the Senate; $352,300 for the Botanic Garden; $15,230,000 for the Library of Congress, not including three items for the Library under the jurisdiction of the Architect; and $15,749,200 for congressional printing and binding and for the Office of the Superintendent of Documents.

As appropriation bills go, Mr. Chairman, the legislative bill is not a big bill and, as I say, it is not feasible to make large economies in the requests because much of it is irreducible if the legislative establishment is to be properly operated and maintained as authorized. We have followed the practice of the past in making reductions wherever we thought we could and still make reasonable provision for efficient functioning and services.

The largest item of decrease below the estimates is in the Library of Congress, where they asked for a new item in the amount of $2,811,400, mostly to purchase from the Treasury foreign currencies now owned by the Treasury to be used in several countries to acquire, catalog, and distribute library materials of those countries. The materials would be sent to a large number of research libraries here in the United States. The committee decided, after rather lengthy consideration, not to allow that item. It is rather fully covered in the committee hearings.

Several other decreases were made in the amounts requested and they are covered in the committee report.

HOUSE OF REPRESENTATIVES

Mr. Chairman, the committee recommends a total of $42,492,485 for all items under the House of Representatives section of the bill. We have reduced these items by $331,160 below comparable budget estimates. In total, the amount recommended is also below 1960 appropriations by $643,780. The reductions made below the requests will not, I am certain, in anywise interfere with the efficient functioning of the activities of the House. In two or three cases, it is a matter of placing the judgment of the committee as to the requirements against that represented by the budget estimates.

We can call attention, as we have done in recent years, to the fact that the number of clerks on the rolls of the Members is well below the total permitted by law; currently the number is approximately 950 less than the maximum number permitted by law. Also, as we have noted in other years, the staffs of the committees are at a level somewhat below the total number authorized by law.

In respect to official allowances for Members of one kind or another, we do not propose any change from the present allowances. That, of course, is not within our jurisdiction. There are one or two individual changes.

I might call attention to the fact that the amount to cover the operating losses of the House restaurants is materially less than heretofore. They are doing better, especially with the new cafeteria in operation. The amount is now down to $35,000 whereas the original budget estimate was for $73,000.

JOINT ITEMS

For the various joint offices and items, as set out in the report, a total of $3,483,875, is recommended. Based on later information, we were able to scale down the request for reimbursing the postal account for penalty mail costs but it is also that same item which accounts for the increase above 1960. That is all explained in the hearings.

We have adjusted the salary language in one of the joint items, namely, that dealing with the two detectives detailed to the Capitol from the Metropolitan Police Department in order to equalize the salaries. Presently, one of the two men is receiving somewhat more than the other and we have brought them to a parity. We felt that was justified as a matter of simple equity.

ARCHITECT OF THE CAPITOL

For all items covering the Architect of the Capitol in this bill, we recommend a total of $23,009,800. This is below both the budget requests and below the current year appropriation level. It was possible to delete a few items requested by the Architect without in anywise being detrimental to the necessary services performed.

The committee report on pages 5, 6, and 7 cover the highlights of this section of the bill. The printed hearings contain progress reports and financial summaries on the extension of the east front project and on the third House office building project. There is no money in the bill for the east front project, but there is $13 million included for the third office building to pay obligations accruing under contracts entered into under the basic law.

As usual, and as is necessary, we have allowed a number of mandatory cost items which come along every year, and, for the purpose of keeping the physical plant in reasonably good order—and that includes the library buildings—we have allowed various repair and improvement increases. We must keep the Capitol of the United States and its supporting buildings in good order. I am certain no one would quarrel with that.

The Architect asked for only six additional positions and we have allowed those. There is one item that I should call attention to. We have included a new item of $75,000 to enable the Architect to prepare preliminary plans and estimates of cost for an additional building for the Library of Congress. They badly need it. They have been overcrowded in the two buildings for many years. Each year, actually each month, the situation becomes worse. The Library does not stand still. It continues to grow. Our Library of Congress is the world's largest and richest in resources. The main building was constructed in 1897. The annex was built in 1938. They are using space originally designed for books and other materials for office space. In fact, the space situation is such that as a temporary but only partial measure, the Committee is recommending, under the Library section of the bill, an interim request to rent suitable space to house some of the activities that do not need to be close to the collections. We can dispense with this rental arrangement once the third building is available which, under favorable conditions, will not be before 6 or 7 years from now. The $75,000 to which I referred has been authorized by the House and the Senate in the passage of House Joint Resolution 352. We have inserted the money in order to save a year's time. We believe it to be fully justified.

BOTANIC GARDEN

There is nothing unusual about the request for the Botanic Garden. We have allowed the budget estimate of $352,300. The small increase is due solely to mandatory costs. A good many people visit the Botanic Garden each year as shown by the statistical tabulation in the printed hearings.

LIBRARY OF CONGRESS

Mr. Chairman, as I have indicated, we have a great Library across the street. It is the world's largest. It is a very important institution and we ought not to neglect it. Its collections grow and grow each year and the demands on it

continue to grow. It has been for many years an invaluable institution to the defense agencies who have been allocating millions of dollars over there for special research and analytical projects.

In this bill, we have been inclined, as we have for the last few years, to make reasonable provision for the Library. We have allowed some additional personnel, although not as many as they wanted. We recommended $15,230,000 under this section of the bill as compared to budget estimates of $18,115,200, a reduction of $2,885,200, but $927,210 above 1960 appropriations. As I indicated earlier, the largest reduction below the estimates is in the special foreign currency program where they wanted $2,811,400 and we have not gone along with it. Some of the increase over 1960 is to meet mandatory costs, price increases, and the like in order to maintain present levels of services. Also, in the Legislative Reference Service, there has been an almost phenomenal increase in the demands on that important service and we have allowed some additional personnel to try to cope with it.

In addition, under the European Law Service, as we point out in the report, we have made somewhat larger provision than recommended in the budget for that work.

For the Copyright Office, we recommend enough to maintain the current level. They did not ask for any additional personnel.

In the program for selling catalog cards, we are pleased to note that for the first time in the current year, and this is projected for the coming year, not only will the full expenditure be recovered to the Treasury through sales of catalog cards but there will be a small profit in addition. Sales volume is increasing every year. This is a very important service to libraries all over the United States.

Continuing the position taken in the past several years, we have approved some expansion in the very worthwhile books for the blind program. That is covered in some detail in the hearings.

In the past, there has been some abuse of the privilege of occupancy of the so-called study rooms in the Library. As the hearings will disclose, that situation has now been cleared up and we shall try to see that there are no similar recurrences.

GOVERNMENT PRINTING OFFICE

There are two items under the Government Printing Office heading, one for congressional printing and binding and the other for the Superintendent of Documents.

For printing and binding, we have recommended the budget estimate of $11,900,000 which is somewhat above the 1960 amount but part of it, as explained in the report, is to replace amounts borrowed from prior appropriations, under authority carried in the bill, to pay for additional printing requirements for the years involved. No one can accurately judge the requirements in advance and we must supply whatever is necessary.

For the Office of the Superintendent of Documents, we have allowed the full budget estimate which is a rather substantial increase of $328,850 over 1960. We have allowed them 25 additional jobs they wanted, but, Mr. Chairman, we are pleased to report that this operation is completely self-supporting and the revenues from sales of Government publications return a small profit to the Treasury—that is, they cover not only the expenses of the sales program, but they also more than cover the cost of all of the other activities of the Office which do not produce revenue. We have these hundreds of Government publications being printed and it is our view that we should spare no reasonable expense to make them available to the public when it is willing to pay for them.

Mr. Chairman, I have tried to touch on some of the highlights of the bill, although, as I have said before, there is not really too much involved in the bill this year. In conclusion, I might summarize by saying that generally speaking the bill provides for things to run along about like they have been for the last year or two. But, of course, there are usually, in any particular bill, a few changes.

Mr. Chairman, this is a good bill and I hope it will be satisfactory.

Mr. Chairman, I reserve the balance of my time.

Mr. HORAN. Mr. Chairman, I yield myself such time as I may require.

I think the chairman has presented this bill very well. He has called your attention to the fact that it is under last year's appropriation and some $3 million plus under the budget this year. We think it is a clean bill. We have held extensive hearings on it, and we believe this bill is entirely in order.

Mr. HOFFMAN of Michigan. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. Evidently a quorum is not present. The Clerk will call the roll.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 92]

Alexander	Farbstein	Lesinski
Alford	Flynn	Libonati
Anderson, Mont.	Fogarty	Loser
Arends	Forand	McGovern
Barden	Gilbert	Mitchell
Baring	Granahan	Moulder
Barry	Green, Oreg.	Multer
Blatnik	Griffiths	Nix
Blitch	Hays	Powell
Boykin	Healey	Riehlman
Brewster	Hébert	Rogers, Mass.
Brown, Mo.	Hogan	Rogers, Tex.
Buckley	Holt	Scott
Cahill	Jackson	Sheppard
Canfield	Jensen	Short
Cederberg	Johnson, Colo.	Smith, Kans.
Chelf	Johnson, Md.	Taber
Coffin	Kearns	Taylor
Davis, Tenn.	Kilburn	Teller
Devine	Kluczynski	Thompson, N.J.
Diggs	Lafore	Walter
Dingell	Landrum	Williams
Durham	Lankford	Zelenko

Accordingly, the Committee rose; and the Speaker having resumed the chair, Mr. TRIMBLE, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill, H.R. 12232, and finding itself without a quorum, he had directed the roll to be called when 362 Members responded to their names, a quorum, and he submitted herewith the names of the absentees to be spread upon the Journal.

The Committee resumed its sitting.

The CHAIRMAN. When the Committee rose the gentleman from Missouri [Mr. JONES] had been recognized for 5 minutes.

Mr. JONES of Missouri. Mr. Chairman, as we are today considering the appropriation bill which calls for a little over $42 million for the operation of the House of Representatives, this should be an opportune time to remind the Members of how this amount might be reduced in future years if we were to adopt some legislation which would regulate and restrict some of the printing that costs several million dollars each year.

I have always felt that the House of Representatives should set an example to the other agencies or departments of government. As long as we are extravagant and apparently take little recognition of the opportunity for saving some money ourselves, we cannot very well be too critical of other agencies.

Mr. Chairman, I have introduced two bills. One is House Resolution 307. That resolution, if adopted by this House, would provide that before printing any bill or resolution the clerk would compare the copy introduced with similar bills or resolutions introduced during the same Congress, and in lieu of printing identical bills or resolutions the title of the bill or the resolution and the name of the Member introducing the same would be printed in the CONGRESSIONAL RECORD together with a reference to the original bill or resolution introduced.

I would call to your attention and remind you that each session we have seen introduced hundreds of bills that are printed 5, 6, 7, 10, 50, and 100 times as separate pieces of legislation that go through all of the machinery and add to the cost. If we could do away with the printing of those identical bills, which are absolutely a waste of money, we could save millions of dollars.

The other piece of legislation that I have introduced is **H.R. 7676**, which would put a restriction upon the printing in the CONGRESSIONAL RECORD. During the 11 years that I have been here I have seen the CONGRESSIONAL RECORD grow to a place where it is absolutely nonsensical. We have certain rules here in the House, but all of us know that we do not abide by our own rules. We avail ourselves of the opportunity here in the well of the House to ask unanimous consent that we may extend our remarks in either the body of the RECORD or in the Appendix of the RECORD in an unlimited fashion. We have a rule which says that if the printing exceeds a certain amount, we have to go to the Public Printer and get an estimate of the cost and then come down here and ask unanimous consent again to have it inserted. Never in the 11 years that I have been here have I ever heard of any request being objected to.

Mr. Chairman, I am not saying this critically, but I am just calling your attention to try to consider how we could make a legitimate saving. I think that

we have abused many of the privileges that come to us. At the close of a legislative day we have seen men standing on each side of the aisle asking for unanimous consent that such and such a Member may extend his remarks in the body of the RECORD and to include extraneous matter, which sometimes runs many pages. They are asking permission for some Members not here; not even interested enough to be on the floor to make his own request. I realize that I could make an objection or you could make an objection and we could keep it out, but I am appealing to the Members of this House to join with me in these two pieces of legislation which would at least restore some semblance of reason, some realistic approach to this problem. I want to say this conservatively, that if H.R. 7676 is adopted, it would not affect 5 percent of the Members of this body and it would save anywhere from $3 million to $5 million during the 2 years of each Congress. I think that is a figure that we should keep in mind. In other words, if the legislation I have suggested were adopted, at the next session, when we consider this legislative appropriation bill with which this committee does such a fine job, we would be able to cut the request down by at least 10 percent. We would certainly save some money.

Mr. HORAN. Mr. Chairman, I yield 5 minutes to the gentleman from Iowa [Mr. GROSS].

Mr. GROSS. Mr. Chairman, I take this time to ask a few questions concerning this bill. I would like to start with the $13 million appropriation for the New-New House Office Building. Will someone on the committee tell me how much has been spent and what this $13 million will bring the spending for that new-new office building up to.

Mr. BOW. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I am glad to yield to my friend from Ohio.

Mr. BOW. I think the record will show that up to this point on the actual building itself and the grounds immediately surrounding the additional House Office Building, it will be somewhere around $74 million. For the completion of the program which is necessary because of the additional House Office Building, the purchase of land and buildings on the House side, which takes in the Congressional Hotel and the old George Washington Inn and the other properties, the anticipated development will amount to about $105 million.

Mr. GROSS. So it is now up to about $74 million.

Mr BOW. For the additional building itself.

Mr. GROSS. And that will not equip the building, or will it equip the building?

Mr. BOW. I understand that will not take care of the furniture; that is for the building itself.

Mr. GROSS. That is just the building without any equipment at all in it?

Mr. BOW. A completed building.

Mr. GROSS. I thank the gentleman.

Mr. HOFFMAN of Michigan. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I am glad to yield to my friend.

Mr. HOFFMAN of Michigan. Who authorized this new building?

Mr. GROSS. The Congress authorized it.

Mr HOFFMAN of Michigan. I know, but on what was the authorization based?

Mr. GROSS. That I could not say. The gentleman from Iowa tried to strike out the first $7,500,000 that went into it. I think the gentleman from Michigan opposed it as did the gentleman from Iowa.

Mr. HOFFMAN of Michigan. I did; and I never could find out who authorized it.

Mr. GROSS. Congress authorized it.

Mr. HOFFMAN of Michigan. I could not find out what the authorization was based on, why it was needed; there were no hearings.

Mr. GROSS. I cannot enlighten the gentleman on that.

Now, we maintain quite a fleet of Cadillacs for certain Members of the other body and the House of Representatives. Are there any new air-conditioned Cadillacs to be purchased under this bill?

Mr. NORRELL. So far as I know, there is nothing for that contemplated in the pending bill.

Mr. GROSS. I am glad to hear that. I hope those available will be driven for several more years.

When will we know what the other body is going to get by way of running its operation? Is the bill for the other body to be tied onto this, and when will we know what the other body is going to spend, or are we not supposed to know?

Mr. HORAN. If the gentleman will yield, we will not know until the other body acts on their portion of the bill.

Mr. GROSS. When this bill goes over there, they tie their bill onto this bill, and then it comes back and is acted on in conference, if there is a conference. Do we know what they are asking?

Mr. HORAN. We know the total amount, yes.

Mr. GROSS. But that is about all we will know?

Mr. HORAN. Oh, no; we will have a breakdown.

Mr. GROSS. That leads me to ask this question.

Mr. HOFFMAN of Michigan. Mr. Chairman, will the gentleman yield?

Mr. GROSS. Yes.

Mr. HOFFMAN of Michigan. The gentleman just said that we will have a breakdown. Does the gentleman mean a national breakdown; does he mean that we will have a bankruptcy, or what?

Mr. GROSS. Mr. Chairman, I note on page 5 of the hearings an item for a physical therapist for the other body, for the new Senate Office Building. How many physical therapists are there in this bill?

Mr. NORRELL. There is no money at all in this bill so far as the other body is concerned. That will have to be included on the other side.

Mr. GROSS. This is under the title of "Senate Office Buildings." It says "One GS–7 physical therapist." How many do they have in the other body, does anybody know?

Mr. HOFFMAN of Michigan. One apiece.

Mr. NORRELL. I do not know what the other body will do.

Mr. MASON. That is in this bill.

Mr. GROSS. The gentleman from Illinois states it is in this bill.

Mr. STEED. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from Oklahoma.

Mr. STEED. It has been the custom for this bill, when it first comes to the House, to exclude items pertaining solely to operation of the other body. It has always been the custom for each body to recognize the prerogative of the other to set its own expenditures.

Mr. GROSS. We are all spending the taxpayers' money, is that not correct? We are responsible for spending it. The gentleman will agree with me that the other body knows when it gets this bill what the House of Representatives is spending?

Mr. STEED. Yes.

Mr. GROSS. Then should not the House of Representatives know what they are spending?

Mr. STEED. When the conference report is filed we will have the same information about what they propose.

Mr. GROSS. We will get at the best one hour to discuss it if we feel like discussing it. The gentleman knows that the conference report is not in the nature of a bill where it is laid out in this fashion. I would like to know in detail what the other body does.

There is one other item of $6,345 for a secretary for the North Atlantic Treaty Organization Parliamentarians' Conference.

Mr. NORRELL. That goes only through this session of Congress.

Mr. GROSS. For the remainder of the calendar year or the remainder of the fiscal year?

Mr. NORRELL. The remainder of the calendar year; to the end of the present Congress only.

Mr. GROSS. Then this junketing outfit must come back to the Congress to get another appropriation for a secretary for the junketeers?

Mr. NORRELL. This year we have not allowed any money for this item beyond the end of the present Congress. This item is authorized by House resolution which currently would expire with the expiration of the present Congress.

Mr. GROSS. I appreciate that.

Mr. BOW. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from Ohio.

Mr. BOW. May I point out to the gentleman that the request for the North Atlantic Treaty Organization Parliamentarians' Conference for this year was $11,710, which would have been for the entire fiscal year. However, inasmuch as the resolution expires with the Congress, the committee has allowed $6,345 for this calendar year. The legislation upon which this is based has not been made a permanent part of this bill. Therefore, if there are additional funds authorized it will have to be by new resolution.

Mr. GROSS. I appreciate the gentleman's explanation, and I hope no further money will be appropriated for this purpose.

Mr. NORRELL. Mr. Chairman, I yield 5 minutes to the gentleman from Massachusetts [Mr. LANE].

Mr. LANE. Mr. Chairman, I ask unanimous consent to speak out of order and to revise and extend my remarks.

The CHAIRMAN. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. LANE. Mr. Chairman, his last editorial will soon pass on review. On May 19, 1960, he will cover his typewriter, gather his personal mementoes, and leave behind the weekly newspaper where he started in as a service officer in 1934.

During that period he saw the Civil War veterans fade away into history; the men of the Spanish American War reach their sunset years; the World War I veterans attain middle age; and millions of younger Americans qualify as veterans by their service in World War II and in Korea.

Jim Sheehan knew of their proud memories and their problems, for he met them every day of his 26 years as service officer, associate editor, acting editor, and finally as editor of the National Tribune-The Stars and Stripes.

This is the weekly that for 84 consecutive years has been "the voice of the veterans." Under its masthead it runs the quote from Abraham Lincoln: "To care for him who shall have borne the battle and for his widow and his orphan."

To Jim Sheehan this was both a duty and a privilege. He gave his heart to the veterans as if they were his own sons and daughters.

A familiar feature that I always enjoyed reading was the front-page editorial which bore the imprint of his intelligence and his compassion.

He brought the gift of language to the service of the needy and ailing veterans and never let the conscience of the Nation forget its obligations to them.

He wrote the truth with kindness and courtesy that won the respect of those who opposed his views. He was honored by the many cccasions on which his editorials were reprinted in the CONGRESSIONAL RECORD, or were quoted by Members of Congress in support of legislation beneficial to veterans.

Every man or woman who served in the Armed Forces of the United States owes much to the sincerity and devotion of Jim Sheehan.

His work in their behalf has undermined his health. Failing eyesight requiring surgery has forced him to resign from his position as editor of the National Tribune-The Stars and Stripes.

In appreciation of our good friend, I urge Members of Congress and individual veterans throughout the Nation to write messages of thanks and of good cheer to James A. Sheehan. He and Mrs. Sheehan will continue to make their home at the Woodner, 3636 16th Street NW., Washington, D.C.

Mr. HORAN. Mr. Chairman, I yield 1 minute to the gentleman from Illinois [Mr. DERWINSKI].

Mr. DERWINSKI. Mr. Chairman, I merely wish to ask one question of some member of the committee, if I may. In view of the embarrassing circumstances that the other body found themselves in when certain excessive costs in the furnishing of their new office building took place; is there any attempt being made in the House to see that the taxpayers will be spared and protected from the possibility of there being a charge levied upon us in the years to come for excessive spending in our new building? Or, to rephrase the question, are we forewarned, as a result of the unfortunate experience in connection with the furnishing of the new office building for the other body, that we, as Members of the House of Representatives will not be embarrassed by abuses here?

Mr. STEED. Mr. Chairman, will the gentleman yield?

Mr. DERWINSKI. I yield to the gentleman from Oklahoma.

Mr. STEED. This work is progressing under the direction of the Architect of the Capitol. The work is also supervised by a special committee composed of three Members of the House on the House Office Building Commission. If the gentleman would go to the Office of the Architect of the Capitol and examine the plans and the details there, he will find what I believe to be true, that they are doing a very fine job in trying to anticipate everything that they possibly can. He will find also that some very substantial savings have been made. It is my impression from what familiarity I have with it that we are getting a very fine job.

For instance, in buying the steel for the building last year, by taking advantage of the market situation, we got the superstructure of steel at a cost which comes to about $1.6 million less than if it were bought today. Of course, when you are trying to build quarters for a lot of individuals like Members of Congress, it is pretty difficult to find a perfect norm that will suit them all. But, I do believe we are getting a very good job, and I urge every Member of the House who is interested to go to the Office of the Architect and study for himself the details of this building. I think the Members would find information there that would make them very pleased with the job that is being done.

Mr. DERWINSKI. Then the gentlemen and the committee feel there will be utmost practicality used so that we, as House Members, will not be embarrassed at a later date by some revelations in this respect?

Mr. STEED. I am confident of it, and I am sure you will find the members of the Building Committee and the Architect's Office glad to give any individual any information they have.

Mr. HORAN. The gentleman expresses my own feelings about the matter.

Mr. NORRELL. Mr. Chairman, I have no further requests for time.

Mr. HORAN. Mr. Chairman, I yield 5 minutes to the gentleman from Michigan [Mr. HOFFMAN].

WE SHOULD SHOW THE WAY

Mr. HOFFMAN of Michigan. Mr. Chairman, this morning there came to my desk, and I assume to the desks of other Members, several letters calling attention to the fact that tomorrow is Calendar Wednesday, insisting that I support the bill for Federal aid to education.

We all know that recently there has been first one pressure group and then another here in Washington. There were the schoolteachers who wanted more money for themselves and school construction.

There were the postal employees who, when they came to my office had a list of questions and they tried to insist upon a yes-or-no answer to each. First, "Will you vote to sustain the President's veto if he vetoes our bill?"

I am getting a little weary of this never-ending pressure when there just is not enough money to satisfy all. I told them I would at least have to see the bill in its final form to learn what was in it before I promised to vote for it. That is the position I am taking, because I recall very distinctly when that bill went through for a new New House Office Building—the third one that is going up—I raised the point of order that it was legislation on an appropriation bill, and the ruling came down after I was on my feet and I remained on my feet, that I was too early. When I called the attention of the Presiding Officer to the fact that I was on my feet and that I stayed on my feet, objecting, he said, "You are too late." [1] I would like to know when the proper time comes to make objection

[1] The CONGRESSIONAL RECORD (vol. 101, pt. 3, 84th Cong., 1st sess., pp. 3204–3205) shows that Mr. RAYBURN offered an amendment to an appropriation bill, authorizing construction of the new New House Office Building. Mr. CANNON, chairman of the Appropriations Committee, accepted the amendment and approved the expenditure. I made the point of order. The RECORD is as follows:

"Mr. HOFFMAN of Michigan. Mr. Chairman, a point of order.

"The CHAIRMAN. The gentleman will state it.

"Mr. HOFFMAN of Michigan. I make the point of order against the amendment that it is legislation on an appropriation bill.

"Mr. CANNON. Mr. Chairman, the point of order comes too late.

"The CHAIRMAN. The point of order does come too late.

"Mr. HOFFMAN of Michigan. How does it come too late when I was on my feet seeking recognition before the gentleman was recognized?

"The CHAIRMAN. The gentleman, as chairman of the committee, was recognized first.

"Mr. HOFFMAN of Michigan. That is to say the rule that requires recognition of the chairman of a committee would deprive another Member from making a point of order?

"The CHAIRMAN. No. Did the gentleman address the Chair?

"Mr. HOFFMAN of Michigan. I did address the Chair before the clerk finished reading.

"The CHAIRMAN. That was not the proper time.

to spending millions of dollars that has never been approved. How can Members with success make objection to that kind of procedure and get a vote on it? Whoever heard that a point of order of that kind came both too early and too late, or that the point of order was not in order? Nonsense, as everyone who heard the ruling, knew.

Many of the Members will have to do one of two things: We will have to increase the national debt several billion dollars and leave it to future generations to make payment of that debt, or we will have to tell these various pressure groups that we cannot go along with them.

The bill now before us provides for our own expenditures and disbursements. If we ourselves take a substantial cut, as I am now proposing, we will have ample justification for logically refusing to go along with desirable but unneeded expenditures until we are once more, as a Nation, on a sound financial basis.

I have a suspicion of what we are going to do. We are going to appropriate more money than we can either collect or borrow. We are going to appropriate more money, some paid by additional taxes and some by borrowing, and increase the national debt. We—that means you and I—are not going to pay one single dollar of that debt. We are just going to pass it along for future generations to pay.

Let us show our sincerity by cutting our own disbursements. This bill, H.R. 12232, concerns us all personally and as a group. If there must be economy and a lessening of appropriations—and there must be—this bill presents an opportunity to cut our own appropriations, show our good faith.

Are we not proud of ourselves? Should we not be? Spend the money, enjoy ourselves, pat ourselves on the back as liberals, and pass the debt on. We know we cannot pay it. We do not have the slightest intention of paying the debts we create. I would like to find some way of going back and facing the people, and the younger folks at home, who are all for this progress, as they call it, without being embarrassed by what I have done down here, and I wish somebody would tell me how to do it. We sure have adopted the policy of Hopkins' "Spend and spend; don't think of where it comes from and never or paying."

Here is an item that I want to ask the committee about. I know there is no use trying to amend the bill. We are all a part of this thing. At least, we have not the courage to vote against it here today. I just want to know about page 6, line 7, from some member of the committee, $2,450,000 to pay the special committees; does that include the special committees created, for example, by the Committee on Government Operations, or does it not? Or does it just mean committees authorized by the House?

Mr. HORAN. It does.

Mr. HOFFMAN of Michigan. That is all?

Mr. HORAN. Yes.

Mr. HOFFMAN of Michigan. I was wondering, because just a few days ago we gave the Committee on Government Operations $400,000 additional to what the committee got out of appropriations and to what the contingent funds provide for that committee. That is right, is it not? That is all extra? I assume they did. The Committee on House Administration came up with $400,000. That is an addition to that item, is it not? Well, the language is in the bill. I am just asking to get information.

Mr. STEED. It comes out of the current 1960 appropriation for this purpose if it is a special or select committee study or investigation.

Mr. NORRELL. This item is for committees of the House. The Appropriations Committee cannot, of course, veto what some of the other committees may do. We have the item here in the House.

I would like to make one statement, if I may.

Mr. HOFFMAN of Michigan. If the gentleman will give me more time.

Mr. NORRELL. I will yield the gentleman additional time.

I have been in Congress the same length of time the gentleman from Michigan has. I am serving now my 22d year. I will put my record in Congress up with that of anybody.

Mr. HOFFMAN of Michigan. I am not finding any fault with your record. I lived over in the same building with you for many years. You and your wife were working all the time, day and night. I am not finding any fault with the gentleman.

Mr. NORRELL. I appreciate that, and thank the gentleman.

Mr. HOFFMAN of Michigan. We are all in this mess. What I want to know is how I am going to square myself with these pressure groups.

The CHAIRMAN. The time of the gentleman from Michigan has expired.

Mr. NORRELL. Mr. Chairman, does the gentleman wish additional time?

Mr. HOFFMAN of Michigan. I do not need any more time; everybody knows what the situation is. We spend far beyond our means. We continue to increase the public debt, impose additional burdens upon our people and then have the nerve to ask them to reelect us. I will vote against this bill.

Mr. HORAN. Mr. Chairman, there are no further requests for time on this side.

The Clerk read as follows:

ATTENDING PHYSICIAN'S OFFICE

For medical supplies, equipment, and contingent expenses of the emergency room and for the attending physician and his assistants, including an allowance of $1,500 to be paid to the attending physician in equal monthly installments as authorized by the Act approved June 27, 1940 (54 Stat. 629), and, in addition, an allowance of $1,500 payable to the attending physician in equal monthly installments, and including an allowance of $75 per month each to five assistants as provided by the House resolutions adopted July 1, 1930, January 20, 1932, November 18, 1940, and May 21, 1959, and Public Law 242, Eighty-fourth Congress, $16,545.

Mr. GROSS. Mr. Chairman, I make a point of order against the language beginning in line 11, after the comma following the parenthesis, and all of line 12, on the ground that it is not authorized by law.

Mr. NORRELL. Distasteful as it is to do it, reluctantly I must say I think the point of order is well taken. It is rather disagreeable to have to make that concession, but I will admit it is subject to a point of order.

The CHAIRMAN. The gentleman concedes the point of order.

The point of order is sustained.

Mr. HORAN. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, this item has been in the bill for some 20 years. Admiral Calver does attend meetings around the country and it is the feeling of the Speaker and others who have studied this item that travel and other expenses having increased, the Admiral is entitled to this amount.

I trust that the House will authorize this amount of money so that the attending physician to the House of Representatives may be in attendance at these necessary meetings that he goes to around the country.

Mr. GROSS. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. GROSS. Mr. Chairman, was the point of order I made conceded?

The CHAIRMAN. The point of order was conceded and sustained.

Mr. GROSS. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I was hoping there would be no particular discussion of this subject, but since the issue has been raised the House should know what is at stake here. I might say to the gentleman from Washington, this is not going to deprive the House physician of a tax-free expense allowance of $1,500.

The language I struck out would have increased the allowance to $3,000 a year, tax free. That would be more than the expense allowance provided the majority leader or the minority leader or anyone else I know of with the exception of the Speaker.

If anyone can justify a $3,000 expense allowance to the House physician, who is a rear admiral in the Navy, who probably can get transportation through the Navy to those conferences the gentleman from Washington talks about, and probably does get his transportation that way, I would like to hear more about it.

Since the issue has been raised, I am going to add a few more details.

Military pay and allowances: The House physician's base pay as a rear admiral, upper half, is $16,200 a year. The special pay for physicians, dentists, and so forth, is $3,000; subsistence allowance, $574.56, and quarters allowance, $2,052. This is all annual income.

Legislative emoluments: An expense allowance of $1,500, for total gross pay

---

"Mr. HOFFMAN of Michigan. I was on my feet and addressed the Chair before the clerk finished and as soon as he finished. Now, if I have to shout louder, I can do that.

"The CHAIRMAN. The Chair could not recognize the gentleman until the clerk had finished reading."

This third office building for the House was the child of the Speaker of the House, Mr. RAYBURN.

and allowances of $23,326.56. The pending increase would have added to that $1,500 a year, resulting in a total of $24,826.56, or more than any ordinary Member of Congress receives.

If the gentleman from Washington can justify that, if he still insists that the House authorize an additional $1,500 for the House physician, I will be glad to meet you and argue the case when he gets an authorization bill on the floor.

Mr. Chairman, let me add that the House physician also has a seven-passenger, air-conditioned Cadillac and chauffeur at his disposal. This has been provided by the legislative branch. He also has a Chrysler Imperial which I understand is supplied by the Navy.

As a naval officer he also has free medical care; a free retirement plan, and an added fringe benefit is reduced rates for personal purchase—PX commissary—if he cares to avail himself of that service.

Mr. Chairman, the time has come to scrutinize all these expenditures with the utmost care, and that I propose to do in the future.

The Clerk concluded the reading of the bill.

Mr. PELLY. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, the Committee has just finished consideration of the legislative appropriation bill, which of course covers the Office of the Parliamentarian; and I just want to express this thought. Our parliamentarian has been indisposed and is in the hospital. Lew Deschler has the respect of all of us. We are all very fond of him, and I just want to use this minute to express my regret at his illness and hope that he will soon be back with us. I know all Members join me in wishing Lew well and extending best wishes.

Mr. NORRELL. Mr. Chairman, I move that the Committee do now rise and report the bill back to the House with the recommendation that the bill do pass.

The motion was agreed to.

Accordingly, the Committee rose; and the Speaker having resumed the chair, Mr. TRIMBLE, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 12232) making appropriations for the legislative branch for the fiscal year ending June 30, 1961, and for other purposes, had directed him to report the bill back to the House with the recommendation that the bill do pass.

The SPEAKER. Without objection, the previous question is ordered.

There was no objection.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

The question was taken, and the Speaker announced that in his opinion the ayes appeared to have it.

Mr. HOFFMAN of Michigan. Mr. Speaker, I object to the vote on the ground that a quorum is not present and I make the point of order that a quorum is not present.

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that further proceedings on this matter go over until Thursday.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

The SPEAKER. Does the gentleman from Michigan withdraw his point of order?

Mr. HOFFMAN of Michigan. No. I am advised that I cannot withdraw it.

CALL OF THE HOUSE

The SPEAKER. Under the unanimous-consent agreement, further proceedings on this bill have been postponed until Thursday.

Evidently a quorum is not present.

Mr. ALBERT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 93]

Alexander	Friedel	Magnuson
Alford	Garmatz	Mitchell
Anderson, Mont.	Gilbert	Morris, Okla.
Arends	Goodell	Moulder
Auchincloss	Granahan	Multer
Ayres	Green, Oreg.	Nix
Barden	Green, Pa.	Powell
Baring	Griffiths	Riehlman
Barry	Hargis	Rogers, Mass.
Baumhart	Hébert	Rogers, Tex.
Blatnik	Herlong	Scott
Bonner	Hogan	Sheppard
Brewster	Holtzman	Short
Brown, Mo.	Jackson	Smith, Kans.
Buckley	Johnson, Colo.	Smith, Miss.
Canfield	Johnson, Md.	Spence
Celler	Jones, Ala.	Taber
Chelf	Kearns	Taylor
Coffin	Kilburn	Teague, Tex.
Davis, Tenn.	Kirwan	Teller
Devine	Kluczynski	Thompson, La.
Diggs	Lafore	Walter
Durham	Landrum	Widnall
Edmondson	Lankford	Williams
Farbstein	Libonati	Willis
Flynn	McCulloch	Withrow
Fogarty	McDowell	Zelenko
Forand	McGovern	
	Madden	

The SPEAKER. On this rollcall 341 Members have answered to their names. A quorum is present.

By unanimous consent, further proceedings under the call were dispensed with.

SAN LUIS UNIT OF THE CENTRAL VALLEY PROJECT

Mr. SMITH of Virginia. Mr. Speaker, I call up House Resolution 514 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 7155) to authorize the Secretary of the Interior to construct the San Luis unit of the Central Valley project, California, to enter into an agreement with the State of California with respect to the construction and operation of such unit, and for other purposes. After general debate, which shall be confined to the bill, and shall continue not to exceed 3 hours, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Interior and Insular Affairs, the bill shall be read for amendment under the 5-minute rule. At the conclusion of the consideration of the bill for amendment, the committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. SMITH of Virginia. Mr. Speaker, I yield 30 minutes to the gentleman from Tennessee [Mr. REECE], and yield myself such time as I may consume.

The SPEAKER. The gentleman from Virginia is recognized.

Mr. SMITH of Virginia. Mr. Speaker, this is a rule providing for the consideration of the bill (H.R. 7155) to authorize the Secretary of the Interior to construct the San Luis unit of the Central Valley project, California, to enter into an agreement with the State of California with respect to the construction and operation of such unit, and for other purposes. It is an open rule providing for 3 hours of general debate.

The bill has been before the Rules Committee on several occasions. Frankly, I have serious doubts about the bill myself. There is this feature about it which is very complicated: It is a joint project between the State of California and the Federal Government, for this project is an integral part of the Federal project known as the Central Valley project.

This bill will cost the Federal Government something like $250 million and a figure of that size always scares me. However, from a thorough investigation I made outside of the testimony before the Rules Committee I ascertained that the State of California had already proceeded on the project, had made certain binding arrangements with the Federal Government, and was so deeply involved in it that there was no question in my mind that the matter would work out all in good faith by both the State of California and the Federal Government; and I hope this rule will be adopted.

There is one controversial matter in the bill and I think the House ought to know about it, because I think all of us will want to consider it. There is a clause in the bill, a saving clause, known as section 7, which provides that the fact the State of California enters its project along with the Federal project does not bind the State under certain provisions of the National Reclamation Act. In other words, it is a States' rights question and California desires to reserve its rights. It hinges around that provision in the Reclamation Act regarding the 160-acre limitation to one individual. I would hope that the House would sustain the committee on this provision and leave section 7 in the bill. But I mention it because I think it involves a controversial matter.

Mr. Speaker, this is all I have to say on the subject. I hope the rule will be adopted.

The SPEAKER. The gentleman from Tennessee is recognized.

Mr. REECE of Tennessee. Mr. Speaker, I have no demand for time on this side, and I shall not take any time myself except to say that I associate myself with the remarks of the gentleman from Virginia; I hope that the rule will be adopted and that the bill with section 7 may pass.

Mr. SMITH of Virginia. Mr. Speaker, I move the previous question.

The previous question was ordered.

The SPEAKER. The question is on the resolution.

The resolution was agreed to.

Mr. ASPINALL. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 7155) to authorize the Secretary of the Interior to construct the San Luis unit of the Central Valley project, California, to enter into an agreement with the State of California with respect to the construction and operation of such unit, and for other purposes.

The motion was agreed to.

Accordingly, the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 7155) with Mr. THOMPSON of Texas in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

Mr. ASPINALL. Mr. Chairman, I yield myself 14 minutes.

Mr. Chairman, the Committee on Interior and Insular Affairs brings to the Committee at this time one of the finest reclamation projects that we have endorsed and recommended for many years. We have so scheduled our time that it is my opinion we shall be able to present the arguments for the legislation logically, and I am sure that those who are in opposition will also have time to voice their position. Also the one section which is in dispute will be argued by the proponents and opponents, so that all Members may understand what is involved.

Due to the fact that this is an important piece of legislation and the only really large reclamation project that will be brought before the 86th Congress, I shall speak from manuscript and as soon as I finish reading the manuscript I shall try to answer any questions if there are any.

Mr. Chairman, H.R. 7155, the legislation now before the Committee, has for its purpose the authorizing of the construction and operation and maintenance of the San Luis irrigation unit of the Central Valley project of the State of California. This is a multipurpose facility with 99.97 percent of the cost allocated to irrigation, which means for all practical purposes the entire cost of construction of this project shall be repaid in full. The project has the unqualified approval of the Department of the Interior and the Bureau of the Budget. It also has unanimous support in California.

The San Luis unit is the next logical addition to the Central Valley project which was initially authorized in 1937. The American River division was added in 1949, the Sacramento Canals division in 1950, and the Trinity River division in 1955. The San Luis unit has been under study since 1943.

Mr. Chairman, this is one of the best irrigation projects that has been recommended by the House Committee on Interior and Insular Affairs for many years. To my friends who usually support these programs, may I say to you that this legislation is in line with established principles and policies approved and followed over the years. To my friends who are critical of such Federal activities, may I say to you that this legislation meets most of the objections which you have voiced here on the floor in the past. As we present our case, we shall appreciate it very much if you will give us your close attention so that if your questions are not answered by our direct presentation then we may have the opportunity and privilege of attempting to answer to your satisfaction any questions that remain.

The San Luis project, which would be authorized by this bill, meets the three all-important requisites necessary in such matters:

(a) It possesses engineering feasibility, that is, the facilities which are contemplated can be built to do the job required of them.

(b) It possesses economic feasibility, that is, the benefits to the State and Nation which will flow from the project far outweigh the costs of the project.

(c) It possesses financial feasibility, that is, the costs which are reimbursable will be repaid to the Federal Government within the regularly established and accepted payout period of 50 years.

Other speakers will go into these matters in more detail.

Mr. Chairman, for many years now, the membership of your House Committee on Interior and Insular Affairs, with me as their spokesman in such matters, have endeavored to support and champion an orderly and constructive irrigation and reclamation construction program. It has been our thinking that this is the responsibility of Congress and not of the agencies in the executive branch. To such purpose, I have met annually with the Subcommittee on Appropriations for Public Works. I have consistently presented what I considered to a reasonable and orderly program for the Bureau of Reclamation. At times this has meant asking for new starts. At other times, as this year, it has meant supporting the recommendations coming up to us from downtown.

The legislative record of reclamation and irrigation authorizations, together with amounts appropriated for construction of such programs since 1947, Congress by Congress, is as follows:

[In millions]

	Authorizations	Construction appropriations
80th Cong. (1947–48)	$40.5	$375.9
81st Cong. (1949–50)	479.1	579.0
82d Cong. (1951–52)	16.1	385.5
83d Cong. (1953–54)	130.3	247.7
84th Cong. (1955–56)	1,162.8	303.0
85th Cong. (1957–58)	71.2	361.6
Total	1,900.0	2,252.7
Average per Congress	317.0	375.0

Authorizations for the 1st session of the 86th Congress total about $14.4 million while appropriations amounted to $207 million.

It can be seen from these figures that the average authorization per Congress since 1947 has been in the amount of $317 million and the average appropriations for each Congress has been $375 million.

A large portion of the appropriations during this 12-year period has been used for construction of projects authorized prior to this period such as the initial units of the Missouri Basin and Central Valley projects and the Columbia Basin project and, of course, a large portion of the work on the larger projects authorized during this period remains to be done, but this comparison does illustrate the point that I want to make and that is that over a long period the authorizations must support the construction program.

The civil works construction program of the Corps of Engineers has received an average of over $1.13 billion per Congress during the same 12-year period compared with the $375 million for the reclamation program, or three times as much. The civil works program is fully justified and I support it. I make this comparison only to show that the reclamation program has not kept pace with the civil works program in our expanding economy.

It is my belief, and I have so recommended to the Subcommittee on Appropriations for Public Works, that the national economy can stand, in fact, would be enhanced by, an annual irrigation and reclamation construction program of around $300 million, give or take a few million as each year presented itself.

This now brings me to the amount in dollars that is involved in the legislation that is before us, and the relationship of this amount to our program of authorizations for the 86th Congress.

The San Luis bill would authorize the appropriation of $290 million for construction of the San Luis unit. In addition to the basic project, distribution, and drainage systems, costing about $192 million will be needed. These systems could be built by the local districts or they could be built by the Federal Government. Those that are built by the Federal Government must be paid for in 40 years under separate repayment contracts. I would like to point out that agreement with the State with respect to joint construction, and I do not believe there is any question but that there will be such agreement, would result in a reduction in the Federal cost of about $50 million. This is simply a matter of sharing the cost of works built to capacity to serve both the San Luis unit and State service areas. Additional amounts may be saved if a satisfactory agreement can be reached with the local power company for power transmission.

While the amount involved in this bill is a rather large single item, it must be considered in the light of the expected overall program for reclamation authorizations in the 86th Congress. In the first session, three small projects were authorized involving a total amount of only $14 million and the addition of the

San Luis project would result in authorizations totaling only a little over $300 million, plus whatever amount is required for the San Luis distribution systems. The point I am making is that this one project constitutes practically the entire authorizations program for the 86th Congress.

Mr. Chairman, I would like to discuss very briefly section 7 of the bill, which appears to be the only controversial matter involved in this legislation. Section 7 provides that the Federal reclamation laws shall not be applicable to water deliveries by the State of California from the jointly used San Luis facilities to lands outside the Federal San Luis unit service area. Now, it is my position and the position of the majority of my committee that it makes no difference whether this section is in the bill or out. We do not believe that reclamation law would be applicable to State-served lands even if this section is removed. The basis for this position is discussed in detail in the committee's report. The section was included in the bill at the request of the State of California as a means of bringing into unanimous agreement the many diverse interests and points of view in the State.

It is only by chance that there is any connection between the Federal and State projects. If two reservoir sites had existed, each government would probably have used one of them on its own terms, and the excess-lands problem, as applied to State lands, would not have arisen. But the physical situation is such that there is only one adequate reservoir site in the area to serve both projects. The State of California will have paid its entire share of the cost of constructing the joint-use facilities prior to its utilization of them for storage and delivery of water.

The majority of my committee feel that, insofar as there is a problem of large ownerships in the State-served area, this is a matter for the State of California to resolve. It is my understanding that the Governor of California is now in the process of formulating a State policy with respect to large ownerships served by State projects and that his recommendations will be submitted to the State legislature.

Because there has been so much misunderstanding and misinformation on this matter of excess lands, I want to make one point unmistakably clear. The legislation we are considering here requires the operation of the Federal San Luis unit under the provisions of Federal reclamation law, including the excess-land provisions thereof, and there is no way that large landowners in the Federal San Luis area can avoid compliance with such provisions.

In closing, Mr. Chairman, I would like to make a brief statement on reclamation development in general. In my opinion, the continued development of supplemental water supplies for existing irrigated areas is entirely consistent with sound long-term agricultural objectives. It provides the most important basic element to a successful regional economy, a stable diversified agriculture; it complements and enhances our overall agricultural economy, tending to alleviate, rather than add to, the existing imbalances or surpluses; and it helps to insure adequate future food and fiber for our rapidly growing population.

The objective of expanding the economy of the West is of prime importance to the whole Nation. The Federal reclamation program has been one of the important tools by which the underdeveloped arid and semiarid regions of the West have been made into a habitable and productive part of the Nation by promoting westward movement of population, business, and agriculture and providing a solid base for investment and employment where little existed previously. The reclamation program still has these positive influences today.

With respect to my statement that reclamation tends to alleviate the existing imbalances in agriculture, I have this to say. It is not widely understood that irrigation farming in the West enjoys a complementary, rather than competitive, relationship with the whole of the country's agriculture. Of the major crops in surplus, those that constitute more than four-fifths of the holdings and loan commitments of the Commodity Credit Corporation, reclamation farms grew only three of these crops and the 1958 contribution from reclamation farms amounted to only 1.8 percent of the holdings. The reason why this proportion is so small when the total importance of reclamation in the economy of the West is so great is that the irrigation farmer has been able to shift production from surplus crops to those that are in current demand. The nonirrigated land is largely tied to a one-crop economy and cannot diversify in response to changing demand patterns. Reclamation has played a large role in facilitating these adjustments and in enhancing the efficiency of the agriculture of the West as a whole. The misapprehension that any extension of irrigation will compound the Nation's agricultural difficulties is not borne out by the facts, either past or present.

In addition, we are advised by agricultural authorities that our present crop imbalances are merely temporary and that continued efforts are needed in research and the conservation and development of soil and water resources. They emphasize that the capacity to meet the food and fiber needs of the expanding population does not just happen automatically. Because major irrigation projects do not reach a fully developed stage until 15 to 25 years after the start of authorization, it is essential that reclamation needs be viewed in future perspective.

The Nation's population is increasing at about 8,600 additional persons per day while the acreage of good cropland diminishes at a rate of 3,000 acres per day due to conversion to roads, airports, and cities. Just how soon our agricultural abundance will give way to shortages depends on what positive steps are taken to overcome the effects of these incursions.

To accommodate the tremendous population surge toward the West the base for economic development has to be provided via water resource development for farms and cities. The material demands of these new westerners come back to the eastern industrial centers in the form of orders for new equipment, new cars, new appliances, additional fuel, chemicals, clothing, and capital.

Our reclamation authorization program for the 86th Congress, to a large extent, is included in this one bill to authorize the San Luis project. I urge my colleagues to give their approval to this legislation.

Mr. Chairman, I yield 15 minutes to the gentleman from California [Mr. SISK].

Mr. UDALL. Mr. Chairman, will the gentleman yield?

Mr. SISK. I am happy to yield to my colleague, the gentleman from Arizona.

Mr. UDALL. I want to pay a tribute to the gentleman from California. He and I came to the Congress at the same time, and we have sat alongside each other in committee for 6 years. This represents, I think, a notable day, a red letter day, for him because when he came to the Congress, his main aim as a Congressman was to get the San Luis project authorized. I have sat by him over the years and I know the work he has put into the planning of this project. Today, we have the culmination of his efforts and the efforts of his colleagues on the committee. I think this project is soundly conceived. I think it is a project which is in the national interest. Every Member of this body can conscientiously support it. I just want to compliment my colleague for the conscientious and hard work that he has put in over the past 6 years on this project, and I am delighted to be here on the floor today to support him and his project.

Mr. SISK. I certainly thank my colleague, the gentleman from Arizona, for his kind remarks. I am also deeply grateful to him for the assistance he has been in what amounted to a major endeavor to get this project thus far along the road.

Mr. Chairman, I would like first to call the attention of the Members to these charts, which we have here in front of you at the present time.

I want to call your attention to the map here to my left which shows the existing Central Valley project of California, the portion which has heretofore been constructed. That is the portion which is shown in green, starting in the north end of the State, up on the Sacramento River, showing the Shasta Dam and powerplant and the Keswick Dam and powerplant.

This portion, under construction at the present time, is the Trinity project. Then, coming on down the river, there is the Folsom Dam, Nimbus, and Sly Park. Then in the San Joaquin Valley is the Friant-Kern Canal which takes the water from Fresno County south, and the Madera Canal, together with the Delta-Mendota Canal into this area along the San Joaquin River. Also, the existing Tracy pumping plant.

Mr. ASPINALL. Mr. Chairman, will the gentleman yield?

Mr. SISK. I yield.

Mr. ASPINALL. Will you explain the direction of the flow of the water in that particular area?

Mr. SISK. I will be glad to. I appreciate the gentleman calling my attention to this. I realize that some of these things are confusing. Actually, the Sacramento is flowing down here south into San Francisco Bay, and into the Pacific Ocean through the delta area. The San Joaquin River is flowing north from the lower end of the valley, and then into the delta area, where the water also empties through the bay and into the Pacific Ocean. As a result it can be confusing, when we have rivers flowing actually in opposite directions, and these rivers are fed by a series of streams, such as the Kern, Kings, the Fresno, Merced, and so forth. In the north they are fed by the Feather River, the Yuba, and many others. But the two rivers that converge in this delta area cause the surplus water to be dumped into the Pacific Ocean.

The project we have under consideration at this time, the San Luis project, is shown in red on this map, and it proposes to use existing facilities and add new ones. At the time that the Central Valley projects was constructed in this area and Friant Dam was built and the water diverted north and south from the San Joaquin, it was necessary to replace the water taken out of the river for these people who had water rights on the San Joaquin. So at that time there was a pumping plant built at Tracy.

Mr. GEORGE P. MILLER. Mr. Chairman, will the gentleman yield?

Mr. SISK. I yield.

Mr. GEORGE P. MILLER. I think, in order to clarify the matter so that it will be better understood, we should point out there is a surplus of water in the Sacramento watershed to the north, whereas the amount of water that is collected and falls into the San Joaquin Valley and runs north, is in short supply and cannot irrigate all of the available land in the lower San Joaquin Valley.

Mr. SISK. I appreciate the gentleman's contribution, because that is exactly the situation. That is an area of deficient water. That is the reason why it is necessary to have these various water projects.

Continuing this explanation, this is the reason why it is necessary to take water out of the delta and bring it down into the Central Valley to irrigate this area of land. At the present time the Tracy pumping plant is used only in the summer or during the irrigation season, since there is no storage in this area. Those facilities are idle during the winter months when there is a great deal of rain occurring in those mountains, and millions of acre-feet of water pour out into the Pacific as waste water.

The San Luis project proposes to use these existing facilities during the months of December, January, and February to bring the water down through existing facilities and pump it into the San Luis Dam Reservoir at this point.

Mr. JONAS. Mr. Chairman, will the gentleman yield?

Mr. SISK. I shall be very happy to yield.

Mr. JONAS. Will you tell the committee whether the cotton acreage in the project is in the green-colored area or in the brown-colored area?

Mr. SISK. At the present time, so far as existing cotton acreage in the valley area is concerned, it would be scattered over the valley, including this particular area here.

Mr. JONAS. That is the brown-colored area.

Mr. SISK. That is right.

Mr. JONAS. And there is no irrigation in that area?

Mr. SISK. Yes, there is. That is what I wanted to proceed to as quickly as I outline this, and I have just about completed my outline.

This is an area which is at present under irrigation. At present it is being farmed; but we have a situation where our water table is going down and down. There was a time when this area could be irrigated with pumping from reasonable depths. At the present time that water has to be pumped from a depth of hundreds of feet. The water table has gone down and down until today the wells that are being put down in this area are over 2,000 feet deep, and some run to 3,000 feet. We are lifting water with 300-horsepower pumps in an attempt to keep this agricultural area alive. So actually we are not putting any land under cultivation by this legislation; we are simply seeking to keep land in cultivation. I want to go back to my notes for a moment. Then if any Member has a question regarding these charts I will be glad to hear them. I want to show the State overlay for just a few moments in order to get back to the physical conditions.

We are pumping to keep 440,000 acres in this area under cultivation. We are not proposing to bring in new land. This land has been farmed for a great many years.

The situation then is this: It costs about $75,000 to put down a deep well. This means that the small operator is precluded from operating in this area until such time as we can get a surface supply of water which will permit him to move in and farm his own land, whether it be 160 acres, 320 acres, or whatever it may be. The present cost is from $60,000 to $100,000 to construct and sink a well. This, as I said, requires a large operator to carry on such an operation, and the small farmer is of necessity forced to lease his land or rent his land to larger operators.

Mr. JONAS. Mr. Chairman, will the gentleman yield?

Mr. SISK. I yield.

Mr. JONAS. What is the average cotton yield per acre?

Mr. SISK. The average cotton yield per acre in this area would run about 3 bales. That has been the average yield. It would run from 2½ to 4 bales to the acre.

Mr. JONAS. Do you estimate that the cotton land will increase through additional irrigation?

Mr. SISK. No; I do not anticipate any increase in yield. In fact, all of our figures show that acreage would substantially decrease. I am not saying that the amount of cotton per acre will decrease. I would not anticipate any basic change in production per acre on this project, because at the present time it is irrigated; and it, of course, would continue to be irrigated.

Mr. JONAS. Mr. Chairman, will the gentleman yield further?

Mr. SISK. Yes; I shall be pleased to yield.

Mr. JONAS. According to the committee report, page 6, 132,000 of the 400,000 acres are devoted to cotton; and the statement is made that there will be no reduction in cotton acreage. Is that correct?

Mr. SISK. No, that is not correct. It is not correct that the report says specifically there will be no reduction. Let me get a copy of the report.

Here is the situation that exists as far as cotton acreage is concerned: The deep well pumps are bringing up so much boron in the water at the present time that the trees have become sterile in this area, the trees and the vines. This is in a semitropical area. The east side of my district is practically all devoted to vineyards, fruits, and vegetables. The boron in the water has brought about a condition in this area where the trees are sterile and will not produce. Therefore we are completely forced to row crops, cotton, and grain. That is about the only thing we can depend on in the area. However, if we are able to get a supply of surface water we will be able once again to go to the development of vineyards, groves of nuts, groves of figs, and other things that can be supported in this area with fresh surface water.

Very frankly, there is a great deal more profit in growing this kind of commodities and we do not have surplus problems.

Mr. JONAS. May I quote this sentence appearing in the third line of page 6 of the report:

> While there probably will be little change in the cotton acreage, it is expected that the acreage in irrigated grain will be drastically reduced.

It was on the basis of that sentence that I asked the gentleman if he expected there would be any reduction in the 132,000 acres of cotton now under production in that section.

Mr. SISK. I am sure those figures are taken from the Bureau of Reclamation report. Of course, I think that the amount of cotton that will continue to be grown will depend to a large extent on the economy of the cotton industry. If prices remain high there might be continued to be produced a rather substantial quantity. On the other hand, there is no comparison between the financial results of cotton and of row crops and citrus. There is lots of citrus on the east side of my district, as well as other commodities that produce high returns and would be a great deal more enhancing financially. Certainly, there is not any question in our mind but that this area will go into groves, into orchards, into vines, as rapidly as water is available, and it can be made to pay financially. For example, I might state that the Boston Land Co. a number of years ago went into this area and sunk about $3 million in an attempt to create

orchards. They had some big, beautiful trees but absolutely no fruit, since this boron situation existed, and it is my understanding they lost some $4 million or $5 million.

The CHAIRMAN. The time of the gentleman from California has expired.

Mr. ASPINALL. Mr. Chairman, I yield the gentleman 10 additional minutes.

Mr. GUBSER. Mr. Chairman, will the gentleman yield?

Mr. SISK. I yield to the gentleman from California.

Mr. GUBSER. I would like to fortify the gentleman's point by bringing out the fact that there is a definite tendency for sugar-beet production to move into the San Luis service area. One of the great limitations on sugar-beet production happens to be water quality. With improved water quality that would come from surface distribution I think it would be safe to predict that thousands of acres of sugar beets would be planted to replace acreage which is currently devoted to cotton.

Mr. SISK. There is no question but that if we can get this water in here and we get a quota on sugar beets, we would be growing sugar beets, because this is a very fine sugar-beet producing area. What is going to happen on the domestic sugar deal, I do not know.

Mr. SMITH of Iowa. Mr. Chairman, will the gentleman yield?

Mr. SISK. I yield to the gentleman from Iowa.

Mr. SMITH of Iowa. As I understand it now, there is no limitation at the present time of any kind as to the crops that can be grown on these acres, is that true?

Mr. SISK. As to the kind of crop?

Mr. SMITH of Iowa. Yes.

Mr. SISK. No. If we had a good supply of the right kind of water, that is, a water free of minerals, we can grow any kind of fruits, vegetables, and nuts known to man in this area.

Mr. SMITH of Iowa. At the present time basic commodities can be raised on those acres?

Mr. SISK. At the present time basic commodities can be grown. The one basic commodity, cotton, is being grown in this area.

Mr. SMITH of Iowa. In the Senate bill there is an amendment that restricts the growing of additional crops on these acres if water is put into this area?

Mr. SISK. That is correct.

Mr. SMITH of Iowa. If that amendment were adopted in this bill we would be extending the conservation reserve to new acres, that is, to 500,000 fertile acres?

Mr. SISK. I think the gentleman well states that. I know, of course, that an amendment is going to be offered to put this section which he refers to in the Senate bill into the House bill. I expect to agree to accept that amendment as far as I am personally concerned. I would not anticipate any particular objection to it.

I might briefly read that amendment:

(b) No water provided by the Federal San Luis unit shall be delivered in the Federal San Luis service area to any water user for the production on newly irrigated lands of any basic agricultural commodity, as defined in the Agricultural Act of 1949, or any amendment thereof, if the total supply of such commodity for the marketing year in which the bulk of the crop would normally be marketed is in excess of the normal supply as defined in section 301(b)(10) of the Agricultural Adjustment Act of 1938, as amended, unless the Secretary of Agriculture calls for an increase in production of such commodity in the interest of national security.

Mr. SMITH of Iowa. And with the adoption of that amendment we would then be reducing by 500,000 acres the acreage in the United States that can be used for growing these surplus crops; is that correct?

Mr. SISK. That is correct in ultimate result. It would prohibit new cotton acreage and would make possible the growing of nonsurplus crops on land now growing cotton. I appreciate the gentleman's comment.

I would like to quickly proceed to the overlay showing the connection between the State and the Federal projects.

Mr. COHELAN. Mr. Chairman, will the gentleman yield?

Mr. SISK. I yield to the gentleman from California.

Mr. COHELAN. I wonder if the gentleman would enlighten me as to whether all of the works depicted on this basic map are Federal works and subject to the 160-acre limitation in the reclamation law.

Mr. SISK. All the works depicted in green, and also the cross-hatched, are Federal projects and are subject to the 160-acre limitation.

Mr. COHELAN. Would it be fair to say that under the actual situation in the State of California as far as reclamation projects are concerned they are pretty much entirely Federal?

Mr. SISK. No; I would not say that, either. I could cite to the gentleman many, many projects all through this area: the Merced works in here, the Don Pedro Dam, Modesto Irrigation District, Fresno Irrigation District, all publicly owned and operated districts in the State that are not Federal. The fact of the business is that percentagewise you have a great portion of your acreage under either public water or public irrigation districts that are not under Federal reclamation.

Mr. COHELAN. Would the gentleman be willing to give me a figure of what percentage of the total it would be so that we can get a comparison between the Federal facilities and the other agencies?

Mr. SISK. I can get that figure. I do not have it at hand now. I would say that the Federal facilities would be less than 50 percent of the total.

This is an overlay indicating the proposed State project in California, a project which has been authorized by the legislature of the State of California. They passed a bond issue which will be on the ballot this year for $1.75 billion for a State project. They have already spent about $172 million on this. They have a substantial appropriation that they are working on at the present time. This is the portion in red, starting with the Oroville Dam, and over here North Bay and South Bay aqueducts.

I want to quickly point out, because I am running out of time, how their project fit into the Federal project and how they enhance each other and reduce the cost to both agencies. This San Luis site happens to be the only substantial reservoir site on the west side of the San Joaquin Valley. The State proposes to bring water from the delta area, take it down through the valley, take it over the mountains and into the Los Angeles-San Diego-San Bernardino area. They need storage for water en route, and therefore they need this storage here in this area, since this is the only real good site. They need approximately 1 million acre-feet of storage. The Federal project, which has been on the drawing boards for the last 20 years and which we are discussing today, the San Luis project, needs approximately 1 million acre-feet of storage to take care of this San Luis area in here. Therefore, by joining together and using the same site but simply building a dam a little bit higher, we are able to reduce the cost both to the Federal Government and to the State and at the same time tie the two projects together at this point. I want to make it completely clear that outside of this point, the State will have its own canal system, its own pumping plants, just as the Federal Government already has in the existing canal to get this water into the Federal San Luis area. The State will not serve water in the Federal area and the Federal Government will not serve water in the State area. They are completely separate and apart. So, for all practical purposes, they are two entirely separate projects except that they are using a common site or, as if they were operating two entirely separate businesses out of the same building.

Mr. GUBSER. Mr. Chairman, will the gentleman yield?

Mr. SISK. I yield to the gentleman.

Mr. GUBSER. I think the gentleman should state that the area upon which this reservoir will be situated is currently owned by the State of California; is that correct?

Mr. SISK. That is correct. And this, of course, goes to the point that our colleague, the distinguished chairman of the Rules Committee, mentioned awhile ago with reference to the commitments of the State to go through with it; the State of California has already proceeded to purchase lands on this reservoir site. I do not think they are all acquired, most of the site has already been acquired and is now in the hands of the State.

Mr. Chairman, this piece of legislation in essence authorizes the Secretary of the Interior to enter into an agreement with the State of California for a joint-use development which will reduce the cost of the Federal project by about $55 million; and at the same time will do the job that is needed to be done in this area where water is so desperately needed. At the same time it will help the State to construct and operate its own project in the transportation of water from the water surplus areas of the north to the water-deficient areas of the south.

Mr. BOW. Mr. Chairman, will the gentleman yield?

Mr. SISK. I yield to the gentleman.

Mr. BOW. I do not know whether I have clearly in mind the gentleman's thought, but there is an item that I should like to inquire about from the appropriations standpoint. On page 12, in section 8, there is the figure of $290,430,000. Then I find on line 19 on the same page the language—

> There are also authorized to be appropriated in addition thereto, such amounts as are required (a) for construction of such distribution systems and drains as are not constructed by local interests—

Can the gentleman advise us or give us any idea as to what that open-end authorization would amount to? We have $290 million and here is an authorization for appropriation without any limiting amount set out.

Mr. SISK. I appreciate the question the gentleman asks and I certainly want to be truthful in answering it. This is the identical language, so far as I know, used in every reclamation project. This is to provide that if the people in the area—in the Westlands Water District, or in other districts—if they desire, they may contract in seperate contracts for funds to construct the irrigation distribution system to carry water to individual farms, or they can do it through their own facilities, or they can do it through some other method. There are a number of ways. Many of these irrigation districts handle their own financing in other ways. But this provides that if the irrigation districts desire and if an equitable agreement can be worked out between the Bureau of Reclamation and the irrigation districts, the money can be borrowed to construct their irrigation facilities.

Mr. BOW. If the gentleman will yield further, I note on page 6 of the report the statement that—

> The distribution and drainage systems which, as previously stated, could be constructed by the Federal Government or by the water users are estimated to cost $192,650,000.

So that what we are in effect doing here is authorizing $290,430,000, plus the $192,650,000; and I note further that there is an open end appropriation for operation and maintenance costs. So operation and maintenance also could be included in addition to the $290,430,000 and the $192,650,000.

Mr. SISK. Any contract which the Bureau would enter into would require the payment of O. & M. costs year-by-year by the district, so that does not become a call upon the Federal Government for O. & M.

As I said, the proposed irrigation distribution system would serve approximately 440,000 acres, and this runs in the neighborhood of $200 million, $192 million, whatever figure the gentleman used. In these reclamation projects we use this language here which would permit a district if it desires to build a system through the Federal Government.

The CHAIRMAN. The time of the gentleman has expired.

Mr. HOSMER. Mr. Chairman, I yield 3 additional minutes to the gentleman from California.

Mr. JONAS. Mr. Chairman, will the gentleman yield?

Mr. SISK. I yield to the gentleman from North Carolina.

Mr. JONAS. Will the gentleman from California tell the committee, will the Government recover any interest on these advancements?

Mr. SISK. The only interest that will be paid on these funds will be for municipal water deliveries. In this area there are several small towns. There is one fair-sized city, the city of Coalinga, which recently was paying about $2,150 per acre-foot for its drinking water. They have a deplorable water situation. This project provides for a water system for the city of Coalinga. Of course, interest will be paid on their portion; other than that it is for irrigation purposes only. This is a regular project fitting into the reclamation law, which provides for these projects to be paid for without interest. It will be only municipal water on which there will be interest paid.

Mr. Chairman, I am very happy to have an opportunity to answer as best I can any questions Members may have on this project. In the time I have left I want to refer to this other map. When I spent so much time on this one, I never got to this. This is identically the same project, but blown up in that specific area which is to be served by the San Luis project. It does not show the extreme north end of the State as this map does. It shows the way the State project would fit into the Federal project.

I want to add one thing in summation, that this overall San Luis State and Federal project is approximately a $500-million project, with a total cost to the Federal Government, provided this agreement can be arrived at which is authorized by this legislation, of about $234 million, and with the cost to the State about $266 million, for this part of the State's project.

Mr. COHELAN. Mr. Chairman, will the gentleman yield?

Mr. SISK. I yield to the gentleman from California.

Mr. COHELAN. Is the project as to San Luis more Federal or more State? I am not clear on the hybrid character of it. It seems to me this is a very important point, because whether or not it is more Federal than State or more State than Federal has a great deal to do with whether the reclamation law applies. Will the gentleman comment on that?

Mr. SISK. The reclamation law will apply 100 percent to the entire Federal area. There is no State water to be delivered in this area at all. The only thing the State does is that through its own canals it brings water down here, puts it into a reservoir which they have paid cash for, their portion of it, then out through their own State canals down into the southern end of the San Joaquin Valley, Kern County, and over the Tehachapis into Los Angeles County. The State of California will deliver the waters for State purposes into this area.

Mr. COHELAN. Is it not true they are using Federal facilities to deliver the water?

Mr. SISK. No; they are not.

Mr. COHELAN. What is that, then?

Mr. SISK. Does the gentleman see the green canal?

Mr. COHELAN. Yes.

Mr. SISK. That is existing Federal facilities; that is, the facilities in which the Federal water will flow down here and go through Federal pumps, out to Federal facilities. And the water will go out through a Federal canal into a Federal service area. The State of California, separate and apart from the Federal Government, through its own pumps will pump water into its own canal and bring that water down to this reservoir, the construction costs of which they share in and pay their full share in cash before it is used. Then from there, in their own canals again, they will bring the water on down into the southern San Joaquin and Los Angeles area. This is completely and totally through a State project.

Mr. COHELAN. But they could not do that without the Federal-supported facility; is that correct?

Mr. SISK. I do not see any particular dependence in that respect. The only thing I want to say to my colleague here is, if we had two reservoir sites—if we had one here and another one here—then the Federal Government could build it in one place and the State could move over and build it in another place, but the thing is that the cost would probably run $50 million to $100 million more if that were done. But neither is dependent upon the other.

The CHAIRMAN. The time of the gentleman has expired.

Mr. ASPINALL. Mr. Chairman, I yield 5 minutes to the distinguished gentleman from Ohio [Mr. KIRWAN].

Mr. KIRWAN. Mr. Chairman, I happen to be chairman of the Committee on Appropriations that appropriates for these projects that are reported out by the Committee on Interior and Insular Affairs. I want to congratulate them for reporting out a piece of legislation such as this. It has been my privilege during the time that I have been a Member of the House of Representatives to visit every major project in the United States, starting with the Grand Coulee Dam when it was first being built and then the Hoover Dam and all the rest of them, right on down to the present day. I have seen them all. I have gone over that land, as I did years ago, when the land around Grand Coulee Dam was dry, when the dust from an automobile would be flying up through the air for miles. I remember when I was a youngster working in California, trying to take water down to the city of Los Angeles. That was back in 1910. And that was not water for industrial purposes, but just for drinking purposes. There was just a little village there, and the house that I used to board in had a picket fence around it. That was in downtown Los Angeles. Just think of what Hoover Dam has done for Los Angeles and all the southern counties in the southern part of California. Millions of people left the East and went out there. I have been over those projects. I went there

6 or 7 years ago and I tell you, when I look at the value those dams have given to America, it is amazing. This is the kind of project that builds America and gives a return to the Government and to the people. There may not be much interest in it in dollars and cents, but that interest comes back 100-fold—yes, many, many times to benefit America.

I have stated many times on the floor of the Congress that any dollar that is invested in a sound investment in America, and I am speaking now of Federal investments in such projects as this, will come back 100-fold. When you see all the land out there that this is going to irrigate, you will realize the difference that it is going to make. The difference is the difference between human slaves trying to raise something on the land as it is today, and sitting back and putting the water down to irrigate the land. That is the big difference. You will be stopping Americans from slaving out there. You will be putting the water in that section of the country to work—water that is now being wasted and going down to the Pacific Ocean. That is the difference. Think of the benefits that will come back to every one of us. The head of the Reclamation Department told me that there has been only one dam or one project in the United States that has failed to pay out. What a record that is. That is the best record I ever heard tell of in any business. You hear people talking about big business and small business, but in this reclamation project business, only one project has failed since the day that Theodore Roosevelt, that great President, put the reclamation law into effect back in 1902. I mean that sincerely. I know the day will come when the people who will go out there, even if it is only for a visit, will see one of the greatest sights not only in all of America, but one of the greatest sights on earth where this project will irrigate 400,000 acres of land, which today is all sand and dry.

I am asking you today if you ever cast a vote for a project, cast it for this one, and tell your colleagues that this is one of the best that will ever be built in this country.

Mr. HOSMER. Mr. Chairman, I yield 5 minutes to the gentleman from Iowa [Mr. JENSEN].

Mr. JENSEN. Mr. Chairman, like the gentleman from Ohio [Mr. KIRWAN], I have been a member of the committee that has appropriated for every bill that has been brought out by the Interior and Insular Affairs Committee and authorized by Congress for the past 18 years. I have been quite liberal as a conservative in voting for and supporting most similar irrigation projects as this one. I took the position long ago, after visiting all the big projects in America, in the 17 Western States, with all the dust and waste that was going on there because of the lack of water, that I would do my best to see to it that not one drop of this precious water, called "liquid gold" would be wasted away to the sea if it could be properly and beneficially used. Of course I have had some misgivings about some of these projects. I could support this project, which I am going to, with a clearer conscience, had it not been for the fact that the Interior and Insular Affairs Committee voted last year to have the Government build the Trinity River powerplant at a cost of $60 million of all the taxpayers money. Had the Pacific Gas & Light Co. built that powerplant, which they were ready, willing, and able to do, and to furnish power at a reasonable rate, which we all know that they do, they would have paid into the Federal Treasury in the next 50 years over $100 million in Federal taxes from power revenues from that Trinity powerplant alone. Thus over $160 million would have been saved to the taxpayers of America. That would have gone a long way in paying for this San Luis project.

There was another thing that I did not appreciate a bit. About the last thing Secretary Chapman did before he left office was to sign a contract with the city of Sacramento which provided that they should get about three-fifths of the power from the Shasta Dam at postage stamp rates, taking that power away from the farmers and other people in the valley who had just as much claim to that cheap power as did the city of Sacramento, just to mention a couple of the things that are distasteful to me and many others in this big program.

It is things like that that we members of the Appropriations Committee must take into consideration when we appropriate these vast sums of money for these irrigation and multipurpose projects.

I know the San Luis project will bring great benefits to that area. I also know that over a period of years the revenues which will come into the local, State, and Federal Governments are going to be enormous, because of the increased prosperity in that area.

But, as I said before, I do not like the idea that we build powerplants with the money of American taxpayers instead of permitting private industry to build those plants wherever it is proper and feasible for that to be done and to pay great sums into the Federal Treasury from which we can appropriate to build our schools, take care of the veterans, the old people, and the thousand other things we have to do. These private utilities pay into the Federal Treasury every year over $1 billion in Federal revenues, and in addition they pay over $1 billion in State and local taxes annually. Let us not kick them in the teeth; let us give them the fair treatment they and all free private taxpaying industry deserve, which includes every farmer in America. The Pacific Gas & Electric Co. is one of the best, most honest, privately owned corporations in America. No one has ever accused them of overcharging their customers.

I have been all over the San Luis project; I have zigzagged back and forth the full length of the Central Valley, in the State of California, and in all the Western States. I apologize to no one for the position I have taken and for the support I have given to those great projects which have done so much for the western people and are paying out and we must thank the American people who have loaned the money without too much complaint to develop that great desert area of the West.

Mr. HOSMER. Mr. Chairman, I yield such time as he may desire to the gentleman from Iowa [Mr. KYL].

Mr. KYL. Mr. Chairman, I hope my colleagues will pardon my taking a moment to direct a comment to the Chairman of the Interior Committee, the gentleman from Colorado [Mr. ASPINALL]. I am the youngest member of his committee, coming here in midsession; and I want to thank this gentleman, on the record, for the help and assistance he has given to me as he always gives full consideration and help to all members of the committee. He even helped me resist the temptation to avoid the daily sessions of the committee. Mr. Chairman, I thank you and congratulate you.

Mr. ASPINALL. Mr. Chairman, I thank the gentleman for his kind remarks.

Mr. HOSMER. Mr. Chairman, I yield 5 minutes to the gentleman from California [Mr. GUBSER].

Mr. GUBSER. Mr. Chairman, I rise in support of the San Luis project. I wish to commend the chairman of the committee, the gentleman from Colorado [Mr. ASPINALL] and the author of the bill, my colleague, the gentleman from California [Mr. SISK] for their fine and clear presentations on this project. Perhaps at the risk of trying to gild the lily, I shall attempt to explain it in my own manner by using a little different approach.

Let us assume for a moment that the Republican National Committee and the Democratic National Committee both wish to build new headquarters close to the Capitol here in Washington, D.C. It is estimated that each needs two floors, but there is only one available site close to the Capitol. So the Republican Committee and the Democratic Committee get together and say: "It is foolish to seek out two expensive sites; let us build a four-story building on this one lot and then two floors of it will go to the Democratic Committee and two floors to the Republican Committee and we will make our own rules about how we will use our own two floors. We will each get water from a common reservoir maintained by the city of Washington, but we will each be on a meter that measures the water consumed and we will pay for this water. However, we will use it as we see fit."

Mr. Chairman, that simile may seem farfetched, but that is exactly what the proposition is. There is only one lot or one reservoir site available, and that is the San Luis site.

We are proposing that the State of California build a capacity of 1 million acre-feet with its money and the Federal Government build its capacity of 1 million acre-feet with its money. Then we will each make our own rules and regulations about what we do with the water stored with our own money. It is not at all unlike having one barrel in which two people store water. The water in the barrel is intermingled and you cannot identify each separate atom.

But water is water. If you put in 5 gallons you take out 5 gallons. It is just that simple.

Mr. COHELAN. Mr. Chairman, will the gentleman yield?

Mr. GUBSER. I yield to the gentleman from California.

Mr. COHELAN. As the gentleman knows, I strongly support this project, but I have some question about certain details that will emerge as time goes on. Title 43, United States Code, section 523, reads:

> Water impounded, stored or carried in Federal reclamation facilities shall be subject to Federal reclamation law.

Would the gentleman like to comment on this code section?

Mr. GUBSER. May I point out to the gentleman that the law he reads concerns Federal reclamation facilities which are built 100 percent by the Federal Government. This is a joint facility and not built 100 percent by the Federal Government.

Mr. COHELAN. May I ask the gentleman, Does the Federal reclamation law contain any language at all excluding any part of such waters because a State shares in some part or in the construction of a Federal reclamation project?

Mr. GUBSER. The gentleman should present that question some time later to the experts on the Committee on Interior and Insular Affairs. I am quite confident that at no time has it ever been held that the law of one government must apply to a portion of a project which is built with funds of a State or local government.

Mr. HOSMER. Mr. Chairman, will the gentleman yield?

Mr. GUBSER. I yield to the gentleman from California.

Mr. HOSMER. I think the simple answer to the gentleman's question is that this is two separate projects coexisting in the same identical space.

Mr. GUBSER. The gentleman is right.

Mr. YOUNGER. Mr. Chairman, will the gentleman yield?

Mr. GUBSER. I yield to the gentleman from California.

Mr. YOUNGER. The question that my colleague raises is the reason why section 7 must remain in the bill.

Mr. GUBSER. Mr. Chairman, I would like to point out one other advantage of this project which I do not think has been mentioned and probably will not be mentioned. Once the San Luis project is completed, we are not restricted to serving only the area which has been described here today as the San Luis project, because we will have an investment with which we can extend the service to other areas of California which are badly in need of water. I refer specifically to what is called the central coast area. This area includes Santa Clara County, the sixth ranking county in the Nation as far as agricultural production is concerned. It includes San Benito County, it includes Santa Cruz County, and Monterey County—all rich agricultural areas.

This Congress has already appropriated $220,000 to match $220,000 of local funds to determine the feasibility of pushing a tunnel through the mountains at the back of the proposed San Luis Reservoir in order to serve this area.

Mr. Chairman, this is an area which has conserved every drop of water natural to the area by its own initiative. This is an area which, in certain parts, has taxed itself $3.80 per $100 of assessed valuation to conserve water. It is an area which grows apricots, prunes, row crops, berries, and various other specialty crops. This is an area which is cut off from the main source of water by a mountain range. It must have supplemental water if it is to survive. The construction of this project will bring Federal water 100 miles closer at an elevation 100 feet higher, making it feasible to extend service to this great water-deficient area.

Mr. Chairman, we in California are very grateful to this Congress because you have helped us in solving a terrific problem. We have a fabulous increase in population. We have a peculiar topographical situation where the water is at one end and the people at the other. We are grateful to you for all you have done in solving our problem and in absorbing that fabulous increase in population. We ask you once more to help us by passing this San Luis bill.

Mr. ASPINALL. Mr. Chairman, I yield 5 minutes to the gentleman from Oregon [Mr. ULLMAN].

Mr. ULLMAN. Mr. Chairman, let me state at the outset that the San Luis project is a good project and that I support its authorization. The need for San Luis has been clearly demonstrated and its feasibility has been substantiated. The bill before us is the result of extended negotiations and is based on our committee's consideration of the problem over a period of not just weeks or months, but of years. This proposal is a sound compromise stemming from the earlier differing approaches to the situation. It provides for an agreement between the Federal Government and the State for joint use as a first alternative, but provides at the same time that the project shall proceed on an all-Federal basis in the event that agreement on joint-use cannot be reached within a specified time.

In short, Mr. Chairman, except for one section this is an excellent bill. That one exception is section 7, which I believe is unnecessary, unwise and unsound and which I strongly urge be eliminated from the bill. At the appropriate time I will offer an amendment to accomplish that purpose.

Why must we delete section 7? The answer to that question must be seen in the context of four aspects of the San Luis proposal before us.

First, the bill authorizes a joint-venture of State and Federal Government. This is made necessary by the fact that the San Luis reservoir site is the only adequate and feasible storage site in the area. For this reason the proposal is to construct, either initially or by subsequent enlargement, facilities sufficient to serve both the recognized Federal needs and those additional needs which the State proposed to meet.

Second, as a part of this joint-venture aspect, there will be a commingling of project facilities and storage supplies. This gives the project a character which is, I believe, unique and which represents a new approach to reclamation development. Third, and of utmost importance, is the fact that the details of joint-use arrangements are not spelled out in the bill before us. They are, of necessity, left to negotiation. The fact that we are moving here into a new area of approach to reclamation problems and that the details of the probable arrangement are to be worked out later in negotiations should alert all of us to the imperative need to move with extreme care—care that we do not in any way undermine Federal interests or the basic concepts of Federal reclamation law.

This concern is given a specific character when we consider the fourth aspect of the situation—the challenge to the traditional 160-acre limitation in Federal reclamation law. The 1956 data show that, of the 1.4 million acres in the San Luis Valley, including the proposed Federal service area and surrounding areas, over 64 percent of the land is held by owners with more than 1,000 acres each. The largest of these, the Southern Pacific Railroad, accounts for 10 percent of the total and the second-largest owner, the Standard Oil Co., accounts for another 7 percent. A similar pattern is to be found in Kern County including possible areas of irrigation service south of the Federal service area. Here, of 1.1 million acres of land, we again find that 64 percent is accounted for by owners of more than 1,000 acres each. The largest owner, the Kern County Land Co., accounts for 16 percent of the total and the various oil companies with large holdings account for another 15 percent.

Mr. Chairman, I do not need to belabor the point. The basic question is whether or not the 160-acre limitation and other such Federal guideposts of reclamation law shall follow Federal investment. This being the basic question, I think all of us would agree that it should be answered either by the courts or by the Congress considering it on its own merits. I submit that section 7 adheres to neither of these approaches, and that for this reason it must be deleted. It does not consider the question on its merits, as is abundantly clear both from the report of the committee on the bill and from the arguments of those who support its retention. But, at the same time, it clearly implies an answer to the question which may be regarded as binding by the courts. This is not the proper way of either changing fundamental reclamation law or of expressing our opinion as to the intent of such fundamental law.

Section 7 may not in any way alter reclamation law as some suggest. The majority of the committee takes the position that this is the case. Then it is redundancy and should be eliminated.

On the other hand, because of the indefinite nature of Federal-State relations contemplated by this bill—which, as I have pointed out, represents a new approach to reclamation—section 7, if

left in the bill, may very well alter directly fundamental reclamation law and abrogate the 160-acre limitation in its legal application. Because of that very distinct and dangerous possibility, this section must be deleted from the bill.

Section 7 is not necessary to the bill. The measure is complete without it.

I ask the opponents of my amendment this question: Is the retention of section 7 necessary to insure that Federal reclamation law will not extend to the so-called State service area? If they answer "No," then they are saying, as some of them do say, that existing law already provides this assurance and they can have no objection to deletion of this admittedly unnecessary action. If they answer "Yes," then they are saying, in effect, "we are not sure whether or not existing law would extend to the State service area and we want to insure that it doesn't." If that is their answer, they are clearly asking that we take a position on a question of fundamental Federal reclamation law—a position either expressing our intent as to its interpretation or altering it—and I repeat that such an action by this body should only be carried out through a specific measure in its own right, with all the due consideration and hearings that such a measure must receive.

I ask the Members of this body to protect the 160-acre limitation by supporting my amendment, then to support this project which will add so greatly to the conservation and use of the water resources of our Nation.

Mr. Chairman, I want to commend the very able gentleman from California for his untiring efforts on behalf of the San Luis project. And, I want to say here that that is a very excellent example of the type of development that has built America, as the gentleman from Ohio [Mr. KIRWAN] has so ably told us a few minutes ago. This is a feasible project. It is a good project. It has been beset with many difficulties over a number of years because of the fact that involved here is not only Federal reclamation but a State water plan. So, we have had a compromise solution worked out in this bill before us today.

Generally speaking, it is a good solution. We are launching out in some respects in a new direction, an untried direction, but I think it is a sound one and the American way to get the job done.

I am concerned about one section of this bill, as many of my colleagues are, and at the proper time I plan to offer an amendment. It will be a very simple amendment to strike out section 7 of the bill. Section 7 is a very short section. It reads:

> The provision of the Federal reclamation laws shall not be applicable to water deliveries or to the use of drainage facilities serving lands under contract with the State to receive a water supply, outside of the Federal San Luis unit service area described in the report of the Department of the Interior entitled "San Luis Unit, Central Valley Project," dated December 17, 1956.

The reason that I oppose this section so strongly—and I do strongly oppose it, as do many of my colleagues to the extent that if section 7 is left in the bill we may have to vote against the project. I urge all of you who are sincere believers in this great development to join in eliminating this section.

Mr. YOUNGER. Mr. Chairman, will the gentleman yield?

Mr. ULLMAN. I yield to the gentleman from California.

Mr. YOUNGER. If, as the chairman of the committee states, it makes no difference whether section 7 is in or out, why, if it is left in, would you vote against the bill?

Mr. ULLMAN. Of course, there is a difference of opinion on this point. The committee takes the position that it makes no difference. Therefore I say why not take it out? Under those circumstances it is completely redundant. There were days of debate over in the other body on this same issue. You can read the RECORD. The other body took out this section. The feeling is so strong over there that if you really want a bill, you will be wise to accept the amendment.

Mr. YOUNGER. Mr. Chairman, if the gentleman will yield further, if it is redundant and you are in favor of the bill, why would you vote against the bill with something that is redundant in it?

Mr. ULLMAN. The proponents of section 7 take that position. I do not happen to agree. My position is that it does make a difference, that if section 7 remains in the bill, there is every likelihood that what we are doing is changing our basic reclamation law. What I am talking about is the 160-acre limitation. I think you all believe in this principle of spreading benefits to the small landowners and keeping the large operators from getting undue enrichment from our Federal investment. This is basic. I think most of my colleagues acknowledge that the taxpayers, who have through the years supported reclamation, depend upon us to make sure that this basic principle is safeguarded.

Mr. COHELAN. Mr. Chairman, will the gentleman yield?

Mr. ULLMAN. I yield to the gentleman from California.

Mr. COHELAN. On this question of whether it does or does not make any difference, and with all due respect to those who contend otherwise, I am wondering if the gentleman is aware that the Feather River Association on February 12 of this year passed a resolution demanding that if the Congress declined to delete section 7, the State of California should be asked to build San Luis in order to avoid the 160-acre limitation. Somebody obviously feels that this is important. In other words the position is taken just the other way around. The bill is threatened if section 7 does not remain in. This makes me very suspicious, and I am sure the gentleman will agree with me.

Mr. ULLMAN. This is true; a great issue has been made over this section 7. There are many people who cannot support the project if section 7 remains. I say delete section 7. What we seek is to have basic reclamation law apply. We want Federal benefits to follow our Federal investment.

Mr. HAGEN. Mr. Chairman, will the gentleman yield?

Mr. ULLMAN. I yield to the gentleman.

Mr. HAGEN. This may be a privileged matter; I think it occurred in the committee at the time of executive consideration of the bill and if the gentleman does not feel it is privileged I should appreciate his answer. Is it not true that in the committee the gentleman from Pennsylvania [Mr. SAYLOR] offered an amendment which would have spelled out the fact that Federal reclamation law did apply to the State project under these circumstances? As I understand, the gentleman was opposed to that amendment; I would like to know why.

Mr. ULLMAN. This is true. In other words, there are some who take the position that all of the water in this joint facility should be under the 160-acre limitation. I take the position that that portion of the water that comes from the Federal investment should be definitely under the 160-acre limitation. What I want to do is to preserve that basic principle. I believe that basic principle will be abrogated with section 7 in the bill and that there is a good likelihood that the benefits from this Federal project will go onto lands without the proper 160-acre limitation.

Mr. HAGEN. One more question, if I may. It is the gentleman's position, then, in offering his amendment, which he will do tomorrow, I assume, to strike section 7; and it is not his intention that water produced with State funds, let us say, shall be subject to the Federal reclamation law?

Mr. ULLMAN. My intention is that existing Federal reclamation law should apply to that portion of the water resulting from Federal investment. On that basis I feel sure that the Members of the House can and will support the amendment. It is certainly a reasonable position. It is a sound position. It is one that I know the taxpayers of America would support because they do not want to take the chance that part of their investment would go to provide water to unduly enrich large landholders beyond the 160-acre limitation principle.

Mr. HOSMER. Mr. Chairman, I yield myself 10 minutes.

Mr. Chairman, in 1542 Juan Rodriguez Cabrillo put into San Diego Bay, went ashore and found the San Diego River which he wanted to use to wash his beard in, but he could find no water in it. California has been having water problems ever since that time.

The people who came out to California in the early days before Federal reclamation was ever heard of got busy and built many of their own projects; and as the gentleman from California [Mr. SISK] indicated, over half of the State's farmlands are supplied by local private projects or public non-Federal projects. Then there came along the developments and increasing State population of the 20th century. San Francisco had to go all the way over to Hetch-Hetchy, which is somewhere in the vicinity of Yosemite Valley, in this portion of the State of California, all that distance, for its water. They have put a pipe across, and

take it from there to San Francisco many, many miles away.

The great city of Los Angeles, had to go up in the hills to another location, many miles away, and install a vastly imaginative water project the like of which the world had never before seen. It brought water down to supply that portion of the State's growing population and industry and turn this essentially desert property into the oasis it is today.

Further down in the State we had to augment the water supply for the coastal plain around San Diego and for the great Imperial Valley by the works along the Colorado River, Hoover Dam, Parker Dam, and so forth.

It is a magnificent tribute to the imagination of the men who conceived these projects and the ability of the men who executed them, and financed them, incidentally, that this great State exists as it does today.

I brought this different map, a molded relief map, out here because it shows the actual mountain ranges that hinder the movement of the water in this State. It illustrates why this San Luis project is needed.

In the southern part of the State the problem is chiefly the lack of water. In the far northern part of the State the problem is a superabundance of water and flooding. In the central portion of the State by San Francisco and below Sacramento, the so-called delta area, the water problem is the contamination of the water by boron and things like that. The gentleman from California [Mr. BALDWIN] is going to introduce an amendment, which I think nobody objects to, to protect the water purity in that area. He is always zealous in the protection of the interests of his constituency.

In the Santa Clara Valley area, which is ably represented by the gentleman from California [Mr. GUBSER] who spoke a moment ago, there is a water problem. Essentially what he wants is to take this same San Luis Reservoir and dig a hole in the back of it, the Pacheco Tunnel, to get some water down to his vital area, too. So you can see that all up and down the State we have problems. They are not the same problems at all. They are at variance, and their solution essentially, to some extent, involves an invasion of what the other man wants to do. That is, give and take is necessary.

In short, the problem of water in California is like a can of worms. It has been even more complicated by a recent recommendation of a master in the suit between Arizona and California that a good deal more water go to Arizona than had previously been anticipated. It is a problem that has placed upon the people of California for generations an awareness of the necessity and the will and the compelling reasons to do something about it.

The vast projects I have mentioned are only the beginning. If the State is to be able to progress and be able to live in the future, more and additional water projects are necessary.

I want to make sure this is understood: The San Luis project the gentleman from California [Mr. SISK] is talking about is a project that will irrigate some half million acres in roughly the portion of the San Joaquin Valley around Fresno. As he explains, the San Joaquin River runs north, the Sacramento River runs south; they meet in the delta area. Other rivers come down off the hills to join them along their courses. The coastal mountains separate the valley from the coastal area. The project of which the gentleman from California [Mr. SISK] speaks is in the middle of the San Joaquin Valley. If the State itself is going to solve its water problems in a cooperative way by taking the excess water from the north and taking it south, it has to follow some route that roughly traverses the length of this San Joaquin Valley.

Now you cannot go down the middle of the valley, naturally, because the flow is in the wrong direction. You have to move it in canals along these hills here after you pump water up from the Delta area at the Tracy Pumping Station. Since the water from the north is produced in the winter, it has to be stored so that the arid south can use it in the summer. That is where the San Luis Reservoir site comes in, so far as the State of California north-to-south water plan is concerned. It is something related to, but not the project that the gentleman from California [Mr. SISK] wants to use to irrigate this half million acres. That San Luis reservoir site happens to be, according to the geographical facts of life in California, the only site where a reservoir can be built. So you see we have two different forces here wanting to use this reservoir site. We have the State of California with its north-to-south water plan and then we have the people who want this Federal San Luis project to irrigate these acres around Fresno in the San Joaquin Valley. Of course, the only sensible thing to do is to get together. Well, we tried a lot of different ways to get together. This project has many years of history behind it, and with all these various groups fighting back and forth there, it was a very, very difficult thing to get them together. In the beginning, most of the groups in California insisted that the Federal Government was not going to have anything to do with this reservoir here. The southern group said: "Gee, when you get the Bureau of Reclamation mixed up in this thing, the first thing you know some bureaucrat hidden in Washington will turn the valves and you will not get any water at all. Not only that, in the first place you have to go down to Washington and beg the Congress to give you some money for a project. We ought to do it at home, take care of it ourselves and keep the Federal Government out of this."

But, some second thoughts occurred which were: "Poor Mr. SISK over there—if you keep the Federal Government out, altogether, he is not going to have his people taken care of. After all, it is one State and why do we not all get together on it?"

Well, the first attempt at getting together was the idea to have the State to build this project, have the Federal Government put up some of the money and work out mutual cooperation that way, to let Mr. SISK get his water from the San Luis area and have the rest of it move to Kern County and further south in an all State project. Then, the State will keep control of it and we will not have the Bureau of Reclamation back in Washington chopping off the water. Finally, we got around to where we said, "Well, that is probably not the way to do it or to go about it. They want to do some integrating of the Federal San Luis project with this Federal Central Valley project and there are a lot of other factors that might make it better if the Federal Government did it jointly with the State." Out of that came the bill before you today.

In other words, we have one reservoir site here and two people wanting to use it. We settled and got together on building a joint reservoir. Mr. SISK's project, the San Luis project has need for about 1 million acre-feet of storage capacity and in order to handle the State north-to-south water plan, it needs roughly another 1,100,000 more acre-feet of storage capacity. So we said, let us build a dam that will store 2,100,000 acre-feet and we can both use it and we will share our costs. Now the State will pump its water in there when it can get it during the rainy season, store it, and then it will pump its water out in the dry season when it is needed. The Federal Government will take its water and pump it in there in the wet season and it will take the Federal Government water up and pump it down into Mr. SISK's project when it is needed there. Well, that is reasonable. The only thing is you cannot take every drop of water and say—this is water that the Federal people put in and this is water that the State people put in, and that you have to take that same exact drop of water out. That is foolishness. Of course, we have in the law a doctrine known as the doctrine of fungible goods.

These great grain storage places all over the Middle West are full of many people's grain. They store it in there, but they do not get the same grain out that they put in. They get a chit that says, "You have so many bushels of grain here, and when you come in you can get that same amount of that same kind of grain out, but we are not going to mark all of this grain with your name on it."

The same is true with water. As a consequence, a few moments ago I made the remark that this is essentially two separate projects, coexisting at one and the same place. Because of the unidentifiable nature of each and every molecule of water, what I say is borne out.

Mr. JONAS. Mr. Chairman, will the gentleman yield?

Mr. HOSMER. I yield.

Mr. JONAS. What does the State do with the water it is bringing down from the north?

Mr. HOSMER. It is not bringing any down now. This is a project on which the State is voting on issuing bonds at the present time.

Mr. JONAS. It is not using the canal so far?

Mr. HOSMER. No. There is a Federal canal in here already.

Mr. ASPINALL. Mr. Chairman, will the gentleman yield?

Mr. HOSMER. I yield.

Mr. ASPINALL. All we are trying to do at this time is to insure necessary right-of-way along the river.

Mr. HOSMER. Yes. As a matter of fact, the State has been spending several million dollars to acquire right-of-way for the San Luis Reservoir site itself. That money is being put up by the State as part of its share of the joint project. I have tried to make that clear but I see some of the Members have a rather quizzical look on their faces. Let me reiterate: These are two separate projects. There is a State project and there is a Federal project. What the bill does is to put up the money for the Federal project and authorizes the Secretary of the Interior to enter into a contract with the State of California for the joint enjoyment of this reservoir space and certain other necessary accouterments so that it can be used by both, with the costs being shared equitably by each.

This brings me down to section 7 about which we have a certain amount of argument. Generally, I am in favor of the 160-acre limitation. My heart does not bleed any time anybody criticizes it, but I think it has been a generally good thing for the country. I also recognize that where you have a State project, that is something else, and that you cannot and should not attempt to impose a Federal law on a State project that just because it is occupying the same space with the Federal project. By no stretch of the imagination is there any reason why it should, just because as independent projects, they happen to be occupying the same space for which they have both paid their separate independent amounts of money. There is no reason for it, in my mind.

I fully agree with the report of this committee, which says that section 7 is surplusage, that without it you could take a case to court and get a decision that says, "Of course, Federal reclamation law does not apply to the State project." The 160-acre limitation cannot apply to this project by any type of legal gymnastics even without section 7.

Then, why am I up here saying that I want to keep section 7 in? For this reason: This State project is going to require better than a billion dollars for just this San Luis phase including distribution systems. The entire Statewide water plan is going to require $5 billion out of the taxpayers of the State of California before it is through. What section 7 does and why it is necessary is illustrated take for instance the argument between the gentleman from Oregon [Mr. ULLMAN], and the gentleman from California [Mr. YOUNGER]. It removes the possibility of such arguments by clean and distinct language. It assures the matter stay out of litigation which could last for 20 years. Why spell it out now and keep it out of court? While the cases are in court you cannot go out and get a bonding house to float bonds. They cannot float them while litigation is pending. In California we cannot wait 20 years for the water while this thing is in court. Section 7 makes sure to begin with it never goes to court and allows us to proceed with our vitally needed State water project. We in the State of California are only asking to be kept free of litigation so we can proceed to spend our own money on the State North-South project needed to take care of our own people. That is all we want to do.

Another thing in reference to my people down here in southern California: this water from San Luis has to come down a long canal and over what we call the Tehachapi Ridge. It has to go up a long way over the mountains and come down a long way to get to Los Angeles and the Long Beach area, and on down the plain to San Diego and the rest of these places. It is going to be costly to put the works in to do this.

A little south is another area in south end of the San Joaquin that also wants some of this water. That is Kern County, an area represented by the gentleman from California [Mr. HAGEN]. Those people want to take part in the water plan but they do not want any part of the 160-acre limitation; they do not want to be faced with lawsuits, do not want to have to fool around with a lot of nonsense from the Federal Government but they are willing to submit to such limitations and control as may be imposed by the State of California. In fact, Governor Brown said he was going to put some kind of acreage limitation on them. But, from Sacramento, the State capital, the place where it should be done as regards to the State's project which it pays for itself.

What about this hassle over section 7 in connection with Mr. HAGEN's people? If that is out of the bill they will do just as they have done for a hundred years, keep pumping water and just tell everybody else to go take a walk. What does that mean to my people in Los Angeles? It simply means that the size of the water conduits along the valley and over the mountains from the San Luis Reservoir to Los Angeles will need to be only half as big, but it will still cost 90 percent of what it would to build it of sufficient size also to supply Mr. HAGEN's people. Thus the cost of this water to my people would be greatly increased if the Kern County people take a walk on the project. It would cost my people almost twice as much as it would to get water in cooperation with Kern County projects. That is what these opponents of section 7 are going to do to us if they succeed in taking this section out of the bill. It is going to make it difficult, and probably impossible, to float bonds; it is going to make it more costly to get water to my people; it is going to delay unmercifully getting the water to them.

Incidentally, let me assure anybody from the agricultural States that what it is proposed to do here for my area by the State project will not bring any vast new areas into agricultural production. In practical effect, what water we used on flora would not be much more than for a few good-sized window boxes containing flowers. It is going to supply our factories with the water that is needed; it is going to go to supply the California workers' homes with the water they need; and unless we can get it down there at a not unreasonable cost, what an imposition that is going to be on 7 million American citizens who happen to live in southern California. That is the reason why we want this section kept in the bill. Take section 7 out and it is not going to impose a 160-acre limitation on Congressman HAGEN's people. The only thing it is going to do is to cause my people to spend a lot more money to get this water, go through a lot of lawsuits to get it, and go thirsty for a long while waiting for it. Keep section 7 in the bill. That is all we are asking you to do; it is just that simple. It is direct, I think it is understandable. I am not going to try to persuade you about the merits of Mr. SISK's agricultural phase of the project. I will merely say that this is probably one of the best reclamation projects Congress has ever had a chance to vote on. Some of you are for reclamation, some of you are against reclamation. The President would like to have this bill; the Vice President would like to have the bill; and the people of California would. And, I am speaking about the bill as now written, without deletions. It has been explained that the cost will eventually be paid back and return a good dividend to the country overall. I am not going to try to persuade you about that. All I am pleading with you to do is after we have contended with this can of worms in California, after years and years of labor and finally gone out and got all these diverse water districts and groups together on a bill they could finally agree upon after all these years, please do not louse it up here, because we have problems enough without anything like that happening.

Now I yield to the gentleman from Oregon.

Mr. ULLMAN. I thank the gentleman. First, does the gentleman think he can get this bill through the other body if he keeps in the bill this controversial section 7?

Mr. HOSMER. Let me say this, I do not think this body which is an independent part of the legislative branch of the Government, should grovel itself around to try to figure out what the other body might do. Let us face this problem when it comes up, and if there is any giving to be done I think it is about time that the giving was done on the other side of the Capitol instead of this.

Mr. ULLMAN. The gentleman said it was surplusage. It seems to me if it is surplusage it would be little to give in return for getting a bill through this House and through the other body and making sure that you have a project.

Mr. HOSMER. It is surplusage insofar as this bill is concerned, but it is not surplusage insofar as its actual, practical effect upon my part of the country is concerned and in the financing, the operation and the speed with which we can carry out our State project.

Mr. LIPSCOMB. Mr. Chairman, will the gentleman yield?

Mr. HOSMER. I yield to the gentleman from California.

Mr. LIPSCOMB. It appears to me from reading this very excellent report by the Committee on the Interior and Insular Affairs that that committee gave this subject a great deal of thought and by their thinking about this and working on it they decided to put section 7 in the bill.

Mr. HOSMER. That is right. Lots of thought was given to the matter, years of thought, and this is the way we were finally able to come out with the people involved behind the project.

Mr. BURDICK. Mr. Chairman, will the gentleman yield?

Mr. HOSMER. I yield to the gentleman from North Dakota.

Mr. BURDICK. I may say that I rise as a friend of the project, but I, too, am concerned about section 7. Is it correct to state that the gentleman does not desire by this legislation to amend the basic reclamation law?

Mr. HOSMER. No. There is no intent, there is no desire, there is no possible way to do it. Read section 7 as the gentleman from Oregon [Mr. ULLMAN] did a little while ago. At that time I thought, in my own mind, how can this gentleman possibly have in his mind that this is any attempt to alter general reclamation law? All it says is that the State portion of the project is not going to be subject to anything but State law, and the other portions of the bill say the Federal parts of the project are going to be subject to Federal law, which is as it should be. Does the gentleman disagree with that States rights proposition?

That is a part of the traditional way we set up our Constitution.

Mr. BURDICK. One more question.

Mr. HOSMER. I have one, too, but it is not answered.

Mr. BURDICK. On page 3, lines 1 to 4, it specifically defines that this project should be under the application of the Federal reclamation law. In the report on page 15 it is stated:

> Its deletion from the bill would have no substantive effect on the law applicable to the San Luis undertaking.

I submit to the gentleman that by adding section 7, rather than getting away from legal difficulties you will have conflicting legal difficulties.

Mr. HOSMER. I doubt that very much. The gentleman must not have heard my answer to the gentleman from Oregon a moment ago. I explained it fully. I was talking about legal difficulties in California with respect to floating bonds, for instance, that would result from this action to delete. If we do not settle it on the floor of Congress the State may have to take 20 years to settle it in the Supreme Court of the United States.

Mr. COHELAN. Mr. Chairman, will the gentleman yield?

Mr. HOSMER. I yield to the gentleman from California.

Mr. COHELAN. Is the gentleman aware of the fact that section 7 is probably in direct conflict right now with a recent ruling of the supreme court of California?

Mr. HOSMER. I am not aware of that, and I do not believe it is true.

Mr. COHELAN. If I might proceed, the State supreme court, I would remind the gentleman, in a decision dated April 29 of this year, stated that the 160-acre limitation is in fact State policy as well as Federal law by action of the State legislature. It goes on to point out:

> The Federal Congress by the passage of section 5 of the Reclamation Act has determined, lawfully, that the 160-acre limitation is a basic part of Federal policy. The State legislature has adopted this concept as State policy by specifically authorizing irrigation projects to enter into contracts for project waters that contain the 160-acre limitation.

That is water code—section 23195—53 AC 718.

Mr. HOSMER. That is dandy, because the gentleman has just made my point for me. Since he is interested in the 160-acre limitation, and since the State has accomplished it on State projects already, why does he not just quietly say nothing about taking section 7 out, and rely on the State law and the State supreme court decision, which he has just referred to? Everything is taken care of, and I thank the gentleman.

Mr. SMITH of California. Mr. Chairman, will the gentleman yield?

Mr. HOSMER. I yield to the gentleman from California.

Mr. SMITH of California. I would like to commend the gentleman from California for the tremendous amount of time and effort he has devoted to this project over the years and on the very fine statement he has made here today. May I take this opportunity to associate myself with the gentleman's remarks.

Mr. HOSMER. I thank the gentleman. For the purpose of the legislative record and history I have obtained permission to include here the following portions of the committee report which deal with applicability of Federal law to the Federal project and section 7 to the State project:

OPERATION UNDER FEDERAL RECLAMATION LAW

Judged in accordance with Federal reclamation law, about 325,000 acres of the 480,000 acres in the Federal San Luis service area—that is, the area within the Westlands, Panoche and San Luis Water Districts—are in large ownerships that will have to be divided into smaller ownerships. The owners of these large holdings are fully aware of the requirements of the antispeculation and excess land provisions of reclamation law, and the committee was advised that, with the exception of the Southern Pacific Co., they are willing to sign recordable contracts, in compliance with reclamation law, agreeing to dispose of their excess acreage. The Panoche and San Luis districts have already signed contracts with the Department calling for compliance with the excess land provisions. The Southern Pacific Co. owns about 58,000 acres within the San Luis service area as defined above, all of which is in the Westlands Water District. A representative of the Southern Pacific Co., appearing before the committee, stated that the company was not interested in selling its lands. At the same time, he stated that in the event of operation of the San Luis project under reclamation law the company would be willing to sit down with the district and the Bureau of Reclamation and explore the possibilities of obtaining water for company lands. The committee understands that the feasibility of the project does not depend upon furnishing water to the Southern Pacific Co. lands, and that the Westlands district will take all the water it can get regardless of whether it serves the company lands. If the company lands are not served, it would enable the district to pump less from underground. The district has the power to tax the company lands even if they take no project water.

The committee certainly recognizes the problems raised by the land ownership situation in the San Luis service area. During the committee's consideration of this legislation, concern was expressed by many individuals and groups lest the large landowners in the San Luis service area might, in some way, be exempt from the land limitation provisions of the Federal reclamation laws. For instance, the committee received this expression from the California Labor Federation:

"This language of the San Luis bills opens the door to unjust enrichment, to monopoly of water resources, and to subsidized giantism in agriculture. * * * We hope that the Congress of the United States will not breach long-established national policy."

The committee gave careful consideration to all the views and comments it received along this line and amended the bill in several respects.

The committee wants to make it unmistakably clear that the legislation it is hereby reporting requires the operation of the Federal San Luis unit under Federal reclamation law, including the excess land provisions thereof, and that there is no way the large landowners in the Federal San Luis service area can avoid compliance with such provisions.

Section 1 of the bill provides that, "In constructing, operating, and maintaining the San Luis unit, the Secretary shall be governed by Federal reclamation laws (act of June 17, 1902 (32 Stat. 388), and acts amendatory thereof or supplementary thereto)." An additional phrase—"except so far as the provisions thereof are inconsistent with this act"—which was formerly appended to this sentence was deleted by the committee. While this phrase obviously related only to provisions set out in the bill and could not be interpreted as exempting the project from other unmentioned provisions of reclamation law, the committee nevertheless removed it in order to allay the fears of those objecting to it and on the basis that the provisions in the bill will speak for themselves and that such deletion will do no harm. The following colloquy illustrates the careful consideration the committee gave to this particular matter, including its consideration of a substitute phrase reading "except as otherwise provided in this act":

"Mr. ROGERS. For a question of counsel: What is referred to by the language 'except as otherwise provided in that act'? In other words, what does the 'otherwise' mean?

"Mr. WITMER. As you will recall, Mr. Chairman, during the hearing substantially the same question was asked of witness after witness. Each one had in mind those things which were particularly pertinent to him * * *. None of the witnesses covered the field fully, however. It seems to me that 'except as herein otherwise provided in this act' covers virtually everything in the bill that follows those words.

"Now, let me illustrate, if I may, sir. If this were authorized in the usual manner to be constructed, operated, and maintained under the Federal reclamation laws, the Secretary could forthwith send up a request for appropriations and, having gotten the appropriations, begin to construct. But the bill, immediately following the words you are considering, lays conditions on such construction.

"One condition: The Secretary has to negotiate with the State. Another condition: Until January 1, 1962, arrives, he cannot proceed without an agreement. Another condition: He must have made some arrangement for drainage works. Another condition: He must specifically have gotten necessary water rights to carry out the purposes of the project. And so on throughout the bill.

"In other words, it seems to me that every provision of the bill from there on is an exception to the general authorization which precedes. If you wanted to go into it more specifically, you could mention, as one of the witnesses did, the authorization for recreation facilities, which are not provided for in general reclamation law. You could mention, as the chairman of the full committee has just mentioned, the provision for joint operation and joint control with the State. If you wanted to be still more specific, you could mention the provision which authorizes the Secretary to turn over the operation and maintenance of the project to the State, for which there is no provision in general reclamation law. And so on.

"Mr. ROGERS. In that particular situation, is it your opinion that the authority of the Secretary to turn over joint use facilities to the State for operation would open the door for exempting the project from the application of the 160-acre limitation?

"Mr. WITMER. My answer, sir, to that is a clear and unequivocal 'No.'

* * * * *

"Mr. ULLMAN. May I ask just one additional question: What is your interpretation of the effect of the amendment offered by the gentleman from California [to strike the language 'except so far as the provisions thereof are inconsistent with this Act'] as against that offered by the gentleman from Colorado [to substitute 'except as otherwise provided in this Act'], for instance, in connection with the operation of the dam? Would the language in the two instances make any difference?

"Mr. WITMER. I think the language will make no difference. The effect of the language will be no different. In other words, may I put it this way, I think the exceptions will speak for themselves as being exceptions."

To avoid any possible misinterpretation on the matter of operation of the Federal San Luis unit service area under Federal reclamation law and in order that there could be no question as to the committee's position that the State should not be allowed to serve lands within the Federal service area the committee adopted several clarifying amendments. It amended section 3(h) of the bill to read as follows:

"(h) notwithstanding transfer of the care, operation and maintenance of any works to the State, as hereinbefore provided, any organization which has theretofore entered into a contract with the United States under the Reclamation Project Act of 1939, and amendments thereto, for a water supply through the works of the San Luis unit, including joint-use facilities, shall continue [to be subject to the same limitations and obligations and] to have and to enjoy the same rights which it would have had under its contract with the United States and the provisions of paragraph (4) of section 1 of the act of July 2, 1956 (70 Stat. 483, 43 U.S.C. 485h–1), in the absence of such transfer, and its enjoyment of such rights shall be without added cost or other detriment arising from such transfer."

Attention is called to the language in black brackets added by the committee.

The committee also (1) added language in section 2 which provides that the additional capacity in the joint-use facilities for State use shall be limited to service outside of the Federal San Luis unit service area and (2) added a subsection to section 3 stating that the State shall not serve any lands in the Federal San Luis service area except as required in connection with its acceptance of the care, operation, and maintenance of the joint-use facilities. In this connection, it is quite clear that if the State takes over the operation and maintenance of the joint-use facilities it will be acting as an agent of the Federal Government under reclamation law, so far as its service to the Federal San Luis service area is concerned. The situation would be no different from that in the many instances in which irrigation districts take over the operation and maintenance of the works serving such districts. The districts are still bound by all the provisions of Federal reclamation law. A portion of the committee's discussion on this particular matter follows:

"Mr. ROGERS. * * * Your answer would indicate, Mr. Witmer, that in the event the Secretary did, under the authority of this act, turn over the operation and maintenance of this project to the State authority, the State authority would then be bound by the 160-acre limitation?

"Mr. WITMER. The State authority would in my judgment, be operating in effect as an agent of the United States, under the laws of the United States. And there would be no waiver of any provisions.

"Mr. ROGERS. And as this bill is written, there is no place in it, in your opinion, where the Secretary himself, if he continued to operate it, would have the power or the authority to waive the 160-acre limitation?

"Mr. WITMER. No, sir.

* * * * *

"Mr. ULLMAN. I would like to ask counsel a question.

"I am rather intrigued by this last statement of yours—that the State of California would be acting as an agent of the Federal Government under the reclamation law. Is that correct?

"Mr. WITMER. In effect, yes.

"Let me give you an analogy. The general reclamation laws provide for turning over operation and maintenance of projects to irrigation districts. That is done every year. In fact, Congress encourages their being taken over. But the districts are still operating for the United States. They are still subject to the control of the United States and the Secretary of the Interior. They are still bound by the excess land laws, by the requirement that water be not delivered if there is nonpayment, etc. You can run down the whole list of requirements. What you are doing is substituting the districts for the Secretary in the operation only. In the case of San Luis it would be the State substituting for the Secretary instead of an irrigation district."

RECLAMATION LAW NOT APPLICABLE TO STATE SERVICE AREAS

Section 7 of the bill provides that the Federal reclamation laws shall not be applicable to areas served by the State of California. Objection was raised in committee to this provision on the ground that it will "exempt" the State-served lands from the acreage limitation provisions of the Federal laws. In accepting section 7, a majority of the committee points out that there is nothing in the reclamation laws which, in the absence of a provision in the bill affirmatively making the land-limitation provisions applicable in the State-served area, would forbid the State from serving whatever lands it chooses on whatever terms it chooses. In other words, mere deletion of section 7 would not accomplish the purpose of those who advocate requiring owners of the State-served lands to observe the limitations which are imposed on those served by the Federal Government. It is, furthermore, the view of the majority that there is no justification for writing an affirmative provision into the bill which would require such observance. Its reasons for this conclusion are these:

(1) It is only by chance that there is any connection between the Federal and State projects. That connection arises from the physical fact that there is one and only one adequate reservoir site in the area and that both the Federal and State Governments need to use this site. If two sites existed, each government would be free to use one of them on its own terms, and the excess lands question as applied to State-served lands would not even have arisen.

Speaking, during committee debate, to the matter of applying Federal law to the State's service area, Mr. HOSMER one of the authors of the legislation, clarified the matter this way:

"So, I ask you gentleman to realize that this particular project we are talking about which the Federal Government would build and the project the State wants to build, are two separate and entirely different projects.

"Of necessity they must occupy the same particular space. But just because in an office building there are several law firms and one of the law firms is representing the plaintiff in a case and another law firm is representing the defendant does not mean they have a conflict of interest because they are operating out of the same building. They are separate enterprises and this is exactly what is occurring here."

(2) The water supply for the State's project will be derived from sources independent of the Federal project's water supply and, except for the joint works, will be handled through an entirely different system of reservoirs, canals, and other works. The Federal impoundment and transportation systems in the Central Valley will, with the construction of the Federal San Luis project, be fully utilized and could not, even if there were inclination to do so, be used to supply the State service area.

(3) The State will, under the terms of the bill, have paid its entire share of the cost of constructing the joint facilities prior to its utilization of them for storage and delivery of water. Even if the State were a customer of the United States—a water right applicant or an irrigation district, for instance—it would not be bound by the acreage limitation provisions under existing law in these circumstances. The committee sees no reason for treating the State, in its capacity as a partner in a joint venture rather than a customer, more onerously than it would a private citizen or an irrigation district.

(4) Insofar as there is a problem of large ownerships in the State-served area, the committee is confident that the Legislature of the State of California can and will enact legislation expressing the public policy of the State and representing the will of the majority of the people of the State. There would be no more justification for the United States, in other words, to decline to enter into this joint venture with the State unless the State makes its land-ownership policy conform to that of the United States than there would be for the State to refuse to enter into the arrangement unless the United States modified its policy to suit that of the State.

In order to make clear the present state of the law and the committee's reasons for believing that no exemption is provided by section 7, the following more complete explanation is offered.

Section 3 of the act of August 9, 1912 (37 Stat. 266, 43 U.S.C. 544) provides, in pertinent part, that "no person shall at any one time or in any manner * * * acquire, own, or hold irrigable land for which entry or water right application shall have been made under the said reclamation act of June 17, 1902, and acts supplementary thereto and amendatory thereof, before final payment in full of all installments of build-

ing and betterment charges shall have been made on account of such land in excess of one farm unit as fixed by the Secretary of the Interior as the limit of area per entry of public land or per single ownership of private land for which a water right may be purchased respectively, nor in any case in excess of one hundred and sixty acres, nor shall water be furnished under said Acts nor a water right sold or recognized for such excess."

During the period when irrigation water contracts were entered into with individuals rather than organized districts, it is thus clear that the law forbade delivery of water to more than one farm unit held by an individual only so long as the entire construction cost allocated to the excess unit had not been fully paid. That the law was so read and applied by the Interior Department is shown in detail in the Bureau of Reclamation's printed publication entitled "Landownership Survey on Federal Reclamation Projects" (1946) and the Interior Department's two-volume document prepared for the Subcommittee on Public Works and Resources of the House Committee on Government Operations entitled "Excess Land Provisions of the Federal Reclamation Laws and the Payment of Charges" (1956).

The same rule has been held to be applicable to irrigation district contracts. Speaking of the relation between the 1912 act and the excess-land provisions of the act of May 25, 1926 (44 Stat. 649, 43 U.S.C. 423e), the Associate Solicitor of the Interior Department advised the Commissioner of Reclamation on October 22, 1947, as follows:

"The specific question is whether the release of the limitation by section 3 of the 1912 act upon 'final payment in full of all installments of building and betterment charges' on account of 'irrigable land for which entry or water-right application shall have been made' can be held to apply to the payment in full of the joint obligation assumed by an irrigation district under a contract entered into as required by section 46 of the 1926 act.

"In construing an ambiguous enactment, it is held proper to consider acts passed at prior and subsequent sessions to which the act does not refer. * * * It seems clear that the various excess-land enactments were intended by Congress to provide a uniform and comprehensive procedure for the implementation of its land-limitation policy.

"Section 46 of the 1926 act, supra, sets out the substance of the provisions required to be incorporated in joint-liability repayment contracts with irrigation districts. That section does not purport to contain all the excess-land provisions applicable to lands affected by such contracts. * * * Since joint-liability repayment contracts were not in general use when the act of August 9, 1912, was adopted, the language used in those acts was not specifically directed at situations arising under contracts of that type. Congress apparently intended that the land-limitation provisions, in effect when the act of May 15, 1922 (42 Stat. 541), the act of May 25, 1926, and other acts covering the use of irrigation district contracts were adopted, would be applicable thereto, as nearly as practicable. Otherwise, substantially different acreage restrictions might result from the discontinuance of water-right applications and the adoption of the joint-liability repayment contract procedures.

"When all construction costs due under a joint liability repayment contract have been paid in full, there is no apparent reason why the lands receiving water under such contract should not be deemed relieved of the excess-land restrictions in the same manner as paidup water right application lands. The fact that Congress did not, in connection with the various acts authorizing or requiring joint liability repayment contracts, enact complete excess-land provisions couched in language adapted to joint-liability contracts does not in itself deny a congressional intention that the principles of its excess-land policy, as previously expressed with reference to water-right applications, should apply to such contracts. The enactment of new excess-land provisions, relative to the phases not specifically covered by the said acts, was undoubtedly deemed unnecessary because these acts became a part of the reclamation laws for all purposes and would be interpreted on that basis. The existing excess-land provisions would, therefore, become applicable.

"In the light of the foregoing, it is my view that upon full payment of construction obligation under a joint-liability repayment contract, the lands receiving water under such contract are, under the provisions contained in section 3 of the act of August 9, 1912, relieved of the statutory excess-land restrictions."

In accordance with this conclusion, a large number of repayment contracts which the Bureau of Reclamation entered into during the years 1949–54 with irrigation districts in Oregon, Idaho, Washington, California, and Montana have had written into them the following provision or its substantive equivalent:

"Pursuant to the provisions of the Federal reclamation laws, water made available hereunder shall not be delivered to more than 160 irrigable acres in the ownership of any one person * * *. The limitations stated in this subarticle shall cease to operate when the construction charge provided in this contract has been paid in full."

Many of these contracts were approved by Congress.

The present Secretary of the Interior has, in effect, announced his concurrence in this view of the law. On July 12, 1957, he said that he was unwilling to enter into a contract with the Kings River Conservation District, California, which would permit individual water users within the district to pay off their proportionate share of the construction costs to be paid by the district and thus come out, as individuals, from under the acreage limitations. But he also said—

"The Department continues to recognize and support the basic concept of reclamation law that full and final payment of the obligation of a district to the Federal Government ends the applicability of the acreage limitations."

"So long as the present acreage limitations remain in the basic reclamation law, they should be complied with, until the district has fully discharged its obligations to the Federal Government."

It is true that the provisions of the 1912 act and their relation to district obligations under the 1926 act have not been construed in any reported judicial decision, but the administrative history is such that the committee has little doubt that the payout rule could and would be properly applied in the present instance even if the State were to be thought of not as a partner but as a customer of the Federal Government. Whatever may be the merits or demerits of continuing to apply the prevailing construction of the 1912 and 1926 acts to irrigation districts in situations in which, although final payment is made only after a period of years during which they have received the benefits of interest-free Federal money and, in many cases, assistance from power revenues, it remains true that (1) the administrative practice of doing so is now so well fortified by history that it can probably be successfully attacked by no one except Congress and (2) that there is no legislation now pending before Congress, nor has any ever been introduced, which would overrule the departmental interpretation of these acts or provide other standards to guide it. The committee cannot, in this circumstance, apply to the special case of the State of California a rule which is not applicable to others.

The Warren Act (36 Stat. 925, 43 U.S.C. 523, 524) adds no substance to the claim of those who see section 7 of the bill as a breach in the Federal Government's land limitation policy. In the first place, that act, limited as its cooperative provisions are to "irrigation districts, water users' associations, corporations, entrymen, or water users," is clearly not applicable to the Federal-State venture proposed in H.R. 7155. In the second place, the Warren Act was enacted before the act of August 9, 1912, cited above and thus, as the Associate Solicitor of the Interior Department in the opinion which has already been quoted in part said, must be regarded as qualified by the payout provisions of the later act.

The whole matter is aptly summed up in the following message from Gov. Edmund G. Brown of California to Senator ENGLE which appears in the CONGRESSIONAL RECORD for May 7, 1959 (p. 6890):

SACRAMENTO, CALIF., *May 7, 1959.*

Senator CLAIR ENGLE,
Senate Office Building,
Washington, D.C.:

Having seen many statements in the press regarding the application of the Federal reclamation laws to the San Luis project, I wish to reiterate what I have said in the past regarding this matter. Upon the basis of my own legal analysis and that of all my legal advisers I am convinced that the Federal reclamation laws do and will apply to all Federal facilities and service areas of the San Luis project. In addition, with or without the language contained in section 6(a) under S. 44, the Federal reclamation laws do not and, in my view, should not apply to the State facilities and State service areas of the project. I am, and I believe that the California Legislature also is, opposed to any unjust enrichment or monopolization of benefits by owners of large landholdings as a result of either Federal or State operation.

However, I feel that the handling of this matter, insofar as State activities are concerned in relation to this project or other State construction, should come as a result of State legislation. I intend, at an appropriate time and before contracts are executed, to take this matter up with the California Legislature in order to preclude the undesirable results which I have described, but I firmly believe that this matter should not delay either Federal or State authorization or construction.

EDMUND G. BROWN,
Governor.

The worst that can be said about section 7, then, is that it is surplusage. Its deletion from the bill would have no substantive effect on the law applicable to the San Luis undertaking. Only an amendment affirmatively requiring adherence to the Federal acreage limitations notwithstanding the State's full payment of its share of the construction cost of the project would accomplish that which those who seek to delete section 7 mistakenly believe would be the effect of doing so.

The committee recognizes that the inclusions of surplusage is usually undesirable in a bill, but it also recognizes that the author of a bill, particularly when he is dealing with a subject that has involved bringing together as many diverse interests and points of view in his State and district as the San Luis project involves, should be given considerable latitude in the way he expresses the position that is arrived at, more latitude than the committee might give itself if it were to start drafting a bill ab initio.

The committee concludes that section 7 of the bill in nowise changes established principles of reclamation law. It can well understand the possibility, however, that there

might be difficulties in securing both statewide agreement and financing for the State project if there were doubt in anyone's mind concerning the relationship and the applicable laws under which each project would be constructed and operated. The committee therefore concludes that inclusion of section 7 in the bill will contribute to clarity and advance construction of the projects. The inclusion of this section—to put the matter otherwise, it is not to be interpreted as indicative of a belief on the committee's part that without it the excess land provisions of the Federal reclamation laws would be applicable to the State-served lands.

It was in the light of such considerations as those that have just been set forth that the committee rejected, by rollcall votes, amendments which would, in one case, have deleted section 7 from the bill and, in the other, replaced it with language requiring the State to agree not to serve lands which would be ineligible to receive water if they were being served by the Bureau of Reclamation.

The CHAIRMAN. The time of the gentleman from California has again expired.

Mr. HOSMER. Mr. Chairman, I yield 5 minutes to the gentleman from Colorado [Mr. CHENOWETH].

Mr. CHENOWETH. Mr. Chairman, it gives me great pleasure to rise in support of this legislation, a bill authorizing the San Luis unit of the Central Valley project in California. Coming from a reclamation State like Colorado I am always anxious to support the reclamation program. I take great pride in the fact that I have voted for all reclamation projects since I have been a Member of this House.

Mr. Chairman, I want to congratulate the distinguished chairman of the House Committee on Interior and Insular Affairs, my colleague the gentleman from Colorado [Mr. ASPINALL], for the skillful manner in which he has handled this legislation. I have been a member of the House Subcommittee on Irrigation and Reclamation which has had this project under consideration for a number of years. You have just heard the gentleman from California [Mr. HOSMER], tell you something about the difficulties which this project has encountered and of the division in California on this proposal. I was happy to see the water users of California agree on this project. The gentleman from Colorado deserves great credit for the fact that he is able to bring this bill to the floor here today, with all parties in agreement I also want to commend the gentleman from California [Mr. SISK], the author of the bill, for his perseverance and diligence in sponsoring and promoting this project over the years. He has done a splendid job.

Mr. Chairman, I had the pleasure of visiting the site of this project in California as a member of the subcommittee several years ago. I saw the need for this project in that great agricultural area and why this project is necessary. I was very favorably impressed with the need for this project. While in Fresno I met some very fine residents of California, and I want to mention just one, Mr. Jack O'Neil. I think Jack O'Neil deserves a great deal of credit also for this legislation being before the House today. He has worked with great zeal and enthusiasm for this project and has made numerous trips to Washington in support of the same. So, I want to commend Mr. O'Neil and his group for their interest in this project, because without their support I doubt if this bill would be before us today.

I have been very pleased this afternoon, Mr. Chairman, to listen to the debate on this bill. It certainly has been heartening to those of us who believe in reclamation, and who recognize that reclamation has been a great success, and that the reclamation program has made a most valuable contribution to the economy of this country. We had on the Democratic side the gentleman from Ohio [Mr. KIRWAN], who is chairman of the Subcommittee on Appropriations handling funds for all reclamation projects. Ohio is not a reclamation State. There is no reclamation in Ohio. But the gentleman from Ohio [Mr. KIRWAN] took the floor this afternoon and called attention to the fact that he has supported these projects and cited the San Luis as an outstanding project. He urged the Members of the House to support the same. All of us are grateful to Mr. KIRWAN for his interest and support. On the Republican side we had the gentleman from Iowa [Mr. JENSEN], the ranking Republican member of the House Subcommittee on Appropriations, of which Mr. KIRWAN is chairman, tell us of his support of reclamation over the years. I want to take this opportunity to thank the gentleman from Iowa [Mr. JENSEN] for the help he has given the reclamation program, and the projects I have sponsored in Colorado. His support has been most effective and helpful, and I know that I speak for many in the State of Colorado when I tell him that we are truly grateful. He has been a real friend of reclamation.

He knows what reclamation has accomplished for this country, and as long as the gentleman from Ohio [Mr. KIRWAN], and the gentleman from Iowa give reclamation projects their full support, we are in good hands. I might state that without such support there would be no reclamation projects. There are not enough of us in the western reclamation States to produce the votes on the floor of the House to pass bills of this magnitude. Here is a bill calling for over $290 million. So, it has been our purpose to sell reclamation to the Representatives from the other States who are not as familiar with the reclamation program as we are. In conclusion, Mr. Chairman, I want to mention one other matter. I refer to the speech made by the gentleman from Colorado [Mr. ASPINALL], on the floor this afternoon in support of this project, calling attention to the fact that our agricultural surpluses are not being built up by products which are produced on irrigated land. It is true that some of the basic commodities are produced on irrigated land. However, I believe he said that just a little over 1 percent of the present surplus of agricultural commodities was produced on irrigated land. I think that is something we ought to keep in mind, and to emphasize that western reclamation projects are not responsible for our present surplus.

Mr. Chairman, I hope that this bill will receive the support of the House and that it will be passed.

Mr. ASPINALL. Mr. Chairman, I yield 10 minutes to the gentleman from California [Mr. HAGEN].

Mr. HAGEN. Mr. Chairman, I do not appear here gratuitously. I have constituents who are interested in receiving water deliveries from the Federal San Luis project and I have more constituents who are interested in the integrity of the State Feather River project. I wish to commend everyone who has expressed an interest in these two projects. I particularly wish to commend the gentleman from Oregon [Mr. ULLMAN] and the gentleman from California [Mr. COHELAN] for opening up a discussion on the floor here today of the so-called section 7 of the bill. The gentleman from Oregon indicated that he would offer an amendment on Thursday, May 19, to strike that section. With respect to this possible amendment, I earnestly solicit your support of the viewpoint which I hereinafter express with respect to section 7. The section has been read into the RECORD by the gentleman from Oregon. However, certain background information is vital to an understanding of this section.

I first want to refer to the effort of California to build its own water project by a State bond issue. In 1951 the California Legislature, after extensive preliminary planning, approved a huge water project to be State financed and State operated, known as the Feather River project. The current cost of this project, or at least the features of it that were described here today, is estimated to be about $1¾ billion. The money will be derived from a State bond issue to be voted upon in California this fall. To date, as I understand, the State has spent in excess of $80 million pursuant to establishing a State Feather River project and has obligated itself, or has authorized itself to spend another $80 million in the immediate future for the same purpose, a total of $160 million.

Let us discuss the relationship of the Feather River project to the Federal San Luis project. Engineering studies disclosed that the State project would require the use of a dam site on San Luis Creek in Merced County for interim storage of water brought there by works to be wholly paid for by California and this same site is deemed necessary for the Federal San Luis project which you will approve or disapprove on Thursday.

What was the resolution of this conflict for a site? It was determined that both the State project and the Federal project had merit, and that the site conflict could be resolved by permitting both to build on the same damsite through the use of common structures thereon and directly appurtenant thereto to which both agencies would contribute their full share of the cost.

The common structures involved would be a main dam, a forebay and an afterbay, common pumps and a main line egress canal. The Federal Government would be the designated construction agent, and at completion, the operating agent of the common structures which would handle the commingled waters

brought there by completely independent water delivery structures.

Actually, the State financial contributions to the cost of construction and operation and maintenance of these common structures will be larger than that of the Federal Government. However, the State yielded to the Federal Government the role of construction and operating agent on the basis that its rights would be protected by a negotiated contract, the essential minimum features of which would be spelled out in a Federal authorizing statute. This brings me to the section 7 problem.

Inasmuch as the State would make the largest contribution to the cost of building and operating the common structures, which are not the whole of either the State or Federal projects, I might add, it was felt necessary to spell out the fact that the joint venture construction without subsidy to the State and the necessary operational commingling of quantities of water would not subject the wholly State financed project to the Federal reclamation law, including but not limited to the acreage limitation phase of the Federal law. Such statutory protection was deemed necessary in spite of the fact that prevailing interpretations of reclamation laws support the same proposition. The necessity arises from these facts:

First. No one can absolutely predict future court decisions.

Second. The State project hinges upon approval and sale of a State bond issue. The lack of explicit protection of the management integrity of the State project might affect the vote on the bond issue, and further, if the bond issue were successful in spite of that adverse effect, could affect the terms of sale and even the general salability of the State bonds. Bond issue lawyers and bond purchasers are notoriously cautious.

Third. The lack of such protection could block State-Federal agreement on a mutually advantageous construction operation.

Fourth. Statutory prohibitive language such as we seek in section 7 would tend to discourage essentially frivolous but costly lawsuits.

Thus section 7 was inserted in the Sisk bill by the author and approved by the House Interior Committee for entirely valid reasons.

Unfortunately, the opposition to this section has come from two sources, and I do not speak ill of them, I merely identify them. Those who feel that the Federal acreage limitation principle should be a part of all water projects and who also feel that all irrigation projects should have a large measure of public subsidy. Their position is implemented in three ways, in order of preference:

First. Securing Federal construction of all large water projects.

Second. Changing State laws to secure absolute conformity to the Federal law.

Third. In the case of the San Luis-Feather River projects, the imposition of Federal law to State water deliveries merely by reason of an arm's length sharing of a common site and common works at that site. This violates all logic and is typical of the attitude that the end justifies the means.

The second group are those who mistakenly feel that section 7 changes the Federal reclamation law. This is not the intent nor the effect of section 7 of the Sisk bill which specifically spells out the fact that the reclamation law applies to all water deliveries financed out of Federal funds. As a matter of fact section 7 itself does this by defining specifically a single class of water deliveries to which Federal law does not apply. Some of these objectors stipulate that the current state of Federal law is identical with the safeguards of section 7, but inexplicably do not want the Congress to state the law. They would abdicate our responsibility and thrust it on some court. Other of these objectors maintain that the current state of the law would subject the State project to the Federal law under the set of facts that we are considering. They view section 7 as an attempt to change the reclamation law. They lack the courage to test their interpretation by offering an amendment spelling their interpretation out in this bill in order that a clear-cut resolution of the justice and strength of their position can be secured in the Congress.

I say let there be light on this issue since the joint features of the Federal San Luis project and the State Feather River project represent a new departure in water cooperation with indicated great savings in cost to the Federal Government. Equity demands that the legislation meet the test of clarity on the issue of whether or not the Federal law applies to a purely State-financed project merely because of a conjunction of construction and use of some features jointly paid for by both. It is my position that section 7 should be retained substantially as it stands. If it needs clarification, let the opponents offer amendments to clarify it. Those opponents of section 7 who feel the Federal law should be applied to the State Feather River project should offer amendments to make such application clear. That would be an act of good faith. Absence of such action is merely an invitation to costly and harassing lawsuits and threats to a California bond issue which in the foreseeable future will greatly reduce demands on our Federal Treasury for California water development.

Mr. GUBSER. Mr. Chairman, will the gentleman yield?

Mr. HAGEN. I yield to the gentleman from California.

Mr. GUBSER. I commend the gentleman for his statement, and would like to ask him if he would enlarge on the point he has just mentioned, that the salability of the bonds for the State water project would be endangered or certainly be placed in jeopardy by the removal of section 7.

Mr. HAGEN. These bonds are only valuable to the extent that the State can find participants in its State project. A large group of these potential participants are in my district in Kern County and they would not buy any program from the State that involved application of the Federal reclamation law. I understand the same opinion holds in Los Angeles. We must remember that there is more to the Federal reclamation law than merely the acreage limitation. I am certain the city of Los Angeles with respect to its share of the State project do not want the Bureau of Reclamation telling them how to run it.

Mr. LIPSCOMB. Mr. Chairman, will the gentleman yield?

Mr. HAGEN. I yield to the gentleman from California.

Mr. COHELAN. Is not the gentleman overlooking the fact that the whole purpose of the project is to benefit people and not to benefit the land? I ask the gentleman if he remembers the Ivanhoe case, an identical case in which it was stated by the Supreme Court:

> It is a reasonable classification to limit the amount of project water available to each individual in order that benefits may be distributed in accordance with the greatest good to the greatest number of individuals.
>
> The limitation insures that this enormous expenditure will not go in disproportionate share to a few individuals with large land holdings.

Mr. HAGEN. May I answer in this way. I have supported the principle of acreage limitation and as a consequence some of these large landowners who are my constituents have never supported me. But it is a separate proposition to say that Federal law should apply to waters that are financed purely at the expense of the State of California and its citizens. This is an entirely separate proposition.

Mr. LIPSCOMB. Mr. Chairman, will the gentleman yield?

Mr. HAGEN. I yield to the gentleman from California.

Mr. LIPSCOMB. I, too, want to commend the gentleman for the statement he has made. I know of the work he has done in this area and I know the gentleman does have an interest in the individual.

Mr. GUBSER. Mr. Chairman, will the gentleman yield?

Mr. HAGEN. I yield to the gentleman from California.

Mr. GUBSER. Does the gentleman know whether or not the State legislature in the State of California at the present time is exploring the possibility of applying the 160-acre limitation to the State portion of the project, and would the gentleman agree that if they are that that is their prerogative and, certainly, is not the prerogative of the Congress to be the all-seeing eye and to be dictating the laws of each of the several States?

Mr. HAGEN. That is absolutely right. Unless we adopt a philosophy that we are for limitation "come hell or high water," and that the end justifies the means. We legislate for a Federal project, not for the State of California, I hope.

Mr. ULLMAN. Mr. Chairman, will the gentleman yield?

Mr. HAGEN. I yield.

Mr. ULLMAN. Is it not true that if this is redundancy and if, as the gentleman says, this does not change the reclamation law, what is all of the concern about on the part of the landholders?

The gentleman does have large landholders in this area. What is the concern about if it does not change the reclamation law?

Mr. HAGEN. First I want to commend the gentleman from Oregon for his interest in this bill. If you and I were to sit down and write a contract, we would want to cover everything that we felt we needed language on rather than relying on a body of case law which is sometimes hard to find and often ambiguous.

For example if I were leasing your barn I would want to specifically cover the contingency of fire even though perhaps the common law would cover it, but as long as we are writing a contract, why not put it in there. It avoids the possibility of some lawsuit on the basis of the absence of that clause in the contract. Similarly legislators frequently codify an accumulation of legal interpretations in the interests of clarity and avoidance of controversy.

Mr. ULLMAN. Would that not be decided by the Court?

Mr. HAGEN. We should not wait upon that. The Members of this body are not legislating for the State of California with respect to their internal management of water projects and that fact should be clearly stated.

The CHAIRMAN. The time of the gentleman from California [Mr. HAGEN] has expired.

Mr. HOSMER. Mr. Chairman, I yield 10 minutes to the gentleman from Pennsylvania [Mr. SAYLOR].

Mr. SAYLOR. Mr. Chairman, the San Luis project, which is being discussed today, is unusual in many respects. First it is unusual in that for the first time in the history of reclamation, which began 58 years ago, a State in the Nation, which is recognized as a reclamation State, has come forward and asked to participate in the project. Up until this time, every time a reclamation project has been presented, every project has been a complete Federal project. Many of these reclamation projects since 1902 have been built in areas where the Federal Government owned all of the land. That brings me to the second point that makes this an unusual project. There is only one area in this section of California where a dam can be built, which will enable not only the area which is known as the Federal area but also the area which has been called a State area, to store water from the northern part of California so that it can be used in this area, and from this area transported south to the area of Los Angeles, through the Tehachapi Mountains to the west coast, and used in the towns in that area of California.

If the State of California, as a result of a bond issue which will be voted upon by the people of that State in this fall's election decides to go ahead, then we find ourselves in the situation that the Federal Government will have absolutely no place to store water and supply much needed water to a Federal area that is entitled by every standard that has been laid down by the Congress since 1902, to have water supplied in a reclamation district.

I want you to notice section 2 of this bill which is unusual, because it contains the provisions directing the Secretary of the Interior to carry out the negotiations with the State of California that are necessary before we can proceed with the building of the San Luis project. Section 2 states:

The Secretary—

Meaning the Secretary of the Interior—

is authorized, on behalf of the United States, to negotiate and enter into an agreement with the State of California providing for coordinated operation of the San Luis unit, including the joint-use facilities, in order that the State may, without cost to the United States, deliver water in service areas outside the Federal San Luis unit service area as described in the report of the Department of the Interior, entitled "San Luis Unit, Central Valley Project," dated December 17, 1956. Said agreement shall recite that the liability of the United States thereunder is contingent upon the availability of appropriations to carry out its obligations under the same.

And, mark this well, because if this bill is passed, this is not the last time you will review the San Luis project, because once the agreement is entered into section 2 further provides:

No funds shall be appropriated to commence construction of the San Luis unit under any such agreement, except for the preparation of designs and specifications and other preliminary work, prior to ninety calendar days (which ninety days, however, shall not include days on which either the House of Representatives or the Senate is not in session because of an adjournment of more than three calendar days to a day certain) after it has been submitted to the Congress, and then only if neither the House nor the Senate Interior and Insular Affairs Committee has disapproved it by committee resolution within said ninety days.

So, if this bill is passed and an agreeable contract is entered into between the Federal Government and the State of California, then it must be brought back to the House Interior and Insular Affairs Committee and the Senate Interior and Insular Affairs Committee for their approval before the Appropriations Committee can authorize any money under this bill.

Mr. ASPINALL. Mr. Chairman, will the gentleman yield?

Mr. SAYLOR. I am happy to yield to my chairman.

Mr. ASPINALL. I want to commend my colleague for bringing this provision to the attention of the Committee. This is an important provision, and as usual, my colleague from Pennsylvania always has a keen insight into important provisions of legislation. I thank him again for bringing this provision to the attention of the Committee.

Mr. GUBSER. Mr. Chairman, will the gentleman yield?

Mr. SAYLOR. I yield.

Mr. GUBSER. I wish the gentleman would correct me if I am wrong in this statement: Is it not true that the gentleman from Pennsylvania now in the well of the House offered an amendment in the committee which stated that Federal reclamation law should apply to the State portion of the project?

Mr. SAYLOR. I did.

Mr. GUBSER. And is it not true that the amendment was rejected by the committee?

Mr. SAYLOR. That is correct.

Mr. GUBSER. And is it not true that apparently the Committee on Interior and Insular Affairs decided that the reclamation law shall not apply to the State portion of the project based upon that vote?

Mr. SAYLOR. Based upon the vote, at least the 160-acre provision should not apply.

To come to the conclusion which the gentleman has done from my one amendment that was defeated I do not see is a justifiable deduction.

Mr. GUBSER. Was I incorrect and should I revise my statement to the extent that the gentleman tried to insert an amendment which would make the 160-acre limitation apply?

Mr. SAYLOR. That is correct. That I did.

Mr. ASPINALL. Mr. Chairman, will the gentleman yield?

Mr. SAYLOR. I yield to the gentleman from Colorado.

Mr. ASPINALL. And in addition, the feeling of the majority of the committee was to the effect that Federal law should not be applied to State projects?

Mr. SAYLOR. That is correct.

Mr. HAGEN. Mr. Chairman, will the gentleman yield?

Mr. SAYLOR. I yield to the gentleman from California.

Mr. HAGEN. I have admired the gentleman from Pennsylvania for some time for his knowledge of reclamation law and reclamation projects. I would like to ask the gentleman, is not the worst possible position that could be assumed on this issue a mere striking of section 7? Is it not much more preferable to have the present section in the bill or the section which the gentleman offered in committee?

Mr. SAYLOR. That is a matter of opinion. I would have liked to have seen my amendment in the bill or I would not have offered it.

Mr. Chairman, I have had a number of questions asked me by colleagues on both sides of the aisle as to why I support this project, why I support this project at a time when the amount of money involved is so much and, according to some people, there has not been shown a need for any project, let alone another huge one in California.

Let me give you some good reasons why this bill should be enacted and why this project should be approved.

This is a true reclamation project. Ninety-eight percent of the cost of this project goes to irrigation, and is reimbursable which was the basic purpose of the original act of 1902. No bill covering any reclamation project in the 6 terms I have been a Member of Congress has had such a high proportion of its cost go into the reclamation of land. In view of the fact that some of this land which would be irrigated by the project is already under irrigation, I was interested in finding out what would be the effect of placing this new irrigation

water upon this land, supplementing the pumping that is going on in that area.

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

Mr. HOSMER. Mr. Chairman, I yield the gentleman 5 additional minutes.

Mr. SAYLOR. Mr. Chairman, every witness who appeared, both from the Department and from the area, testified that the sweet water that comes down from the northern part of California and which will be stored in this dam will if allowed to flow onto the land to be irrigated, instead of raising many of the crops which are now in surplus, it will be possible in this area to convert this territory into a place where it will grow crops and foodstuffs which are in short supply. I think this alone will be a tremendous benefit not only to the State of California but it will be a tremendous benefit to the United States.

Another important feature of what this bill actually does, is extend to the south side of the Central Valley the same benefits which Congress in its wisdom extended to the east side of the Central Valley of California, and to enable the people who live in the south side of the Central Valley area to receive the same benefits that the people who live on the east side of the valley have already received.

The land in this area is just as good and will produce the same kind of crops that are being produced over on the east side of the valley.

It is also interesting to note that the cost-benefit ratio in this project is unusually high. Most of the projects which the Bureau of Reclamation has brought to us in recent years have averaged less than 1.5 to 1.

This project has a better than 2½ to 1 benefit cost ratio. That is one of the highest ratios that this Congress has had presented to it in the last 12 years.

Mr. McCORMACK. Mr. Chairman, will the gentleman yield?

Mr. SAYLOR. I am happy to yield to the majority leader.

Mr. McCORMACK. One of the great challenges, as I see it, confronting our people in the years that lie ahead is the availability of water for drinking and sanitation purposes. Does the gentleman agree that that opinion of mine has substance?

Mr. SAYLOR. It certainly does.

Mr. McCORMACK. I think we have a great challenge within the immediate years ahead; is that not right?

Mr. SAYLOR. That is right. And, I might say to the majority leader that the water problem that confronts the American people is confined not just to the western reclamation States, but it also affects his State and mine here in the East. It is a national problem.

Mr. McCORMACK. Everywhere; it is a national problem. And, I understand, in addition to the other benefits that will flow from this project, that it also covers the field of water available to the communities out there, towns, cities, and so forth, in connection with their future water demands, from the angle of drinking and sanitation and so forth.

Mr. SAYLOR. That is correct. It will make available to the southern part of the State a great supply of fresh water which is now running to waste in the San Francisco Bay.

One of the important things about this bill is that after all of the controversy that has existed over the years, the State and all of the parties to it have gotten together and agreed unanimously upon this bill with the exception of section 7. That is a matter on which the House will have to work its will when the bill is read for amendment under the 5-minute rule.

There is another provision in the bill that I would like to call attention to, and that deals with section 8. Section 8 places a limitation upon the amount of money that can be expended for this project. This follows the policy which the House Committee on Interior and Insular Affairs insisted be placed in each reclamation bill which comes out of that committee. It does, however, have one sentence in it which I am going to offer an amendment to delete, when we get to that stage, and that appears on page 12, lines 19 to 23, which is an open end appropriation for the construction of distribution systems and drains and for operation and maintenance. It is my belief that these features of the bill should be included in a closed contract just as the others are.

Mr. Chairman, I might say that after all of these nice things I have had to say about the project, some may wonder if there is not something that you can complain about. And, I would like to point out to my friends from California that while this is a good project and it is going to cost a lot of money, the Congress has given away or has placed itself in such a position that the Federal Government and the people in that area will have to pay for it completely out of their own pockets. If the committee would have accepted some years ago a provision which would have sold falling water from the Trinity project, which is also a part of the Central Valley, to one of the private utilities that made an offer for it, from that income alone there would have been more than sufficient funds to pay for this project. That was not the will of the members of the committee, and so this is one of the things that Congress will have to face up to in this bill.

Mr. ASPINALL. Mr. Chairman, I yield such time as he may desire to the gentleman from California [Mr. JOHNSON].

Mr. JOHNSON of California. Mr. Chairman, as a cosponsor of the legislation now before us, I would like to rise in support of H.R. 7155. First of all, however, I would like to commend my colleague from Colorado, Mr. WAYNE ASPINALL, chairman of the Committee on Interior and Insular Affairs, and my colleague from Texas, Mr. WALTER ROGERS, chairman of the Subcommittee on Irrigation and Reclamation, which considered the bill.

The committee examined this bill extensively. It studied the project in the record and on the ground and came up with a sound recommendation for the San Luis project. The wonderful work of the committee members did much toward resolving the many problems so that with one exception, which I personally believe of minor importance, we have a bill we can give our united support.

I thank Chairman ASPINALL and Chairman ROGERS for their fine work.

Looking at the bill itself, Mr. Chairman, we find H.R. 7155 would authorize construction of an outstanding reclamation project. This project would irrigate 480,000 acres of high productive land in the San Joaquin Valley. Much of this land now is irrigated from ground supplies, but the underground pools are being depleted at an extremely rapid pace. Five times more water is being drawn from the ground than is being replaced each year. One city of 6,000 people has become so desperate that it is hauling its domestic water by tank car.

If this goes on much longer, the fine farms of the area will return to dust. The desert will reclaim the land. Certainly in this day when an expanding population demands more and more foodstuffs we do not want that type of reclamation.

The San Luis project will permit proper reclamation, development of the fruit, vegetable and dairy commodities for which there is a substantial demand in the immediate region.

The Bureau of Reclamation predicts that of the 480,000 acres to receive the benefits of this project, 88,000 acres will be in truck crops, 22,000 acres in deciduous fruit and grapes, 66,000 acres in miscellaneous field crops, 88,000 acres in alfalfa, 44,000 acres in irrigated pasture, 132,000 acres in cotton and only 44,000 acres in irrigated grain and grain hay. A substantial amount of the 400,000 acres now under cultivation is in wheat production. The transformation created by the availability of an increased stable supply of good water thus will have an effect on our national wheat surplus problem.

The transformation from wheat and cotton to fruit and similar commodities will mean a gross increase of agricultural production of $35 million a year. All of this will be added to our gross national product for the benefit of the entire Nation. This $35 million will be money not otherwise in circulation and will be spent for automobiles, refrigerators and other appliances, furniture, shoes, clothing, frozen and canned goods from throughout the Nation, homes, and in that way provide more jobs for people throughout the Nation. The transition from the large holdings to the smaller, family type farm also will provide more jobs and more homeowners in the immediate area. This, of course, will bolster and stabilize the economy to the benefit of the entire Nation.

The committee has found the benefit-cost ratio to be feasible economically with a benefit of 2½ to 1.

The project is unique in one way. It is the first Federal reclamation facility constructed in cooperation with a State government. In developing independent water plans, the State and Federal Governments settled on the San Luis site as the only feasible location for a major storage installation. From this came the logical decision that the project should

be developed and used jointly, although each agency would have its own basic collection and distribution system. The Federal Government has developed projects with local agencies for many years in all parts of the Nation.

There is no reason why the Federal Government and States cannot work together, especially when the scope of the projects far exceed the jurisdiction of any single local agency.

There are many flood control, reclamation, and other types of projects involving large areas, even more than one State. These projects could be developed most successfully on a cooperative State-Federal basis.

The San Luis project is a pilot plan for all these developments. I believe the Congress should try this pilot program, especially when committee and bureau feasibility reports indicate it will be so successful.

State participation in this project would save the Federal Government $50 million.

This is another benefit for all the people of the Nation.

Reclamation programs were developed as a program of the people. Here we have a reclamation project which will benefit the people in many ways:

By raising the standard of living of the immediate area, which will have its effect throughout the Nation.

By providing the needed farm commodities for a growing nation.

By adding $35 million a year to our national economy, which means more products and more jobs.

All of this can be achieved at relatively low cost to the people of the Nation, since all of the distribution system costs will be repaid and almost all of the basic project costs will be repaid. The annual benefit-cost ratio is 2½ to 1.

Mr. Chairman, our fine committee has given this matter long and thorough study over the years and in summary had this to say:

On the basis of its extensive consideration and examination of the San Luis project over the past several years, the committee finds that the Federal San Luis unit is physically and economically feasible and a desirable and logical addition to the Federal Central Valley project.

The committee finds that water service to this area is urgently needed to prevent most of the area from returning to desert, and the committee believes that the San Luis unit should be authorized and construction undertaken at the earliest possible date.

The legislation here reported provides a sound basis for joint Federal-State development and use of the San Luis Reservoir site and for an agreement between the Secretary of the Interior and the State with respect to such development. At the same time the legislation provides the means whereby the project can be constructed as an all-Federal development in the event an agreement between the Department and the State is not reached.

I urge you to approve this project. Thank you.

Mr. ASPINALL. Mr. Chairman, I yield such time as he may desire to the gentleman from California [Mr. McFALL].

Mr. McFALL. Mr. Chairman, I rise in support of H.R. 7155, the Sisk bill to authorize the San Luis unit of the Central Valley project and to enter into an agreement with the State of California with respect to its construction and operation.

This proposal represents, in my opinion, the best possible example of Federal-State action in water resources development.

The operation of the Federal San Luis unit would conserve and regulate surplus wintertime water that now wastes into the Pacific Ocean and make it usable, along with additional CVP water from storage, in the water-deficient San Joaquin Valley to the south.

The water made available would provide a supplemental water supply for the irrigation of about 480,000 acres of highly productive land on the west side of the San Joaquin Valley. The unit would also provide some domestic and municipal water as well as important benefits to recreation and to the preservation and propagation of fish and wildlife.

At the same time, construction of this Federal unit will allow the development of a State project to serve additional thousands of acres of land badly needing irrigation and will serve as the basis for the transportation of water from north California to south California as is contemplated in the State water plan.

This Federal-State cooperative pattern might well also provide solutions to other water problems throughout the Nation, with resulting savings to the States involved and to the Federal Government.

The joint-use plant of the San Luis Reservoir site, apparently the only adequate and feasible storage site in the area, is the outcome of a situation in which the Federal Government and the State of California found themselves proposing key projects utilizing the same reservoir site. The State's Feather River project plan calls for storage at the San Luis location, as does the Bureau of Reclamation unit of the great Central Valley project.

In spite of the manifest difficulties in drawing up workable legislation to accomplish this joint purpose, the House Interior Committee, through the persistent and knowledgeable leadership of Congressman SISK over the past 4 years, has drawn a bill that can and will do the job.

The San Luis project directly fits the purposes and objectives of our national reclamation policy, and the Secretary of Interior, after full study, has described the project as economically feasible and with a very favorable benefit to cost ratio of 2½ to 1.

The project would be operated under Federal reclamation law, and I would support amendment of the measure under consideration to delete the section 7 provision in this regard, which has been the subject of some considerable discussion and misunderstanding.

The committee report makes it clear that this section is not necessary to carry out the purposes of the bill. Some people feel that the section would alter or modify existing provisions of Federal reclamation law, including the 160-acre limitation. I feel that under these circumstances it is better to leave the Federal law as it is and remove section 7 from this bill. We in California are not seeking any exemptions or favors that are not now available to all other States under general reclamation law. The 160-acre limitation has long since proved its worth in the development of our West.

Because of the lack of a firm water supply, the area to be served by San Luis does not now lend itself to the development of family-sized farms. With a firm supply of good quality water it is expected there will be a big change in the crop pattern and this, together with application of the acreage limitations, will cause the large holdings to be broken up into family-sized farms in the best tradition of American agriculture.

Also it is important to note that the pattern of family size farming in California is toward the nonbasic crops, the speciality crops such as fruits, nuts, and vegetables, which are not a part of our great national agriculture surplus problem. It is estimated that without this project, lands remaining under irrigation from ground units would be devoted to grain and cotton, which you will recognize as two of our problem crops.

The action we take today on this legislation will set the pattern for water and agriculture development in California for the next decade or longer and it may well show the way to other States with similar problems. Our State and our Nation need this project. I earnestly solicit your support of this measure.

Mr. ASPINALL. Mr. Chairman, I yield such time as he may desire to the gentleman from Nebraska [Mr. McGINLEY].

Mr. McGINLEY. Mr. Chairman, as a member of the committee on Interior and Insular Affairs and as a member of the Nebraska delegation, I am in support of this legislation. As an important addition to the development of the Central Valley project in California, the San Luis portion is unique in many ways. Its arrival here, in bill form, on the floor of the House today is the culmination of many years of discussion, planning, negotiating, and resolving of many diverse and conflicting interests in the State of California, all of which have a legitimate stake in the final agreement that is represented in this legislation.

To me, as a resident of the Platte Valley of Nebraska, one of the most interesting beneficial features of the San Luis project is the anticipated recharge of the underground water supply that will result. The gentleman from California [Mr. SISK] has explained the critical depletion of ground water in the San Joaquin Valley which has been drawn upon for pump irrigation. He says that whereas it once was possible to have efficient wells of the depth of 200 feet, that it is now necessary to install wells having a depth of 1,000 and 2,000 feet. It is unnecessary to elaborate on the obvious cost of the farming operation that must resort to such massive investments in deep-well facilities.

Of course, each of us from our own regions encounter different problems in

the goal of using our water resources to the fullest advantage and efficiency. But I am most interested in this aspect of reclamation project benefits—that of recharging the diminishing groundwater levels in established agricultural areas. Although it is one of the most real benefits, it is unfortunately one of the least measurable from the standpoint of methods used in arriving at a benefit-to-cost ratio.

Maintenance of a stable groundwater reserve is becoming more and more important in farming areas where farmers have made heavy capital expenditures in pump irrigation works. We have recognized this in the Platte Valley of central Nebraska, a rich farming and livestock feeding area, where the Bureau of Reclamation has presented the mid-State project as a means to alleviate the threatening decline in our natural water table.

Mr. Chairman, it has been my privilege as a first-term member of the Irrigation and Reclamation Subcommittee to have had a small part in the formulation of this legislation. I congratulate my colleague, Mr. SISK, and the other Members from California who have labored so long to bring the San Luis project closer to reality.

Mr. ASPINALL. Mr. Chairman, I yield such time as he may desire to the gentleman from California [Mr. COHELAN].

Mr. COHELAN. Mr. Chairman, like the gentleman from Oregon [Mr. ULLMAN], I share the general feelings which have been so well expressed that the San Luis project is a good project and should be passed. While I favor the project and urge its passage, I also strongly urge the adoption of an amendment which will be introduced at the appropriate time by the gentleman from Oregon to delete section 7 from the bill.

The basic question, then, Mr. Chairman, is how Federal reclamation law, and specifically the historic and traditional 160-acre limitation, shall apply to a reclamation project, like the proposed San Luis Reservoir, in the construction of which the Federal Government is joined in some part by a State.

Generally, the San Luis bill provides for construction of a major central reservoir just about in the center of our State to store waters gathered in the northern and eastern mountain ranges. From this vital storage basin, water would then be distributed to parched lands in the central, southern, and coastal areas of California.

In the two major valleys in the interior of California, the Sacramento and San Joaquin Valleys, we already have a vast Federal reclamation project—the Central Valley project. Some of the San Luis waters would be used to enlarge the Central Valley project to include valuable acreage now served by deep wells which are drying up. Other San Luis waters would be distributed to southern and coastal areas of the State.

According to the plan envisioned in the San Luis Reservoir bill, H.R. 7155, the Federal Government will build canals to take part of the San Luis water to the new Central Valley project land. The State will build separate canals to carry water to the southern and coastal areas. Now this is the heart of the matter: Those who support section 7 of this bill and argue for its retention propose that the question of how Federal reclamation law shall apply shall be simply solved on the basis that water carried through State-constructed canals is "State project" water and shall not be controlled by Federal reclamation law. Of course, it is all right, they say, for the water distributed from the San Luis Reservoir through Federally constructed canals to be termed "Federal project" water and distributed under the 160-acre limitation and other Federal reclamation law. In short, this bill applies Federal reclamation law simply on the basis of whether the State or the Federal Government distributes the water after it leaves the San Luis Reservoir.

Mr. Chairman, this is a gross oversimplification which blithely overlooks the vast Federal expenditure in the many and extensive dams, powerhouses, canals, and other facilities which will be used in gathering the water which will be stored in the San Luis Reservoir, and fails completely to take into account the vast Federal expenditure which would go into the construction of the San Luis Reservoir itself.

Let us take a closer look. The flow of water into the Sacramento-San Joaquin Delta, the natural pool from which the San Luis Reservoir would be directly filled, is regulated and controlled by the Shasta Dam, the Keswick Dam, the Nimbus Dam, the Folsom Dam, and others. These are all projects which were constructed with Federal funds. Furthermore, waters en route to San Luis Reservoir would pass through the delta cross-channel, a project constructed with Federal funds. These same waters would be pumped up out of the delta en route to San Luis through the Tracy pumping plant, a project constructed with Federal funds. Finally, San Luis pumping facilities will be activated by power from federally constructed powerplants in the Central Valley project.

Now we get to the San Luis project itself. The immense substructure of the San Luis Reservoir, the deep foundations, and the first story of the dam would be constructed and financed by the Federal Government. On top of this, it is proposed that the State of California build a second story so that it will be possible to store more water. The basic unit would be a Federal project and without this primary Federal investment there would be no reservoir for the State to later expand.

These are the facts: First, Federal structures regulate and control the water which will be gathered at San Luis, and, second, Federal investment will make the San Luis Reservoir possible.

These are the facts which we are asked to ignore when it comes to the question of how Federal reclamation law shall apply. Section 7 of H.R. 7155 would have us ignore the Federal interest in the structures by which water is brought to, and stored at, San Luis and simply divide the water after that point on the basis of whether it is then distributed by the State works or by Federal works and apply Federal reclamation law accordingly.

Federal reclamation law, specifically the Warren Act, bases the application of Federal reclamation law on the question of what facilities the water passes through, not just at one point along the way, but throughout the whole project—not just on the canal through which the water passes from a particular reservoir, but on the dams and canals and reservoirs through which it passes from point of origin to point of use.

Mr. Chairman, the amendment to delete section 7 from H.R. 7155 is intended to do only one thing, namely, remove that section of this bill which predetermines that Federal reclamation law shall be applied on the basis of who carries water from the San Luis Reservoir, the section which completely ignores the extensive Federal interest in San Luis itself and in the vast facilities which will bring that water to the San Luis pool.

Congress cannot ignore that Federal interest. Indeed, the sole job of the Congress in this matter is to jealously protect the Federal interest.

Mr. Chairman, deletion of section 7 of this bill will accomplish two things. Not only will it protect the traditional Federal reclamation law, but it will also assure the passage of this legislation which is so important to the State of California. The other body last year passed the San Luis bill after deleting this same language, and, in doing so, made it clear that a House bill which includes this controversial section will not be acceptable.

I urge my colleagues to vote for the Ullman amendment to protect Federal reclamation principles and to assure the passage of this legislation which will create a vital, worthwhile reclamation project much needed in California.

The following letter from Dr. Paul Taylor, professor of economics and chairman of the Institute of International Studies at the University of California in Berkeley, Calif.—a distinguished economist long regarded as an expert on water and land policy—is well worth the careful attention of our colleagues. It is a summary statement of Professor Taylor's views on the San Luis project.

APRIL 6, 1960.

HON. JEFFERY COHELAN,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN COHELAN: A proposal is before the House to abandon this Nation's historic policy of distributing the benefits of water widely, rather than reserving them for the few.

Specifically, section 7 of H.R. 7155 (San Luis) proposes to grant waters destined for delivery to a so-called State service area the special privilege of using Federal facilities without observing the Federal excess land law. It has been a practice to defend some past proposals for similar exemption on the ground that few large landholdings were involved in the area, perhaps on an unspoken theory that a violation of public policy is not really a violation if it is small enough. Even that specious plea cannot be made to Congress at San Luis.

The proposal of H.R. 7155 is to exempt, not a handful of large landowners, but an area of perhaps the greatest concentration of landownership of an irrigable area in the United States. In 1947, 34 individuals or corporations, according to reports of the Bureau of Reclamation to Congress, owned close to three-quarters of a million acres "in probable present and future San Joaquin Valley service areas" of water development. None of them owned less than 5,000 acres each. (Senate Public Lands Subcommittee hearings on S. 912, 80th Cong. 1st sess., p. 864.)

In face of this frontal attack on national policy, we need to remind the public that the 160-acre limitation is exceedingly generous to large landowners. If it disappoints them, it is not because reclamation law is not lavish in the benefits it bestows, but because the law places a ceiling on the benefits one individual can receive. The excess land law takes nothing from its beneficiaries except hopes and expectations of gain that Congress has decided are beyond what they can appropriately be permitted to receive. A few simple arithmetic calculations of subsidies on a project adjacent to San Luis can be used to suggest the ceiling, and leave to anyone's judgment whether it is unreasonably low, and a just ground for complaint. In 1957 California Congressmen (ENGLE, MILLER, MOSS, HAGEN, SISK, MCFALL) estimated that the per acre subsidy on Federal Central Valley project, adjacent to San Luis, is $577, or $92,320 for 160 acres; or $184,640 for 320 acres of water allowed to man and wife by current interpretation of the excess land limitation. These estimates are exclusive of flood control subsidies, and exclusive of the privilege accorded to excess landowners of operating their entire acreages, no matter how extensive, with a subsidized water supply for about 10 years prior to sale of the excess holdings. The financial magnitude of this operating privilege has been acknowledged to Congress by a witness unfriendly to any protective limitation whatsoever on the amount of public subsidy to individuals:

"Let us lay the cards on the table with respect to [a particular, named], large landowner. I will give you my own opinion of his willingness to sign the 160-acre limitation. He thinks if he gets water for 10 years on there without having to sell it, he can make enough out of it so he can afford to sell the land at any old price." (Testimony of Harry W. Horton, chief counsel, Imperial Irrigation District, California, hearings before Senate Subcommittee on Interior and Insular Affairs, 85th Cong., 2d sess., on S. 1425, S. 2541, and S. 3448, pp. 87, 88.)

To approve section 7 would be to say that subsidies and gains from public expenditures of these large, not to say vast magnitudes, are too small.

So far as I know, no one has offered any reason why this great concentration of landownership in a California "State service area" should be freed from the compliance with law expected of other landowners. The author of the National Reclamation Act, and other original sponsors of reclamation said they had this very concentration of large holdings in mind when Congress passed the 160-acre water limitation in the first place.

Instead of pointing out characteristics, if any, of this extreme concentration of landownership in the San Luis area, that might support a plea for special treatment, the specious reason is advanced that State law should govern a State-served area. This, of course, is misleading; section 7 is unnecessary to assure that waters delivered to State service areas will be governed by State law. The fact is that Federal law applies at San Luis because these waters use Federal facilities, as the very language of section 7 acknowledges. There is no evidence at all that the owners of vast landholdings in the State service area want State law to apply; on the contrary, they want no acreage limitation law at all, neither Federal nor State.

California has a State law which it adopted, viz, Federal acreage limitation for Federal projects in the State, but a gap in State law leaves the so-called State service area uncovered by the State's policy. Large California landholders seek, not to extend State law in accord with State policy, but to preserve the gap. A recent decision of the California supreme court, on February 29, 1960, declares this identity of Federal and State policy and law on Federal projects in the State. The court said there is no "basic conflict between Federal policy and law on one hand, and State policy and law on the other. * * * The Federal Congress by the passage of section 5 of the Reclamation Act, has determined, lawfully, that the 160-acre limitation, is a basic part of Federal policy. The State legislature has adopted this concept as State policy by specifically authorizing irrigation districts to enter into contracts for project water that contain the 160-acre limitation (Wat. Code, sec. 23195)." (*Ivanhoe Irr. Dist.* v. *All parties* (53 Advance Cal. 718).)

California policy adverse to large landholdings is even older than Federal-State reclamation legislation. The State constitution contains a 320-acre limitation on grants of State lands (art. XVII, secs. 2 and 3); and the convention debates show that article XVII was adopted largely in protest against concentration of landownership in the very State service area for which section 7 now seeks an exemption from Federal law. Interpreting article XVII, the California Supreme Court has said:

"It must be manifest that all lands within this State should, so far as governmental action could accomplish it without violating private rights, be held in small tracts and constitute homes for its owners" (*Fulton* v. *Brannan* (88 Cal. 454, 455)).

There is no evidence, however, that the California Legislature intends to close the gap in State law in order to achieve State policy on the San Luis "State service area." On the contrary, the legislature has defeated attempts to close the gap in 1957 and again in 1959. There is no evidence that the legislature will do differently in the future. On the contrary, a leading association in California with spokesmen for very large landholdings on its directorate appears confident that the legislature can be relied upon not to bring State law into line with State policy. As recently as February 12, 1960, the Feather River Project Association opposed Federal construction of San Luis joint-use facilities if Congress rejects the exemption proposed by section 7, and proposes turning construction over to the State. Of course, the people of the State may not approve this proposal to help large landholders escape from public policy.

The Feather River Project Association joins others who have been saying to Congress, "It is essential to the State water development program that State laws apply to its water service areas" (FRPA Newsletter, Feb. 29, 1960). There is no State law, and most of those who insist on section 7 do not want any State law. The appeal to demolish existing Federal law in order to make way for an alleged State law appears to resemble an invitation to Congress to permit itself to be led by the hand into a dark cellar at midnight, searching for a black cat that isn't there.

At this time no one can even be certain how much of a State water project there will be. California voters will not decide prior to November 1960 whether they approve a general obligation bond issue in the amount of $1.75 billion to start financing a program. Opposition to these bonds is strong, and for many reasons. The California Federation of Labor, in the absence of policy protection at least equal in strength to the Federal 160-acre limitation, is among the organizations that oppose the issue.

If California should decide to put up money for a State program, is even that a reason why Congress should scrap a good Federal policy? The 160-acre protection was written for the benefit of the many in every State, including California, and not for the few. Congress has rejected proposals to sell policy in exchange for money before this. The 57th Congress, facing this question, said "No." It specifically repudiated "commutation" of policy for money in framing the original act of 1902 because it knew how seriously cash purchases of land had damaged the policy of the homestead law (sec. 3, 38 Stat. 389; Paul W. Gates, "Homestead Law in an Incongruous Land System," 41 Am. Hist. Rev. 655, 656).

You will appreciate, surely, that I am not speaking of conscious purposes of congressional sponsors of section 7, H.R. 7155, but rather of the natural and probable damage to policy that would result if Congress should take the action they propose. The damage was described as intentional on the part of excess-land owners as long ago as 1944, before the present sponsors were Members of the Congress, when a national magazine forecast that large landowners in Central Valley would seek to make use of the State of California as a means of escape from acreage limitation. "Another proposal," it wrote, "said to have originated among the big landowners of Fresno County, is for the State of California to take over the Central Valley project, paying the entire bill." (Business Week, May 13, 1944, p. 24.) Section 7 of H.R. 7155 and the resolution of the Feather River Project Association on February 12, 1960, appear to harmonize with this forecast.

The 160-acre limitation of 1902 was an expression in reclamation law of a principle embodied even earlier in homestead and preemption land laws, favoring widespread ownership of property rather than concentration. Widespread ownership was believed to be favorable, if not necessary to government by the people. Speaking in 1820 at the bicentennial of the landing of the Pilgrims, Daniel Webster said:

"Their situation demanded a parceling out and division of the lands; and it may be said fairly that this necessary act fixed the future frame and form of their Government. The character of their political institutions was determined by the fundamental laws respecting property. * * * The consequence of all these causes has been a great subdivision of the soil, and a great equality of condition; the true basis most certainly of popular government." (Webster, discourse delivered at Plymouth, Dec. 22, 1820. In commemoration of the first settlement in New England 53–54 (3d ed. 1825).)

Is widespread ownership of land by families outmoded? No American political party has said so yet. No studies of agricultural production indicate that family farms of sizes permitted by acreage limitation are inefficient. During the recent visit to this country of Mr. Khrushchev, the name of a distinguished Member of the House was appended to a vigorous letter published in the Washington Post, saying:

"I would inform Mr. Khrushchev, if he does not now know it, that the independent family farm was the foundation upon which America's free enterprise economy was constructed" (Sept. 18, 1959, p. A12).

Section 7 is an attack on the family farm, and on small business, too. Some years ago, about the time when Congress was rejecting proposals similar to section 7, made by former Congressman Alfred Elliott and by former Senators Sheridan Downey and William Knowland (H.R. 3961, sec. 4, 78th Cong.; S. 912, 80th Cong.), a study was made com-

paring the effect of family-size and large-scale farming, respectively, on small business in Central Valley, Calif. The Senate Small Business Committee published the results in 1946 under the title "Small Business and the Community: A Study in Central Valley of California on Effects of Scale of Farm Operations." (Report of the Special Committee To Study Problems of American Small Business, U.S. Senate, 79th Cong., pursuant to S. Res. 28, committee print No. 13, Dec. 23, 1946.) On page 5 that report says:

"Certain conclusions are particularly significant to the small businessman, and to an understanding of the importance of his place in a community. Not only does the small farm itself constitute small business, but it supports flourishing small commercial business.

"Analysis of the business conditions in the communities of Arvin and Dinuba shows that—

"(1) The small farm community supported 62 separate business establishments, to but 35 in the large-farm community; a ratio in favor of the small-farm community of nearly 2:1.

"(2) The volume of retail trade in the small-farm community during the 12-month period analyzed was $4,383,000 as against only $2,535,000 in the large-farm community. Retail trade in the small-farm community was greater by 61 percent. (See figure and table, pp. 83 and 84.)

"(3) The expenditure for household supplies and building equipment was over three times as great in the small-farm community as it was in the large-farm community.

"The investigation disclosed other vast differences in the economic and social life of the two communities, and affords strong support for the belief that small farms provide the basis for a richer community life and a greater sum of those values for which America stands, than do industrialized farms of the usual type."

Introducing the Arvin-Dinuba study, the chairman of the Senate committee said:

"The bearing on the American way of life which is all-important to all of us who seek to see the virility of this Nation go on unimpaired, is at once apparent. I submit this study to the Senate Small Business Committee, to the United States Senate, and the citizens of this country, feeling that it further indicates the importance of independent small-scale business as the cornerstone of our American economic system of free enterprise."

It is surprising that the attempt to escape from a policy so fundamental, while accepting benefits from generous public appropriations, could have advanced so far. Last May, a Senator described the Senate measure companion to section 7 of H.R. 7155 as a proposal for "one of the greatest land steals in the history of this Nation." (CONGRESSIONAL RECORD, vol. 105, pt. 6, p. 7849.)

If Daniel Webster knew the dangers of concentrated landownership in 1820, and Abraham Lincoln knew them in 1862 when he signed the Homestead Act, Theodore Roosevelt knew them also when he inspired the 160-acre limitation in the Reclamation Act he signed in 1902. A few years afterwards, when in San Francisco, he told the Commonwealth Club of California:

"Now I have struck the crux of my appeal [for the excess land law]. I wish to save the very wealthy men of this country and their advocates and upholders from the ruin that they would bring upon themselves if they were permitted to have their way. It is because I am against revolution; it is because I am against the doctrines of the extremists, of the Socialists; it is because I wish to see this country of ours continued as a genuine democracy; it is because I distrust violence and disbelieve in it; it is because I wish to secure this country against ever seeing a time when the 'have-nots' shall rise against the 'haves'; it is because I wish to secure for our children and our grandchildren and for their children's children the same freedom of opportunity, the same peace and order and justice that we have had in the past." (7 Transactions of the Commonwealth Club 108 (1912–13).)

Today, more even than a domestic issue of internal stability is raised by section 7. At stake, also, is the image of ourselves as a Nation that we wish to project to the world. Eight years ago Senator PAUL DOUGLAS, of Illinois, wrote to a Secretary of the Interior:

"The great landowners of the Kings River and Tulare Lake area apparently have not hesitated to seek public appropriations for their own benefit while deferring and possibly defying compliance with a law they should be proud to support. The President, on the other hand, has wisely declared maintenance of the family farm to be our national policy at home and abroad. Land reform has become one of our main instruments for stopping the spread of international communism and maintaining our national security. * * * Whatever we do on Kings River, therefore, will be subjected to the most searching examination of all who realize that our policy must now meet the test in our own country as well as in foreign lands." (CONGRESSIONAL RECORD, vol. 98, pt. 7, p. 9181.)

Why should Congress allow itself to be persuaded now at San Luis, Calif., to nullify the policy and law it enacted for the benefit of the entire Nation, including California?

Sincerely yours,

PAUL S. TAYLOR.

I also wish to add one further insertion, Mr. Chairman, which is a detailed statement explaining the views on this legislation of the California State Labor Federation, AFL–CIO:

STATEMENT BY CALIFORNIA STATE LABOR FEDERATION, AFL–CIO

The California Labor Federation, AFL–CIO, is deeply concerned by what appears to be a three-pronged attack in Sacramento and Washington to thwart the aims of Federal water policy and allow future irrigation projects in California to fall under the control of the the few corporate absentee owners who hold huge tracts of land in the San Joaquin Valley.

This three-pronged attack is manifested in the following:

1. The San Luis legislation now being considered by the House Rules Committee.

2. The irrigation repayment contract which Secretary of the Interior Fred Seaton has recently offered to districts in the Pine Flat service area.

3. Water legislation passed by the California State Legislature.

These three drives are not necessarily coordinated, but, significantly, each of them would serve the same end: Monopolization of irrigation water furnished by public moneys.

SAN LUIS LEGISLATION

On April 24, 1959, this organization mailed to all Members of Congress an analysis (enclosed) of the San Luis bills. Since that time, one of the bills, S. 44, has been passed by the Senate with one of the key amendments suggested in our earlier statement (deletion of section 6a). Meanwhile, H.R. 7155 has cleared the House Interior Committee, and is now in the Rules Committee. H.R. 7155 is virtually the same bill as H.R. 5687 which is analyzed in our enclosed statement. The most objectionable feature which appeared as section 6 in H.R. 5687 shows up in H.R. 7155 as section 7.

We were pleased to discover that some of the objectionable language in section 3h has been removed, but that sections 3f and 3g have not been improved.

Without repeating the substance of our previous statement, we would like to emphasize that none of the language to which we have objected is necessary in this bill. The bill is complete without it, the legal framework for a cooperative State-Federal project already exists in present Federal reclamation law and, finally, the inclusion of this language can only serve to confuse and confound existing law to the sole advantage of the larger landowners, some of whom right now are on the verge of evading the aims of reclamation law in Pine Flat service area.

PINE FLAT SERVICE AREA

Secretary of Interior Fred Seaton has recently offered to the local districts receiving irrigation water from Pine Flat Dam repayment contracts which would allow them to sidestep compliance with the so-called 160-acre limitation (actually the 320-acre plus limitation) by prepaying the charges allocated for irrigation, but not, of course, all the charges involved.

In offering to exchange policy for cash by this prepayment doctrine, Secretary Seaton relies on an obtuse interpretation of reclamation law. But he fails to recognize that:

1. This interpretation runs counter to the strongly expressed legislative intent of the law. The framers of reclamation law planned to erect a permanent barrier against water monopoly. One that is not for sale.

2. On two occasions (in 1950 and 1951) legislation was introduced to permit the type of Pine Flat contracts Seaton is now proposing. Congress did not pass on either bill, so Secretary Seaton in 1959 is acting without legislative authority and in contradiction to the intent of the law which is supposedly designed to insure widespread distribution of the economic benefits of public financed water projects.

About 25 percent of the 1 million acres in the Pine Flat service area is excess land—land which should not receive water from Pine Flat unless the owners agree to abide by the acreage limitation. Incidentally, the dam has been completed for 5 years, and for 5 years the irrigation water furnished therefrom has been distributed with total disregard for the so-called 160-acre limitation. All the while, the large landowners have bickered over contract terms.

The pattern of land holdings in this area breaks down like this: Some 5,900 owners hold no excess land (no more than 160 acres per owner) while a mere 52 farmers own 196,466 excess acres.

In the Federal service area of the San Luis project, 66 owners hold about 70 percent of the project's 450,000 acres.

The Pine Flat and San Luis situations are closely related for two reasons:

1. The interpretation of the law which Seaton falls back on at Pine Flat is the same as one of the arguments which supporters of the San Luis legislation are using to buttress their claim that the Federal law cannot be applied to the alleged State part of the project. They say the State will be paying its share of the project as construction proceeds, therefore, the prepayment doctrine, which would free water from regulation once allocated charges are paid, in this case would free State water from regulation.

Supporters of H.R. 7155 also argue that the alleged State part of the project is a separate venture. Of course, if this were strictly true, the Federal law could not apply. But the very fact that these advocates find it necessary to include special exemptions in their bill and the fact that they rely so heavily on Seaton's unsubstantiated interpretation (see House report, pp. 11–16) seems to indicate that even they have some grave doubts about the existence of any separate State project.

This conclusion seems inescapable: The special language in San Luis legislation and

Seaton's ruling on Pine Flat are desired by certain interests to evade application of Federal reclamation law as concerns Federal facilities. We appreciate the fact that some of those supporting H.R. 7155 have accepted the questionable language as the price they must pay to gain support from certain interests in California. We do not doubt the sincerity of these men, but we cannot accept their assurances, and we do not believe that the whole framework of future California water development should be lashed to their political commitments.

2. The Pine Flat and San Luis situations are also closely related because many of the same corporate interests who hold huge acreages in the Pine Flat service area also have giant holdings in both the State and Federal service areas of the San Luis project which is right next door. If these interests will negotiate and stall on Pine Flat to avoid the law—as they successfully have—we certainly can expect they will resort to the same tactics on San Luis. The language of the San Luis legislation should be direct and minimal, not devious and rambling. It should be such that all reasonable men who understand reclamation law are not at odds as to just what every sentence means.

STATE WATER LEGISLATION

Some supporters of H.R. 7155 are taking a "let George do it" attitude in regard to antimonopoly and antispeculation controls. Rather than assert Federal authority, they apparently maintain the fiction of an independent State project, succumb to the lure of States rights, and design language which limits, and in part repeals Federal authority.

We are told that the provisions in the San Luis bill for State participation relate to an entirely independent project, and that the Federal Government cannot enforce its regulations. We do not know of any lateral barrier being planned in the San Luis Dam that will separate Federal water from State water, and prevent the latter from touching Federal concrete. On the contrary, it is our understanding that water for Federal deliveries is to be pumped to the San Luis Dam in the winter, and that as this water is used for irrigation in the summer, the State would have direct planned use of the federally financed portion of the dam. Again we note that the supporters of H.R. 7155, who hold to the States rights point of view, find that to maintain this position, they must write special provisions into the Federal bill to make sure the Federal law will not apply to a State project.

The full significance of this argument is revealed by the action—or more accurately the inaction—of the California Legislature.

The history of the California Legislature is consistent in efforts of the body to evade the application of Federal reclamation law to California projects. This history dates back to the period when the Federal Government assumed the responsibility for construction of the Central Valley project, and specifically to 1944, when the legislature adopted a resolution memorializing Congress to adopt the Elliott rider to the Rivers and Harbors Act, designed to remove the application of the excess lands law to the Central Valley project (SJR 1, filed with the secretary of state, June 15, 1944, ch. 24, statutes of California, 4th extra session of the 55th legislature.)

In the failure of the California Legislature to secure exemptions for monopoly landholders in Federal law, it has nevertheless left the door open for these monopoly forces to use the State as a vehicle for undoing Federal reclamation law.

This year several important water measures were passed by the California Legislature. None of them, however, contained any type of acreage limitation or public power preference. The most important measure was the passage of S. 1106, the Governor's $1.75 billion bond issue program, which will be submitted to the voters next fall. Unsuccessful efforts were made in both houses of the California Legislature to incorporate antimonopoly protections. The amendments were not supported by the State administration or the sponsors of the bill. During debates, claims were made that this was not the time to consider protections against enrichment and monopolization of benefits. A later date was suggested—some vague later date before water delivery. Those of us familiar with the evasions at Pine Flat Dam and the history of the Central Valley project generally, find it difficult to be convinced by such vague assurances.

Further, we are not unmindful of the decision of the California Supreme Court which upheld the efforts of monopolists in this State to undo reclamation law. While the U.S. Supreme Court reversed the State court decision in the application of the 160-acre limitation in the Central Valley project, there is no assurance that anything short of a State constitutional amendment, requiring two-thirds vote in the legislature, would prevent the invalidation of a State acreage limitation.

In summary, therefore, when we add up the questionable language in H.R. 1755, the machinations at Pine Flat Dam and the aloofness of the State legislature, we see a major threat to Federal water policy, dire consequences for working people, small farmers and small businessmen, and an erosion of independent economic political action in the great Central Valley of California.

We are taking this opportunity, therefore, to respectfully urge Congress to (1) amend H.R. 7155 along the lines suggested by the enclosed statement previously submitted to Congress, and (2) protest Secretary of Interior Seaton's proposed contracts for evasion of reclamation law in the service area of Pine Flat Dam.

California is truly at the crossroads in the development of its water and power resources. The decisions immediately before Congress will give direction to the future growth of California for years to come. We in California labor place our trust in the men of vision and integrity who are our elected representatives, to make the decisions which will insure the development of California's water and power resources in a manner consistent with the widest possible distribution of the benefits of such development.

Mr. LIPSCOMB. Mr. Chairman, I ask unanimous consent to extend my remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. LIPSCOMB. Mr. Chairman, I rise in support of H.R. 7155 as reported by the House Committee on Interior and Insular Affairs. The San Luis Dam is a vital link in the California water plan and I deem it of vital importance that the bill be speedily enacted into law.

I am in agreement with the committee action in setting forth, in section 7, that Federal reclamation laws shall not apply to an area served by a State water facility.

Section 7 does not change the Federal reclamation laws. It merely attempts to state in clear, unmistakable language that just because there would be joint Federal-State use of a common water storing facility, that such a situation for no reason gives rise to a right to impose Federal law on the State part of such facility.

The Congress in my view would not be fulfilling its duty if it failed to provide this expression of policy for the guidance of the Federal Government, the State of California, the courts, and others, in any future decision that may be given or negotiations that will take place concerning this unique joint facility.

To fail to do so on the part of the Congress could cause unreasonable and unnecessary delay and confusion in putting this facility into use and in any decisions that may need to be made concerning the relative rights in regard to the project.

I wish to again strongly urge the House of Representatives to approve H.R. 7155 as reported by the Committee on Interior and Insular Affairs.

Mr. SISK. Mr. Chairman, I ask unanimous consent that the gentleman from California [Mr. MOSS] may extend his remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. MOSS. Mr. Chairman, in supporting H.R. 7155, as introduced by Congressman SISK, I should like to stress that the San Luis Dam and Reservoir is not just another worthwhile project in my State; it is central and necessary to the sound development of California's vast water program which stretches from the Siskiyou Mountains on the north to the Mexican border on the south.

As I am sure you all appreciate, California's water problems have become more complicated and critical as its population has skyrocketed. The State's population now is more than 15 million and that figure is being increased daily by thousands. In something like 8 or 9 years, California, beyond doubt, will be the most populous State of the Union.

Time, therefore, is an increasingly important factor in our water situation.

As some of you know, the big difficulty waterwise in my State is that about two-thirds of its water resources are in the northern half of the State, where only one-third of the arable land lies, and about two-thirds of the arable land lies in the southern half of the State, which enjoys only one-third of the water resources.

The operation of the Federal San Luis unit would conserve and regulate surplus wintertime water now wasting away down the Sacramento River to the Pacific Ocean and make it usable, along with additional Central Valley project water from storage, in the water-deficient San Joaquin Valley to the south.

Water thus made available would provide a supplemental supply for the irrigation of about 480,000 acres of fabulously rich land on the west side of the San Joaquin Valley. It would also give some sorely needed domestic and municipal water to towns in this area, as well as providing important benefits to recreation and to the propagation of fish and wildlife.

As far as they serve the Federal San Luis service area, this project's works would be integrated physically and financially with other features of the

great Central Valley project to help move the rain from north to south in California.

By any rule the San Luis project, with a benefit cost ratio of 2.5 to 1 is an outstanding reclamation project. Not only will it save more than 400,000 acres of land from reverting to desert, but it will contribute many millions of dollars annually in net crop earnings to the Nation's economy, with which to buy the goods, services and products of other States.

In this connection, I might point out that the total gross farm income from the San Luis area is $75 million annually. Thus, it seems obvious that construction of San Luis would mean more markets and more jobs for many more people than are presently employed in this area. On the other hand, failure to build it would result in a large annual loss to the Nation's economy.

For several years, preparation of satisfactory San Luis legislation has been complicated by the fact that the development involves joint use by the Federal Government and the State of California of the proposed San Luis Reservoir and certain other project facilities. The joint use plan, provided for in Mr. SISK's bill, is the outcome of a situation in which both the Federal Government and the State found themselves proposing projects utilizing the same reservoir site. That is to say, California's $1.75 billion Feather River project calls for storage at the San Luis site and so does the Bureau of Reclamation's plan for the San Luis unit of the Central Valley project. The engineers seem to be in agreement on the fact that the San Luis Reservoir site appears to be the only adequate and feasible storage site in the area.

H.R. 7155 provides a new concept for Federal-State cooperation in water conservation. It is not hard to understand, therefore, the concern that has been expressed by some individuals and groups lest the large land owners in the San Luis service area might in some way be exempt from the land limitation provisions of the Federal reclamation laws.

The Interior and Insular Affairs Committee of the House gave careful consideration to all the views and comments it received along this line and amended the bill in several respects. The committee has announced that it wishes to make it unmistakably clear that the Sisk bill as reported requires the operation of the Federal San Luis unit under Federal reclamation law, including the excess land provisions thereof, and that there is no way the large landowners in the Federal San Luis service area can avoid compliance with such provisions.

Section 7 of this bill provides that the Federal reclamation laws shall not be applicable to areas served by the State of California. It is my conviction that section 7 should never have been put into the bill inasmuch as it does not in any way change the law as it is presently written, and only raises issues which tend to cloud the more important aspects of the legislation.

Since I view the section as unnecessary and without point, I support the San Luis legislation without section 7.

If, however, a move to strike section 7 is defeated, I shall support the measure with the section included.

Mr. ASPINALL. Mr. Chairman, I yield 8 minutes to the gentleman from Vermont [Mr. MEYER].

Mr. MEYER. Mr. Chairman, I ask unanimous consent to proceed out of order.

The CHAIRMAN. Is there objection to the request of the gentleman from Vermont?

Mr. YOUNGER. Mr. Chairman, I object.

Mr. ASPINALL. Mr. Chairman, I ask that the Clerk read.

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That for the principal purpose of furnishing water for the irrigation of approximately five hundred thousand acres of land in Merced, Fresno, and Kings Counties, California, hereinafter referred to as the Federal San Luis unit service area, and as incidents thereto of furnishing water for municipal and domestic use and providing recreation and fish and wildlife benefits, the Secretary of the Interior (hereinafter referred to as the Secretary) is authorized to construct, operate, and maintain the San Luis unit as an integral part of the Central Valley project. The principal engineering features of said unit shall be a dam and reservoir at or near the San Luis site, a forebay and afterbay, the San Luis Canal, the Pleasant Valley Canal, and necessary pumping plants, distribution systems, drains, channels, levees, flood works, and related facilities, but no facilities shall be constructed for electric transmission or distribution service which the Secretary determines, on the basis of an offer of a firm fifty-year contract from a local public or private agency, can through such contract be obtained at less cost to the Federal Government than by construction and operation of government facilities. The works (hereinafter referred to as joint-use facilities) for joint use with the State of California (hereinafter referred to as the State) shall be the dam and reservoir at or near the San Luis site, forebay and afterbay, pumping plants, and the San Luis Canal. The joint-use facilities consisting of the dam and reservoir shall be constructed, and other joint-use facilities may be constructed, so as to permit future expansion; or the joint-use facilities shall be constructed initially to the capacities necessary to serve both the Federal San Luis unit service area and the State's service area, as hereinafter provided. In constructing, operating, and maintaining the San Luis unit, the Secretary shall be governed by the Federal reclamation laws (Act of June 17, 1902 (32 Stat. 388), and Acts amendatory thereof or supplementary thereto). Construction of the San Luis unit shall not be commenced until the Secretary has (1) secured, or has satisfactory assurance of his ability to secure, all rights to the use of water which are necessary to carry out the purposes of the unit and the terms and conditions of this Act, and (2) received satisfactory assurance from the State of California that it will make provision for a master drainage outlet and disposal channel for the San Joaquin Valley, as generally outlined in the California water plan, Bulletin Numbered 3, of the California Department of Water Resources, which will adequately serve, by connection therewith, the drainage system for the San Luis unit or has made provision for constructing the San Luis interceptor drain to the delta designed to meet the drainage requirements of the San Luis unit as generally outlined in the report of the Department of the Interior, entitled "San Luis Unit, Central Valley Project," dated December 17, 1956.

Mr. ASPINALL. Mr. Chairman, I move that the Committee do now rise.

The motion was agreed to.

Accordingly, the Committee rose; and the Speaker having resumed the chair, Mr. THOMPSON of Texas, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 7155) to authorize the Secretary of the Interior to construct the San Luis unit of the Central Valley project, California, to enter into an agreement with the State of California with respect to the construction and operation of such unit, and for other purposes, had come to no resolution thereon.

ANNOUNCEMENT

Mr. BRADEMAS. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Indiana?

There was no objection.

Mr. BRADEMAS. Mr. Speaker, along with a number of colleagues I was not present for the session on Monday, May 2, 1960, because of the assurances that many of us had received that, due to the Indiana primary on May 3, there would be no RECORD votes.

Because of circumstances with which we are all now familiar, there were RECORD votes on May 2 and many Members, including myself, were not present.

Mr. Speaker, I should like to announce that, had I been present on May 2, I would have voted "yea" on rollcall No. 62, on the passage of H.R. 10596, legislation to change the method of payment of Federal aid to State or territorial homes for disabled veterans of the United States. This bill was passed by a vote of 265 to 0, with 165 Members not voting.

I should also like to announce that, had I been present, I would have voted "yea" on rollcall No. 63, on the passage of House Concurrent Resolution 633, a resolution expressing the hope of Congress that the President "pursue energetically" at the summit conference the restoration of fundamental freedoms and basic rights to the people of the captive nations of Eastern and Central Europe. This resolution was passed by a vote of 276 to 0, with 154 Members not voting.

NATIONAL MILK SANITATION BILL

Mr. JOHNSON of Wisconsin. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

Mr. JOHNSON of Wisconsin. Mr. Speaker, I have been working for the past 4 years on ways of eliminating the

use of sanitary regulations as trade barriers against the free flow of high quality milk from State to State.

During the 85th Congress, I introduced a bill aimed at this objective. Hearings were held on this measure in 1958 by the House Interstate and Foreign Commerce Committee, and the testimony at those hearings proved very useful in pointing out some of the weak spots in the proposed legislation. Before submitting my new national milk sanitation bill, H.R. 3840, I consulted with public health officials to iron out those difficulties.

H.R. 3840, which is identical to S. 988, follows the recommendations of the Association of State and Territorial Health Officers. As the name implies, this association is composed of the chief health officials in each State and territory. In 1957, the association set up a committee to study the matter of Federal milk sanitation legislation, and, a year later, issued an official report titled "Need and Recommended Principles for Federal Milk Sanitation Legislation."

This report states:

> The association believes that there is need to strongly reaffirm that the sanitary control of fluid milk and fluid milk products is a public health matter which is primarily the responsibility of State and local governments, except where interstate commerce is involved.

Mr. Speaker, H.R. 3840 and S. 988 are in full agreement with the principle set forth by the Association of State and Territorial Health Officers. This legislation seeks only to provide unrestricted interstate markets for milk of the highest sanitary quality by eliminating the use of capricious and arbitrary pseudo-health regulations to keep high quality milk out of monopolized local markets.

Being a public health and general welfare measure, national milk sanitation legislation has drawn bipartisan support. In the House, 9 other Democrats and 10 Republicans have joined me in introducing the bill. On the Senate side, the measure is being sponsored by Senators HUMPHREY and MCCARTHY of Minnesota and Senators PROXMIRE and WILEY of my home State of Wisconsin.

Under the provisions of the proposed milk sanitation legislation, a Federal Milk Sanitation Code which would be at least the equivalent of the U.S. Public Health Service's proven milk ordinance and code would become the quality yardstick for milk shipped in interstate trade. Fluid milk and fluid milk products meeting the standards of this Federal milk code could not be kept out of interstate trade because of varying local health rules.

Mr. Speaker, the measure would provide an effective means of eliminating barriers to the interstate shipment of high-quality milk resulting from unduly restrictive sanitation regulations and differing inspection requirements. This would be accomplished without displacing the existing local systems. The force of Federal law would be applied only where health regulations or enforcement practices are being used to unnecessarily obstruct the interstate marketing of wholesome milk of high sanitary quality.

At the same time, the States and municipalities would retain the right to inspect the interstate milk upon arrival to make sure it had not deteriorated in transit. From there on, the handling, processing and sale of the interstate milk would have to meet the requirements applied to milk entering the market from sources inside the State. Since the bill does not contain an "affects interstate commerce" clause, the measure would not deprive States and local communities of the right to exercise full sanitary control over their intrastate milk supplies.

National milk sanitation legislation would utilize, subject to U.S. Public Health Service checks, the existing system of State and local milk sanitation services for supervision, inspection, laboratory control, rating, and certification of interstate milk supplies. A minimum of Federal expenditure would be required to monitor certifications made by the States and to support certain other services such as training, research, and development of standards.

Mr. Speaker, some critics of national milk sanitation legislation have advanced the theory that it would be detrimental to the quality of the milk sold in their markets. These critics reason that the Federal standards to be established under the bill might not be adequate to protect the health of their citizens.

The bill provides that the Federal standards shall be at least the equivalent of the high health standards now contained in the Milk Ordinance and Code recommended by the U.S. Public Health Service—which is the watchdog of our public health. At the present time, 36 States and some 1,900 local jurisdictions have voluntarily adopted this model milk code or one based on its provisions. Some 75 million people drink milk produced under conditions spelled out by the U.S. Milk Code. In addition, it is used as the quality standard for milk purchased by our Armed Forces. Surely a body of health regulations in such general use cannot be notably deficient in providing for adequate health protection of our citizens.

On April 26, 27, and 28, the Health and Science Subcommittee of the House Interstate and Foreign Commerce Committee held hearings on my H.R. 3840 and the milk sanitation bills introduced by 19 of my colleagues. We received favorable support from the Department of Health, Education, and Welfare; the Department of Commerce; the Bureau of the Budget; the Association of State and Territorial Health Officers; the National Consumers League; the General Federation of Women's Clubs; the Connecticut Milk Consumers Association; State boards of health; dairy equipment manufacturers; and many farm and dairy groups.

Mr. Speaker, in contrast to the wide range of persons and groups who appeared in support of the measure, the opposition was limited mainly to representatives of eastern fluid milk producer groups, farm groups from the same area, and a few State departments of agriculture. In going over their testimony, I found that 16 objections to the legislation are mentioned most frequently. I have gone over these 16 objections with experts in the general field of milk sanitation, and at this time, I would like to answer the objections point by point. They are as follows:

Objection 1: There is not enough evidence to show that health regulations have been unduly restrictive.

Answer: Considerable evidence indicates that on numerous occasions the sanitation or health requirements of a local milkshed have been used to keep out milk from another area. The U.S. Public Health Service has compiled such evidence, as has the U.S. Department of Agriculture. The experience of numerous milk cooperatives and milk plants shows that health regulations in truth have been, and are being used as trade barriers. This usually occurs during the time of the year when a surplus of milk exists in the locality. At times when there is a shortage of milk in the same locality, no questions are raised about the quality of milk shipped in from another State.

Frequently these out-of-State milk supplies are prevented from entering a local market by verbal interpretation of existing laws or regulations. This makes it difficult for out-of-State firms to appeal such a decision through the courts.

Objection 2: Such a law would lower the milk sanitation standards in receiving areas.

Answer: A comparison was recently made between the Milk Ordinance and Code recommended by the U.S. Public Health Service and the milk sanitation laws and regulations of some of the States which do not follow the Public Health Service's regulations. This comparison of milk sanitation standards revealed that these States either failed to cover many sanitation items of significant public health importance, or else referred to these items in general terms rather than in specific terms contained in the Public Health Service's Milk Ordinance and Code.

This code has been tried and proven over the years throughout the United States. A 90 percent compliance with the provisions of the code, as is required by this bill, would produce the highest quality milk, the safety of which would be above question.

Objection 3: The provisions of this bill would deprive States and municipalities of their police powers over milk sanitation and so would violate States' rights.

Answer: The Federal Government has the right to control interstate commerce, and this bill deals only with the interstate shipment of milk. The measure does not deprive the receiving State or municipality of the right to exercise its police power, inasmuch as section 808(b)(1) of the bill gives the receiving jurisdiction the right to subject the milk upon arrival to laboratory or screening tests. If the milk fails to comply with bacterial counts, temperature, and composition standards and other criteria of the Federal Milk Code, the receiving jurisdiction retains the power to reject the milk.

Objection 4: The Federal Government would force States and municipalities to accept milk inspected by other States and municipalities.

Answer: As I have pointed out in the answer to objection 3, the receiving States or municipality would still have the right to reject milk from another area if such milk, when checked upon arrival, did not meet the prescribed standards. I can see no public health reason why one State would object to receiving milk from another State if the milk was of the same or higher quality than that produced in the receiving area. If the State does object to receiving high quality milk from another State, then the objecting State is obviously misusing its health regulations as trade barriers.

Objection 5: The bill would provide for no uniformity of rating.

Answer: The measure authorizes the Surgeon General to establish regulations for the purpose of rating, certification and listing of interstate milk shippers. He would also approve a State plan to provide for reliable ratings; train State and local personnel; and cooperate with State milk sanitation authorities in the development of improved programs for the control of the sanitary quality of milk.

Under this authorization, frequent spot checks would be made of listed shippers; in-service training programs would be conducted for State milk sanitation rating officers; and field observations would be made of State program activities. All of this will enable the Public Health Service to attain a high degree of uniformity among the various State personnel making milk sanitation ratings.

Objection 6: National milk sanitation legislation would nullify the effect of Federal milk marketing orders.

Answer: H.R. 3840 and S. 988 would have no effect on the Federal milk marketing orders issued by the U.S. Department of Agriculture, as these bills are not designed to affect or control or adjust the prices paid for milk.

Objection 7: The bill would require Federal inspection which would duplicate work already being carried out by local authorities.

Answer: This measure clearly states that routine inspection of milk supplies would be made by local authorities, and that the rating of these supplies would be made by the State rating survey officials. This same arrangement is now being successfully carried out under the voluntary interstate milk shippers program. Thus, there would be no duplication of inspection efforts. However, spot checks would be made by the Surgeon General for the purpose of checking on the quality of the local inspection services and the adequacy of the State certifying methods and rating officials.

Objection 8: In reality, this bill is an economic one traveling under the guise of a health bill.

Answer: Actually, the shoe is on the other foot. The States and municipalities which refuse to accept high-quality milk from other areas are utilizing health regulations to achieve the economic advantage of a monopoly on the milk market. The purpose of this bill is to prevent the unwarranted use of sanitary regulations for economic gain. Health rules should be used only to protect the public health, not for the protection of local monopolies.

Objection 9: If a plant were being discriminated against by a local health authority, the plant would be able to get relief through the courts under the present rules and regulations without the need of a National Milk Sanitation Act.

Answer: It is true that many milk plants have won court cases against restrictive local rules and regulations hindering the movement of milk in interstate commerce. However, taking a case of this kind to court is time consuming and expensive. Therefore, many plants prefer to seek a market elsewhere rather than put up with the long delays and expense involved in fighting a local restrictive ordinance. This bill would provide relief for many of these areas and permit the sale of high-quality milk wherever there is a need for additional milk.

Objection 10: The bill would give a State the power of determining whether or not its own milk supply is fit for shipment and consumption in interstate commerce.

Answer: While the State of origin would make the rating of the milk, the State inspectors would have to apply the Federal Milk Code in doing the rating. Before the milk for interstate shipment could be certified, it would have to achieve a 90-percent compliance with the provisions of that code. The entire program would be under the watchful eye of the Surgeon General. He would insure the integrity and reliability of the program through approval of the State rating plans; training and certification of State rating officers; spot checks of the plants and their milk supply to verify the compliance ratings; and exclusions or removal of a plant from the list of certified shippers if he finds the plant is not entitled to certification.

Objection 11: Such a measure would create a new Federal bureaucracy at high cost with no good purpose.

Answer: This legislation does not propose to create any new Federal bureaus. It would utilize the existing program and personnel in the Public Health Service, which is now carrying on a voluntary interstate milk shipment program at a very nominal cost.

Objection 12: Local inspectors would have no concern of milk to be shipped to another State.

Answer: Since many plants depend upon the shipment of milk to out-of-State areas, the plant operators are very anxious to obtain certification and approval of these supplies. They would be very much interested in obtaining approval of these sources through their State rating authorities.

Furthermore, if the entire milkshed met the minimum sanitation requirements under the proposed act, and this plant was listed and certified as an approved shipper for interstate commerce, any or all of the milk being produced by this plant could be shipped in interstate commerce. Since the plant operator would never know when he would receive a request for a shipment of milk, he would want to keep his supply on a continuous approval status for shipment in interstate trade.

Experience in the voluntary interstate milk shipment program has shown that the local inspectors are very anxious to maintain high standards for the milk shipped out of a State. The integrity of the inspectors as well as the integrity of the milk supply is involved in this.

Objection 13: Milk transported over long distances must be older than nearby milk, and milk does not improve with age.

Answer: When making this statement, the opponents of milk sanitation legislation are talking about the horse and buggy days, not 1960, with its modern transportation and refrigeration methods. Many tests have proved that milk properly produced and refrigerated at 35 to 40 degrees can be held for long periods of time without deterioration or loss of quality. When milk is handled under these conditions, it is impossible to tell the difference between milk that is a day old and milk which is a week old.

Objection 14: Supporters of the bill are interested in only one objective, which is to sell surplus milk from their own areas in other markets.

Answer: Of course we want to be able to sell our high-quality milk in interstate trade. Is there any reason why top-quality milk should not be shipped from one State to another? The supporters of this bill feel most strongly that trade barriers should not be disguised as health regulations.

Objection 15: This bill would lower the standards so that midwestern producers could sell milk in other markets without meeting established health requirements.

Answer: This statement is incorrect because a large portion of the midwestern areas are now using the Public Health Service's Milk Ordinance and Code as the standard for their milk laws and regulations.

Objection 16: Under this bill, the inspection of milk to be approved for interstate commerce is left up to the State and localities. Ratings on which the Surgeon General's approval is based are carried out by these agencies, although he cannot check on their activities. It appears odd that a man would rate his own work.

Answer: It is true the bill provides that inspection and supervision will be performed by the milk sanitation personnel of the States in which the milk supply is located. However, for a supply to be eligible for certification, the supervision and inspection, as well as the laboratory control, must be performed in accordance with the high standards of the Federal Milk Sanitation Code. State and local codes would not be used.

In addition, the Surgeon General would have the authority to check on the activities of the State and local health departments. The bill contains numerous provisions which the Surgeon General must carry out in order to assure the integrity and reliability of the system.

In regard to the charge that an inspector would rate his own work, this would not be the case. Ratings for certification would be made only by the State milk sanitation rating officers, who would have no responsibility for supervisory activity.

Mr. Speaker, this concludes my review of the 16 principal objections brought up by the opponents of national milk sanitation legislation. As I have pointed out, these objections do not hold water when compared with the facts in the case.

LEGISLATION IN THE SAVINGS AND LOAN FIELD

Mr. SPENCE. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Kentucky?

There was no objection.

Mr. SPENCE. Mr. Speaker, I have today introduced a bill to make permanent the existing law restricting holding companies in the savings and loan field. Legislation enacted last year was of a temporary nature, expiring May 31, 1961.

My bill to strike the termination date and make the law permanent has the support of the United States Savings and Loan League, the National League of Insured Savings Associations, and the California Savings and Loan League—the State in which most of the holding companies operate. I have been advised that the holding companies themselves have discussed my proposal and have agreed to support it—without amendment. Thus, all of the interested elements in the savings and loan business are in favor of this legislation. The bill also has the approval of the Federal Home Loan Bank Board, the Government agency involved, and the Federal Savings and Loan Advisory Council, created by statute as an advisory agency for the Federal home loan bank system.

Legislation to prohibit holding companies from acquiring control of savings and loan associations was first introduced in 1957. This bill, H.R. 4135, which I introduced, was passed by the House unanimously. Similar legislation was included in S. 1451, the Financial Institutions Act of 1957, and passed by the Senate. However, the latter bill was not passed by the House and hence the savings and loan holding company legislation was not enacted.

Last year identical legislation was again passed unanimously by the House. The bill reached the Senate late in the session and some concern was expressed there that it might cause hardship on some of the savings and loan associations in California. As a result, an amendment was added to the bill in the Senate providing for an expiration date of May 31, 1961, and requiring the Board to submit a report to Congress concerning savings and loan holding company operations. The purpose of this amendment was to give an opportunity to review the actual impact and operation of the law.

We now know that the law is accomplishing the desired objective and has prevented the spread of holding companies. The fact that a permanent extension of the law has the support of the savings and loan business, including the holding companies, is good evidence that the law has not caused hardship or inequity to any group. The purpose of my bill is to make this legislation permanent so that all persons involved may plan their operations with greater certainty than is the case with temporary legislation. The bill would also repeal the requirement for a report by the Board, which would serve no useful purpose at this time.

The savings and loan associations of our Nation have rendered a tremendous service in promoting thrift and home ownership. They are the largest single source of housing credit, making 40 percent of all the home loans in the country. They are typically local institutions, managed and operated by men and women living in the community and deeply interested in the community's welfare. It would change the character of these institutions were holding companies to become an important or dominant feature of the savings and loan business. The legislation enacted last year prevents holding companies from acquiring more than 10 percent of the stock of more than one insured association. My bill would make this important law permanent and I hope the Congress will enact it speedily.

DISCHARGE PETITION ON NATIONAL FAIR TRADE BILL—H.R. 1253

Mr. HARRIS. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

Mr. HARRIS. Mr. Speaker, I have filed today with the Clerk of the House a motion to discharge the Committee on Rules from the further consideration of House Resolution 521, a resolution providing for the consideration of the bill, H.R. 1253, a bill to amend the Federal Trade Commission Act, as amended, so as to equalize rights in the distribution of merchandise identified by a trademark, brand, or trade name.

H.R. 1253 was reported to the House by the Committee on Interstate and Foreign Commerce by a vote of 20 to 9 and the report was filed on June 9, 1959. I immediately requested the Committee on Rules to arrange for a hearing on this bill and a brief hearing was held on August 3, 1959. On April 19, 1960, the Committee on Rules tabled our request for a rule on this legislation.

H.R. 1253 would make it lawful for a manufacturer to establish and control, by notice to his distributors, stipulated or minimum resale prices for his trademarked or brand-named merchandise, if such merchandise is in interstate commerce, or is held for sale after shipment in interstate commerce, and is in free and open competition with merchandise of the same general class produced by others.

The bill would make it unlawful for a distributor with notice of applicable stipulated or minimum resale price on such merchandise to sell, offer to sell, or advertise such merchandise in interstate commerce at a different, or lower price, as the case may be. Any person suffering, or reasonably anticipating, damage by reason of violation of this legislation may sue in any State or Federal court of competent jurisdiction for damages and injunctive relief and be entitled to recover the cost of the suit, including a reasonable attorney's fee.

This bill is for the purpose of aiding small business from the onslaught of unrestrained, cutthroat competition of large chainstores, department stores, and discount houses which have been flourishing as a result of a breakdown of effective State fair trade laws.

I urge the Members of the House to sign this discharge petition.

PROGRAM FOR TOMORROW

Mr. SAYLOR. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. SAYLOR. Mr. Speaker, I take this time to ask the majority leader concerning the program for tomorrow according to his present expectations.

Mr. McCORMACK. I suggest that the committee that is handling the bill presently under consideration be available for a continuation of that bill under the 5-minute rule. I cannot state definitely the program, but I suggest that the committee stand ready.

AIRLIFT SCHEME

Mr. ROBISON. Mr. Speaker, I ask unanimous consent that the gentleman from Nebraska [Mr. CUNNINGHAM] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. CUNNINGHAM. Mr. Speaker, recently a Member of the other body made a statement supporting the proposed airlift scheme of the Post Office Department. This proposal would have a severely adverse effect upon the Nation's railroads which are so vital to our economy. This proposal would divert 4-cent letter mail which belongs to the railroads to aircraft and the costs of moving this mail would be greater if this should ever be done.

The Post Office Department does not have legislative authority to expand the airlift of 4-cent letter mail. I have introduced legislation to stop this practice

and to require that all mail moving by air carry the 7-cent postage rate as required by law.

I do not, of course, agree with the position taken by the Member of the other body and I am pleased to insert here a letter written by the president of the American Association of Railroads in answer to the statements which the gentleman has made. The letter which follows very effectively outlines a few of the objections many of us have to the proposed airlift scheme:

ASSOCIATION OF AMERICAN RAILROADS,
Washington, D.C., May 12, 1960.

The Honorable A. S. MIKE MONRONEY,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MONRONEY: The CONGRESSIONAL RECORD for May 10, 1960, records your statement in connection with plans of the Post Office Department to divert first-class mail from rail to air transportation.

I am astonished at your charge that the railroads have subjected Members of Congress to an unbelievable barrage of misinformation. I know that the railroad witnesses in public testimony before committees of Congress have correctly stated the effect on railroad passenger train service and revenue of the proposal for flying first-class and other preferential mail.

We have seen the flying of surface mail start in 1953 between Chicago, New York, and Washington; early in 1954, Jacksonville, Miami, and Tampa were added; later in 1954 it was extended along the west coast; this year it has been expanded to include Atlanta, Detroit, Cleveland, and Pittsburgh; and it is now proposed to extend this to all major cities throughout the United States. These cities are among those where the best train service is still available.

In addition to concern over the effect on railroad passenger revenues and service, as a result of eliminating railway postal cars on trains serving these cities, Congress should be concerned about mail service to the more than 11,000 communities and post offices in the United States which are served by rail and not served by air. There are only about 800 air stops in the country. Further, this program will eventually remove the distinction between 7-cent airmail service for those who want to pay for it and the 4-cent regular service for those who have no need for the more costly service. The public then would be deprived of their freedom to choose the more economical mail service provided by rail transportation.

In this connection House of Representatives Report No. 1281, dated February 19, 1960, on page 18, says:

"Any action which would further impair the condition of the railroads as an important element of our national economy would concern every citizen.

"Proposals affecting airlift and surface transportation of the mails involve major considerations of policy and major impacts on the railroads, the airlines, their employees, and the public. These policy questions should be formulated in legislative proposals for separate resolution; they are not a matter for inclusion in an appropriation bill nor for exclusive administrative determination."

In view of the wide interest in this matter, copies of this letter are being sent to Members of the House and Senate Committees on Appropriations, Post Office and Civil Service, and Interstate and Foreign Commerce, as well as to all the Members of Congress who have introduced legislation to prohibit, with certain proper exceptions, any flying of surface mail.

Very truly yours,

DANIEL P. LOOMIS.

NATIONAL POSTAL TRANSPORT ASSOCIATION

Mr. ROBISON. Mr. Speaker, I ask unanimous consent that the gentleman from Wisconsin [Mr. WITHROW] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. WITHROW. Mr. Speaker, as a former member of the House Committee on Post Office and Civil Service and as a lifelong active worker in the railway brotherhoods, I have an unusually strong interest in postal and railway problems.

Accordingly, I have been very much interested in statements emanating from the Post Office Department indicating that railway post office service valued at $2,684,221 annually is to be withdrawn to finance an expansion of the airlift of ordinary first-class mail.

Persons most directly affected by the withdrawal of railway post office service are those employed by the Post Office Department who perform distribution in railway post office cars. Those postal employees are represented by the National Postal Transport Association, formerly known as the Railway Mail Association.

A founder of the old Railway Mail Association is commemorated in my own hometown of La Crosse, Wis., where the local branch of the National Postal Transport Association once was called the Bill Fry branch, and where a Bill Fry banquet is held annually.

Just a few miles away from La Crosse, at Winona, Minn., the remains of one of the Railway Mail Association founders, Bill Fry, have been laid to rest.

The membership cards of each person belonging to the National Postal Transport Association to this day are embossed with the name Bill Fry on the side of the RPO car which is reproduced on the membership card and which serves to identify this loyal group of public servants.

Because of these sentimental reasons and because I have been closely interested in both the Railway Mail Association and now the National Postal Transport Association, I have a very grave concern over the postal service changes either threatened or already under way.

In addition to the Bill Fry heritage, I have had close contacts with the present leader of the National Postal Transport Association, Mr. Paul A. Nagle, and with one other president, Mr. William M. Thomas.

Mr. Thomas headed the National Postal Transport Association from 1949 to 1956. He was a person whom I knew very well and admired greatly.

The tensions associated with the initial activation of the airlifting of first-class mail in 1953 contributed greatly to the untimely death of Mr. Thomas almost immediately after he turned over the reins of office to the person whom he had groomed to succeed him, Mr. Paul A. Nagle, the same person who now heads the National Postal Transport Association with a vigor and determination of which Mr. Thomas will be proud.

Mr. Nagle has faced with quiet courage a systematic program of postal reorganization. To my certain knowledge, he has worked carefully to enlist the aid of friendly congressional people in an effort to stem the tide of needless reorganization. A measure of the progress he has attained is the fact that recently the House Post Office Committee of which formerly I was a member, has scheduled action on the airlift to be taken and hearings to be started on June 14. Now a subcommittee has been assigned to handle the problem and even earlier action may be anticipated.

One of the more tragic overtones of the trend away from railway post office service is that instead of being progressive, the post office in its thirst for change is instead turning the clock back 100 years to the period, ending in 1864, during which mail was concentrated in huge transportation centers.

Railway post office service was inaugurated in 1864. This new service was described in February 1959 in the Postal Service News, official publication of the Post Office Department, as "the answer to a bottleneck in postal service experienced by the Nation in its earlier history."

Until that time, the postal paper reported:

> Mail usually was not sorted until arrival at its post office of destination or a distribution post office along the route, resulting in huge accumulations of mail at such points and in numerous delays.

The Post Office Department is now going back to its earlier bottleneck structure. The nationwide integrated postal service plan, the newest innovation, will set up 62 transportation centers in the 50 States when it is fully in effect.

The final clock-reversing fact is presented in the official announcement of the new plan in which the Department has said:

> Distribution of mail en route would not be a basic requirement of the plan.

The 100-year-old service is still essential.

The railway post office service was only 15 years old when Bill Fry took up his first assignment from Winona to St. Peter in 1869.

Almost immediately Bill Fry was the center of controversy as he qualified for membership card number 10 in the Railway Mail Association and took up the cudgels for reform in the same way that Paul Nagle is doing today.

In the January 1957 issue of the Postal Transport Journal, official organ of the National Postal Transport Association, Mr. Fry is quoted by an ardent admirer, Mr. Lloyd Wilsey, of La Crosse, Wis., as having said of a then current problem:

> That is all a matter of detail which we can settle afterward. The big thing is to get the job done.

The spirit of getting the job done prevails today in the National Postal Transport Association. Paul A. Nagle and his

associates are fighting in true pioneer fashion to protect the Bill Fry heritage in the National Postal Transport Association. The changes of the times have flung some mighty challenges at Bill Fry's successors. With true adaptability they have moved from the railway post office car to the highway post office bus to carry on their fight to deliver the mail in the face of fleeting time.

With calm courage they have reckoned the cost of new ways of working, of fresh affiliations, of reshaped postal unions and have concluded again that "the big thing is to get the job done."

The men of the National Postal Transport Association are the unsung heroes of the postal service. All America owes them a debt of gratitude and I am proud to count them as my friends.

RELATIVE TAXES IN VARIOUS STATES

Mr. ROBISON. Mr. Speaker, I ask unanimous consent that the gentleman from New York [Mr. GOODELL] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. GOODELL. Mr. Speaker, with the possibility of the Calendar Wednesday procedure being invoked tomorrow for consideration of the House Federal aid to education bill, H.R. 10128, I think my colleagues would appreciate having some pertinent information I have compiled on relative taxes in the various States. I have taken as an example a man and wife with two children and a total family income of $5,000 a year. The family automobile is driven 10,000 miles a year and gets 15 miles on a gallon of gas. The husband and wife together smoke a pack of cigarettes a day. They own a house, the actual market value of which is $10,000. They spend $800 a year on items which are subject to a sales tax if there is a State sales tax. They own $1,000 worth of tangible personal property for tax purposes.

The above figures are as close to the average as I could find for a family with a $5,000 income. It is interesting to see how that family would fare if they lived in Meridian, Miss.; Selma, Ala.; Cordele, Ga.; Jamestown, N.Y.; or Bloomfield, N.J. The following table is a partial breakdown by State, of the State and local taxes which such a family would pay. These figures are estimates based upon the rate of taxation which the most recent records available to me reveal. It is impossible to be precise, but I believe these estimates are generally accurate and fair. Following is my own compilation for the guidance of Members in this respect:

State and local taxes of a person with a $5,000 annual income in various States

	State sales tax	State tobacco tax	State gasoline tax	Local and State tangible property tax	State income tax	Local real property tax	Total taxes, State and local
Alabama	$24.00	$21.90	$46.62	$6.50	$27.00	$162.00	$288.52
Arkansas	24.00	21.90	43.29	----------	17.00	70.70	176.89
California	24.00	10.95	39.96	----------	8.00	149.70	232.61
Delaware	----------	10.95	33.30	----------	53.00	72.80	170.05
Florida	24.00	18.25	46.62	----------	----------	123.80	212.67
Georgia	24.00	18.25	43.29	2.50	----------	137.20	225.24
Kentucky	----------	10.95	46.62	----------	38.00	116.30	211.87
Louisiana	16.00	29.20	46.62	5.75	----------	91.20	188.77
Maryland	24.00	10.95	39.96	1.34	54.00	153.10	283.95
Michigan	24.00	18.25	39.96	----------	----------	196.00	278.21
Minnesota	----------	20.07	33.30	----------	114.50	223.50	391.37
Mississippi	24.00	21.90	46.62	----------	----------	117.70	209.22
New Jersey	----------	18.25	33.30	----------	----------	256.80	308.35
New York	----------	18.25	39.96	----------	88.00	278.70	422.91
North Carolina	24.00	----------	46.62	----------	76.00	102.40	249.02
Ohio	24.00	18.25	46.62	.60	17.00	142.40	248.77
Pennsylvania	32.00	21.90	33.30	----------	----------	154.40	231.60

I obtained the figures upon which the above estimates were made from table No. 5 of HEW's Circular No. 605 for October 1959 entitled "Preliminary Statistics for State School Systems, 1957–58"; from the biennial survey of education in the United States by HEW and from the information obtained in the hearings before the Senate and House committees.

APOLOGIES FOR CERTAIN POLITICALLY INSPIRED REMARKS

Mr. ROBISON. Mr. Speaker, I ask unanimous consent that the gentleman from California [Mr. HIESTAND] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. HIESTAND. Mr. Speaker, in behalf of the people of California I wish to offer apologies to the Congress and this Nation for the politically inspired remarks of our Governor, Edmund Brown, concerning President Eisenhower, Vice President Nixon, and the summit meeting in Paris.

I am chagrined to find that the Governor of my State of California has taken the moment of crisis in international affairs to launch an attack against the Vice President of the United States. Press reports indicate that Governor Brown has said he believes the summit dispute has undermined the prestige of the President and will result in the defeat of the Vice President at the Republican National Convention.

For some time it has been apparent to those of us from California that Governor Brown has slipped badly in public esteem. I feel that this below-the-belt effort, which can only have the effect of giving comfort to our enemies, will result in further revulsion against Governor Brown by the clear-thinking people of California.

I deplore such remarks, Mr. Speaker, and assure you and the Nation that such remarks do not truly represent the sentiments of the vast majority of loyal Californians.

GREEN ACRES FARM PROGRAM

Mr. ROBISON. Mr. Speaker, I ask unanimous consent that the gentleman from Minnesota [Mr. ANDERSEN] may extend his remarks at this point in the RECORD and may include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. ANDERSEN of Minnesota. Mr. Speaker, on May 10 it was my privilege to discuss the details of my bill, H.R. 12000, which I introduced on May 2 to authorize a green acres farm program in behalf of our farm economy.

My office has received so many inquiries regarding the proposed legislation that I have arranged to have printed at my own expense copies of the May 10 debate which I plan to send to interested people in my own congressional district. I am asking them to study this proposal very carefully and see for themselves what it would be worth to them.

As pointed out in my earlier speeches on the subject, my bill will take nothing whatsoever away from any farmer which he now has under present law other than the one requirement of the green acres provision. In other words, I have scrupulously protected all of the commodity programs now in effect and, in addition, propose higher levels of price supports which the market will sustain in view of the orderly liquidation of present price-depressing surpluses.

At the time this bill was drafted we did not have available the 1959 Agriculture Census data. Although this information was still not available when I discussed the proposal on the floor, I now have the census data for a few of my counties and would like to briefly explain how the green acres program would work in one particular county.

This county has about 1,150 farms with a total of 232,000 acres of cropland. In 1959, almost 221,000 acres of cropland were harvested and only 224 farms reported a total of 6,300 acres of pasture. Only 80 farms reported 1,700 acres in cover crops. About 95 percent of the cropland in this county produced harvested crops in 1959.

More than 1,100 of these 1,150 farms produced corn, reporting 114,000 acres in corn in 1959 compared with less than 91,000 acres in 1954. This county produced 360,000 bushels more corn in 1959 than in 1954.

In 1960 that county will probably produce at least 3½ million bushels of corn, more than one-half of which will be put on the market for sale with a substantial portion to be delivered to the Government under the price support program.

At best that corn will be worth no more than a dollar a bushel or about $3,500,000.

However, if the principles of my bill are adopted, the results in 1961 will be quite different. Since that county has only 5 percent of its cropland under cover crops, pasture, and so forth, the green acres provision would immediately take at least 15 percent of the cropland—or 34,800 acres—out of crop production. Since one-half of the county's cropland is now producing corn, we can assume one-half of the green acres would come out of corn production and that would represent one-half million bushels less corn to be produced in that county.

Then, with the 80 percent of average yield payment-in-kind offered to farmers taking additional land completely out of production, we might assume an additional 15 percent of total acreage would be retired for a reduction in production of another million bushels of corn.

Note that the application of very conservative estimates to the corn production of this county proves conclusively that present surplus production would be eliminated and a strong market would be provided for the remaining production together with the payment-in-kind commodities.

Now, look at the economic impact of this type of program. Assuming a corn crop in 1960 under the present program worth, at most $3,500,000, compare that with the corn-crop income in 1961 under the green acres program which would be in the neighborhood of $3,800,000 with a considerable drop in the costs of production. In addition, the other grain crops would be worth proportionately more for a total increase in crop value of at least one-half million dollars or a total increase in net income of about $1 million in view of reduced production costs.

With a firm price on feed grains and no surpluses on the market it can also be assumed that excessive production of livestock products would be reduced to the point that we would also have relatively good livestock markets. In 1959 this county sold more than 100,000 hogs compared with 65,000 in 1954 when we did not have such an abundance of cheap feed. Those hogs in 1959 brought about $30 apiece or a total gross income of about $3 million. But, in 1961 with the green acres program in operation and $1.30 for corn you would not see all those hogs produced and, instead, you would have perhaps 75,000 hogs worth about $40 apiece. Gross income would be about the same—$3 million—but the cost of production would be down about 25 percent or $500,000 which would mean an increase in net income on hogs of about $500,000.

When all of the crop and livestock production is taken into account in that particular county, Mr. Speaker, the statistics show an increased net income of about $2 million the first year of operation under the green acres program and that all-important net income for farm people should increase another $500,000 a year for each of the next 5 years.

Think what this increase in net or spendable income would mean to the farm families in the 19 counties of my congressional district and you can readily see what it would mean to the whole Nation. The county I have described is not one of my bigger producing counties; it is actually a bit below average for the whole 19. Therefore, in my district, the first year of operation under the green acres program I have proposed in H.R. 12000, we would have an increase in net farm income of about $40 million. That increased income would be wonderful for our farm families and for the main street businessmen in every one of the towns, villages, and cities in my district not to mention the factories and mills all over the Nation.

Mr. Speaker, if I proposed a $40-million payroll to be added to all congressional districts like mine at little or no expense to the Government, I daresay there would not be a vote against it on the part of either the Congressmen from agricultural districts or those from the industrial areas looking for markets for manufactured goods.

I hope every farmer, every businessman, and every citizen of my district will study this proposal thoroughly and see firsthand what it could actually mean to him or her in dollars and cents income. I hope, also, that my colleagues from all over the Nation will weigh this matter very carefully in the hope that action may be taken on the measure before we adjourn less than 2 months from now.

We have been in session about 4½ months and have seen no constructive action taken by the Congress on this most urgent farm problem. I personally consider this our number one domestic problem and urge our colleagues to set aside their differences and proceed to the active consideration of some proposal such as I have advanced which will give our farm people and rural businessmen some hope for their economic future.

ONE HUNDRED AND FORTY-SIXTH ANNIVERSARY OF NORWEGIAN INDEPENDENCE DAY

Mr. SISK. Mr. Speaker, I ask unanimous consent that the gentleman from New York [Mr. ROONEY] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. ROONEY. Mr. Speaker, I should like to pay tribute today to the people of Norway on the occasion of the 146th anniversary of their independence day.

I have been lucky to have had for years many close friends who are Americans of Norwegian birth or descent. They have played an important part in the enrichment of our lives by their culture, their industry, and their strong religious and moral convictions. They are imbued with a great love for American ideals and our democratic form of government. Many have been notable and successful leaders in our Government and in our public life.

The Norwegian people have every reason for taking justly deserved pride in celebrating the day on which their country first adopted their constitution. In April of 1814 a constitutional assembly gathered at their capitol for the purpose of drawing up a constitution that would be based upon the sovereign will of the people. Within a few weeks after the first meeting of this assembly, a new constitution was adopted and a new Storting (legislature) elected. This constitution of 1814 was fully based on the firm principles of civil liberties and human rights.

Only 20 years ago the people of Norway were brutally assaulted by Hitler and his Nazi gang. Those were dark and seemingly hopeless days for them. But few nations in the world have shown a more indomitable spirit of courage and fortitude than the Norwegian people did during the grim hours of Nazi occupation. We shall always remember their courageous stand and their unrelenting underground struggle in the years that followed.

Since that time the Norwegians have strenuously defied Communist Russia even though a huge Red army is stationed in close proximity to them. They have been a staunch and loyal ally of our country, and we should feel fortunate in having them among our friends.

LAKE McALISTER

Mr. SISK. Mr. Speaker, I ask unanimous consent that the gentleman from Texas [Mr. DOWDY] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. DOWDY. Mr. Speaker, I have today introduced a bill proposing to name and designate the reservoir at McGee Bend as "Lake McAlister."

The late Honorable Ralph McAlister was an attorney at Nacogdoches, Tex. He departed this life the morning of April 8, 1960.

Mr. McAlister had long been vitally interested in water conservation, and was one of the founders, a director, and one-time president of the organization which through the years has had as its principal objective the construction of McGee Bend Dam and Reservoir on the Angelina River, in east Texas.

With the passing of Ralph McAlister, who was my friend of many years, water conservation lost as persistent a supporter as it ever had. He was one of the first in our section of the Nation to devote his time to it. No other man did so much to bring McGee Bend Dam into being. He kept the project alive during its lean years. McGee Bend Dam and the reservoir created thereby will be a continuing memorial to Ralph McAlister, whether it bears his name, or not. I feel we can do no less than rename the reservoir "Lake McAlister" in his memory.

NO SUBSIDY FOR FAILURE

The SPEAKER. Under previous order of the House, the gentleman from Ohio [Mr. VANIK] is recognized for 15 minutes.

Mr. VANIK. Mr. Speaker, on March 25, 1960, Capital Airlines filed an application with the Civil Aeronautics

Board asking for $12,949,000 in annual subsidy payments. The subsidy would be in addition to the $2,300,000 paid Capital yearly by the Postmaster General for the carriage of mail.

The filing of this application was a momentous event, Mr. Speaker. No other domestic trunkline air carrier has requested subsidy payments and none of the domestic trunk airlines—with some minor exceptions—have received subsidy for the past 8 years—CAB Order No. E–15088, page 2. Capital itself has been off subsidy since October 1, 1951.

Mr. Speaker, I am convinced that subsidy was justified during the developmental stages of American aviation. I am also convinced that certain sectors of the airline industry such as the feeders and the helicopter companies are still in the developmental stages and require subsidy. But, Mr. Speaker, the domestic trunkline carriers have been self-sufficient for nearly a decade; they are or should be a mature industry no longer dependent on subsidy. Therefore this application for subsidy by a long self-sufficient member of the trunkline industry raises several important questions.

First. To what extent does continuing eligibility to receive subsidy encourage improvident decisions and economically reckless conduct among the domestic trunkline carriers

Second. What will be the consequences to the airline industry if one or more of the heretofore self-sufficient trunkline carriers succeeds in obtaining subsidy payments?

Finally, to what extent does Congress have control of the subsidy situation? For example, does the present law permit the accrual of trunkline subsidy claims that encroach upon appropriations Congress intended for local service carriers or other parts of the industry we are trying to develop?

Mr. Speaker, the answer to the first question is clear. The net effect of permitting subsidy eligibility to continue in an industry that no longer requires it is that some operators will take advantage of the insurance against bankruptcy which subsidy eligibility provides to take gambles and make decisions which a normal businessman would not risk. In other words, it breeds recklessness and irresponsibility.

The record of Capital Airlines headlong career of expansionitis is the best example of this principle at work. In 1950, Capital operated 798 million available seat miles. By 1955 it had nearly doubled its operation and was offering 1,363,912,000 available seat miles and in 1959, the last full year of operations available for comparison, Capital had more than doubled the 1955 level and was operating 2,759,941,000 available seat miles.

To achieve this phenomenal expansion Capital naturally had to expand its fleet extensively, and the results of this are being witnessed today in the Vickers Aircraft foreclosure on Capital's entire fleet.

I cannot believe that Capital would have expanded so recklessly and taken all the risks if they had not felt they could fall back on subsidy if their gamble failed.

Mr. Speaker, this leads me to my second question. What happens if we bail Capital out and subsidize their operation? The answer is simple. Capital's route system competes with several other trunkline carriers in the eastern half of the United States, all of whom are operating on a self-sufficient basis. Payment of subsidy to Capital would be no more and no less than Federal competition against these free enterprise subsidy-free companies. The consequences of such a policy are obvious. The weakest of Capital's competitors would soon be compelled to apply for subsidy to withstand the impact of federally subsidized competition. It would only be a matter of time before all of Capital's competitors would become infected, and they, in turn, once they were subsidized, would infect their competitors elsewhere in the Nation.

Mr. Speaker, we have reached the point where the subsidy which was essential to nourish the domestic trunkline industry during its developmental period will, if it is continued, poison the industry and ruin its chances of survival as a strong, self-sufficent transportation facility. Continued subsidy eligibility can result in only one thing—nationalization of the industry.

Finally, I address myself to the question of the extent to which Congress has control of this vital economic problem under existing law and whether a change in the law is necessary. As of now the Civil Aeronautics Board has denied two requests by Capital for immediate interim subsidy grants and the Board has not requested any appropriation by Congress for any such subsidy. A prehearing conference has been set for May 16 and thereafter formal consideration will be given to Capital's subsidy application.

Mr. Speaker, under the provisions of existing law it is clear that Capital Airlines, or any other trunkline applicant, could be paid subsidy despite the fact that Congress had not appropriated money to be used for that specific purpose.

This is true because the Civil Aeronautics Board has statutory power to determine subsidy mail rates for an air carrier without regard to whether there are sufficient appropriations available to cover the amounts which may become due under those rates. The Comptroller General has said "that the existence or nonexistence of appropriations does not in any way restrict or interfere with the ratemaking duties of the Board," and that the Board's statutory authority to fix and determine the rates for subsidy payments "is disassociated not only from the Board's function of payment but even from the incurrence of obligations"—letter of the Comptroller General to the Chairman of the Civil Aeronautics Board, October 6, 1954.

Thus, if the Board were to grant Capital Airlines present request for subsidy, a valid legal obligation would be incurred. That obligation could be met by the Board out of appropriations for subsidy already available, and if the Board refused to make such payment, the legal obligation could be enforced in one of two ways.

First. The carrier could seek, in a district court of the United States, a mandatory injunction requiring the Board to authorize payment. This forum is made available under section 10 of the Administrative Procedure Act and section 1337 of title 28 of the United States Code.

Second. A second approach would be a suit against the United States in the Court of Claims under section 1491 of title 28 of the United States Code. If successful, the complaining carrier would obtain a money judgment. If this judgment was not in excess of $100,000—title 31, United States Code, section 724a—it would be satisfied by the Government Accounting Office upon presentation of the certified copy of the judgment—title 28, United States Code, section 2517. If the amount of the judgment, however, was in excess of $100,000—as would almost certainly be the case—the amount of the judgment would be certified to Congress by the Court of Claims for an appropriation. Thereafter satisfaction would be purely a matter for Congress—*Hetfield* v. *United States* (78 Ct. Cl. 419 (1933)); *Citizens Bank & Trust Co.* v. *United States* (100 App. D.C. 2, 240 F. 2d 863 (1957)).

However, as a practical matter, Congress each year appropriates many millions of dollars for subsidy payments to the local service carriers, helicopter operators, and others. In fiscal year 1961 alone the Board requested $68,984,000 for these payments. The House Subcommittee on Independent Offices Appropriations reported a bill proposing $60 million.

Thus, Mr. Speaker, despite the fact that such appropriations were intended for other activities, the trunkline carrier could, by the methods I have indicated, crowd out other subsidized interests. Such a diversion of appropriated funds might well seriously interfere with the program of the local service or other developmental industry.

Moreover, even if the Civil Aeronautics Board refused to consider an application for subsidy, a trunkline applicant can sue in the U.S. district court under section 10 of the Administrative Procedure Act and title 28, United States Code, section 1337, for a mandatory injunction ordering the Board to process the application. Should differences arise between the trunkline and the Civil Aeronautics Board as to the amount of subsidy, the reasonableness and adequacy of the administrative findings are reviewable under section 1006 of the Federal Aviation Act by the U.S. Court of Appeals for the District of Columbia.

Thus, Mr. Speaker, under present law a carrier can compel a hearing on its subsidy application, can compel the fair exercise of statutory subsidy criteria by the Civil Aeronautics Board in evaluating its claim and, regardless of whether Congress appropriated money for that purpose, if a subsidy payment is found needed, can compel the Civil Aeronautics Board to authorize payment out of funds appropriated by Congress for other carrier payments.

I submit, Mr. Speaker, that this law must be changed. On May 9, 1960, I in-

troduced H.R. 12122, which is identical in wording to that introduced by my distinguished colleague, the gentleman from Illinois [Mr. MACK]. I believe this legislation is necessary not only to preserve the trunkline industry from financial ruin and eventual nationalization but also to preclude any diversion of appropriated funds from the developmental purposes for which they are intended.

THE RIGHT OF THE CONGRESS TO BE INFORMED

The SPEAKER. Under previous order of the House, the gentleman from Vermont [Mr. MEYER] is recognized for 15 minutes.

Mr. MEYER. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Vermont?

There was no objection.

Mr. MEYER. Mr. Speaker, I believe that our rights as Members of this House have been and are infringed upon.

As an aftermath of the U–2 plane incident over Soviet Russia we heard the following on this floor:

> Although the Members of the House have not generally been informed on the subject the mission was one of a series and part of an established program with which the subcommittee in charge of the program was familiar, and of which it had been fully apprised during this and previous sessions.

However, earlier in the other body one Member stated that neither he nor any other member of the Select Appropriations Subcommittee which has for 13 years passed on the Central Intelligence Agency budget had ever heard that it operated planes.

When I subscribed to the following oath of office—

> I, WILLIAM H. MEYER, do solemnly swear that I will support and defend the Constitution of the United States against all enemies, foreign and domestic; that I take this obligation freely, without any mental reservation or purpose of evasion, and that I will well and faithfully discharge the duties of the office on which I am about to enter. So help me God—

I obligated myself to fulfill it and to fulfill it regardless of what others might do that might interfere with my obligation. I say that the previous statements in both bodies leave me confused as to what actually has happened in secret. Nevertheless and regardless, I claim that my sincere attempt to fulfill my oath of office is being obstructed and that this is harmful to my country. I wish to quote these excerpts from our Constitution that relate to my claim.

To begin with, we are charged with the following duties at various points in the Constitution of the United States:

> 1. * * * Raising revenue.
> 2. Lay and collect taxes * * * and provide for the common defense.
> 3. To declare war.
> 4. To raise and support armies, but no appropriation of money to that use shall be for a longer term than 2 years.
> 5. To make rules for the government and regulation of the land and naval forces.
> 6. To make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any department or officer thereof.

I would like also to quote the following excerpts from the Constitution:

> 7. No money shall be drawn from the Treasury, but in consequence of appropriations made by law; and a regular statement and account of the receipts and expenditures of all public money shall be published from time to time.
> 8. The President, Vice President, and all civil officers of the United States, shall be removed from office on impeachment for, and conviction of, treason, bribery, or other high crimes and misdemeanors.

Then I want to repeat the sentence contained in an amendment to the Constitution:

> 9. The enumeration in the Constitution of certain rights, shall not be construed to deny or disparage others retained by the people.

I say that as a Representative to Congress I must know what is going on if I am to fulfill my duties. I and the vast majority of Congressmen cannot do this if either the House or Senate statements previously mentioned by me reflect the conditions we operate under. There can be no first-class and second-class separation of Congressmen. We all must have equal access to those facts without which we cannot fulfill our oath of office and our constitutional duties.

No man can tell me that I have any greater duty than to safeguard the rights of Congress and our people when the threat of actions leading to war are so ominous. War must be prevented, and at the very least it must not come while our people and Congress are purposefully kept in the dark as to facts and acts that are by law supposed to be available to them and under their control. No one has the right to arrogate special powers to himself especially when they belong equally to others and particularly when the life and future of our people and country are at stake as the clouds of a war of unknown destructiveness gather in the sky.

I ask that the appropriate committees and Members of the House investigate this matter and prepare the proper reports leading to remedial action.

Mr. Speaker, in connection with these items from the Constitution which I have quoted, I would like to add a little bit that has been in the papers and elsewhere. For instance, it seems to me, under the constitutional provisions relating to the common defense and declaration of war we could consider this one:

> Green Hackworth's authoritative work on "International Law as Interpreted and Applied by the United States" has much documentation on the international law concerning violation of national jurisdiction over air space which leaves no doubt of the illegality of the present practice.

Even our own Government forbids commercial planes of other countries to enter our airspace without a permit from the Civil Aeronautics Authority; and, certainly, if this is the case, it is obvious that the intrusion of espionage and military planes would certainly be prohibited and that they would not be permitted to invade our air space.

Furthermore, I would say under raising revenue and also laying and collecting taxes and providing for the common defense and declaring war: Is there no responsible control over the activities of the Central Intelligence Agency? That these spy flights, with all their inherent danger of precipitating war, have been going on for 4 years is alarming enough. But that such a flight should have been sent out at this moment just before the summit meeting indicates either incredible stupidity or a positive desire to sabotage this meeting of heads of state from which the whole world had hoped for an easing of tensions, a test ban treaty, and some insurance of human survival through disarmament.

Second. If unarmed, and possibly armed flights of this illegal kind are common practice, is it not true that the power to plunge us into war now rests with any one of hundreds, many of whom may be willing to gamble their lives, and perhaps the lives of all humanity for the high pay involved, or because they think they are performing a service? And also under the points I previously mentioned from the Constitution and many others, I would ask, thirdly: What of the superior morality claimed by the Government which lies and, when caught, justifies the act which it tried to hide by claiming that it was no worse than acts done by a totalitarian Communist Government, whose immorality it consistently condemns?

Mr. Speaker, one Member of the other body has said that the United States was an aggressor in sending a U–2 spy plane deep into Russia. I might not go that far, but I would at least say that we certainly could be under suspicion of that, and that many of our allies and friends throughout the world have been adversely affected by this news.

Furthermore, this same person said it was a risk that could lead to nuclear war if continued; and he added that there is no justification for getting military intelligence through aggression. Whether this is described as aggression or not I would say that it could be so interpreted; and I would agree that whereas we need military information and many other forms of intelligence we should not allow ourselves to be placed in a position where it could be interpreted as aggression, not if we want to stand before the world as the country that we really claim to be and which we really are.

I am not going to say too much more about what another gentleman said, but he did say that he was in favor of getting military intelligence, but in ways that we can reconcile with international comity. I think that is a sensible statement.

Another thing I would like to call to the attention of this body, Mr. Speaker—and these are not my words, but the words of another—we speak of our free society. It is not free if the people are committed to actions which

conflict with our stated diplomatic aims, though having no knowledge of these actions, no control over them, and no way of knowing who is to blame when mistakes are made. This is the way totalitarian societies work. This same type of thinking is part of the reason I am speaking now today. I feel that we must consider these matters if we are to maintain our traditional position, if we are to maintain those things which we stand for, and if we are to resolve the problems that are before the world.

Furthermore, I would like to quote from a column by Marquis Childs in the Washington Post for May 14.

He is over in Geneva now. He states:

America's position is rapidly deteriorating because the visible signs of leadership, the friendly grin to one side, are fewer and fewer. The tragedy of the U–2 illuminated this as with a lightning flash. The universal regret and sorrow in the European press, even in West Germany where there is a confused desire to cling to the concept of American infallibility, are expressed in terms of restraint that cloak dismay and indignation.

Mr. Speaker, I could go on for a long time with many other quotes and many other references to the Constitution and the traditions of our country in the past.

I do not want to be in the position in which I am playing what would be called partisan politics. That does not enter into the picture at all. But neither can we afford to be bipartisan. There is a difference. We can be nonpartisan, and when the national interest of the United States is at stake I, for myself, prefer to be nonpartisan rather than bipartisan. I believe that someone must speak out and correct this tragic comedy of errors. The people who are at fault must in some way be told to change some of the acts, some of the thinking that is leading them to do these things. Somehow or other we must find a better way.

I have just learned from the news wire what Mr. Khrushchev has said. He has demanded an abject apology from our President, he is demanding that we admit that we are aggressors. I feel in this case he has gone much too far if he is a sincere man who really wants to negotiate. His language is offensive. It is not conducive to the best negotiations which we must have.

However, I feel that we as Americans, that we as Members of Congress, have as our first duty to correct that which is within us which may be wrong, and at the same time help to correct that which is wrong elsewhere in the world, and that only in this way can we achieve the fine and noble goals which we as Americans all desire.

LEGISLATIVE PROGRAM FOR TOMORROW

Mr. HALLECK. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from Indiana?

There was no objection.

Mr. HALLECK. Mr. Speaker, I take this time to inquire of the majority leader as to the program for tomorrow.

Mr. McCORMACK. Mr. Speaker, it was rather difficult to definitely state what the program would be on tomorrow or to state with any degree of definiteness until a few minutes ago. I am glad the gentleman from Indiana made the inquiry.

It is the intention to call Calendar Wednesday business on tomorrow and when the Committee on the District of Columbia is reached, if that committee calls up no bills, I shall undertake to take the necessary steps to dispense with further proceedings under Calendar Wednesday, which means that the school construction bill will not come up. It will enable the Committee on Education and Labor to be the No. 1 committee in connection with next week's Calendar Wednesday business. In the meanwhile, the Rules Committee is holding a hearing on Thursday with reference to the school construction bill. We will have another week's opportunity as to whether or not the committee takes a vote on reporting a rule.

If the House dispenses with further proceedings under the call it is intended that we proceed with the bill under consideration today, H.R. 7155, the San Luis project bill.

Mr. HALLECK. Then proceed with the bills as listed heretofore?

Mr. McCORMACK. Then we will proceed with the consideration of the other bills. Of course, when I announced the program last week we expected Calendar Wednesday to be utilized. If Calendar Wednesday business is dispensed with, it is implied that we would continue with the bills as listed heretofore. We want to proceed legislatively tomorrow and those bills will be taken up in the order noted.

THE SOIL BANK TRAGEDY

The SPEAKER. Under previous order of the House, the gentleman from North Dakota [Mr. BURDICK] is recognized for 5 minutes.

Mr. BURDICK. Mr. Speaker, when the House considers farm legislation this year, one problem must take precedence over all others: the so-called whole farm concept—most serious flaw in that unfortunate, jerry-built structure known as the soil bank program. This whole farm provision is systematically destroying the fabric of North Dakota's small community life.

What has happened is this: Hundreds of farmers are abandoning the land they have tilled, picking up their soil bank checks and moving to cities to disrupt the urban economy and, in many cases, deserting the State entirely.

Farmers who ordinarily would be placing a portion of their acreage into the soil bank but still continue to keep up their farms as live, productive, operating units, find it easier to retire all of their crop land and move into town. This convenient means of renting land to the Government is attractive and easy. The farmer sees a way to continue his income from his land without any of the headaches of active farming or private renting; he is left free to go elsewhere and find employment. While it is all perfectly honest and legal for him to do so, he is setting a pattern that is extremely unappealing to nonfarmers to say nothing of the whole rural population which continues to farm actively and always will.

We cannot place too much blame upon those who are joining the exodus away from the farm. They are not discouraged from the whole farm practice; it is to their economic advantage to go and it can even be construed to be patriotic. They are taking land out of production and believe they are doing their part to cut the surplus.

Under these circumstances, it is easy to see what is happening to the small towns and once thriving communities, which for the most part make up the State of North Dakota.

As people leave their farms and sell their machinery and personal property, the community loses tax money, the small town loses consumers, machinery and implement dealers are left without customers and the entire community gradually declines.

Being primarily an agricultural State, North Dakota does not have adequate industry to employ and support the people who bank their land. Thus, these North Dakotans leave the State to seek employment elsewhere, and they are leaving with alarming speed.

I was not sent to Congress to legislate the depopulation of the State of North Dakota. I cannot sit by and watch it happen and I implore all of you to try to understand the seriousness of this problem.

About a month ago, the 1960 soil bank contracts went into effect. The unofficial figures are frightening. A good many more than half of all the farmers participating in the soil bank program in North Dakota—and North Dakota is one of the most heavily contracted States in the Nation—have placed their entire farms in the bank. North Dakota now has a total of 12,375 soil bank contracts and 7,804 or 63 percent of them are whole farm retirements. Last year whole farms represented 52.2 percent of the total contracts.

In one North Dakota county alone 532 whole farms have been banked. Farmers in another have placed 475 entire farms in reserve. The impact on the communities involved is tremendous.

And what good is it doing? The program is so costly in terms of both money and the serious effect on community life that to justify it at all we would have to be sure that benefits at least balance the drawbacks.

Let me emphasize here that I realize the necessity for a land retirement program to control our surplus. It should be a program properly constituted under the banner of conservation which places responsibility on the individual farmer to participate on a cost-sharing basis at the greatest possible saving to the Government. Such a program can be worked out, I believe, along with full parity for crops raised under bushel quotas and is contained in the Poage-McGovern-Burdick farm bill.

But the present program is not decreasing our surplus and I, for one, see no hope that it will do so in the near

future. In fact, surpluses have continued to mount under the program.

First of all, the maximum amount which can be paid to a single farm operator is $5,000. This has had little or no effect on the wheat acreages in my State or elsewhere. Department of Agriculture people say that the present soil bank program should be expanded so that a dent can be made in our wheat surplus and, they argue, the fairest, fastest way to do it is to get whole farms out of production. I see little possibility that Congress will now, or for a long time to come, approve any program requiring such huge outlays to a single unit or operator for banking his land as would be necessary to have a real effect on our surplus.

So, who is really benefiting? The operating farmer today is beset with new problems which result from his neighbor's departure from his land. Weeds and pests are not being controlled on soil banked acreage. This is a dreadful hazard for farmers and they resent it deeply.

Furthermore, the tax burden on these people is being increased because the original number of farmers in a community with taxable personal property has decreased.

And they certainly are not pleased at the deterioration of community life. Their towns, churches, schools, roads, and all civic enterprises are hurt. The ultimate effect of banking whole farms is just the reverse of the intent of the program—to force people to do something they do not want to do—to force the farmers who want to be farmers, and who know nothing else, to look about them and decide they cannot make a go of it.

Does the large operator benefit by the program? Only very slightly, under the present limitations. Besides, when the large operator's quota is increased, what happens to production? He naturally will place his poorest eligible acreage in the soil bank and continue, with all his modern know-how and equipment, to get the greatest possible yield out of his best soil.

I believe there must be serious revision of the entire farm program and that such a revision is the only thing which can even begin to solve the problem. It cannot be attacked with halfway measures. Right now, however, we are facing an emergency. Before any more damage is done, we have got to stop this wholesale abandonment of farms with ownership still residing in the persons who have abandoned them and the Government paying the bill.

Aside from the unwanted results of this whole farm provision among farmers and on the farm economy itself, there are the demoralizing side effects which must be considered with equal gravity.

The farm implement dealer who no longer can maintain a profitable business is a common figure on the North Dakota scene today. The need for machines, fuel oil and service dwindles and, correspondingly, so do the employment opportunities with these businesses. Other Main Street merchants feel the pinch next, as the number of consumers in the community drops. And finally, the social institutions supported by tax money begin to suffer. Schools, churches, hospitals, municipal water and sewer systems, township and country roads—all begin to deteriorate.

The situation is ideally suited to the land speculator who comes in with ready cash and is able and willing to make a grand slam investment for the future—his future or those of the interests he represents.

Still another serious problem arising as a result of the whole farm retirement is the increased competition evident in urban labor markets. Farmers who have soil banked their land go into towns and cities seeking employment. Idle, and with soil bank income providing a cushion of support, they are willing to work for lower than average wages. The laboring men in our cities and towns are saying the farmers are taking jobs away from them—the only jobs by which the town worker can make a living.

The farmer cannot be blamed too much; his outlook for a satisfactory place in today's world is pretty discouraging. But the solution is not in the soil bank as we know it.

It should be remembered, however, that when the soil bank program is brought to an end, existing contracts will be honored as legitimate and valid obligations of the Government which cannot be repudiated. These contracts create obligations which are as binding as a bond or any other Government obligation.

When we see the results of the whole farm plan—results that have all the earmarks of permanence—can we afford to continue the program? I do not think so. Farmers, laboringmen, small businessmen, and community leaders all are protesting. They say whole farm abandonment has got to be stopped. We now are responsible to see that the whole farm concept of the soil bank is not renewed.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. VANIK, for 15 minutes, today, and to revise and extend his remarks.

Mr. BAILEY, for 5 minutes, today.

Mr. MEYER, for 15 minutes, today.

Mr. BURDICK, for 5 minutes, today.

Mr. POWELL (at the request of Mr. SISK), for 30 minutes, on Thursday next.

Mr. GUBSER, for 15 minutes, on tomorrow.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the CONGRESSIONAL RECORD, or to revise and extend remarks, was granted to:

Mr. BOGGS and to include extraneous matter.

Mrs. KEE and to include extraneous matter.

Mr. FISHER and include extraneous matter.

Mr. BRADEMAS.

Mr. HOSMER, his remarks in Committee of the Whole today and to include extraneous matter.

Mr. COHELAN, his remarks in Committee of the Whole today and to include extraneous matter.

(At the request of Mr. ROBISON, and to include extraneous matter, the following:)

Mr. LIPSCOMB.

Mr. HOSMER.

Mr. MUMMA.

Mr. BRAY.

Mr. WIDNALL.

Mr. WILSON.

(At the request of Mr. SISK, and to include extraneous matter, the following:)

Mr. MULTER.

Mr. DINGELL.

Mr. RODINO.

Mr. DELANEY.

ENROLLED JOINT RESOLUTION SIGNED

Mr. BURLESON, from the Committee on House Administration, reported that that committee had examined and found truly enrolled a joint resolution of the House of the following title, which was thereupon signed by the Speaker:

H.J. Res. 640. Joint resolution to authorize and request the President to issue a proclamation in connection with the centennial of the birth of General of the Armies John J. Pershing.

SENATE ENROLLED BILL SIGNED

The SPEAKER announced his signature to an enrolled bill of the Senate of the following title:

S. 3338. An act to remove the present $5,000 limitation which prevents the Secretary of the Air Force from settling certain claims arising out of the crash of a U.S. Air Force aircraft at Little Rock, Ark.

JOINT RESOLUTION PRESENTED TO THE PRESIDENT

Mr. BURLESON, from the Committee on House Administration, reported that that committee did on May 16, 1960, deliver to the White House for presentation to the President, for his approval, a joint resolution of the following title:

H.J. Res. 602. Joint resolution authorizing the President to proclaim the week in May of 1960 in which falls the third Friday of that month as National Transportation Week.

ADJOURNMENT

Mr. ULLMAN. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 4 o'clock and 45 minutes p.m.) the House adjourned until tomorrow, Wednesday, May 18, 1960, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

2155. A letter from the Assistant Secretary of the Interior, relative to reporting that

an adequate soil survey and land classification of the lands in the East Bench unit, Three Forks division, Missouri River Basin project, Montana, has been completed as a part of the investigations required in the formulation of a definite plan for project development, pursuant to Public Law 172, 83d Congress; to the Committee on Appropriations.

2156. A letter from the Acting Secretary of the Treasury, transmitting a draft of proposed legislation entitled "a bill to amend section 14(b) of the Federal Reserve Act, as amended, to extend for 2 years the authority of Federal Reserve banks to purchase U.S. obligations directly from the Treasury"; to the Committee on Banking and Currency.

2157. A letter from the Acting Secretary of the Treasury, transmitting a draft of proposed legislation entitled "a bill to amend section 15(b) of the Railroad Retirement Act, as amended, to revise the interest rate formula of special obligations purchased for the railroad retirement account, and for other purposes"; to the Committee on Interstate and Foreign Commerce.

2158. A letter from the Secretary of the Army, transmitting the Annual Report of the U.S. Soldiers' Home for the fiscal year 1959, and the Report of the Annual Inspection of the Home, 1959, pursuant to the act of Congress approved March 3, 1883, as amended (24 U.S.C.A. 59 and 60); to the Committee on Armed Services.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. KILDAY: Committee on Armed Services. H.R. 9702. A bill to amend section 2771 of title 10, United States Code, to authorize certain payments of deceased members' final accounts without the necessity of settlement by General Accounting Office; with amendment (Rept. No. 1610). Referred to the Committee of the Whole House on the State of the Union.

Mr. KILDAY: Committee on Armed Services. H.R. 11812. A bill to provide uniform computation of retired pay for enlisted members retired prior to June 1, 1958, under section 4 of the Armed Forces Voluntary Recruitment Act of 1945, as amended by section 6(a) of the act of August 10, 1946 (60 Stat. 995); without amendment (Rept. No. 1611). Referred to the Committee of the Whole House on the State of the Union.

Mrs. PFOST: Committee on Interior and Insular Affairs. S. 1411. An act to amend the act of August 1, 1956 (70 Stat. 898); without amendment (Rept. No. 1612). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. BENNETT of Florida:

H.R. 12248. A bill to provide for a review and an analysis of the positions held by military personnel in the Office of the Secretary of Defense and in the Office of each of the Secretaries of the Armed Forces, for the purpose of effecting certain economies as well as of restoring the offices of the Secretaries to civilian control; to the Committee on Armed Services.

By Mr. BENNETT of Michigan:

H.R. 12249. A bill to amend the Federal Trade Commission Act to provide for the issuance of temporary cease and desist orders to prevent certain acts and practices pending completion of Federal Trade Commission proceedings; to the Committee on Interstate and Foreign Commerce.

H.R. 12250. A bill to amend the Tariff Act of 1930 to impose an import quota on iron ore; to the Committee on Ways and Means.

By Mr. BRAY:

H.R. 12251. A bill to provide additional funds for use in the several States without Federal direction, control, or interference; to the Committee on Ways and Means.

H.R. 12252. A bill to strengthen State governments, to provide financial assistance to States for educational purposes by returning a portion of the Federal taxes collected therein, and for other purposes; to the Committee on Education and Labor.

By Mr. DOWDY:

H.R. 12253. A bill to designate the reservoir to be constructed on the Angelina River near Jasper, Tex., as "Lake McAlister"; to the Committee on Public Works.

By Mr. EVINS:

H.R. 12254. A bill to change the name of the bridge in DeKalb County, Tenn., now known as Hurricane Bridge, to the P. C. Crowley Memorial Bridge; to the Committee on Public Works.

By Mr. GALLAGHER:

H.R. 12255. A bill to amend the Social Security Act and the Internal Revenue Code so as to provide insurance against the costs of hospital, nursing home, home nursing service, and diagnostic outpatient hospital services for persons eligible for old-age, survivors, and disability insurance benefits, and for other purposes; to the Committee on Ways and Means.

By Mr. HIESTAND:

H.R. 12256. A bill to amend section 1361 of the Internal Revenue Code of 1954 with respect to the election of certain partnerships and proprietorships as to taxable status; to the Committee on Ways and Means.

By Mr. INOUYE:

H.R. 12257. A bill to amend section 601 of title 38, United States Code, to restore to certain veterans in Alaska or Hawaii the right to receive hospital care; to the Committee on Veterans' Affairs.

By Mr. JOHNSON of California:

H.R. 12258. A bill to provide for the conveyance of certain lands to the State of California; to the Committee on Interior and Insular Affairs.

By Mr. KEARNS:

H.R. 12259. A bill to authorize a 5-year program of assistance to financially needy school districts in paying the principal and interest annually falling due on loans for construction of urgently needed elementary or secondary public school facilities, and for other purposes; to the Committee on Education and Labor.

By Mr. GEORGE P. MILLER:

H.R. 12260. A bill to amend the Career Compensation Act of 1949 to provide for the payment of incentive pay to members of the Armed Forces performing duty as operators of submersibles; to the Committee on Armed Services.

By Mr. POAGE:

H.R. 12261. A bill to amend the Agricultural Adjustment Act of 1938, as amended, and the Agricultural Act of 1949, as amended, with respect to market adjustment and price support programs for wheat and feed grains, to provide a high-protein food distribution program, and for other purposes; to the Committee on Agriculture.

By Mr. SANTANGELO:

H.R. 12262. A bill to amend section 353(3) of the Immigration and Nationality Act; to the Committee on the Judiciary.

By Mr. SELDEN:

H.R. 12263. A bill to authorize the conclusion of an agreement for the joint construction by the United States and Mexico of a major international storage dam on the Rio Grande in accordance with the provisions of the treaty of February 3, 1944, with Mexico, and for other purposes; to the Committee on Foreign Affairs.

By Mr. SPENCE:

H.R. 12264. A bill to amend section 408 of the National Housing Act so as to repeal its expiration date, thereby making permanent law its provisions for regulating savings and loan holding companies; to the Committee on Banking and Currency.

By Mr. VINSON:

H.R. 12265. A bill to amend title 10, United States Code, to authorize certain persons to administer oaths and to perform notarial acts for persons serving with, employed by, or accompanying the Armed Forces outside the United States; to the Committee on Armed Services.

By Mr. WATTS:

H.R. 12266. A bill to provide that if the Republic of the Philippines prohibits the export of rattan poles the full statutory rate of duty of 60 percent ad valorem shall apply to furniture wholly or in chief value of rattan which was manufactured in, or comes into the United States from, the Republic of the Philippines; to the Committee on Ways and Means.

By Mr. WILLIAMS:

H.R. 12267. A bill to amend part I of the Interstate Commerce Act by excluding express companies from the provisions of the fourth section; to the Committee on Interstate and Foreign Commerce.

By Mr. YOUNGER:

H.R. 12268. A bill to provide for the assessment and collection of fees to cover the cost of operation of certain regulatory agencies; to the Committee on Interstate and Foreign Commerce.

By Mr. ZABLOCKI:

H.R. 12269. A bill to authorize Federal financial assistance to the States to be used for constructing school facilities; to the Committee on Education and Labor.

By Mr. BARRETT:

H.R. 12270. A bill to amend certain laws relating to the conservation and improvement of private housing and the renewal of urban communities, and for other purposes; to the Committee on Banking and Currency.

By Mr. GOODELL:

H.R. 12271. A bill to amend the Internal Revenue Code of 1954 so as to provide that lawful expenditures for legislative purposes shall be allowed as deductions from gross income; to the Committee on Ways and Means.

By Mr. GUBSER:

H.R. 12272. A bill to authorize the Secretary of Health, Education, and Welfare to enter into agreements with each of the States, Commonwealths, territories, and the District of Columbia to provide for a private voluntary medical care insurance program for certain persons over the age of 65, and to authorize payments by the Secretary to States to cover part of the cost of such insurance; to the Committee on Interstate and Foreign Commerce.

By Mr. KILGORE:

H.R. 12273. A bill to amend section 7 of the Administrative Expenses Act of 1946, as amended, to provide for the payment of travel and transportation cost for persons selected for appointment to certain positions in the United States and for other purposes; to the Committee on Government Operations.

By Mr. RIVERS of Alaska:

H.R. 12274. A bill to amend section 4 of the act of January 21, 1929 (48 U.S.C. 354a (c)), and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. BUDGE:

H.J. Res. 708. Joint resolution providing for the issuance of a special postage stamp in recognition of the efforts of both labor and management in bringing to the attention of the American public the value of the

apprenticeship system to our national economy; to the Committee on Post Office and Civil Service.

By Mr. BURLESON:

H. Con. Res. 691. Concurrent resolution authorizing the disposal of certain publications now stored in the folding room of the House of Representatives and the warehouse of the Senate; to the Committee on House Administration.

By Mr. CELLER:

H. Res. 530. Resolution to amend House Resolution 27, 86th Congress; to the Committee on Rules.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ASHLEY:

H.R. 12275. A bill for the relief of Fotios Sakelaropoulos Kaplan; to the Committee on the Judiciary.

By Mr. BARRETT:

H.R. 12276. A bill for the relief of Domenico Natale; to the Committee on the Judiciary.

By Mr. BROYHILL:

H.R. 12277. A bill for the relief of Stanley Hayman & Co., Inc.; to the Committee on the Judiciary.

H.R. 12278. A bill for the relief of Mrs. Louisa Caparrini Guasti; to the Committee on the Judiciary.

H.R. 12279. A bill for the relief of Silvio A. Guasti; to the Committee on the Judiciary.

By Mr. BURKE of Kentucky:

H.R. 12280. A bill for the relief of Hans Peter Franz Schlobach; to the Committee on the Judiciary.

By Mrs. CHURCH:

H.R. 12281. A bill for the relief of Kaino Knuuttila; to the Committee on the Judiciary.

By Mr. CURTIS of Massachusetts:

H.R. 12282. A bill for the relief of Mrs. Bessie Caroline Perry; to the Committee on the Judiciary.

By Mr. DONOHUE:

H.R. 12283. A bill for the relief of Jan Michal Dien; to the Committee on the Judiciary.

By Mr. FOLEY:

H.R. 12284. A bill for the relief of David C. Thomas, Robert W. Barber, Milton A. Chace and Richard F. Turner; to the Committee on the Judiciary.

H.R. 12285. A bill for the relief of Mrs. Stamata Vergyri; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

465. By Mr. FORAND: Petition of the Croatian Fraternal Union of America memorializing the Congress of the United States with respect to the Forand bill (H.R. 4700) which would amend the social security law so as to provide against the high costs of hospitals, nursing homes, medical and surgical care for persons eligible for old-age and survivors' insurance benefits; to the Committee on Ways and Means.

466. By Mr. McCULLOCH: Petition of 90 members of the Mercer County, Ohio, Teachers Association indicating support of H.R. 22 and S. 8 relating to Federal aid to education; to the Committee on Education and Labor.

EXTENSIONS OF REMARKS

The Depressed Areas Bill

EXTENSION OF REMARKS

OF

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1960

Mr. WIDNALL. Mr. Speaker, Pennsylvania is one of the States suffering most from pockets of chronic industrial unemployment. There is general agreement that five of the major labor market areas are so-called depressed areas. These are the Altoona, Erie, Johnstown, Scranton, and Wilkes-Barre-Hazleton areas. As of March 1960, unemployment in these five major areas totaled 57,500 persons. In addition there are six smaller industrial areas on which there is general agreement that conditions of chronic unemployment exist. These are the Berwick-Bloomsburg, Clearfield-Du Bois, New Castle, Pottsville, Sunbury-Shamokin-Mount Carmel, and Uniontown-Connellsville areas. Unemployment in those six smaller areas totaled 40,850 persons on the basis of most recently available surveys. All 11 of these areas would have been recognized as areas of chronic unemployment under both the administration's and the Senate passed depressed areas bills. Aside from the addition of one smaller industrial area, namely Butler with an unemployed total of 3,100 persons, the bill as it passed the Senate and the administration's bill were in complete agreement that these were the areas of chronic unemployment in Pennsylvania. The unemployed total for these 12 areas totals 101,450 persons.

Now let us see what would happen under the House version of the bill, as amended, which was accepted by the Senate, and sent to the President and vetoed. It would have been mandatory that the administrator designate 23 areas in Pennsylvania as eligible for assistance with an unemployed total of 320,850 or over three times that for the commonly recognized chronic areas. In other words, chronic areas would get only one-third of the assistance intended for them. Other areas, including Philadelphia with 119,300 unemployed and Pittsburgh with 75,700 unemployed would get $2 of every $3 of assistance intended for the chronic areas in Pennsylvania.

No wonder the President found it necessary to veto the unfair and unsound depressed areas bill which the Congress sent to him. Failure of this Congress to get busy and pass a good bill at this session can mean only one thing, and that is, that the majority party of this Congress is more interested in a potential political issue than it is in enacting constructive legislation to lessen suffering in hard-hit areas of chronic unemployment.

Keenotes

EXTENSION OF REMARKS

OF

HON. ELIZABETH KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1960

Mrs. KEE. Mr. Speaker, under unanimous consent, I include in the CONGRESSIONAL RECORD a copy of my newsletter released May 16, 1960:

KEENOTES

(By Representative ELIZABETH KEE)

Dominating all discussion in Washington is the shooting down of an American plane while on a flight over Russia. This incident has raised serious international questions and its effect could be reflected in the summit conference scheduled for this week, and President Eisenhower's proposed subsequent visit to Russia.

There is no doubt that this country lost considerable prestige abroad over the manner in which the incident was handled. Yet, because Democrats have closed ranks behind the President, the possibility that the incident will be as costly as first feared has been lessened.

Chairman CLARENCE CANNON of the House Appropriations Committee, a Democrat and one of the three or four most powerful men in the House, took the floor in a dramatic speech to defend this Nation's practice of flying photographic planes over Russia at high altitudes. He was followed by Senator LYNDON JOHNSON of Texas, the majority leader in the Senate, who called upon the Nation to close ranks at a time of crisis.

Mr. Khrushchev is enjoying a propaganda holiday as a result of the incident. He is going to do all he can to keep the issue alive and at times it seems he is intent upon forcing the President to cancel his planned visit to Russia.

If we had shown a tendency to argue among ourselves at home over this matter, the damage abroad could have been incalculable. Our allies undoubtedly would have been frightened, possibly to the point of denying to us the further use of bases.

As things worked out, the country is united behind the President, even though no one is particularly happy that we were caught in such embarrassing circumstances. We can at least through a show of unity minimize the damage from the incident.

REA 25 YEARS OLD

Last week marked the 25th anniversary of the Rural Electrification Administration. This is the Federal agency which loans funds to locally owned cooperatives to build and operate electric systems serving rural areas.

The program has been a tremendous success. About 95 percent of all farms are now electrified, enabling farmers to install modern conveniences and laborsaving devices. The life of farm families has been considerably enriched by this program.

REA is universally accepted as a part of the American system. It is an example of what can be accomplished when the Federal Government works with local groups instead of trying to run a program from Washington.

WEST VIRGINIA SPEAKS OUT

The people of West Virginia have demonstrated once more that they make up their own minds about people and issues. The national press devoted several weeks to telling the Nation that our State was composed of people whose judgment would be swayed by blind prejudice. Now the people have spoken. As usual, the people of West Virginia acted in accordance with the dictates of their own conscience. They refused to live up to the picture painted by visiting journalists. They listened to the arguments, they weighed them and then voted as they believed best.

Norwegian Independence Day

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 17, 1960

Mr. MULTER. Mr. Speaker, we honor today a milestone in Norway's more-than-thousand-year-old history. Norway's Constitution Day dates from but a century and a half ago—May 17, 1814.

The Norsemen, however, were recognized as a separate nation as early as the 9th century. Political unification of this ancient country is identified with the Viking era; as is, indeed, the first connection with North America. For the intrepid Norsemen were famous for their voyages, reaching as far as Greenland and the coast of the North American Continent. This day May 17, 1814, marks the reemergence of the nation of Norway.

During the intervening centuries the political independence of Norway had more than once been submerged; but the spirit of freedom was unconquerable. It reasserted itself most vigorously after the Napoleonic Wars. The people refused to be dominated either from without or within.

On May 17, 1814, Norway, through a national assembly, was declared independent. The constitution then adopted was based on the ideas which had inspired the American and the French Revolutions, on the principles of Montesquieu and John Locke's doctrine of the sovereignty of the people.

The spirit of independence in Norway was, however, long linked with a spirit of cooperation. During the 19th century Norway was linked with Sweden in a union. Theoretically each country was to preserve its complete, sovereign independence. In fact, however, Sweden became dominant, particularly in the conduct of foreign affairs; and in 1905 the union was dissolved. Norway became an entirely independent nation.

Significantly, the democratic spirit of a people was never more clearly demonstrated than in their election of a king. When, in 1905, King Haakon VII commenced his long reign as a much-loved "First Citizen," he was the first man ever to be elected king by modern democratic processes.

Together with their love of democracy and independence the Norwegians have maintained their willingness to cooperate. Clear evidence of this spirit exists today in the part that Norway plays in the North Atlantic Treaty Organization.

Emphasizing the fact that the principal aim of this collective system is to prevent war, Norway has placed great weight on NATO's activities to promote conditions of peace.

Norway has sought to strengthen political contacts between member countries for consultative activity on political problems. Such measures are not only valuable for cooperative purposes—and Norway places emphasis on the nonmilitary field—but also contributes to the relaxing of tensions. Such a policy is typical of Norway's traditional avoidance of international conflict.

We in the United States are proud to feel a kinship with Norway—this country of demonstrated faith in the principles of democracy, cooperation, and the promotion of world peace—one which has sent so many of her sons and daughters to our own shores.

Tribute to the Eagle Rock Sentinel

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 17, 1960

Mr. LIPSCOMB. Mr. Speaker, the 24th Congressional District of California, which it is my privilege to represent in Congress, possesses a number of top quality local newspapers which make an important contribution to the district in reporting news of special interest to the community, expressing area views on matters affecting it, undertaking crusades in behalf of the community where its interest is concerned, and generally performing many other valuable services in behalf of the residents of the community. The 24th District is very fortunate to have these public-spirited institutions.

One of the fine community newspapers serving the 24th District, the Eagle Rock Sentinel, is celebrating its 50th anniversary this year. The Sentinel is a source of pride to the district and I wish to add my heartiest congratulations on this important occasion.

There was no doubt as to what kind of newspaper the Sentinel was to be from the very beginning. When it first appeared, in March 1910, the Sentinel announced that it would defy the then existing trend toward journalistic sensationalism and that it would report community news in a conservative, straightforward manner.

In the intervening 50 years, the Eagle Rock Sentinel has maintained its original position with admirable determination. Throughout a brilliant career the Sentinel has kept to its original purpose and resisted temptations to gain in circulation through sacrifice of its ideals. It has earned a deserved reputation as a leader in its field.

Much credit for the success of the Eagle Rock Sentinel and the position it occupies today is due Mr. Harry Lawson, for many years the owner, and still publisher, of the Sentinel, and Mr. Oran Asa, who purchased the Sentinel several years ago. I am confident that under these extremely capable hands the Sentinel will continue to contribute to the best interests of the community of Eagle Rock for many years to come and I wish it every success in the future.

Federal Subsidies Inflate School Costs (H.R. 10128)

EXTENSION OF REMARKS
OF
HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 17, 1960

Mr. FISHER. Mr. Speaker, in considering the question of Federal aid for education, we need to take a close, hard look at the facts. Is such Federal aid actually needed? Is it good business to send a tax dollar to Washington and get back a smaller dollar in the form of so-called Federal aid for school construction? Should we risk a degree of Federal control over education by undertaking a mammoth $975 million grant and aid program for school construction?

On the question of need, the U.S. Office of Education states that the peak need for new classroom construction has been passed. From that source it can also be assumed that the anticipated annual classroom construction rate, without Federal aid, will more than meet future requirements—even as estimated by the bill's proponents.

That same office, after a recent survey, reports that only 237 school districts in 45 States (embracing 35,000 districts) have exhausted all sources of borrowing for classroom construction. The total classroom need in these 237 "borrowed-up" districts was less than 3,100; and 45 percent of the districts had fewer than 600 pupils enrolled.

It is also significant that almost 50 percent of all classrooms used in 1959 have been built since World War II.

Moreover, it is estimated that on a national average property values for school tax purposes are assessed at 30 percent of real values.

It would seem self-evident, therefore, that in the face of available information the facts do not support the need for this form of Federal aid as proposed.

Second, is it good business from a taxpayer's standpoint to send a tax dollar to Washington and get back only a portion of it, to help build classrooms? Or, on the other hand, would it not be better, from the taxpayer's standpoint, to retain that tax dollar at its source, avoid the shrinking effect of sending it to Washington and then back to its source, and

be able to get the full benefit of that tax dollar in the construction of classrooms, and with no strings attached in the use that is made of it?

On this subject of costs, it is necessary for local interests to take into consideration section 8 of the pending bill, H.R. 10128, which provides:

SEC. 8. (a) The State educational agency of each State which receives funds under this Act shall give adequate assurance to the Commissioner that all laborers and mechanics employed by contractors or subcontractors in the performance of work on school construction projects financed in whole or in part under this Act will be paid wages at rates not less than those prevailing on similar construction in the locality as determined by the Davis-Bacon Act.

A difficulty often encountered in the application of the Davis-Bacon Act is that wage rates set by the Secretary of Labor in a given community may reflect prevailing wages in a locality, but not those that prevail in a particular community.

Let me cite one example to illustrate that fact. Two schools were recently built simultaneously in Selma, Ala.—the Edgewood Grade School, upon which no Federal funds were used, and the New Knox Elementary School upon which Federal funds were used.

Here are the wage rates applied to the two construction jobs:

[Per hour]

Job category	Edgewood School (no Federal funds)	Knox School (Federal funds)
Common labor	$0.75	$1.15
Carpenter	1.75	2.25
Concrete finisher	1.75	2.85
Concrete mixer and traveling machine operator	1.50	2.75

It can be seen that the federally set wages ranged from 40 cents to $1.25 more per hour than local wages for the same kind of work. It appears from this example that the wage rates set by the Secretary of Labor in that particular community were substantially higher than the prevailing wage that existed there, although it may have reflected the prevailing rates in a locality that perhaps included a metropolitan area.

I have pointed out that the tax dollar that is sent to Washington and comes back later in the form of Federal aid, is a smaller dollar when it returns to its place of origin. I do not know just how much of its true value is lost in this form of Federal aid. In the field of Federal aid for slum clearance, for example, it is said that some 22½ cents of each dollar is consumed by the Federal overhead expense of making the dollar available and returned to its original source. And in the case of public housing, the brokerage fee paid to the Government on each tax dollar spent amounts to 39.9 cents.

Moreover, Mr. Speaker, I think most people agree with the warning so often given by the late Senator Robert Taft when he said: "Federal aid means Federal control. There is no middle ground."

A study of the history of Federal aid programs reveals that as a general rule such aid entails conditions and terms under which it is to be spent. We begin with it here by the application of the Davis-Bacon Act right at the inception, with Uncle Sam dictating to the local community how much they must pay the laborers who do the work, without regard to the local labor market and the wage rates that may actually prevail in a particular community.

It becomes evident, therefore, that if the taxpayers' money is to be sent to Washington, then returned for local use, it will come back with strings attached. That is one of the elements in the price that the people must pay if they choose to make use of Federal aid on local projects of this nature.

Therefore, while certain Federal aid programs have become accepted in this country, it would seem wise to take a close, hard look at the new ones that are proposed. Unless there are compelling reasons to justify such activities, it would seem the better part of wisdom to allow local communities which can do so to assume this responsibility on a local level, and keep Uncle Sam out of it.

Jobs After 40

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1960

Mr. HOSMER. Mr. Speaker, the Fraternal Order of Eagles has for some time conducted a fine campaign to educate employers to the advantages of hiring older workers. Remarks on the subject a couple of years ago by former Senator Frank A. Barrett were commented upon editorially by the Wyoming Tribune, Apirl 30, 1958, as follows:

JOB HUNTING AFTER 40

A lot of people will indeed applaud Senator Frank A. Barrett for questioning, in his newsletter, the callousness of the crack that "Life Begins at 40."

He pointed to the growing and grave concern with the trend among employers to bypass the fellow who has seen 40 summers.

"It is becoming increasingly difficult for men of that age to find jobs," he observed. "Thousands of skilled and experienced workers are unable to earn a living because of this discrimination in employment."

He praised the nationwide drive of the Eagles, which got off to a rousing start at Cheyenne largely through the efforts of W. F. O'Toole.

Legislation is pending before the Senate Labor Committee which would prohibit contractors on a Federal project from discriminating against individuals solely because of age.

"A good many of our citizens find themselves unemployed after working 20 years or more for one employer," the Senator said. "Even though they are in good physical condition and in the prime of life, they cannot find jobs. And yet these people are entirely too young to retire, and most without means to retire.

"They are caught betwixt and between. In my book, it 'ain't' fair and I don't mind saying so."

The seriousness of the situation was pronounced even when the economy was booming. It has become tragic in many respects with the onset of the depression.

The Federal Government, at least, doesn't have to go along with the matter. And States might also take a cue.

Other favorable comments on the Eagles' campaign have been made by many public figures. Here are samples:

Vice President: "The Fraternal Order of Eagles deserves the gratitude of every American for their 'Jobs After 40' campaign. The all too prevalent practice of discriminating against middle-aged workers is a twofold tragedy. It causes hardship to many of our finest citizens, and it deprives the Nation of skills which it so badly needs these critical days"—RICHARD NIXON, Vice President of the United States.

Governor: "It is gratifying to learn that the Fraternal Order of Eagles, of which I am a member, is conducting this active campaign to end job discrimination based on age. I have been very much opposed to practice of shunting aside older folks"—Ernest W. McFarland, Governor of Arizona.

U.S. Senator: "In what should be their 'golden years,' altogether too many, now, are shunted more and more to an insecure, dependent, and hopeless position in our society, through deprivation, because of their age, of their opportunity for gainful work"—WARREN G. MAGNUSON, U.S. Senator from Washington.

Governor: "The Eagles certainly have my support in their efforts to take better advantage of the skills now being neglected in the increasing group of older men and women. I do support the Eagles 'Jobs After 40' campaign"—Albert D. Rosellini, Governor of the State of Washington.

Congressman: "Both public and private employers would be benefited by giving our older workers greater job opportunities, and I should like to commend the Eagles for their efforts in this important field"—GEORGE HUDDLESTON, Jr., Member of Congress, Ninth District, Alabama.

Governor: "I subscribe wholeheartedly to the objectives of the Eagles 'Jobs After 40' campaign. I will be happy to take steps to evaluate the problem in Maine with a view to developing solutions"—EDMUND S. MUSKIE, Governor of Maine.

Congressman: "The Fraternal Order of Eagles program for 'Jobs After 40' is a highly meritorious one and it certainly has my full support. Congratulations on this worthwhile enterprise"—Lawrence H. Smith, Member of Congress, First District, Wisconsin.

Governor: "I am sure that your organization can do a great deal to assist persons over 40 years of age find employment, and I have long been understanding of the problems faced by the middle aged"—Theodore R. McKeldin, Governor of Maryland.

Congressman: "Today too many competent, able-bodied, trained, and experienced workers are being told they are 'too old, even at age 40.' That is why I have pledged my full support to the Fraternal Order of Eagles campaign against age discrimination"—HENRY S. REUSS, Member of Congress, Fifth District, Wisconsin.

Governor: "To the Fraternal Order of Eagles: It has been my experience that people after the age of 40 years have very much to offer in being placed on jobs. Their accumulated experience is valuable, and I find that very often they are more inclined to take an interest in the work and stay on the job longer than younger people"—Charles H. Russell, Governor of Nevada.

U.S. Senator: "The loss of production, as well as of a skilled work force sufficient to meet our national defense needs, require that older workers be given equal status in the competitive job market. The Eagles 'Jobs After 40' campaign is a most commendable and worthy project, and one which deserves wholehearted support. You certainly can count on mine"—HUBERT H. HUMPHREY, U.S. Senator from Minnesota.

Pennsylvania Dutch

EXTENSION OF REMARKS
OF
HON. WALTER M. MUMMA
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1960

Mr. MUMMA. Mr. Speaker, just recently I sent to each Member of the House of Representatives, a 76-page booklet that contained just about that many traditional Pennsylvania Dutch recipes. Along with each copy, I sent a covering letter, written in the Pennsylvania Dutch dialect which is written and spoken in my district. One of the daily papers in my district, the Lebanon Daily News, each day has a column written in that dialect. Not to keep the Members confounded, I also sent along an English translation of my covering letter, mentioning this wonderful area in Pennsylvania, which, from the response I received from the Members, is borne out in their letters to me.

I am grateful to receive the many nice comments from the membership for my effort to impart to them some information about customs of the Pennsylvania Dutch community and particularly their delightful food preparations and combination of Dutch dishes.

I want to include at the end of my remarks typical letters received that reflect the literary effort evoked by the cookbook and its covering letters, and should you be passing through that lovely Pennsylvania country with its well-kept farms, the colorful "hex" signs, and so forth, and overhear expressions like: "Jake is spritzing the grass," "It's just for nice," or "It wonders me," then you will know you are among the nice, hospitable Pennsylvania Dutch.

HOUSE OF REPRESENTATIVES,
Washington, D.C., May 5, 1960.

MIE GUDER FRIEND: Ich hob kaird es sawa uft muhls—"Fer wos sella mir Deutsch sie, wun du bisht net dumm." Our, Ich bin recht shure wun do glicklich genunk waersht fuh dirich des land, du daetsch ous finna aus sell net war is.

De shanne un gute-kolta boweri mit schier gute in pharab un mit "hexa" tzana—un de ushtso gute-kolta heiser sin arrick gross un so be-kund.

Ains fum de unner digna fah wos si bekund sin is erie kucha. Si sin grosse esser. Dirich des land sin wotsheiser wu si specializea (in des essa wos unser gross- modder gamacht hut).

Ich hob gamaint du daitsch glicha bruvera fum des essa in die hamit. Der Biles Horst, Secretary Benson's congressional liaison mun, aire is awe fum des land un connet usht des schwetza aire con des ouse acta.

Huff du gleischt das buch un awe dale fum des kucha.

Sincerely yours,

WALTER M. MUMMA,
Member of Congress.

[Translation]

HOUSE OF REPRESENTATIVES,
Washington, D.C., May 5, 1960.

MY DEAR COLLEAGUE: I have heard the expression many times—"What's the use of being Dutch if you are not dumb." Nevertheless, I am quite sure if you have been fortunate enough to get up through this country, you would realize the untruth of that statement.

The beautiful and well-kept farms with barns well painted and with "hex" signs—and the equally well kept houses are really terrific and so characteristic.

One of the other things for which they are famous is their cooking. They are stout eaters. Throughout the territory there are hotels where they specialize in these traditional dishes.

I thought you would like to even try such meals in your home. Well, my good friend, Jack Wolfe of the Meggs Company of Harrisburg, who specializes in manufacturing several varieties of the Pennsylvania Dutch noodles, has a recipe book for many such dishes, and has made some of these available for you.

I know you will get hungry just reading these recipes. Have your folks try one. My favorite is "Schnitz un Gnepp" on page 29.

Miles Horst, Secretary Benson's congressional liaison man, is also from this country and cannot only talk it but act it out.

Hope you will enjoy the book and also some of the cooking.

Sincerely yours,

WALTER M. MUMMA,
Member of Congress.

HOUSE OF REPRESENTATIVES,
Washington, D.C.

WALTER: When the flags go by the train is all! Jacob! Get up! Mamas et herself, papas et hisself, and I have et myself!

Thanks for the noodles!

WALT.

HOUSE OF REPRESENTATIVES,
Washington, D.C., May 10, 1960.

Representative WALTER M. MUMMA,
House Office Building,
Washington, D.C.

DEAR WALTER: Mine Gott, if your recipe book I take home an elephant mine wife makes me.

That's goot * * * I take home!

Thanks so much,

CHARLES E. CHAMBERLAIN.

MEIN LIEBE HERR MUMMA: Ich been gescribblin deser noten to mein Congressenman to asken vass is loss mitten der mailen und envelopen. Mein yungin Erhardt iss mit der trainen gewoerken mit mailen. He vass commenzin mit der grosse hufen puffer mit coal geskupen und now mit der lowdish getooten and stinken dieseler. Ich been ein aulten mann und been not understandern alles. Auber Erhardt is dinken he vill be das job withouten iffen das mailen and envelopin mit desen grosse zoomer boomers is gefiyian. He vants I shuld mine Congressenman gescribblin to tellen vas a goodische mann is Herr CUNNINGHAM who kompt fun Omaha.

Also ich been vorryin mit das zoomer boomer vas is gerpeepin mit kameran in das backyarden fun diese Kremlin. Varoom he is gettin gecaughten?

Leben zie so viele yahren as da fuchs um schwantz hadt haaren.

WALTER WIENERWURST.

HOUSE OF REPRESENTATIVES,
Washington, D.C., May 10, 1960.

Howdy.

I has just contracted yore cook book and Ise powerful greatful.

Some of the vittles talked of shore sound scrumptus but it is quite a contrasatory to the grub fed in our Ozarks. We'uns air attached to the beans, tatters, maters, pork, cornbread, poke greens, and 'lassus we'uns been fetched up on, but bein' of the sportin' kind—I'll have Ma stew up a batch and try it on tha youngens!

Yourn,

His mark (X)
A. S. J. CARNAHAN.

P.S.—Translated from Ozark into English: "We wish to acknowledge receipt of your recipe book and sincerely thank you."

A. S. J. CARNAHAN.

Statement of Hon. Robert Lovett to National Policy Machinery Subcommittee

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Tuesday, May 17, 1960

Mr. JAVITS. Mr. President, earlier in this session, Robert A. Lovett testified before the Subcommittee on National Policy Machinery, of which Senator JACKSON is chairman, and of which I have the honor to be a member. This testimony attracted widespread interest and comment when it was subsequently released, but a number of articles published subsequently interpreted certain comments of Mr. Lovett as being critical of President Eisenhower. In order to make clear that Mr. Lovett's testimony was both in word and intent directed at the institution of the Presidency and not at President Eisenhower personally, Senator MUNDT, ranking Republican member of the subcommittee, wrote Mr. Lovett and received a reply making this intent completely clear.

I ask unanimous consent that the exchange of correspondence between Senator MUNDT and Mr. Lovett, and an article on the subject by Arthur Krock printed in the New York Times of April 14, 1960, may be printed in the RECORD.

There being no objection, the letters and article were ordered to be printed in the RECORD, as follows:

MARCH 30, 1960.

Mr. ROBERT LOVETT,
Brown Bros., Harriman & Co.,
New York, N.Y.

DEAR MR. LOVETT: During March you graciously appeared as the leadoff witness before the Subcommittee on National Policy Machinery, of which I am a member. At the close of your appearance, the subcommittee went into executive session to receive your comments on the operations of the National Security Council.

Throughout your discussion of the NSC you referred to "the President." At the time, it was my impression that you were analyzing the position of President. Subsequent published articles have been based on the assumption that you described the activities of the present incumbent of the Presidency, Dwight D. Eisenhower.

One of these articles was a column by Mr. Walter Lippmann on March 1. Several days later I attempted to clarify the matter through a statement for the RECORD. Attached is a copy.

Unfortunately my clarification statement seems to have clarified nothing. Your testimony still is be interpreted as applying to President Eisenhower. I would appreciate very much having a short note from you as to the meaning you intended to give the phrase "the President" in your executive testimony. I hope to insert it in the committee record.

Again may I say that your basic statement before our subcommittee was most interesting and pertinent. With kindest regards, I am,

Cordially yours,

KARL E. MUNDT,
U.S. Senator.

ROBERT A. LOVETT,
New York, N.Y., April 4, 1960.

Senator KARL E. MUNDT,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MUNDT: On my return to the office today from the Pacific coast, I found awaiting me your letter of March 31 requesting clarification of the meaning of certain language in my comments on the National Security Council given in executive session before the Subcommittee on National Policy Machinery.

You are correct in your understanding that my use of the expression "the President" meant "a President," or "any President," and not specifically the present incumbent. I have made this same answer to Gordon Gray, special assistant to the President, who made the same inquiry of me by telephone while I was in California.

You will recall that, in my opening statement, I said (last sentence, p. 12, of the subcommittee printed record, pt. 1) that "It should be clear, therefore, that none of these observations is intended to be critical of any individuals or of operational decisions." The few paragraphs I had written dealing with NSC were excised from my public statement and were given in executive session in accordance, I am informed, with the terms of an understanding reached at the request of the White House regarding the handling in executive session of questions on NSC matters. The sentence quoted above naturally applies, as you rightly understood, to all my testimony in both open and executive sessions.

In view of the public interest shown in the subcommittee's hearings, it is not surprising to find some agencies or individuals who feel that the shoe might fit. I know of no way to keep them from trying it on for size.

With my thanks for your kind letter and cordial personal regards, I am,

Very sincerely yours,

ROBERT A. LOVETT.

HOW TO MAKE A SHOE FIT ANY FOOT

(By Arthur Krock)

WASHINGTON, April 13.—Since Robert A. Lovett testified before Senator JACKSON'S subcommittee several weeks ago, the impression has been growing that he definitely subscribed to some of the harshest criticisms of President Eisenhower and the National Security Council in their mutual relationship. Some news dispatches and analyses of Lovett's testimony, and a Senate speech by Senator FULBRIGHT, are important sources of this public understanding.

The chairman of the Foreign Relations Committee concluded that the former Secretary of Defense "indicated that the President (meaning Eisenhower) leads a dangerously sheltered life as Chief Executive." Also, that Lovett "said * * * the NSC protects Mr. Eisenhower from the debates that precede policy decisions."

The transcript of Lovett's testimony, both in open and executive session, does not establish either of these conclusions, or the assumptions in the press that when Lovett referred to "the" President, he always meant Eisenhower. What the transcript does establish is this:

1. At the outset of his testimony Lovett stated a caveat. It was that his remarks would be "based for the most part on notes made" during the Truman administration, and that he intended "no direct reference to any individuals or specific decisions."

2. But he did not regularly repeat this caveat. Therefore, when he answered, and agreed with, questions about "NSC procedures" and "the President," so phrased they could have been taken to apply to the Eisenhower tenure, it was possible to assume that the witness replied in kind.

3. But close inspection of the transcript shows that the former Secretary of Defense conceived he was discussing "a" President and the National Security Council as an institution, and he has since said as much. Apparently he relied on his opening caveat to prevent hypothetical exchanges in executive session from being interpreted as applying specifically to Eisenhower and the current procedures of the National Security Council.

QUESTIONS AND ANSWERS

The following are such exchanges:

Mr. JACKSON. Do you think the Security Council can operate effectively, as it was designed originally, if you have a large number of participants?

Mr. LOVETT. I would have very great doubts about its ability to operate in a mass atmosphere. I think it would inhibit fair discussion * * * [and] be an embarassment as regards the vigor with which a man might want to defend his position. I think it would limit the quality of the debate which the President ought to hear.

Mr. JACKSON. You do not necessarily lighten the load of the President by bringing to him agreed-upon papers where no decision is involved, other than to say, "We will go ahead with this." Don't you think there is confusion on the point that there is a tendency to help the President, to lighten his load, by trying to do his constitutional work for him?

Mr. LOVETT. I think the President in his own protection must insist on being informed and not merely protected by his aids, [it being] a tendency of younger assistant * * * to try to keep the bothersome problems away from the senior's desk.

Probably it was because the witness did not steadily invoke his caveat, like takers of the fifth amendment before racket inquiries, that many concluded Lovett had conceded the points of criticism involved as currently applicable. But if he fears that President Eisenhower's temperament, his military preference for having issues intensely screened for him, and his awesome renown, inevitably have diluted the essential concept and function of the National Security Council in this administration, Lovett neither "said" nor "indicated" this. And the National Security Council's statistical record—of the President in the chair at 90 percent of the National Security Council meetings, sharp debates in his presence over fundamental differences in policy papers—refutes many assumptions on which major criticisms are founded.

H.R. 5

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 17, 1960

Mr. BOGGS. Mr. Speaker, the Members of the House have been advised that H.R. 5, the Foreign Investment Tax Act, will be brought up on Thursday of this week so that the House can complete consideration of the bill. Members will recall the debate on H.R. 5 began on March 8 under a closed rule providing for 3 hours of debate. Two and one-half hours of debate were consumed on that day and debate was suspended until a later date. Thus, when consideration of H.R. 5 is resumed on Thursday, there will only remain 30 minutes of debate, 22 minutes of which are reserved to the minority.

The limited amount of time available for debate on Thursday will not permit a full discussion of a number of points which deserve to be brought to the attention of the House for its consideration in connection with the vote on the bill.

I refer particularly to the fact that the Committee on Ways and Means has adopted two amendments to the bill which it proposes to offer to the House as committee amendments, as provided for by the rule. On April 28 I inserted in the CONGRESSIONAL RECORD the text of three amendments and the text of the press release of the chairman of the Committee on Ways and Means, the Honorable WILBUR D. MILLS, in explanation of the committee amendments.

I want to take this occasion to explain briefly the committee amendments and to commend them and the bill to the House. These amendments were adopted in the light of the debate which took place on March 8 on the bill and are designed to perfect the bill by removing some of the features which evidently gave concern to a number of the Members of the House. I feel confident that the committee amendments successfully accomplish this purpose and that no Member of the House need entertain any reservations about voting for H.R. 5 this Thursday.

I also propose to discuss some of the matters raised by the Members involving general policy questions surrounding H.R. 5. I refer particularly to two matters: First, the question of the impact of H.R. 5 on the U.S. balance of payments and, second, the effect of the bill on American jobs. After giving very careful thought to these questions, I am absolutely convinced that there need not be any concern about H.R. 5 on these two counts.

BASIC PURPOSE OF THE BILL

The basic purpose of H.R. 5 is to permit the deferral—postponement—of the U.S. corporate income tax on income earned abroad by a new type of domestic corporation to be known as the Foreign Business Corporation. The Foreign

Business Corporation will be a corporation that earns virtually all of its income outside of the United States and meets a number of very rigorous tests. Under one of the committee amendments, which I will discuss in greater detail below, the Foreign Business Corporation must earn and reinvest its income in the less-developed countries of the world.

Today, under existing law, a great number of American business firms can enjoy tax deferral by setting up foreign corporations and particularly what are known as "foreign base companies." The Foreign Business Corporation would be a domestic base company. As I have indicated, in order to qualify as a Foreign Business Corporation and to enjoy tax deferral on the income earned, a company would have to meet very rigorous tests, more rigorous than those involved in foreign incorporation. In addition, as I have also pointed out, the Foreign Business Corporation would have to earn its income in the less-developed countries in order to enjoy tax deferral whereas existing foreign base companies can earn their income anywhere in the world.

The modest character of H.R. 5 is, I think, quite evident. Nevertheless the bill is important. A number of American firms, particularly small business firms, are either not able or not willing to incorporate abroad in order to get tax deferral. Foreign incorporation is generally regarded as a cumbersome and expensive business and often does not lead to rational management of business operations. H.R. 5 would make it possible for these American firms to enjoy parity with other American firms that have been able and willing to go abroad—at least so far as operating in the less-developed countries is concerned. H.R. 5 would also—and this is most important—improve the competitive position of American firms abroad relative to the position of their foreign competitors. The United States stands virtually alone among the major countries of the world in not providing the kind of tax treatment involved in H.R. 5. Finally, H.R. 5 would serve as an incentive to American private investment in the less developed countries and would serve, therefore, to advance our foreign policy objectives which are being met through Government aid. It is only through expanding private investment that the prospect of reducing Government aid to the less developed countries can be realized.

COMMITTEE AMENDMENTS TO H.R. 5

The two amendments to H.R. 5 that will be offered to the House would accomplish three purposes. They would:

First, limit the provisions of H.R. 5 to income earned and reinvested in the less developed countries;

Second, eliminate the so-called gross-up with respect to the dividend income received by the foreign business corporation; and

Third, make a corporation ineligible as a foreign business corporation if it has been operating abroad under substandard labor conditions.

Limiting H.R. 5 to investment in the less developed countries means that the provisions of the bill would act as incentives to investment in the less developed countries only. It is in these areas of the world that private investment is most desperately needed and where the development of private enterprise is essential for long-term economic growth and political stability.

The elimination of gross-up is a highly technical matter. A number of the minority members of the committee, in the floor debate of March 8, objected to the inclusion of this provision in H.R. 5 on the grounds that it discriminated against the Foreign Business Corporation provided for in H.R. 5. Since that time, the Committee on Ways and Means has held public hearings on gross-up legislation which, if enacted, would apply to all domestic corporations including the Foreign Business Corporation. It was felt that, in view of this pending bill, it was not necessary or desirable to have a separate gross-up provision in H.R. 5.

The committee also adopted an amendment providing that a corporation would be ineligible for the benefits of H.R. 5 for any taxable year in which it was found to be operating abroad under substandard labor conditions. The wage standards involved would be those of the foreign country in which it was operating. The committee felt that, since the expansion of U.S. private investment was essential to the effectuation of important goals of national policy, the positive results of such an investment should not be endangered by a corporation operating in a less developed country under labor standard conditions that were below the minimum standards of the country concerned and still be able to enjoy the advantages of H.R. 5. This provision of the bill will not be administered in a harsh and punitive manner. It is expected that adequate opportunity will be given a corporation to raise its standards in order to conform with the required standards.

REVENUE EFFECTS

The Treasury Department has estimated that, with the amendment limiting H.R. 5 to less developed countries, the revenue effect of the bill will range between $30 to $40 million a year. This is a reduction of over 50 percent and, indeed, more like a two-thirds reduction, in the revenue effect that was estimated for the bill as originally reported by the Committee on Ways and Means.

It is important to emphasize that this revenue effect does not involve an ultimate revenue loss for the Treasury. H.R. 5 does not provide for tax reduction; it only provides for the postponement of tax. When the earnings from foreign investments are returned to the United States, as they ultimately must, the full U.S. tax will be paid. Moreover, by promoting investments, H.R. 5 also promotes the future flow of income from investments and hence increases the revenue from such income which the Treasury will collect. I firmly believe that tax deferral should be regarded as a short-term investment by our Government in American private enterprise abroad that will yield good returns to the U.S. Government, to the Treasury Department and to American business in the years ahead.

ADMINISTRATION SUPPORTS H.R. 5

The administration has indicated its support for H.R. 5, as amended, because it gives effect to the President's recommendation, contained in his budget message this year, for the enactment of tax deferral legislation limited to income earned and reinvested in the less developed countries of the world. In a letter from the Treasury Department to the chairman of the Ways and Means Committee it is pointed out that the administration has urged that further steps be taken to encourage private investment in the less developed countries abroad and that H.R. 5 is in accord with this specific recommendation of the President.

I also understand that the committee amendments to the bill have satisfactorily met the reservations that a number of groups have had to the enactment of H.R. 5. The AFL–CIO, which indicated its opposition to H.R. 5 when the bill was first brought up, has now urged the passage of H.R. 5, as amended.

H.R. 5 AND THE U.S. BALANCE OF PAYMENTS

There has been some concern expressed about the question of promoting private investment abroad at a time when the U.S. balance of payments has manifested a deficit. It is, therefore, worth while to examine briefly the relationship between private investment and the U.S. balance of payments and the effect of H.R. 5 thereon. Before doing so it is useful to take a look at the recent developments in the U.S. balance of payments to see what has been happening and particularly to note whether our balance of payments problem is as serious today as it was a year or two ago.

The evidence is very encouraging. In the Foreign Commerce Weekly, for May 9, 1960, a publication of the U.S. Department of Commerce, there is a detailed discussion of the remarkable improvement in U.S. exports. I quote the lead paragraph in this article:

> Sales of U.S. goods abroad displayed considerably increased vigor in the first 3 months of this year, following their rebounds in the second half of 1959. Nonmilitary shipments, totaling $18.4 billion at a seasonally adjusted annual rate in January–March, as compared with $15.4 billion a year earlier, showed the greatest strength apparent in more than 2 years.

The improvement in our exports reflected a 20-percent increase over the same period in 1959 and March exports were larger than in any month since June of 1957 when exports were inflated by the post-Suez situation. The gain in exports this year was shared by all major categories of U.S. exports.

It is interesting to note that exports to Western Europe—a prime target for American investors in recent years—rose 40 percent in January and February 1960 above the corresponding months of 1959. Exports to Japan were also higher by 40 percent than for the same period in 1959.

With the improvement in our balance of payments the gold outflow that was of so much concern in 1958 and 1959 has slowed down to a trickle. I understand that there was a smaller gold outflow in the whole first quarter of 1960 than was recorded on the average for any month in 1959.

Not only has our balance of payments situation shown very encouraging signs of improvement so that we need be less concerned about our balance of payments, but it is also very important to recognize that U.S. direct private investment abroad has not been a factor in our balance of payments troubles. There is one fact about investment and our balance of payments that is not well known and deserves wide attention. It is that year in and year out since the end of World War II, and even before, the income that we have earned from our direct investments abroad has exceeded the outflow of new direct investment.

Every year we have been taking in more in income than we have been sending out in new investment. This has been an important plus factor in our balance of payments—almost as important in 1959 as our export surplus. Thus, over the last 5 years, 1955–59, the excess of our direct investment income over our direct investment outgo has totaled $3.5 billion. Thus, direct investment transactions have on balance supported our balance of payments to the tune of $3.5 billion over the past 5 years. In 1958 and 1959, the excesses of income over outgo on direct investment account equaled $1.1 billion and $0.9 billion respectively.

Nor can it be argued that direct investment outflows helped cause our balance of payments problems in 1958 and 1959. The fact of the matter is that direct investment outflows were lower in 1958 and 1959 than in 1957 which was a year of balance of payments surplus for the United States.

Actually we can look forward to income from our direct investments offering an important support for our balance of payments in the years ahead. Direct investments abroad also help U.S. exports as can be seen in the record of exports to Western Europe this year which I cited earlier.

The "Staff Report on Employment, Growth, and Price Levels" prepared by the staff of the Joint Economic Committee of the U.S. Congress and published on December 24, 1959, confirms these observations. The following quotation is taken from this report:

> Taken by itself, the net contribution of private capital investments abroad cannot reasonably be accused of causing balance of payments problems. To say this, however, requires the setting against one another of private foreign investment outflows and private earnings on foreign investment. If, at this period, U.S. business stopped investing abroad, the balance of payments deficit would be reduced to a negligible amount However, if the fruits of past private foreign investment were also eliminated, this proposition would be vitiated. It seems a more reasonable approach to take the net of these two flows, which gives private foreign investments to date a pretty clear bill of health.

A recent interim report by the Committee on Interstate and Foreign Commerce of the U.S. Senate, prepared in connection with its special study of U.S. foreign commerce and dated April 25, 1960 had this to say in connection with the subject of private foreign investment and our balance of payments:

> Reducing the flow of private investment abroad would contradict a major thesis of our economic assistance policy, hobble the competitive power of U.S. industry in world commerce and, in the longer run, diminish the returns from foreign investment which are an important entry on the income side of our international ledger.

JOBS, EXPORTS, AND FOREIGN INVESTMENT

It has been contended that private investment abroad reduces U.S. exports and hence takes away American jobs. What truth is there to this contention? I think the evidence shows that far from reducing American exports and taking away American jobs, private investment abroad creates markets for American exports and hence helps create American jobs.

First, let me say that H.R. 5 would not take away investment money that would otherwise be invested in the United States and induce American corporations to invest that capital abroad. H.R. 5 provides the deferral of U.S. tax on income earned abroad. It, therefore, operates as an incentive to reinvestment abroad of incomes earned abroad. To put it briefly, it promotes the plowing-back of foreign earnings. Once the foreign earnings come back to the United States and enter the domestic capital market they will be subject to the full U.S. tax. Thus, H.R. 5 will not take capital away from investment in the United States and from the creation of jobs in the United States. As a matter of fact, if an American corporation has decided to invest abroad, H.R. 5 would make it possible for that corporation to finance more of the investment out of its foreign earnings and correspondingly less of the investment out of its domestic capital.

Neither would the bill result in a reduction of U.S. exports and the production abroad of goods that were formerly exported from the United States. As we all know, there has been a sizable amount of U.S. investment abroad particularly in Canada and Western Europe in the last few years. Has this investment resulted in a decline of the U.S. exports? Let us take Western Europe for example. There has been a substantial amount of investment by U.S. corporations in the six countries that make up the common market. Yet, despite this fact, our exports to the common market countries have actually increased. In the first 2 months of this year U.S. exports to the common market amounted to almost $550 million. This was 52 percent above our exports for the same period in 1959 and 36 percent above our exports for the same period in 1956, a year which we tend to regard as a high export year.

Another test of whether U.S. investment has impaired our exports can be made by examining the decline in our exports that took place in 1958 and 1959 to see whether these declines in exports were attributable to American investments abroad. Our exports declined in such categories as raw cotton, iron and steel mill products, nonferrous metals, civilian aircraft and petroleum. In no case did our exports decline because the exports markets for these products were being supplied from overseas sources by American companies.

Even in the case of imports into the United States, the increase that we have experienced over the past few years is not attributable to goods produced by American investment abroad. As you know, H.R. 5 contains a provision that would make a corporation ineligible for the benefits of H.R. 5 if it reexported to the United States, directly or indirectly, goods that had been produced by it abroad. The provision in the bill says specifically that a corporation will be ineligible for the benefits of H.R. 5 if more than 10 percent of its gross income is derived from the sale of goods in the United States that were produced abroad.

I think it should be appreciated that the less developed countries of the world are not good markets for U.S. exports for the simple and basic reason that these countries are poor. Investment abroad, as investment at home, creates wealth and income. It is only through investment that production can expand, standards of living rise and markets be developed. Investment by private U.S. companies will produce goods that these countries cannot afford to buy today from the United States. But in the process these countries will become markets for U.S. exports and this will create jobs in the United States.

This is surely the lesson of American history. We export the most to those countries with the highest standards of living and in which American enterprise has the greatest investment. The following table shows this clearly:

	Income per capita	*Per capita purchases from U.S.*
Canada	$1,436	$234.0
Great Britain	958	21.0
France	846	13.0
Germany	742	18.0
Italy	404	14.0
Japan	254	13.0
Egypt	109	1.5
India	61	1.1
Pakistan	52	1.3

I therefore do not think that there is a basis for concern about the effect of H.R. 5 either in terms of what it might do to exports and jobs at home or in terms of the effect that it might have on the balance of payments. On the contrary, it seems to me that through offering this modest, but important, incentive to private investment in the less developed countries we will help these countries to develop and to become good customers. Beyond that we would be advancing important objectives of national policy through the utilization of private enterprise which is our secret weapon in the cold war with the Sino-Soviet bloc.

In Answer to Soviets: Congressman Curtis of Missouri Urges New Weapons To Fight an Economic War

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 17, 1960

Mr. WILSON. Mr. Speaker, during past weeks, the Nation's press has been subject to considerable criticism and analysis. Many news media are, however, doing a thoughtful, careful and constructive reporting job in the public interest. A good example of this is an interview by Sid Goldberg, news editor, NANA, with my colleague, TOM CURTIS. Mr. Goldberg, who is an executive of NANA, seldom personally covers news breaks and does interviews because he is in charge of the gathering and transmission of news. However, as an experienced and skilled reporter, occasionally he does do a story of national significance and importance. His thoughtful analysis of the points raised by Congressman CURTIS in discussing that peace can be maintained both through a strong military defense but also sound economic policies, both at home and abroad, has been very favorably received by the Nation's press. This interview has already been printed in the editorial sections of the St. Louis Globe-Democrat, Atlanta Constitution, Louisville Times, New Haven Register, among others.

I am familiar with the work of NANA because one of my hometown papers, the San Diego Union, carries this service. In days when there is a tendency to publicize the spectacular, I wish to commend Mr. Goldberg, Mr. CURTIS, and NANA in presenting to the public a forward looking analysis of economic steps that can and should be taken in our relations with countries overseas and, at the same time, protect the jobs of American workers:

IN ANSWER TO SOVIETS, LAWMAKER URGES NEW WEAPONS TO FIGHT AN "ECONOMIC WAR"

(By Sid Goldberg, North American Newspaper Alliance)

NEW YORK, April 16.—A key Congressman, in response to Premier Khrushchev's declaration of economic war, proposes strong countermeasures to Soviet "dumping," a complete revamping of the U.S. tariff system, and creation of a secretary of foreign economics as a full Cabinet member.

"Khrushchev has challenged us to economic war, but our arsenal is empty of effective weapons in this field," says Representative TOM CURTIS of St. Louis, Mo. "We've got the bombs and missiles to stand up to Russia in a military showdown, but in a battle between economies—the kind we're now being forced into—the United States is almost defenseless."

CURTIS, the only Missouri Republican holding high elective office, is the ranking minority Member of the House-Senate Joint Economic Committee and fourth-ranking Republican in the House Ways and Means Committee.

Now completing his fifth term in the House, the 48-year-old Congressman has been mentioned in the press as a running mate for either Vice President NIXON or, should he be drafted, Gov. Nelson Rockefeller of New York.

PROPOSALS NOTED

The first of CURTIS' unorthodox proposals is the establishment of a U.S. Trading Corpotion (USTC), capitalized by the Government at $1 billion with a potential of up to $4 billion. Purpose of the corporation would be to enable U.S. firms to compete with the artificially low prices set by Soviet state trading monopolies. Payments from the corporation would assure a U.S. firm of a fair profit margin if it were forced to drastically lower its prices to meet the monopoly prices of Russia.

"Right now Russia is engaged in the same kind of unscrupulous business practices that were outlawed by our antitrust legislation in the last century," CURTIS explained in an interview during a visit here.

"The U.S. exporter, in competing with Soviet monopolies, often is up against the type of unfair competition that many small businessmen faced in American before the Sherman Antitrust Act," he said.

The St. Louis Congressman stresses that the Corporation would be designed as a defense only against totalitarian economies such as Russia's, and would go into action only when U.S. firms could prove they were up against unscrupulous foreign competition.

"There must be built-in safeguards against U.S. firms taking advantage of the Corporation," he continued. "Some firms inevitably would try to blackmail the Corporation into helping them underbid foreign competitors. But payments would be made only when the competition could be shown blatantly unfair."

TOM CURTIS cites several examples of how Russia cuts corners in its economic war with the West. Two years ago it tried to create anarchy in the world aluminum market by dumping vast quantities of the metal at below-cost prices. At the same time it outbid the United States for Icelandic fish, trying to tie the island's entire foreign trade to Kremlin purchases.

RETALIATION THREAT

He also points out that Poland recently agreed to supply Cuba with textile machinery; yet for several months Poland was negotiating to buy textile machinery from the United States, claiming a serious shortage at home.

"This kind of trade deal often is expensive economically to the Soviet bloc, and is entered only when an outstanding political goal can be achieved," CURTIS said. "Perhaps the mere threat of U.S. retaliation through the trading Corporation would be enough to dissuade the Russians from these practices.

"Just as the possession of the hydrogen bomb works as a deterrent to military aggression, existence of the trading Corporation could work as a deterrent to economic forms of aggression," he suggested.

CURTIS hopes that the Corporation, if set up, some day could be internationalized, growing into an "economic court of justice" that would eliminate the cutthroat practices that still persist in international trade.

Regarding U.S. tariffs, CURTIS believes the whole system is outdated. "It regulates but it doesn't stimulate," he said. "The tariff should be an economic wedge that we could use to force an increase in the standard of living around the world."

He believes this could be done by automatically lowering the tariff by a set percentage every time a foreign wage scale goes up. For example, if Japanese textile workers received an increase in pay, the tariff on Japanese textiles would be lowered proportionately. Similarly, when a foreign wage rate goes down, the U.S. tariff would go up.

CURTIS says it is inconceivable that we can have healthy trade relations with countries where workers are paid a 10th or a 20th of the U.S. scale. He cites the Peruvian miner, who earns 8 cents an hour—compared to the $1.50 an hour earned by his American counterpart.

EMPLOYERS COULD PAY MORE

"Our miners may be 10 times more efficient than Peru's, or even 15 times; but I refuse to believe they are 20 times better," he said. "Although employers in underdeveloped countries naturally can't pay U.S.-scale wages, they certainly can afford to pay more than they are. One way to encourage them is through a carrot-and-stick tariff policy."

CURTIS says the United States need have no guilty conscience about "meddling" in the wage policies of foreign countries. "If you call this 'interference,' then I'm all for more 'interference' of this kind," he says. "People will eat better."

The Congressman is not dispirited that neither the trading corporation nor the new tariff system has majority support in Congress. He has tried twice without success to push through the necessary legislation. But he believes that, as the Soviet economic threat intensifies, and as the needs and demands of underdeveloped countries continue growing, pressure for a new approach to foreign economic policy will become compelling.

"The problems already have become so vast that the State Department no longer can handle them," he said. "What is needed is a new Cabinet position, a Secretary of Foreign Economics, devoted entirely to the questions of export-import, tariffs, the Soviet economic challenge, and our aid and trade agreements. Several European Governments have had such cabinet posts for many years, and it is time we got around to having one ourselves."

Herbert J. Pascoe Educational Scholarship Foundation

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 17, 1960

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I should like to include a statement which I made at the seventh anniversary dinner of the Herbert J. Pascoe Educational Scholarship Foundation, which was held on Sunday, May 15, in Newark, N.J. The foundation was set up to encourage young people to enter the field of education by awarding scholarships to aspiring young teachers. This year, scholarships were awarded to two outstanding students; Joyce Tuzzolo, of Bloomfield, N.J., and Rosalie Notto, of Phillipsburg. Both of these young women were selected because they demonstrated their superior academic ability and excellent potential for the profession which they have chosen for themselves.

The statement follows:

REMARKS BY CONGRESSMAN PETER W. RODINO, JR., AT THE HERBERT J. PASCOE EDUCATIONAL SCHOLARSHIP FOUNDATION SEVENTH ANNUAL DINNER

It is a great pleasure to greet you once again at this commemoration of 7 years of fruitful activity by the Herbert J. Pascoe Educational Scholarship Foundation.

There could be no more fitting memorial to Herbert J. Pascoe, who himself made a

great contribution to education in this State, than the dedicated work of the Foundation.

The lives of boys and girls throughout the State of New Jersey are already being affected and enriched by the leadership of Herbert J. Pascoe scholars who have now graduated and joined the dedicated ranks of their chosen profession.

Through your efforts many young people have become teachers who otherwise might have been attracted elsewhere, and many have attended college who might otherwise not have been able to do so.

The broad problem of higher education has come into sharp focus in recent years as we realize how essential is a college-trained and college-educated citizenry to our very survival.

The complex problems of living in this nuclear age makes bare literacy hardly sufficient. And the challenge of keeping pace with the technological advance of the Soviet Union—a challenge we must meet—further underlines the importance of higher education.

Unfortunately, the recognition of these basic truths has not yet spurred us on to adequate action.

While the Soviet Union is graduating more teachers, more scientists and more engineers than ever before, we complacently permit an appalling wastage of our human resources. It has been estimated that over half, and possibly three-quarters, of our qualified and capable students, with demonstrated academic ability, fail to go on to college.

Perhaps a major reason why so many of these young people do not go to college is because of a lack of adequate personal funds to finance their education. Part of this gap is being filled by the efforts of this foundation, and by similar private groups throughout the country. Another part of this gap is being filled by the National Defense Education Act, which in the 2 years since its passage has enabled many young people to go to college.

But I do not think I shall offend this organization, nor shall I offend the Federal Government, when I say that all of these efforts are only a drop in the bucket. The dimensions of the need are simply too great and too overwhelming.

And the problem is not alone that of finances. As graduation time approaches I receive dozens of letters every week from high school seniors who plead with me for help in getting into college. It is tragic, but true, that students with A or B averages, with well-rounded and impressive records, are being turned away every day by our colleges and universities. The schools have 5, 10 or even 15 applications for every opening. As a result, even those who could pay their own way are forced to forego their lifetime ambitions.

The problem is becoming more and more acute in New Jersey, which has always exported the majority of its high school graduates to out-of-State institutions. I understand from the press that other State universities have already given notice that the increasing pressures of their local applicants will require them to give less and less consideration to the New Jersey student in the future.

We cannot continue to permit our potential human resources to lie fallow. It is not my purpose, in this brief statement, to suggest the details of a solution. I merely wish to stress that the solution requires the concerted and dedicated efforts of all our citizens on all fronts and on all levels. It requires a program of national scope and with national support. Above all, it requires our united conviction that the need is too urgent to be set aside or ignored.

We in this country, have indeed, bet all our chips on the enlightenment of our people. We have placed all our faith, all our hope, upon the education, the intelligence and the understanding of our body politic. We have said that ours is a Government conducted by its citizens, and from this it follows that our Government can only be properly conducted if our citizens are well educated.

The manner in which we accept the challenge to provide those citizens with educational opportunities may well determine the future course of our destiny.

The Fallacy of High Interest Rates

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1960

Mr. DINGELL. Mr. Speaker, attempts to raise the interest rate on long-term U.S. bonds, will have an adverse impact upon our economy. The tight-money policy saddles this Nation with one of the most fantastic economic theories ever advanced.

Since 1953, the Eisenhower administration has persistently sought to effectuate higher and higher interest rates. As I have stated before, the rise in interest rates has been nothing less than scandalous. Hiking of interest rates has only one function, to create spirals of increasing costs on every item, transaction, and commodity, sold or purchased in our economy. These increased interest rates must be borne by the borrower, while the lender reaps tremendous additional profits for no good reason whatsoever.

The action of the Republican Party, self-professed disciples of the balanced budget, in straight-facedly urging a higher interest rate—which will among other things increase the cost of Government indebtedness—while at the same time, accusing the Democratic leadership of wild, inflationary spending, would be indeed comical if it were not so vicious.

The tight-money policy is dangerous because it tends to restrict our Nation's economic growth. Topflight economists have been quick to point out that pursuit of a policy such as this at a time when our economic growth is already retarded, as evidenced by the high unemployment statistics, serves only to further curb our productive capacity. Unfortunately, inflation is not retarded by increased interest rates. High interest rates accomplish higher costs with no corresponding increase in output. For example: the increased cost to the taxpayer of a quarter of 1 percent rise in interest on $1 billion worth of Government bonds is $2.5 million a year. Yet none of this increased cost gives the taxpayers a dime's worth of additional services; rather, it further raises the cost of all the other money borrowed, since this increase is passed along in other loans, mortgages, and financing plans. For instance, such a proposed interest raise would increase the cost of buying a home, and this would make homeownership more difficult.

Recently, Senator WILLIAM PROXMIRE illustrated how increased interest rates have raised the cost of each typical elementary school by $150,000. The results of the tight-money policy in the school program alone have cost the Government an additional $675 million each year. This increased burden on school construction and education in the United States is directly attributable to the Republican administration's tight-money policy. The additional money did not go toward increased construction costs, or for the wages of workingmen, or even to the building contractors. Instead, this money went to the moneylenders, the financiers and investment corporations, and banks. It was sweated from the hides of our citizens.

The effect of tight money on private housing is already observable. Despite the continued pressing need for decent housing, it is estimated that there will be some 200,000 less homes built this year as compared with the year 1959, in which only 1.3 million new homes were built. The main reasons for fewer new homes; lack of mortgage money and the high interest rates, both the natural result of the Republican tight-money policy.

The more carefully the tight-money policy is analyzed, the more fantastic it becomes. Inflation can be successfully curbed, according to the administration, if the runaway boom in this country is nipped by making money more difficult to obtain. Money can be made more difficult to obtain by making those seeking it pay more interest when they attempt to borrow it. But how can this theory possibly work when the increased interest rate will only affect those who have need of the money markets; namely, the consumer and small business. It is they who must pay the increased interest rate oftentimes for commodities that are necessary to them and vital to our economy. Thus bankers prosper while the consumer staggers under an increased cost for borrowing money or mortgages, while the big corporations go unscathed. Yet it is the huge corporations who can, and do, swell their profits by continuous price hikes, thereby directly contributing to an inflated economy.

Not only has tight money failed to curb inflation, it has directly and unmistakably promoted it. The cost of living has increased in spite of this misguided act of clamping down on the little man. Billions of dollars have been lost as a result of only partial economic productivity. With at least 3½ million unemployed, and no reduction in sight, there is nothing to justify the currently high interest rates or an increase in them. Certainly we must scrap all economic theories which prevent the economy from developing in a manner that will permit it to support full employment. In Detroit, there are absolutely no signs whatsoever that point to a boom. Indeed, the opposite is true. Unemployment is still a serious problem, small business is in bad shape by any standard of measurement, and taxes and revenue from all branches of government are falling off. This then, is obviously no time to be raising interest rates. Already the number of second land contracts, second mortgages, and other

shaky security devices grow more numerous; and at the same time, there has been a drastic increase in the number of foreclosures. These are the results of this artificial scarcity of money that the administration seems determined to accomplish at any cost to the national economy. The tremendous costs of these already high interest rates that have been heaped upon millions of wage earners as well as small businessmen and home buyers, permitting moneylenders to reap a tremendous profit without providing any additional service whatsoever is disgraceful. To surrender to the moneylenders of this country by indulging them in this selfish desire, is unnecessary.

May I point out that since World War I, through the booms, depressions, and crises, this country has successfully met its fiscal needs without the necessity to exceed the 4½-percent interest rate ceiling on long-term U.S. bonds. I believe these bonds can attract buyers as they always have without the necessity of raising the interest rate. Whatever shortage of loanable funds that may arise from time to time, is, at most, a temporary situation.

I further charge the Republican administration with promoting a scare campaign about inflation, which besides being an irresponsible act in itself, operates to discourage investors in long-term bonds of any kind, but rather encourages them to buy stocks. Republicans from the President down have engaged in this inflation scare to justify various policies and results of the present administration. Why should the interest rates on long-term U.S. bonds be increased at a time when these rates are now at an alltime 35-year high? It would only add billions to the tax bill of working Americans, and to make it worse, would operate to further inflate all other interest rates as well.

Ever since Mr. Eisenhower's first Secretary of the Treasury, Mr. Humphrey, boosted interest rates, interest rates in all fields have been steadily increasing. Surely the tight-money policy should prove to its Republican supporters that the inflationary atmosphere created by the gigantic corporations in this Nation cannot be deterred by the tight-money policy, primarily because they have no necessity to go to the moneylenders. The giant industries of steel, oil, automobiles, and drugs, can and do administer their prices upward, without any regard whatever for a tight-money policy that is supposed to curb inflation.

Millions of average American families have been hit hard by tight money. For example, over the last few years, higher interest rates on FHA mortgages have added thousands of dollars to the cost of buying a home.

In the final analysis, high interest rates increase all prices; they inflate the cost of raising a family, of buying a home, car, or appliances, and of raising small business capital. Thus, high interest costs are a major factor in the spiraling prices.

Are not two recessions since the Republican-sponsored tight-money policy sufficient proof of its ineffectiveness?

In my view, the President's recent request for a higher interest rate on U.S. bonds is more than just bad economic judgment. It reflects concern for the bankers and the money lenders in preference to the welfare of the entire Nation. Such callous indifference to the economic necessities of the day are inexcusable. It is my intention to bring the facts to the American people for it is they who must know who in Government would make them economic pawns of the vested interests of this country.

Funds for the Building of Schools and Paying of Teachers

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 17, 1960

Mr. BRAY. Mr. Speaker, there has been much said in our country about the need for good, sound education for American youth. I believe that all of us will agree that we do want such education provided for them. I believe that the State of Indiana has been trying to provide such education.

The building of schools, their maintenance, and the employment of an adequate number of capable teachers are very expensive and such costs will increase as time goes on. The taxes to support this educational system are falling heavily on property owners, especially the owners of homes, farms, and small businesses. In some school districts, especially those where the children live and go to school in one district and their parents are employed in another, the property taxes for the building and maintenance of schools have pushed the local property tax levy to seven, eight, and even as much as nine and ten dollars per hundred dollars of taxable property.

In order to alleviate this burden, taxpayers are considering many alternatives. For years it has been suggested that the Federal Government contribute heavily to the support of our schools, but that, too, entails several problems. One is that the Federal Government is, as we know, heavily in debt, and in the end the taxpayer is also paying for all of the Federal money, plus the expense of Federal bureaucracy. If Federal money is to be used, a problem also arises about the formula for allocating the money among the various States and school districts. Some say that Federal assistance should be according to the need of the respective States. This could lead to a great unfairness, as a State which has refused to tax its citizens to build and maintain its schools, and frankly there are such States, naturally has needs greater than those States which have taxed themselves to give their children a proper education. School districts in Indiana have been leaders in building and maintaining adequate educational systems. Any Federal criteria for either school construction or teachers' salaries that bases that allocation on need would give great advantage to those States which refuse to pay adequate taxes for education. This practice would condone those States which have failed to collect taxes to properly construct and operate their schools, and would encourage these States to rely on the money other States pay into the Federal treasury.

Certain States have encouraged industry to move from Indiana. The State of Indiana has lost considerable industry to these States by giving an exemption on property taxes. That brings about an interesting situation. Several States give industries 10 years freedom from taxes if they will move their factories from Indiana to their State. This industry, which has paid taxes to maintain Indiana schools, goes to another State and pays no taxes. Taxpayers in Indiana employed in that industry lose their jobs and the Indiana school system loses the taxes this industry paid. The industry pays no taxes in its new location so that State has a greater need for the Federal money. If legislation is passed which allocates Federal aid on the basis of need, Indiana would pay taxes to the Federal Government to build schools in these States that take industry away fom Indiana. This situation could go on and on.

However, we must admit that there is a great need to find additional revenue sources to build and support our schools without creating a greater burden on the local property owner.

In addition to these problems arising from proposals for Federal assistance in education, we also have a national fear, and I think a just one, that the Government might dominate our schools and would not exert the same care in spending our tax dollars as the individual States do. It is, fortunately, a problem to which there is a solution.

The Federal Government, through income and excise taxes, has been taking a tremendous tax bite out of our national economy. The Federal Government has, throughout the years, exploited new taxes in an aggressive manner and now dominates the excise, corporation, and personal income tax field. What I propose is that the Federal Government earmark a certain part of the taxes it takes from the citizens of each State to return to that State for educational purposes. The Federal Government would have no claim on this money; there would be no part of it remaining in Washington. The relationship of the Federal Government to this money would be the same as that of the county treasurer in each of the 92 counties in the State of Indiana. If the treasurer is to collect a $3 levy for schools in a certain township or district, all of it, not just part of it is sent to that district.

I have introduced legislation whereby the Federal Government shall return to each State one-half of the tax it collects on cigarettes sold in that State. The State would be obliged to use this money for teachers' salaries or the construction of school buildings, whichever it determines is most needed. This would not encourage a State to cut down on its property taxes in order to get Fed-

eral aid. Each State would get back a certain portion of that which its taxpayers had paid.

I mentioned the possibility of the cigarette tax to an educator friend of mine. He said that it wouldn't be enough. I pointed out to him that if the Federal Government returned to Indiana just one-half of the cigarette tax, that is, 4 cents of every 8 cents tax per pack, it would amount to $24 million per year, which is three times the amount Indiana would receive under proposed legislation. He readily agreed that this legislation would meet their needs. It would be a simple matter to determine how much each State would receive, for all States except three have imposed State cigarette taxes, which require that accurate sales records are kept.

For more than a decade we have heard many voices raised to provide Federal financial assistance to our schools to relieve the burden on State and local revenue sources. These proposals have varied widely but have inevitably become mired down, owing to the problems stemming from the Federal association with the program. If we really want to provide additional money for school purposes here is a way to do it and leave the authority with the States and communities. This will offset much of the criticism of the other proposals and avoid some of the problems which have prevented enactment of other suggestions.

Furthermore, the several alternative plans for Federal aid which have been before the Congress this year are all temporary "stopgap" measures, or so we are told. A rebate of excise tax collections could provide a steady and permanent source of additional revenue for school purposes. There would be no need for congressional wrangles about the distribution of such funds, for each State would receive what it would be entitled to, based on its own consumption.

This approach need not be limited to one-half of the cigarette tax. It could be a greater or lesser proportion of that tax or it could be related to some similar Federal excise tax or a percentage of a personal income tax paid by each State which would provide adequate funds. It does provide an opportunity for persons concerned about this growing financial problem to meet the need for additional school funds and avoid many of the pitfalls of other Federal school-aid suggestions.

Do We Value Our Free Civilization?

EXTENSION OF REMARKS

OF

HON. JAMES J. DELANEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1960

Mr. DELANEY. Mr. Speaker, the Freedom Institute of St. John's University, Jamaica, N.Y., is designed to inform students at the graduate level of the nature and evils of communism as contrasted to the priceless gift of freedom.

In view of the developments at Paris, the following eloquent address given by Senator THOMAS J. DODD at the convocation of the Freedom Institute on May 14, 1960, is particularly timely, and I commend it to the attention of my colleagues:

ADDRESS OF SENATOR THOMAS J. DODD AT THE CONVOCATION OF THE FREEDOM INSTITUTE OF ST. JOHN'S UNIVERSITY, JAMAICA, N.Y., MAY 14, 1960

On Thursday of this week, during debate on the Senate floor, I had occasion to refer to the Pulitzer Prize-winning novel "Advise and Consent," which pictures an America of a few years hence, an America in which demagogs can inflame huge gatherings and bring them to their feet cheering with the slogan, "I would rather crawl to Moscow on my hands and knees than be killed by an atomic bomb."

Should this book prove prophetic, it will mean that our people have rejected the choice between liberty and death made by Patrick Henry and the Founding Fathers, the choice which drew the cheers of America from 1775 down to the recent past.

The fundamental question before the United States and our free world allies in the coming decade is this: Do we value our free civilization enough to run all the risks and meet all the challenges which the Communists will force upon us in the years ahead? It is in the context of this question that I would like to discuss the subject that has been assigned to me today—"Political freedom under a representative government and in a totalitarian state."

I do not think it likely that an ignoble surrender policy will ever be publicly proclaimed by high American officials as their political platform.

Men and nations have frequently betrayed their best interests through fear but they have generally rationalized and disguised their cowardice and not publicly proclaimed it. Surrender, if it comes, will probably come in more subtle ways, but the end result will be the same. We need not look, therefore, for base pronouncements. We must seek out the trend in less obvious signs and guises. And such signs are not wanting.

When the preservation of freedom in West Berlin appeared to run serious risk of war a year ago, there was no dearth of advocates, at home and abroad, for a policy of concession and retreat that would temporarily avoid risk of war at the probable cost of freedom for West Berlin.

There is today a rapidly growing movement, well organized, well represented in the press, movies and TV, in the scientific community and in government, people so fearful of the risks of the cold war, that they are willing to accept nuclear disarmament on almost any terms, with or without an adequate system of detection and enforcement.

These people are not concerned that this could condemn the United States to a military inferiority which would make our eventual surrender or destruction inevitable. They are concerned only with their fears of the present.

And then we have the school of British intellectuals now openly advocating what our own "softies" have heretofore kept below the surface. This group, headed by Lord Bertrand Russell and Philip Toynbee, believes that we must give up nuclear weapons now to assure that they will never be used against us, that we should seek the best terms from the Soviets we can get; but if they should be totally intransigent we should give up nuclear weapons anyway, and submit to Communist control as a preferable alternative to carrying on the present struggle that might lead to nuclear war.

Toynbee states the basic philosophy of this group in the following sentence:

"In the terrible context of nuclear war, even the vital differences between communism and Western freedom become almost unimportant."

Almost unimportant.

This is the neutralist intellectual's equivalent of "I would rather crawl to Moscow on my hands and knees than be killed by an atomic bomb."

It does not matter to these people that by building our strength we maintain a good chance of preserving both our lives and our freedom. It does not matter that the blood bath which historically follows every Communist seizure might take more lives than the A-bomb. It does not matter that the existence they purchased by surrender would be only the exploited existence of a Communist slave.

It matters only that the element of risk is large, and that, to them, any considerable risk to existence is a greater evil than the loss of Christian civilization. They are so overwhelmed at the horror of nuclear destruction that all other values are for them already destroyed and are rendered relatively meaningless.

Whether this neutralist philosophy will remain an isolated view held by an insignificant group, manifesting itself infrequently in test ban rallies or in occasional picketing of Downing Street and the White House; or whether this poisonous creed will seep into the marrow of our national bone structure and paralyze us, will depend upon whether our people really understand, or can be brought to understand, what the loss of national freedom and subjection to Communist tyranny would mean.

There are two basic replies to the neutralist position. The first is that we can avoid both catastrophies, nuclear war and enslavement, by remaining militarily strong and standing firm against aggression. This is a potent argument. It is a tangible argument. It is a demonstrable argument that has thus far worked. It is the basis of our national policy. It has been exhaustively debated, its tenets are widely known, and I therefore forego discussion of it today in favor of the second argument against neutralism, which is less understood and little discussed.

This argument maintains that the political destruction of Western civilization and its system of free institutions constitutes a death for its people and its nations just as violent, just as hideous, just as final as nuclear destruction itself, that there is little to choose between nuclear physical destruction and Communist political destruction.

The detailed knowledge of communism in all its aspects is available; indeed it is abundant. But the evil of communism is so alien, so appalling, so far removed from anything in our own experience, that our intellectuals and our people ignore the evidence.

By and large, men believe what they are prepared to believe, what is familiar to them, what jibes with their own experience. We ignore the clear signs in order to retain our familiar conceptions. We shield our eyes from the reality of communism or we lack the intellectual curiosity to inquire into it.

On the supernatural level, we have read in the lives of the saints of occasions when they were granted visions of human evil as God sees it, and the sight of this evil in its true light was so loathsome, so horrible that they felt they would die were the visions not instantly withdrawn. And ever after they would die rather than commit evil.

So on the natural level, a true picture of atheistic communism would so repel the freedom-loving peoples of the world could they but see it, that they would risk all that they have to defend themselves and their posterity against it. Our task is to bring this true picture before them in every way we can.

Communism can win only in darkness, deceit, error, and falsehood. Freedom can win only in light, candor, logic, and truth. This struggle must be fought on the intellectual front. Once we have won the intellectual struggle for men's minds, the other battles will be easily won and communism will be remembered in history as just another mental plague and torment that cost men dearly.

Your Freedom Institute is a great and early arsenal of truth and freedom. I congratulate St. John's University for exerting leadership in this field as it has throughout its distinguished history in so many fields of learning.

I hope that the Judiciary Committee of the U.S. Senate will favorably recommend, within the next few weeks, the establishment of a National Freedom Academy, an academy which aims to do on the national level what the Freedom Institute is doing here at St. John's University.

It is a relatively easy thing to imagine the horrors of physical destruction brought on by a nuclear attack. It seems a difficult thing for people to understand the meaning of the political, moral, and social destruction that is involved in the communization of the civilized world. We cannot even grasp the full extent of it by looking at what the Communists have done already in the areas they control. For they have been unable to completely work their will on their subject peoples.

The existence of a great and powerful free community exercises a restraint upon them. The public remembrance of the old order still limits them. The need to concede some things to the wishes of their subjects still restrains them. Should they conquer the world, and thus gain complete security, they could work their terrible will unrestrained and put into total practice their dialectic which is as yet only half realized.

Prof. Gerhart Neimeyer of Notre Dame University, has described the meaning of Communist rule in a brilliant essay, a classic, recently appearing in Modern Age.

Dr. Neimeyer says at one point:

"Communism is destructive with a novel quality, not mere injustice or mere unfreedom, but the ravaging of the reality of human life by the spirit of dogmatized unreality. Western intellectuals understand the danger of material destruction, which is, after all, simple and obvious. The quality of communism's destructiveness has so far escaped their grasp. To understand it, one must get oneself to enter a mental world of distortion, reason perverted with the aid of force, half-truth set up as dogma, deceit espoused as norm."

If the Communists sought only to rule the world, then the danger could be judged in the same light as that of previous aggressive tyrannies. But they want more than to rule the world. They want to destroy it and remake it in the image of their insane dogma.

To the Communist, everything that we hold to be true is false. Our ideals, values, customs, loyalties are to him parts of an ugly system he is determined to destroy. Our concepts of God, the individual, the family, truth, love, freedom, justice are to him objects of hatred and derision.

But our world haunts him. He cannot be content just to deride us and wait for our demise. If our truths are real, then his life is a senseless nightmare. He must banish our values to vindicate his own.

In the long run, therefore, our death becomes essential to his life. He is locked tight in an irrational system which admits of no truth or standard of measurement outside its own dialectic.

To the extent that he is a Communist, he abhors the non-Communist world and is compelled to work for its destruction. To the extent that he is a Communist, he can know no peace. He is driven on by a desperate inner compulsion toward the destruction of the existing world order.

The only priority ahead of the destruction of our system is the building and preservation of his own. The only restraints upon his designs against us are his fears for the safety of his own system.

The threat of Communist subjugation, therefore, differs from the threat of all previous attempts to conquer the world. Here is no tyranny which seeks domination only for the sake of power, or spoils, or exploitation, or even the gratification of limitless ambition. Here is a depraved Samson which seeks to pull down the pillars of the present world and raise in its place a structure such as man has never seen. How would our lives be changed should the Communists achieve world domination? What would Communist rule mean in America?

The revealed truths of religion would be thoroughly and systematically stamped out. Religious instruction and services, the Sacraments, the means of grace which we hold to be essential for the salvation of the human soul, would be made as unavailable as perverted man can make them. Knowledge of the true goal of our existence, eternal life, would be erased insofar as it is possible for it to be erased.

The concept of private property, around which so much of our daily life revolves, would be swept away. The fabric of free choice, through which we shape our lives by thousands of our own decisions, would be unraveled. Family life as we know it would disappear. Our free associations would be gone.

Pride of country, respect for law, satisfaction with our basic political and social order, all of which so much conditions our habitual attitudes, our character, our personality—all this would vanish.

Every aspect of our lives, from the sublime to the ridiculous, would be swept away and in its place erected the insane, irrational, antihuman regimentation of every phase of life, which requires not mere submission to evil but active participation in it.

Again to quote Dr. Neimeyer:

"Their rule is 'not of this world,' not of the world of present reality, but of the unreality of speculative fiction. That is why their hostility to the present-day world is so unrelenting. That is why they impose their party line not merely to secure their power, but to combat the expressions of the present-day world in art, poetry, music, philosophy, and religion. That is why they are never contented with mere compliance under their rule, but always seek to break their victim's mind from the world of common humanity, to attach it to the cause of the dialectic future, to bring about its inner transformation by means of self-criticism or public confession. That is why they cannot stop lecturing even to their life-long enemies in the inhuman setting of the prison camps. That is why there can be for them no truth, ethics, wisdom, save in the party's will, why every act of the party's power is to them hallowed through its service to the dialectic of history. And that is why Communists, in their relations with men and women of the present-day world can never achieve peace, no matter how strong a structure of power they erect."

For the existence that we have known, Communist rule would mean a death as final as the grave. And our despair would be magnified by the sight of our children and grandchildren born into and growing up in a world alien to everything once cherished—a world of darkness, a world without faith, a world dead to either temporal or eternal realities.

This is the fate which the avant-garde of the neutralists is willing to accept now if they can thereby purchase the guarantee that there will be no war; death of the soul, death of the spirit, death of the heart, if only the body is permitted to live.

Failure to understand the evil of communism is only half of our problem. The other half is that so many free people do not understand the meaning of Government in their lives, nor the significance of freedom.

They tend to downgrade the importance of our political structure. They tend to think that we work out our destiny, our happiness in the private sphere of life and that the public sphere provides only utilities, peripheral benefits, law, order, safety.

They think that a change of government, or a new system of government, might cause some distress, some inconvenience but it would not reach the heart of our existence, it need not intrude upon the inner sanctum of our lives.

Many of our people regard government as a nuisance, a game of spoils for politicians, a butt for jokes. Many think that whatever degree of contentment and happiness they have achieved has come about independently of, or in spite of our political institutions rather than in large measure because of them.

These assumptions are tragically erroneous. The extent to which our lives are influenced by public institutions is difficult to exaggerate. Our education, our development, our ideas, goals, hopes, are all heavily influenced by a variety of public institutions. These institutions reflect the basic ideas of our people about God, about the nature of life, the destiny of mankind, the way that life should be lived.

Our public institutions determine whether our home is our refuge or a mere extension of the state; whether we live with our neighbors comfortably as with friends, or fearfully as with spies; whether we raise our children according to our lights, or surrender them to the state; whether we are free to work out a private life of our own making, or have no private life, but only a public existence ordered to serve the all-consuming demands of the state.

If our public institutions reflect our religious, ethical, and social ideals, our personal growth can take place with a certain harmony. If they do not, we are at best dogged with doubt and confusion and, at worst, reduced to hopeless frustration and neurotic helplessness.

If there are no religious or ethical convictions reflected in public institutions, but only a ruthless program to exterminate them and replace them with false gods and distorted truth, then the purpose of human life is so frustrated, the goal of life is so obscured, that it is really dehumanized.

And so the uprooting of public order, the destruction of this system of free institutions and its replacement with an order which is totally alien would wholly destroy our mode of existence as we have known it. This is a death as real as physical death itself.

And as the public framework is pulled down, as the churches are destroyed, as our ideals are uprooted, as human knowledge of God and His revelation is blotted out, as all the moral refinements and elevations of human nature wrought by thousands of years of our Judaic-Christian heritage are eroded away, our descendants may be condemned to a death infinitely more final than physical death, for we leave to them a world without the instruction, the aids, the instruments of grace which are necessary to man's eternal salvation.

That is the argument that I would make to the neutralist intellectual. But I would make it with scant hope of success, for in many ways he is little better than the Communist.

He is the lukewarm, for whom Christ reserved perhaps the most severe condemnation of the New Testament.

Convinced that there are no moral absolutes, he can wholly commit himself to nothing and he finds nothing worth suffering

greatly for or giving his life for. Convinced that there is no life beyond the grave, animal survival is to him the ultimate reality.

Fear blinds him to his own best interests; pettiness robs him of the magnanimous courage to risk all for the sake of posterity; pride compels him to cloak his fear and pettiness in the mantle of high, noble motives. All he can offer the civilization which has given him life and growth is the whimpering counsel of despair and abandonment.

Only history can tell how much of our intellectual community deserves this description. We may fervently hope the portion is small.

Any philosophy or political program which aims at the avoidance of death or destruction is foredoomed to failure.

Death, in the end, comes to all men and destruction comes upon all material things. In the century-old words of Cardinal Newman:

"The world passes, the lofty palace crumbles, the busy city is mute, the ships of Tarshish are sped away; death comes upon the heart and the flesh. The veil is breaking."

It is not the circumstance of death, but the moral quality of life that has eternal significance.

Let us help our countrymen to react to the risk of nuclear death not with a craven terror that prompts the betrayal of all we value in return for the wormlike existence of Communist slaves for ourselves and our descendants. Let us help them to regard death as the time of judgment, the time of entry into immortality.

Let our people live, and if need be die, in defense of our faith, our freedom and our country, confident that our individual destiny and the survival of our race is yet in the hands of Divine Providence, a Providence which, if we but act our part with courage and loyalty, may yet ordain for us and our children a full, natural life in a world in which the peace of a just political and moral order is extended to all peoples.

Addresses of Congressman John Brademas, of Indiana, and Martin McKneally, National Commander of the American Legion, at Dedication of New Post Home of James Lowell Corey Post 68, American Legion, Argos, Ind., May 15, 1960

EXTENSION OF REMARKS

OF

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1960

Mr. BRADEMAS. Mr. Speaker, on Sunday, May 15, in Argos, Ind., members of the James Lowell Corey Post 68 of the American Legion took part in ceremonies marking the dedication of a new post home to replace one that burned in 1958.

Among the persons participating in this event were the distinguished former Governor of the State of Indiana, the Honorable Henry F. Schricker; the Indiana department commander of the American Legion, Donald Hynes; and the commander of the James Lowell Corey Post, Bruce Van Der Weele.

Of particular interest to the Legionnaires and their families was the moving address of the national commander of the American Legion, Martin B. McKneally, of New York, who dedicated the new post home.

CONGRESSMAN BRADEMAS PRESENTS AMERICAN FLAG

It was my honor on this occasion to to present to the members of the James Lowell Corey Post a 49-star flag which had flown over the Capitol of the United States on July 4, 1959, the day when the 49-star flag became the official flag of our country. I was also pleased to present the post with four pencil drawings of the "Four Fortresses of Freedom," the White House, the Capitol, the Supreme Court, and the Declaration of Independence.

Mr. Speaker, under unanimous consent I include my own remarks on this occasion and those of National American Legion Commander McKneally:

REMARKS OF CONGRESSMAN JOHN BRADEMAS ON MAY 15, 1960, ARGOS, IND.

Governor Schricker, Commander McKneally, Commander Hynes, Commander Van Der Weele, fellow Legionnaires and friends, today is a great day not only for members of the James Lowell Corey Post of the American Legion but for all Hoosier Legionnaires. Not often do we have an opportunity to have our distinguished national commander, Martin McKneally, in our midst and we welcome him here today.

I want to congratulate Commander Van Der Weele and all the members of James Lowel Corey Post 68 of Argos for their dedicated efforts which have made possible the construction of this fine new home.

ARMED FORCES WEEK SLOGAN: POWER FOR PEACE

It is fitting and proper that we should dedicate this new home on the eve of Armed Forces Week, which begins tomorrow and runs through May 22. Commander McKneally has asked all Legionnaires to support the 11th observance of this week and Commander Hynes has been named by the Governor of Indiana to serve as Indiana State chairman of the observance.

The recognition of Armed Forces Week is therefore a splendid symbol of the continuing devotion of the American Legion to the security and defense of our country and to the cause of freedom.

The slogan of Armed Forces Week is "Power for Peace." All Americans want peace. Democrats want peace. Republicans want peace. You want peace and I want peace. Yet you and I know that today the world is standing on a tightrope, with peace depending in large measure on the capacity of a divided world to maintain its balance and not fall into the volcano of nuclear war.

REPUBLICANS AND DEMOCRATS DISCUSS ARMS CONTROL

It is encouraging to see that political leaders of both our great political parties are now discussing the problem of arms control more seriously than it has ever been discussed before. For as Secretary of State Christian Herter made clear in February in his famous speech to the National Press Club in Washington, D.C., the only sure longrun way to defend ourselves in this troubled world is to work out an effective disarmament agreement with our adversaries in the Soviet Union, an agreement which, I hasten to add, will of course require effective inspection guarantees.

WE MUST BE MILITARILY STRONG IN ORDER TO DISCUSS DISARMAMENT

But I am sure Commander McKneally would agree with me that we in America must be strong militarily if we are to have bargaining power in dealing with the Soviet Union, even on the subject of disarmament.

We cannot lead effectively from a position of military weakness.

That is the meaning of the slogan, "Power for Peace."

We must be strong not only militarily but economically and diplomatically as well, for our Communist adversaries do not fight the cold war on one front alone. We have already seen, for example, how Khrushchev has been exploiting the unhappy blunder of the U–2 incident for all the anti-American propaganda he can make of it.

I have no wish to exploit this matter for partisan gain for we want our President to enjoy the united support of the American people as he goes into talks at the summit which may directly affect the destiny and peace of the entire world. We nonetheless must recognize how our Government has been placed on the defensive by this incident and by the way in which Khrushchev has been using it.

AMERICA FACED WITH POWERFUL CHALLENGE IN SOVIET UNION

We must realize more than ever by the events of recent days and by the trip which Khrushchev made across our country last year that in him and in the Soviet people whom he leads we are confronted with the most powerful challenge to our survival as a free society in all the history of the American Republic. We must be prepared to understand the nature of the challenge we face.

We believe in a free society. The Communists believe in a slave society.

We believe in an open society. The Communists believe in a closed society.

If we are effectively to meet the challenge of the Communist world, we must be prepared to sacrifice. We must understand why we must be strong if we are to continue to be free.

WE MUST HAVE POWER IF WE ARE TO HAVE PEACE

Better than most organizations in our country, the American Legion understands the dangers of the Communist challenge to freedom, understands why we must have power if we are to have peace.

I therefore deem it a high honor and a privilege, as your Representative in Congress, in the presence of our national and State commanders and of Commander Van Der Weele and all my fellow Legionnaires to present to the members of the James Lowell Corey Post 68 of the American Legion this American flag which was flown over the Capitol of the United States on July 4, 1959, the day the 49-star flag became the official flag of our country.

I have another gift which I am pleased at this time to present to you, four pencil drawings of the Four Fortresses of American Freedom: The White House, the Capitol, the Supreme Court Building and the Declaration of Independence.

May these drawings and may this flag serve as an ever constant reminder to all members of the American Legion of the greatness of our country and the freedom which is the birthright of the American people.

REMARKS OF NATIONAL COMMANDER MARTIN B. MCKNEALLY, THE AMERICAN LEGION, AT THE DEDICATION OF THE NEW HOME OF THE JAMES LOWELL COREY POST, ARGOS, IND., MAY 15, 1960

I am delighted to be in Argos and to assist in the dedication of this beautiful new building wherein will be housed not only the men and women of James Lowell Corey Post but their ideals as well. This new post home is a fulfillment of the hopes and labors of the men and women of Argos for 40 years. It is a monument and at once a milestone of progress in the history of the American Legion.

The American Legion stands solely as the architect of the rehabilitation program with its network of hospitals across the land which is monument enough for any group of founders, but what of the millions of hours spent in hospital visitations? What of the millions of dollars spent in child welfare? What of the original thinking that chartered the course of the country in ways of preparedness or national security? What of the GI bill, written by the American Legion and sponsored over the protest of professional educators? What of the development of a strong, authentic voice in the field of Americanism? What of the multifarious arts of charity that have become a legend in the land? What a heritage—what a perfect description of this heritage of charity was written by the immortal Shakespeare when he penned the lines which read: "How far that little candle throws its beams, so shines a good deed in a naughty world."

THE PURPOSE OF THE AMERICAN LEGION

I have said on previous occasions that the American Legion purpose in our day was the sustaining of the doctrine of belief upon which this Nation was founded and without which it must perish, and that is the belief in the existence of God and in the dignity of human personality. I need not point out to you that today it is those twin beliefs which are under the most relentless and the most powerful attack in the history of mankind.

CALLS FOR CONTINUED ATTENTION TO U.S. GRAVES ABROAD

The American Legion holds in high esteem the profession and the office of the soldier. If it were not for the soldier there would be no America and there would be no hope for men who love freedom. In man's ceaseless struggle to be free, he must be willing to pay the enormous costs of war. It is the melancholy record of fallen man, that his motivations conflict and collide. His will to do evil and his baseness must be reckoned with and the reckoning sometimes enslaves and it very frequently kills. I commend to your most reverent attention the thousands of graves abroad in cemeteries cared for by the American Government and I direct you to the fact that five new cemeteries are to be dedicated this year. Hardly a word is written, a picture published concerning this subject and I am informed that this is so because the present-day rationale of the American people is not to be reminded of the ugliness of the cost of freedom. Freedom and the cause of America we say to you, must never be computed in the terms of dollars and cents. The only item to be considered is the cost of men's lives. Reminiscence and reminders of this fact must be the No. 1 item on the agenda of our daily lives, depression, and sadness to the contrary notwithstanding.

"WE ARE EITHER FOR FREEDOM OR WE ARE AGAINST IT"

For we have an enemy, an enemy that opposes everything that we hold dear and that enemy makes our age one of tremendous risks. And in this age there is no neutrality, we are either for freedom or we are against it. Fear of atomic destruction does not provide us with the solution of the dilemma. There is a considerable body of intellectuals whom the fear of atomic war has obsessed. They have made their objective in life only the preserving of existence. One reads of their thinking with a certain horrifying fascination. Phillip Toynbee states as follows: "In the terrible contest of nuclear war even the vital differences between communism and western freedom become almost unimportant."

The West he declares should, "negotiate at once with the Russians and get the best terms that are available." Since Russia in his estimation is now and will continue to remain stronger there is nothing to do for the West "but to negotiate from comparative weakness." He admits that this may well set up the total domination of the world by Russia in a few years. The Soviets would impose on us a regime which most of us detest but this is better than allowing the human race to destroy itself. And one of Toynbee's confreres observes, "I might not much mind living under Soviet domination."

These men are not Communists but they have lost their will; they have lost it to fear and to despair, in the pursuit of existence. They have lost sight of the truth which is simple enough and that is that we in our day are faced with two destructive forces of incredible dimensions. The bomb represents material devastation, the Communist party political destruction.

THE SOLEMN DILEMMA OF OUR TIME

This is the solemn dilemma of our time and this is the foremost consideration of our people this afternoon. The administration in Washington has chosen by its continuation of nuclear testing, by the flight of the U–2 over the secret territory of the Soviets to pursue the ideal of political freedom. What kind of a nation with the holy mission of preserving its sovereignty, its people, and its freedom, would do less in the face of the gigantic dilemma? To sit by knowing what we know, facing what we face, and do nothing, would make the cemeteries of Europe where our honored dead are entombed, and the whole history of this Republic a gargantuan jest. The administration is charged through its intelligence service with the responsibility of providing for the safety of its people; its duty is plain and it is to gather the facts with which it may discharge that duty. Must we act as if its duty were less? Must we act as if the obtaining of information necessary to our own defense against a secretive and threatening power was to commit a sin? Are we to assume the abasing role of the boy caught with his hand in the cooky jar when we know the food there obtained is the only means of sustaining freedom and hope? I for one American, suffer no embarrassment and highly praise all those in authority who see clearly the bitter dilemma of these days. We of the American Legion do not seek to impose our views but we do propose to all that there is no flight from the serious business of our days and that is the survival of free man.

MEN OF COURAGE, FAITH, IDEALS NEEDED

The late Albert Camus tells us, "with every dawn an assassin slips into some cell, murder is the question before us." This is the solemn keynote of our time, the murder of men and the murder of ideals. As Americans, let us conduct ourselves as men. Men of courage, men of faith, and men of ideals. There is no other way open to us, for Americans may not be craven, they may not be pacifistic, they may not be men of despair.

In the world there is but one city in which we can dwell, it is the city of the halt, the blind, the maimed, but it is the city of charity, and it is the city of courage, the city of freedom. It is the City of God. Outside it is the night.

SENATE

WEDNESDAY, MAY 18, 1960

The Senate met at 12 o'clock meridian, and was called to order by the President pro tempore.

The Chaplain, Rev. Frederick Brown Harris, D.D., offered the following prayer:

Lord God Omnipotent, Thou only art the help and hope of our distracted world in all the disasters in human relationships the wrath of men brings upon it.

Though people imagine a vain thing, Thou still art God, and Thy mercy endureth forever, in spite of all human denials and betrayals.

Make plain to our understanding that our legislative enactments and our economic adjustments in the realm of trade and commerce in themselves cannot bring social salvation, except as they clear the way for the spiritual undergirding without which we labor in vain and all our endeavors are as futile props against a decaying house that the Lord hath not made.

We ask it in the name of the One whose truth shall make us free. Amen.

THE JOURNAL

On request of Mr. JOHNSON of Texas, and by unanimous consent, the reading of the Journal of the proceedings of Tuesday, May 17, 1960, was dispensed with.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. BARTLETT, one of its reading clerks, announced that the House had passed the following bills, in which it requested the concurrence of the Senate:

H.R. 6215. An act for the relief of Mrs. Cornelia Fales;

H.R. 8606. An act for the relief of Katherine O. Conover;

H.R. 9406. An act for the relief of William J. Huntsman;

H.R. 9711. An act for the relief of Robert L. Stoermer;

H.R. 11826. An act for the relief of Loren W. Willis; and

H.R. 11827. An act for the relief of Maj. Howard L. Clark.

ENROLLED BILLS AND JOINT RESOLUTION SIGNED

The message also announced that the Speaker had affixed his signature to the following enrolled bills and joint resolution, and they were signed by the President pro tempore:

S. 684. An act for the relief of Gerald Degnan, William C. Williams, Harry Eakon, Jacob Beebe, Thorvald Ohnstad, Evan S. Henry, Henry Pitmatalik, D. LeRoy Kotila, Bernard Rock, Bud J. Carlson, Charles F. Curtis, and A. N. Dake;

S. 2317. An act for the relief of Mary Alice Clements;

S. 2523. An act for the relief of Harry L. Arkin;

S. 2779. An act relating to the election under section 1372 of the Internal Revenue Code of 1954 by the Augusta Furniture Co., Inc., of Staunton, Va.; and

S. J. Res. 166. Joint resolution authorizing the Architect of the Capitol to permit certain temporary and permanent construction work on the Capitol Grounds in connection with the erection of a building on privately owned property adjacent thereto.

HOUSE BILLS REFERRED

The following bills were severally read twice by their titles and referred to the Committee on the Judiciary:

H.R. 6215. An act for the relief of Mrs. Cornelia Fales;

H.R. 8606. An act for the relief of Katherine O. Conover;

H.R. 9406. An act for the relief of William J. Huntsman;

H.R. 9711. An act for the relief of Robert L. Stoermer;

H.R. 11826. An act for the relief of Loren W. Willis; and

H.R. 11827. An act for the relief of Maj. Howard L. Clark.

LIMITATION OF DEBATE DURING MORNING HOUR

Mr. JOHNSON of Texas. Mr. President, under the rule, there will be the usual morning hour; and I ask unanimous consent that statements in connection therewith be limited to 3 minutes.

The PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

On request of Mr. JOHNSON of Texas, and by unanimous consent, the Judiciary Subcommittee of the Committee on the District of Columbia and the Flood Control, Rivers, and Harbors Subcommittee of the Committee on Public Works were authorized to meet during the session of the Senate today.

THE UNITED STATES AND FREE WORLD UNITY

Mr. JOHNSON of Texas. Mr. President, the summit conference has collapsed, leaving in its wake confusion, discord, and a feeling of dismay in many quarters.

The fact that the conference accomplished nothing is not, in and of itself, the overriding factor which has left the people of the world with a deep feeling of anxiety. What is important is the manner in which an effort to negotiate was smashed before it had even started.

It is apparent that whatever the facts which were used to prevent discussion, there was a determination to prevent discussion. The spirit of Camp David has been replaced by a spirit of discord, and an uneasy world is groping its way into a future which, Mr. President, no one can see very clearly.

It goes without saying that the United States and the free world are going to have to reassess their position.

I do not believe there is any doubt as to the essential unity of this country. By that, I do not mean a generalized unity which covers everything, and therefore means nothing. I do mean unity on the specific points upon which all Americans—Republicans and Democrats alike—are in agreement. We earnestly hope that those who have openly proclaimed their opposition to freedom as a way of life now realize how deep that unity is.

The American people are determined to do whatever is necessary to preserve their freedom. They are not going to be panicked; they are not going to be divided; they are not going to be blackmailed.

The American people, I believe, are determined to maintain the strength that is necessary in order to survive in a world where a major power has set as its basic standard of right the issue of might.

The American people are determined that free men shall not be surrendered to the untender mercies of dictators. I hope no one will be deceived into premature actions on the assumption that America lacks the will or the determination to resist.

Mr. President, there is another point of that unity which I think should be made very clear. It is that unity does not imply that we ignore mistakes or that we smother differences. What it does imply is that we shall treat errors as mistakes to be corrected, not as leverage to separate our Nation. It also implies that whatever may be our differences, we are united on the fundamental necessity of preserving our way of life, and of opposing tyranny over the minds and souls of men and women.

Mr. President, there will, of course—as I stated yesterday—be a cool and objective assessment of whatever mistakes have been made. That assessment will take place under conditions and circumstances which will contribute to the information of the American people and to the strengthening of our country. Under our system, Congress is a body which has great responsibilities; and I am convinced that the Members of Congress will continue to discharge their responsibility.

We shall have to determine whether there are changed conditions which affect the adequacy of our defenses. We shall have to determine whether we have provided adequately for the integrity of our executive agencies. We shall have to determine whether we have provided adequately for the coordination of our vast governmental structure.

There is no need to search for scapegoats, because we do not have time to indulge in partisanship. All of us, Republicans and Democrats alike, must be conscious of the fact that the only time we can afford is that whose utilization will contribute to the strength, the determination, and the prestige of these United States of America and the free world.

Mr. President, we are not going to be panicked by threats over Berlin or threats against our allies.

We are going to continue to operate through our established institutions, recognizing fully that only one man can speak for our country, and that he must have behind him the united strength of a determined people.

Mr. President, I wish to read into the RECORD a cablegram which late yesterday afternoon was dispatched to President Dwight D. Eisenhower. The cablegram was signed by the illustrious Speaker of the House of Representatives, Mr. Rayburn; the majority leader of the Senate, Mr. Johnson of Texas; the Democratic presidential nominee in 1956, the titular head of the Democratic Party, the Honorable Adlai E. Stevenson, former Governor of Illinois; and the very able and distinguished chairman of the Senate Committee on Foreign Relations, the Senator from Arkansas, Mr. Fulbright. The cablegram reads as follows:

The Honorable DWIGHT D. EISENHOWER,
Embassy of the United States of America,
Paris, France:

As leaders of the Democratic Party of the United States we earnestly urge you to convey to Premier Khrushchev the views of the opposition party in your country that he reconsider his suggestion for postponement of the summit meeting until after the national elections in this country.

We feel that total failure of the conference and increasing mistrust on both sides will be serious and deeply disturbing to the whole world.

All of the American people earnestly desire peace, an end to the arms race, and ever better relations between our countries. We ask you, as the leader of this Nation, to see that these views are conveyed to Mr. Khrushchev.

Mr. MANSFIELD. Mr. President, I wish to commend the distinguished majority leader for the speech he has just made, and also for his part in the sending, on yesterday, of the cablegram signed by himself, Speaker Rayburn, Mr. Adlai Stevenson, and Senator J. William Fulbright, before the summit conference collapsed. I look upon it as an answer to the time proposal made by Mr. Khrushchev, to the effect that he would be willing to consider another summit meeting 6 or 8 months hence. As these leaders of the opposition party—that is to say, the party in opposition to the present administration—made abundantly clear, in this country there will be no division based on what has happened at the summit; but there will be unity, because it is needed and because it is voluntarily given and asserted.

Mr. President, speaking of the summit meeting, the breakdown of the meeting at Paris calls for a reassessment in the field of diplomacy. Perhaps what has happened at Paris is, in a sense a blessing in disguise.

It may well bring about an end to summit meetings, which are mostly ceremonial, and have a tendency to provide a propaganda field day for the press, the radio, TV, and even for some of the countries concerned. It would be far better if we returned to quiet diplomacy based on conferences in private, good faith on the part of the negotiators, and real authority vested in our accredited Ambassadors by those constitutionally responsible. In this way the hard, dogged, and determined work which must be shown on any question leading up to a solution can be performed by those most knowledgeable in the affairs of the country or countries concerned. It can be done on a mutual basis, a give-and-take basis, and perhaps in this way marginal differences in the beginning can be accommodated, and, as time goes on, even larger problems discussed, and perhaps settled.

Summit meetings at best are too short on diplomacy, too long on pageantry, and too limited in time. If they are to be

held, they should be held for the purpose of allowing the chiefs of state to put their final stamp of approval on agreements which had already been reached at lower levels; and certainly not, as in this most recent summit meeting, for the purpose of downgrading and humiliating the chiefs of staff of the Western Powers, and most especially President Eisenhower.

Mr. President, the invitation to visit the Soviet Union extended by Mr. Khrushchev to the President of the United States has been withdrawn. I understand from the press, though, that President Eisenhower intends to visit Japan and Korea. I would hope that, in addition to those two countries, at that time he will find it possible to visit the Republic of the Philippines and the Republic of South Vietnam as well.

I would hope also that what has happened at the summit, the breakdown, will not be duplicated at Geneva, because there at the present time there are at least technically three conferences in being: first, a conference on banning nuclear tests; second, a conference on disarmament; and third, a conference on surprise attack, which I understand has been in suspension since December 1958.

I would hope devoutly that these three conferences would continue to the end that at least in these fields a modicum of peace and stability could be achieved for the people of the world.

Mr. DIRKSEN. Mr. President, for the last few days I have given particular attention to the headlines and to the captions on the various columns expressing individual opinions as to what has been taking place in Paris. It constitutes something of a fantasy when one writes them all in a column, taking a good many pages, to see what a myriad viewpoint is expressed.

The comment of the majority leader comes as a refreshing note indeed in all this confusing complex, because it reasserts from the opposition party the unity of this country and its determination to stand behind the man who is endowed by the Constitution and charged by the Constitution with the conduct of our foreign policy. As he goes abroad to diplomatic battle, it may be a cheering happenstance that the ancient alphabet makers put the letter "U" ahead of the letter "V." I have always thought that "U" for unity must necessarily come ahead of "V" for victory, whether it be in battle or in diplomatic interchange. And so this note of unity is the kind of thing that energizes a national leader when he is thousands of miles from home, and it makes him feel that all of his troops, regardless of their political affiliations, are behind him; and I think I can say, for the President, to the majority leader and his associates, "Thanks for a refreshing message."

Mr. KUCHEL. Mr. President, that is a splendid thing for the minority leader to say, and it was also fine for the majority leader and for the assistant majority leader to have said what they did.

What has happened in Paris is no real disaster for our beloved country. It has perhaps more than ever knit more closely together the people of the United States. We do not intend to lose our liberty. We will continue to work for a just peace. I think, too, it is fair to say that Khrushchev's imprecations have knit together more closely the peoples of the free world.

What has been said here today has been echoed in parliaments all around the globe. I read with the greatest of interest the moving comments of the Prime Minister of the Flemish people to the Holland Parliament, in which he went on to say that so long as free people stand together, freedom can well be secured.

I congratulate my colleague on the other side of the aisle, and my Republican leader, as well.

RESOLUTION OF BOARD OF SUPERVISORS OF ERIE COUNTY, N.Y.

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the RECORD a resolution adopted by the Board of Supervisors of Erie County, N.Y., favoring the enactment of legislation to provide medical care for elderly citizens.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas the agricultural productivity of America has resulted in an abundance of healthful and nutritious foods; and

Whereas medical science has made tremendous progress in the development of surgical methods and drugs which strengthen and prolong life; and

Whereas as a result we can all look forward to a healthier and longer life; and

Whereas since life expectancy has increased, we have in our midst a large number of senior citizens without whose efforts our recent situation would not be possible; and

Whereas the cost and frequency of medical care increases as a person reaches the age of 65 which is the mandatory retirement age for most persons; and

Whereas medical aid to senior citizens could be financed in a manner similar to or in conjunction with social security by spreading the cost over the productive years in which a person is gainfully employed; and

Whereas the benefits of medical aid to senior citizens would far outweigh the very small cost to each individual: Now, therefore, be it

Resolved, That this honorable board go on record as strongly in favor of medical aid to senior citizens.

Attest:

LEON J. HINKLEY,
Deputy Clerk of the Board of Supervisors of Erie County.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. JOHNSTON of South Carolina, from the Committee on the Judiciary, with an amendment:

S. 2770. A bill for the relief of Borinquen Home Corporation (Rept. No. 1388).

By Mr. MAGNUSON, from the Committee on Interstate and Foreign Commerce, without amendment:

S. 3429. A bill to amend section 216(b) of the Merchant Marine Act, 1936, as amended, to permit the appointment of U.S. nationals to the Merchant Marine Academy (Rept. No. 1391).

By Mr. BARTLETT, from the Committee on Interstate and Foreign Commerce, with an amendment:

S. 3018. A bill to authorize the Maritime Administration to make advances on Government insured ship mortgages (Rept. No. 1389).

REPORT ENTITLED "TRADING WITH THE ENEMY ACT"—INDIVIDUAL VIEWS (S. REPT. NO. 1390)

Mr. JOHNSTON of South Carolina. Mr. President, pursuant to Senate Resolution 56, as extended, from the Committee on the Judiciary, I submit a report entitled "Trading with the Enemy Act," together with individual views of the Senator from Illinois [Mr. DIRKSEN] and the Senator from New York [Mr. KEATING].

Mr. President, I ask unanimous consent that the report, together with the individual views, be printed.

The PRESIDENT pro tempore. Without objection, the report will be received and printed, as requested by the Senator from South Carolina.

EXECUTIVE REPORTS OF A COMMITTEE

As in executive session,

The following favorable reports of nominations were submitted:

By Mr. MAGNUSON, from the Committee on Interstate and Foreign Commerce:

Ray M. Sundean, and sundry other persons, for permanent appointment in the Coast and Geodetic Survey.

BILLS AND JOINT RESOLUTION INTRODUCED

Bills and a joint resolution were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. MURRAY (by request):

S. 3561. A bill to permit the Secretary of the Interior to revoke in whole or in part the school and agency farm reserve on the Lac du Flambeau Reservation; to the Committee on Interior and Insular Affairs.

By Mr. LAUSCHE:

S. 3562. A bill to amend the act entitled "An act to incorporate the Hungarian Reformed Federation of America," approved March 2, 1907, and for other purposes; to the Committee on the District of Columbia.

By Mr. ENGLE:

S. 3563. A bill to amend the Federal Aviation Act of 1958 to give the Civil Aeronautics Board certain review authority over the Administrator of the Federal Aviation Agency; and

S. 3564. A bill to amend the Federal Aviation Act of 1958 with respect to the authority of the Administrator of the Federal Aviation Agency over airmen's certificates; to the Committee on Interstate and Foreign Commerce.

(See the remarks of Mr. ENGLE when he introduced the above bills, which appear under a separate heading.)

By Mr. HOLLAND:

S. 3565. A bill for the relief of Alpo Fransila Crane; to the Committee on the Judiciary.

By Mr. FONG:

S. 3566. A bill for the relief of Yun Fun Cheng Chan; to the Committee on the Judiciary.

By Mr. CURTIS:

S. 3567. A bill providing for the disposition of judgment funds of the Omaha Tribe

of Indians; to the Committee on Interior and Insular Affairs.

By Mr. SCOTT:

S. 3568. A bill to establish a program of financial and technical assistance designed to alleviate conditions of substantial and persistent unemployment in economically depressed areas, and for other purposes; to the Committee on Banking and Currency.

By Mr. DIRKSEN (for himself, Mr. BUSH, Mr. BEALL, Mr. KEATING, Mr. MORTON, and Mr. JAVITS):

S. 3569. A bill to assist areas to develop and maintain stable and diversified economies by a program of financial and technical assistance and otherwise, and for other purposes; to the Committee on Banking and Currency.

(See the remarks of Mr. DIRKSEN when he introduced the above bill, which appear under a separate heading.)

By Mr. COOPER (for himself, Mr. MANSFIELD, Mr. BARTLETT, Mr. BYRD of West Virginia, Mr. KEFAUVER, Mr. MORSE, Mr. PROXMIRE, Mr. RANDOLPH, Mr. GRUENING, Mr. MCNAMARA, and Mr. CLARK):

S. 3570. A bill to provide for the humane treatment of animals used in experiment and tests by recipients of grants from the United States and by agencies and instrumentalities of the U.S. Government, and for other purposes; to the Committee on Labor and Public Welfare.

(See the remarks of Mr. COOPER when he introduced the above bill, which appear under a separate heading.)

By Mr. HUMPHREY:

S.J. Res. 195. Joint resolution providing for the designation of 1960 as Sinclair Lewis Year; to the Committee on the Judiciary.

(See the remarks of Mr. HUMPHREY when he introduced the above joint resolution, which appear under a separate heading.)

TREATMENT OF LICENSED PILOTS BY FEDERAL AVIATION AGENCY

Mr. ENGLE. Mr. President, I continue to be distressed at what I feel to be arbitrary actions by the Federal Aviation Agency in the matter of treatment of licensed civil pilots under the authority granted to the FAA Administrator by the Congress in the Federal Aviation Act of 1958. Senators may recall the tragic series of midair collisions that prompted a review of the then existing Civil Air Regulations and resulted in enactment by the 85th Congress of the Federal Aviation Act, which placed extraordinary powers in the hands of a single man—the Administrator of the Federal Aviation Agency. At that time, I expressed concern with regard to the vast power that would be lodged in one individual, but the act was passed most expeditiously in the overall interests of safety. It may be recalled that testimony before the Senate Interstate and Foreign Commerce Committee indicated the desire of the aviation industry to cooperate in the legislative overhaul of our Civil Air Regulations. Misgivings were voiced by aviation leaders concerning certain aspects of the appeal provisions of the Federal Aviation Act and the thought was expressed that recourse to the Congress would be utilized if a reasonable period of operation indicated that some modification or amendment of the act was required.

When the act of 1958 was put in final form and passed by the Congress, a provision was included in section 609 for appeal to the Civil Aeronautics Board with regard to rulings by the FAA Administrator concerning airman and aircraft certificates. Time and experience now have indicated that this provision does not provide for an adequate review of decisions of the Administrator. Under the provisions of the Federal Aviation Act, the Civil Aeronautics Board has the authority to hear an appeal from a civil airman with respect to whether or not the action against the individual was correct and proper under the terms of the rule established by the Administrator of the Federal Aviation Agency. The Civil Aeronautics Board does not have the authority to take any decisive action with regard to correction of a faulty or unsound rule.

In practical operation, we have discovered that the rights of an individual pilot receive less consideration under the administration of the Federal Aviation Act than would be accorded the most common criminal in a court of law. Substantial and upright citizens of this country, who are active civil pilots, 380,000 by the last official count of the Federal Aviation Agency, are subject to being charged with a violation of the regulations under the present enforcement program of the Agency and thereafter stand guilty until they can prove their innocence. If a civil penalty compromise is offered by the Administrator when the pilot is accused, his only appeal is to the same Administrator who has made the charge against him. Thus, we find that the FAA Administrator who made the rule and who charged the pilot with violating the rule also acts as the judge, jury, and prosecutor. Under these proceedings, the pilot stands guilty until he can prove his innocence. These proceedings violate every basic concept of Anglo-Saxon law and justice. The only alternative open to a pilot in these cases is to take his case to the Federal courts, wherein the legal costs may well exceed more than 10 times the cost of the compromise penalty offered by the FAA. Usually, the pilot will accept the charge of guilty for economic reasons, if no other. There is no assurance that even the Federal courts can afford the individual pilot relief, regardless of the costs.

The PRESIDENT pro tempore. The time of the Senator from California [Mr. ENGLE] has expired.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the Senator be given 3 additional minutes.

The PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. ENGLE. Judicial determinations to date indicate that the courts rely upon the expertise of the Administrator and their findings are based upon whether or not this Administrator, who has been given the power to make the rule and then act as judge, jury, and prosecutor—has acted within the law—Aviation Act of 1958—and the Administrative Procedure Act.

The pilot does have an avenue of appeal in cases where the FAA Administrator suspends or revokes his pilot's certificate. This appeal may be made to the Civil Aeronautics Board in accordance with the present act. However, we have found that this appeal, which was granted by the Congress to protect the rights of individuals, can be circumvented by the FAA Administrator by the simple expedient of revising or amending any rule under which the Agency may receive adverse rulings from the Civil Aeronautics Board on actions against individual pilot certificates. The CAB is helpless in such cases.

The Federal Aviation Agency has been in existence for about a year and a half and in that time the Administrator has promulgated numerous rulings regulating flying and the conduct of pilots in the air. Some of these regulations have deprived pilots of their livelihood, even though the pilots may have had many years of experience and a good safety record. These regulations have been passed over a multitude of objections, with little factual evidence that they would contribute to safety in the air, and in the main, without a public hearing.

I do not believe that it was the intent of the Congress to authorize or encourage the Administrator to act in such an arbitrary manner, and I share the alarm of my colleagues who have had this matter brought to their attention by their constituents in the aviation industry. I have no quarrel with the need for immediate action by the Administrator of FAA on matters wherein there is a clear-cut and factual need for corrective action in the interest of safety in the air and to protect the public, but unfortunately, many of the arbitrary rulings that have been handed down by the Administrator under this power that we have given him, are not in areas where there is factual or clear-cut evidence to support his action in the interest of safety. In fact, there is very little evidence to indicate that many of his so-called safety rulings would have prevented any of the unfortunate accidents that have occurred in the past, or will make any significant contribution to safety in the future.

It is quite clear to me that the Administrator must be required to hold hearings on proposed rulings which do not require emergency exercise of his authority in the interest of safety. Only by following such procedure and obtaining full information from all of the valuable sources both within and outside of Government, can the Administrator arrive at reasonable and just rules which are necessary in the public interest. Failure to obtain full information through the medium of public hearings has resulted in actions by the Administrator which I consider arbitrary and unwarranted, and which have resulted in grave injustices whereby many capable and experienced pilots have been deprived of their flying privileges and their livelihood.

Aviation has become one of the great industries of the United States and I feel strongly that the Administrator of the Federal Aviation Agency must exercise his responsibilities in this great and growing industry in a reasonable and just manner. To do otherwise would be contrary to the declaration of policy stated in section 103 of the act wherein

the Administrator was charged by the Congress with "the promotion, encouragement, and development of civil aeronautics." Unless this matter is corrected and the Administrator discharges these responsibilities in a reasonable and just manner, we will see our very valuable national asset—our aviation industry—wither on the vine under the burden of Government oppression. We have heard on many occasions that the Federal Aviation Agency program is being carried on with utmost vigor in the interest of public safety. I wish to commend the Agency for its forthright interest in safety, but I also wish to remark that the individual who is most concerned with the safety of an aircraft is the pilot who is in the front of that aircraft and may pay with his life for any major violation of basic safety concepts. These pilots are vitally interested in flight safety and have contributed much to develop this great national asset. Unfortunately, these people are operating under a severe handicap in the form of procedures imposed upon them by the Administrator of FAA and grave injustice is being done in many cases wherein the individual is denied the same due process of law that is the very foundation of our American way of life.

No one human being is infallible, yet we have vested in one man this vast authority over an entire industry. In a field so vital, progressive, and complex as the aviation industry, a safeguard must be provided to insure reasonable and proper exercise of this all-powerful authority. For this reason, I consider it of utmost importance that the Federal Aviation Act of 1958 be amended so as to grant the Civil Aeronautics Board certain review authority over the actions of the Administrator of the Federal Aviation Agency. It is quite clear now that we have placed too much power in the hands of a single individual and that a safeguard must be provided by the Congress to protect the rights of our citizens in this vital business. Without this safeguard, many grave injustices will be imposed upon law abiding and upright citizens and this dynamic economic resource will not continue to develop as it should with the proper encouragement of the Federal Government.

So, Mr. President, I offer for introduction and appropriate reference two bills, first a bill to amend the Federal Aviation Act of 1958 to give the Civil Aeronautics Board certain review authority over the Administrator of the Federal Aviation Agency, and second, a bill to amend the Federal Aviation Act of 1958 with respect to the authority of the Administrator of the Federal Aviation Agency over airmen's certificates.

I ask unanimous consent that the text of these bills—and they are short—be printed in the RECORD immediately following my remarks.

The PRESIDENT pro tempore. The bills will be appropriately referred, and, without objection, the bills will be printed in the RECORD.

The bills, introduced by Mr. ENGLE, were received, read twice by their titles, referred to the Committee on Interstate and Foreign Commerce, and ordered to be printed in the RECORD, as follows:

S. 3563. A bill to amend the Federal Aviation Act of 1958 to give the Civil Aeronautics Board certain review authority over the Administrator of the Federal Aviation Agency.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 601 of the Federal Aviation Act of 1958 (49 U.S.C. sec. 1421) is amended by inserting at the end thereof a new subsection as follows:

"(d) The Board, by its own act or upon the application of any affected person, may review any rule, regulation, standard, or order issued or made by the Administrator under this title. The Board, insofar as practicable, shall give such review priority over other proceedings under this Act. Upon such review the Board shall have authority in the public interest to revoke or modify any such rule, regulation, standard, or order. Pending such review and determination thereon, the Board, by its own act, or upon the application of any interested person for good cause shown, may suspend the effect or operation of any such rule, regulation, standard, or order. Nothing in this subsection shall be construed as amending, modifying, or repealing any portion of the Administrative Procedures Act."

S. 3564. A bill to amend the Federal Aviation Act of 1958 with respect to the authority of the Administrator of the Federal Aviation Agency over airmen's certificates.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 313(a) of the Federal Aviation Act of 1958 (49 U.S.C. sec. 1354(a)) is amended by inserting at the end thereof the following: "Nothing in this Act shall be construed to authorize the Administrator to promulgate or make any rule, regulation, standard, or order which shall have the effect of amending, modifying, suspending, limiting, or revoking airmen's certificates or an airman's certificate, or of depriving or limiting any airman in the use of such certificate or of disqualifying any airman from operation pursuant to such certificate, except after a hearing and compliance with the procedures provided under section 609 of this Act."

Mr. ENGLE. Mr. President, I call attention to the fact that hearings have been announced by the Aviation Subcommittee of the Committee on Interstate and Foreign Commerce with respect to some of these problems for the early part of June, and I hope the proposed legislation can be considered by the committee at that time.

AREA ASSISTANCE ACT OF 1960

Mr. DIRKSEN. Mr. President, in his disapproval message on the area redevelopment bill, the President, among other things, said:

Again, I strongly urge the Congress to enact new legislation at this session—but without those features of S. 722 that I find objectionable. I would, however, accept the eligibility criteria set forth in the bill that first passed the Senate even though these criteria are broader than those contained in the Administration bill.

Moreover, during the process of developing a new bill, I would hope that in other areas of past differences solutions could be found satisfactory to both the Congress and the Executive.

My profound hope is that sound, new legislation will be promptly enacted. If it is, our communities of chronic unemployment will be only the immediate beneficiaries. A tone will have been set that would hold forth, for the remainder of the session, the hope of sound and rewarding legislation in other vital areas—mutual security, wheat, sugar, minimum wage, interest rates, revenue measures, medical care for the aged, and aid to education to mention but a few.

Only this result can truly serve the finest and best interests of all our people.

Consonant with that request and that entreaty by the President, I am introducing another bill dealing with the matter of area redevelopment. As a part of my remarks, I ask unanimous consent to have printed in the RECORD an outline of the bill.

I introduce the bill for appropriate reference.

The PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objection, the outline will be printed in the RECORD.

The bill (S. 3569) to assist areas to develop and maintain stable and diversified economies by a program of financial and technical assistance and otherwise, and for other purposes, introduced by Mr. DIRKSEN (for himself and other Senators), was received, read twice by its title, and referred to the Committee on Banking and Currency.

The outline presented by Mr. DIRKSEN is as follows:

OUTLINE OF THE NEW AREA ASSISTANCE BILL

1. Incorporates eligibility criteria from first Senate bill.

(a) President, in veto message, said he would accept these criteria.

(b) Includes 1 more major area and 11 more smaller areas than would criteria in original administration bill.

2. Authorizes $75 million in loan assistance for the construction or refurbishing of industrial plants.

(a) The vetoed bill also provided $75 million for this purpose.

(b) No such loan authority is provided for rural areas.

3. Limits Federal loan assistance to 35 percent of aggregate cost, as in original administration bill.

(a) State or local participation must not be less than 15 percent, as in original administration bill.

4. Doubles existing HHFA public facilities loan authorization from $100 million to $200 million.

(a) This additional authorization had already been requested.

5. Requires HHFA to give a first priority to applications for public facilities that will directly serve an industrial plant construction or refurbishing project authorized by the act.

(a) Requires HHFA to accord next and equal priority to applications from (1) areas of substantial and persistent unemployment designated under the act and (2) smaller municipalities (which hold the only priority under existing law).

6. Authorizes $1.5 million annually for vocational education assistance in areas eligible under the act.

(a) Original administration bill contained no specific dollar authorization.

7. Authorizes $1.5 million annually for technical assistance, including studies of economic growth potential, to areas eligible under the act.

8. Authorizes $2 million annually for technical assistance to low-income rural areas and one-industry small towns to help them develop manufacturing activities and to diversify so that their economic vulnerability may be reduced.

NOTE.—7 and 8 in the original administration bill carried authorizations totaling $3 million for both; the vetoed bill authorized $4.5 million for these purposes.

NOTE.—Not included in this bill is the provision in the vetoed bill for retraining subsistence payments ($10 million annually was authorized) to unemployment persons, in eligible areas, not receiving unemployment compensation (because exhausted or not covered) and who are undergoing vocational training authorized by the bill—such payments to continue for not more than 13 weeks.

9. Provides for presidential appointment and Senate confirmation of an Area Assistance Administrator in the Department of Commerce.

Other provisions of the bill are of minor significance and are drawn mainly from the original administration bill.

The total of the authorization provided in the new bill is $180 million.

HUMANE TREATMENT FOR CERTAIN ANIMALS

Mr. COOPER. Mr. President, on behalf of myself, and Senators MANSFIELD, BARTLETT, BYRD of West Virginia, KEFAUVER, MORSE, PROXMIRE, RANDOLPH, GRUENING, MCNAMARA, and CLARK, I introduce, for appropriate reference, a bill which would provide for the humane treatment of animals used in experiments by recipients of grants from the United States, and by departments and agencies of the Government.

I am aware that there are those who have raised objection to this proposal. Yet it seems to me that the objectives of the bill are such that they are entitled to be considered by the appropriate committees of the Congress. I do not say that the language is perfect or that every approach is necessarily the proper one. Certainly, the objectives of the bill are worth while, and it merits earnest attention.

I am informed that this bill would not inhibit or prevent experimental research. Nor is it my intention or that of the cosponsors of this bill to do so. Its basic goal is to insure that in experiments requiring the use of animals, precautions will be taken and every effort will be made to conduct such experiments in a manner that is as humane as possible.

I ask unanimous consent that the bill lie on the table for 5 days so that other Senators who wish to join in sponsoring the bill may have the opportunity to do so.

The PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objection, the bill will lie on the desk, as requested by the Senator from Kentucky.

The bill (S. 3570) to provide for the humane treatment of animals used in experiments and tests by recipients of grants from the United States and by agencies and instrumentalities of the U.S. Government, and for other purposes, introduced by Mr. COOPER (for himself and other Senators), was received, read twice by its title, and referred to the Committee on Labor and Public Welfare.

DESIGNATION OF 1960 AS SINCLAIR LEWIS YEAR

Mr. HUMPHREY. Mr. President, our great Middle West has always contributed vigorously and distinctively to the mainstream of intellectual life in our Nation.

Novelist Sinclair Lewis who immortalized the Main Streets of America in his novel of "Main Street," Sauk Centre, Minn., is an excellent example of the spirit of free inquiry and honest self-criticism which has marked the thought of America's heartland.

Sinclair Lewis is being honored in 1960 in Sauk Centre and in Minnesota because this is the 75th anniversary of the birth of Sinclair Lewis, the 40th anniversary of the publication of "Main Street," and the 30th anniversary of the author's acceptance of the Nobel Prize for literature.

The Governor of our State has proclaimed 1960 as Sinclair Lewis Main Street Year in Minnesota, and civic and cultural observances are being planned in the State and in Sauk Centre throughout the year.

Sinclair Lewis was a focus of controversy in his time because he sought to hold a mirror up to his own society and to reflect not only its good points but its faults and vices. It is this spirit of free and honest self-criticism and self-evaluation that Sinclair Lewis practiced that we must strive to preserve so that our Nation will not allow itself to be lulled into a mood of self-satisfaction.

We cannot do better than we did yesterday and we certainly cannot do our best unless we are willing to admit honestly to ourselves that we are not perfect and that there is more that we must do.

Because of Sinclair Lewis' contribution to American literature and his effective social commentary, as well as the fact that he was the first American author to be honored with a Nobel Prize for literature, I urge prompt favorable action on my proposal to designate 1960 as Sinclair Lewis Year.

I ask unanimous consent that the joint resolution be appropriately referred, and that it be printed in the RECORD.

The PRESIDENT pro tempore. The joint resolution will be received and appropriately referred; and, without objection, the joint resolution will be printed in the RECORD.

The joint resolution (S.J. Res. 195) providing for the designation of 1960 as Sinclair Lewis Year, introduced by Mr. HUMPHREY, was received, read twice by its title, referred to the Committee on the Judiciary, and ordered to be printed in the RECORD, as follows:

Whereas Sinclair Lewis in 1930 was the first American to be honored with the Nobel Prize for literature; and

Whereas this native son of Sauk Centre in the State of Minnesota, location of the Main Street he immortalized, was devoted to the ideal of an American literature reflecting fully and honestly human dignity, freedom and individual talents; and

Whereas he encouraged younger authors in pursuit of this ideal to reflect not only America's "mountains and endless prairies, enormous cities, farm cabins, billions of money and tons of faith" of her past but also her intellectual and spiritual achievements in meeting new opportunities and challenges; and

Whereas he opposed in American literature "a doctrine of death" and "escape from complexities and angers of living * * * in a land where one would expect only boldness and intellectual adventure"; and

Whereas with novels such as "Main Street" and "Babbitt," Sinclair Lewis demanded of America a spirit of objective self-evaluation and criticism to match her past achievements and the demands of a swiftly changing world; and

Whereas 1960 is the 75th anniversary of the birth of Sinclair Lewis, the 40th anniversary of the publication of "Main Street" and the 30th anniversary of Sinclair Lewis' acceptance of the Nobel Prize for literature: Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) 1960 is hereby designated as Sinclair Lewis Year in recognition of the contributions of this great novelist of the Midwest to American life.

(b) The President is authorized and required to issue a proclamation inviting the people of the United States to observe this year with suitable ceremonies.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows:

By Mr. SCOTT:

Speech by Senator KENNETH B. KEATING delivered before the Americans for the Competitive Enterprise System, Inc., at Philadelphia, Pa., on May 13, 1960.

By Mr. HUMPHREY:

Address entitled "The Quest for Safeguarded Disarmament Must Be at the Heart of the U.S. Foreign Policy," delivered by him in Washington, D.C., April 27, 1960.

MEDICAL CARE FOR THE AGED

Mr. PROXMIRE. Mr. President, I was in Wisconsin all last fall while the Senate was out of session, and, again and again, in cities, towns, and villages, our senior citizens, men and women in their late sixties and older, came to me with one insistent need—some way to take care of the enormous increase in the cost of medical care. This is not a synthetic, political, election-year issue. There is a deep, urgent, very widespread need.

I ask unanimous consent to have printed in the RECORD a letter typical of those I receive from elder residents of Wisconsin describing their plight.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DEAR SENATOR: I am one of the oldsters, age 69 and drawing social security. I retired in 1957 and am not, of course, drawing the maximum benefit.

I have a health and accident policy which I have carried for about 8 years. It gave me good coverage then. Today it will cover only about 50 percent to 75 percent of present doctor fees.

I wrote to the insurance company about this, and they offered to attach a rider for hospital benefits only. The two contracts would give me a credit of $13 per day and the new premium cost would be increased over 100 percent and my income will not allow for this.

A prolonged sickness or surgical confinement for either my wife or myself would be impossible to meet.

I believe the bill H.R. 4700, if passed, would give us much needed security, and respectfully ask that you give it earnest consideration.

Sincerely yours,

——— ———.

PROPOSED NATIONAL MILK SANITATION ACT

Mr. PROXMIRE. Mr. President, yesterday I appeared before the Subcommittee on Health of the Committee on Labor and Public Welfare in support of a bill, of which I am a cosponsor, S. 988, to provide for a National Milk Sanitation Act.

At the present time there is a real anachronism in this country; a series of State and local sanitation provisions which prevent the transportation of milk from areas which produce it most efficiently and inexpensively into other areas of the country which urgently need it. The consumer therefore has to pay higher prices, and the Wisconsin farmers who produce far more milk than those of any other State have lower incomes because of the restriction. And Mr. President, the facts are very clear. These sanitation provisions are, to be blunt, phony. They do not protect consumer health at all.

Mr. President, I ask unanimous consent that my testimony, together with a table I received from the Department of Agriculture, setting forth in detail exactly how Wisconsin milk does flow into other States, be printed in the RECORD at this point.

There being no objection, the testimony and table were ordered to be printed in the RECORD, as follows:

STATEMENT OF HON. WILLIAM PROXMIRE, A MEMBER OF THE U.S. SENATE FROM THE STATE OF WISCONSIN

Senator PROXMIRE. Mr. Chairman, I want to thank you very much for this opportunity to appear.

As a cosponsor of S. 988, I appreciate this opportunity to testify in favor of a National Milk Sanitation Act. Such legislation would benefit consumers, farmers, and processors, and in my firm opinion is long overdue.

Let me take this opportunity to thank the subcommittee for holding these hearings. You are providing the means by which the attention of Congress and the general public can be focused on an important and much misunderstood problem. I feel certain that the testimony which you are hearing from the many competent witnesses appearing before you will help clear up this situation of doubt and confusion. By making this possible, you are performing a signal public service.

Enactment of a national milk sanitation law would have many beneficial consequences. At present so-called sanitation regulations are used as economic trade barriers, as Senator HUMPHREY so eloquently said. They exclude milk as effectively as a skyscraping tariff or a zero import quota in international trade. They distort trade patterns in the same way that a maze of national regulations made a patchwork quilt of European trade in the 1930's, and have helped create a similar "balkanization" of milk markets in the United States, thus violating the principle of free interstate commerce.

This fragmentization of markets came about because large quantities of milk were desired in each major metropolitan area, at a time when the technology of portable refrigeration had not advanced to its present high level. Until quite recently moving fresh whole milk more than a few miles was virtually impossible; it was difficult enough for the rural dairy farmer to rush his milk, in individual containers, to a nearby town, in time to be pasteurized and sold before it began to sour. The sight of a small pickup truck bouncing along a country road with milk cans jiggling behind is a familiar memory to many.

But it is no more than that, a memory. Today, fresh milk moves through pipes, hoses, and tanks, to a gleaming glass-lined ice-cold hermatically sealed tank on a refrigerated truck, which rolls smoothly from farm to city, and from city to city. The milk can be delivered a thousand and more miles from its source with absolutely no impairment of quality or purity.

The sanitation codes of many localities date from the time in the past when efficient refrigerated conveyance of milk was unknown. Today the codes remain as monuments to the obsolete requirements of a vanished era, anachronisms in a new world of reliable refrigeration and rapid transportation.

Though historic in origin, the problems caused by fragmented milk markets are very current in their effects. The American marketplace for milk as for nearly every product is potentially national in character. The benefits of free trade which accrue to all parties in a transaction, and to all citizens of a country, are well known. In the present case, the consumer in particular would gain if trade in milk could follow the road map delineated by the forces of supply and demand, undistorted by a proliferation of obsolete sanitation and inspection requirements.

I would like to state some facts about our dairy economy which may not be known to the committee. My State of Wisconsin produces about one-seventh of the total national milk output. Receipts from the sale of milk count for about one-half of Wisconsin's total annual farm income. In 1959, more than a third of the State's milk qualified as the top grade specified by the U.S. Public Health Service code.

However, only half of this top quality grade A milk was marketed for class I, fluid use. The rest was used to make cheese, butter, and milk powder, much less remunerative outlets. Besides the large portion which is grade A, a very substantial share of the milk which gets labeled grade B in Wisconsin is in fact practically equal to the top grade. Many Wisconsin dairymen could easily qualify their milk as grade A if they thought there was a market for it as fresh whole milk. But as it is, all this high quality grade B must go for manufacturing purposes, where it brings a significantly lower return.

I have asked the Department of Agriculture to prepare a table which I would like to send up to the desk for the chairman to see. I only have one copy of it unfortunately, but I have references to it in my text.

Senator YARBOROUGH. Senator PROXMIRE, do you desire this be filed and printed in the record of the hearings?

Senator PROXMIRE. I would appreciate that very much, Mr. Chairman, if it could be put in the hearings.

Senator YARBOROUGH. Or do you want this printed in the record?

Senator PROXMIRE. I appreciate if it could be printed in the record after my statement.

Senator YARBOROUGH. Fine. Do you need it there to refer to?

Senator PROXMIRE. I do not need it at the present time.

Senator YARBOROUGH. Fine, thank you. This table will be ordered printed in the record immediately following Senator PROXMIRE's statement.

Senator PROXMIRE. I am going to refer to this table, Mr. Chairman. The first column of it shows the total receipts of milk from pool plants. The second column shows the gross sales of grade A, fluid milk, in each Federal order market. This figure is usually somewhat lower than the total receipts, because in most Federal order markets some milk is surplus and moves into manufacturing purposes.

The third column shows the number of pounds of milk (or milk equivalent of cream) received from Wisconsin handlers in each Federal order market. The last two columns show the milk received from Wisconsin as a percent of column 1, the total receipts of each market, and as a percent of column 2, the gross sales of fluid milk in each market.

Overall, the table shows that 40 out of the 77 Federal order markets took in no milk at all from Wisconsin in 1959. In another 18 the Wisconsin share of total receipts or gross class I sales was less than 1 percent. Only 10 markets, all of them in the Midwest, accepted more than 5 percent of their total receipts of class I sales from Wisconsin.

The costs of transportation play a large role in causing milk from the country's most efficient dairy producing area not to move into some markets. But in a number of markets, the price for class I milk is significantly above the Wisconsin price even when transportation costs are added on.

Arbitrary and superfluous sanitation requirements help prevent Wisconsin milk from moving according to the promptings of supply and demand. For example, some municipalities require a 2-inch outlet valve on bulk milk coolers. Elsewhere the 1½ inch is standard. Some areas require that milk-handling machinery be sterilized by steam and heat, while others demand chemical sterilization. The poor dairyman is caught in a crossfire of conflicting regulations. With the best will in the world, he is unable to satisfy flatly contradictory requirements.

In the crazy quilt of milk regulations which blankets the country, inspection requirements are among the most whimsical and discriminatory in their effect. Many cities insist on sending their own public health officials to inspect any dairy facility which handles milk consumed in their area. This may entail a trip of several hundred miles each way, frequently at the expense of the dairy farmer. Obviously when a dairy farmer in Wisconsin has to pay the expenses of an inspector coming from a State several hundred miles away, it simply makes it impossible for him to compete. If he ships to several areas, he may be inspected as often as 100 times each year, as the sanitation officials from various communities fulfill their varying requirements. This puts an unnecessary and irritating burden on the dairyman, and because the inspections are redundant they do not in any way heighten the sanitary level of the final product.

Capricious administration of local codes is another way to discriminate against and exclude out-of-State milk. A municipality may waive its discriminatory health ordinance from time to time, when it needs Wisconsin milk. When it has enough, it clamps the restrictions back on, with no warning, forcing the trucker to sell the milk at the class II price or cart the milk back home again.

As other witnesses have pointed out or will point out, we already have a fine model U.S. Public Health Service milk code. Thus the present bill would not require a study of the dairy industry to determine standards of quality and purity. There is no need for prolonged technical arguments about what constitutes a permissible bacteria count, or how to measure butterfat content. These questions have already been examined and settled by Government scientists.

Local sanitary codes could continue to contain standards and provisions which differ from the national code. This bill will not force a municipality to bring its own milk purity standards in line with the Federal level. If a particular municipality wishes to allow milk which does not conform to the Federal code, it may continue to do so.

However, and this is the crux of the matter, the municipality may not exclude milk which meets the U.S. standards of purity and wholesomeness. Passage of this bill would prevent the misuse of sanitation regulations as barriers against free trade.

At the same time it would establish in law a very useful quality code. Inspection and grading is a service to consumer and producer alike, which is well handled by the Federal Government. Uniform standards are the bedrock of quality and purity and they should not vary from place to place.

Because the sanitation standards enunciated by the proposed law are high, it is plain that a defense of the existing system must be a defense of trade barriers, actual or potential. These barriers restrain interstate trade, and thus give effect to a practice which article 8 of our Constitution was intended to prohibit.

Legal action has been one method by which such trade barriers have been broken down.

Mr. Chairman, in the concluding comments, I would like to point out what I think is a very dramatic demonstration of how it has taken action by the courts because we face up to this situation. It is a very tough political problem in some areas and it can be blown up into a much tougher political problem than what it really should be. I think what happens in my own State of Wisconsin demonstrates this quite well.

One of the best known cases stems from an action in my own State of Wisconsin. It is not many years since an ordinance of the city of Madison still prohibited the sale of milk not pasteurized within 5 miles of the city. When that ordinance was first enacted, the 5-mile designation was not important because it was not possible for dairies in other cities to ship milk into Madison and maintain its quality. When because of technological developments, it became feasible to ship milk from hundreds of miles away to Madison, the interest of the local dairies in preserving the local market for themselves, was so strong that it was politically impossible to secure a repeal of this ordinance. I well recall the fight we had in Madison.

Senator YARBOROUGH. That was an intrastate matter?

Senator PROXMIRE. That is absolutely correct, Mr. Chairman.

Thus, a part of a health ordinance became an economic barrier, an intrastate barrier, as the chairman pointed out, and it took a decision of the U.S. Supreme Court to clear it away. That was the *Dean Milk Company* v. *City of Madison* ((1931) 340 U.S. 349).

However, the high cost of court action and the small size of many markets frequently make it impractical to bring such suits. It would be economically wise and simpler to enact a specific statute defining the legality of restrictive sanitation ordinances. Such a standard would settle the question clearly, once and for all, eliminating the need for prolonged and expensive litigation.

It seems plain to me, Mr. Chairman, that the bill currently before the committee must strike any unprejudiced observer as an eminently sane and desirable piece of legislation. I think, therefore, that it may clarify the subject if we face up to the fact that the opposition to this bill is mainly motivated by a fear that milk from the most efficient producing areas, like Wisconsin, will flood markets, depress prices, and take established business away from local dairy farmers. An examination of the facts shows that this is not a sound prediction. The high cost of transportation, which averages $2.18 per hundredweight per 1,000 miles (based on Wisconsin experience) will permanently give local producers an enormous cost advantage. Because they are already established near the ultimate consumer, they will continue to be able to provide milk to their traditional market.

The main benefit that will accrue to the Nation and to the dairy industry from the passage of this bill lies in the future development of new markets. We don't expect to break into the old markets and we would not. This will enable us to open up some of the new markets as they develop. The present pattern of marketing areas satisfies the milk needs of our present population, as presently distributed. Some sections, particularly in the West and Far West, are spurting ahead. Western cities are mushrooming, and whole new metropolitan centers are being created.

It would be silly if these new population centers of the jet age enacted sanitation and inspection codes suited to a model T generation. Passage of national milk sanitation legislation would give these communities the assurance that their milk is pure and wholesome, while sparing them the need to create and administer codes of their own. There would be no excuse for building up a high-cost, inefficient dairy industry, on lands far better suited to truck farming, citrus fruits, livestock, and timber. It is in the national interest that the section of our country which has a comparative advantage in dairying should provide milk to these new markets.

My own State of Wisconsin recently passed a grade A law which accomplished on a State basis what passage of a National Milk Sanitation Act would achieve nationally. This statewide quality and sanitation law has cut redtape, helped the dairy farmer, and assured reliable and unvarying top-quality milk to all consumers, including those not protected by any previous local regulations. Passage of a National Milk Sanitation Act would bring similar benefits to the entire country.

Once again, Mr. Chairman, I want to thank you very much for permitting me to appear and for accommodating us from Minnesota and Wisconsin, who feel very deeply and strongly about this legislation.

We feel it is not only in the interest of our own State but we feel—and I say this with complete sincerity—it is in the very great interest of all Americans everywhere.

Senator YARBOROUGH. That is a very forceful statement, Senator PROXMIRE.

CONTRACT OF UNIVERSITY OF WYOMING IN AFGHANISTAN

Mr. McGEE. Mr. President, I am in receipt of a letter from the president of the University of Wyoming. The letter deals with the question of the university's participation in some of our foreign programs in other parts of the world.

The University of Wyoming has had a very active foreign contract under the ICA involving the Government of Afghanistan. Afghanistan, as we well know, is one of the critical frontier fringe areas in the cold war.

In view of the participation by the University of Wyoming in that critical area, we have reason to believe useful, helpful and constructive inroads have been made in that area in favor of the free world.

The battle is by no means won; but in Washington, D.C., at the present time, hearings are being held on this phase of our oversea program. There have been those who have called into question the role of universities in the oversea undertakings. Because of that I should like to have printed in the RECORD this morning the record of the University of Wyoming in this program.

The university's participation has been on four fronts; in vocational agriculture, in the Afghan Institute of Technology, in agricultural research, and in the faculty of agriculture and engineering.

Mr. President, when I was touring in that part of the world last fall, although I was not able to go into Afghanistan myself, because that was not my particular assignment, I learned in the surrounding countries, particularly Iran and Pakistan, of the very notable service being rendered by my colleagues of the University of Wyoming, who have offered their services in order to help the cause in this very remote part of the world, a portion of the world which borders directly on the Soviet Union.

Mr. President, I ask unanimous consent that the letter from the President of the University of Wyoming, Mr. G. D. Humphrey, to me, summarizing what has been done, be printed in the RECORD at this point.

The PRESIDING OFFICER (Mr. PROXMIRE in the chair). Is there objection to the request of the Senator from Wyoming?

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE UNIVERSITY OF WYOMING,
Laramie, Wyo., May 16, 1960.

Senator GALE W. McGEE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR McGEE: It has come to my attention that hearings of the House Appropriations Subcommittee on Foreign Operations are presently in process and that the practice of using U.S. institutions of higher learning in the educational activities of ICA has been seriously questioned.

As you are no doubt aware, the University of Wyoming has had an active foreign contract under ICA and predecessor agencies since September 1952, and we do not consider it either unreasonable or wasteful, as the subcommittee has suggested.

I should like to point out that our contract is a nonprofit type, with the only questionable revenue being a provisional overhead charge used to defray administrative and logistic costs on our campus involved solely in the prosecution of this work. Following is a brief résumé of our contract program, presented as a matter of information for you.

This contract is in the country of Afghanistan, and during the course of years since its inception it has been enlarged until it now consists of four separate, though related, fields of endeavor working in conjunction with the Royal Afghan Ministries of Agriculture and Education. These four specific projects are:

1. Vocational agriculture: This is high school level training, preparing students for either college work or terminal training, enabling them to act as aids for agricultural technicians.

2. Afghan Institute of Technology: This is high school level training in trades, again with the option of terminal or college preparatory curriculums.

3. Agricultural research: This project is an attempt to gain sufficient information in order that firm recommendations may be given to the Afghan farmers, enabling them to increase their production by various means.

4. Faculty of agriculture and engineering: This is college level training in the two listed fields, with the project being run in conjunction with Kabul University. Graduates from this faculty ordinarily go into Government service or, in some instances, are sent abroad for advanced technological education.

In all cases, Afghan personnel work side by side with their American counterparts, and it is hoped that in due course these projects may be phased out in their present form and turned over to the Afghans completely without loss of effectiveness to the project.

Over the years of this operation approximately 75 staff members have been assigned to this project, of whom about 40 percent have been directly from our campus. During this same period of time, approximately 80 Afghan participants have come to the United States for higher learning, most of them having matriculated at the University of Wyoming.

It is our concerted opinion that we, as an institution of higher learning, are aiding materially in the cold war fight against communism by virtue of our participation in this type of program. Further, we feel that we are assisting the country of Afghanistan in upgrading its agricultural and engineering techniques. I would be remiss not to men-

tion that, in so doing, our own institution is benefiting by foreign experience of our staff. Again I should like to mention that, in our opinion, this program has been neither unreasonable nor wasteful in its execution.

Sincerely yours,

G. D. HUMPHREY,
President.

DEPARTMENT OF DEFENSE APPROPRIATIONS

Mr. JOHNSON of Texas. Mr. President, one of the most significant hearings of the year was held this morning before a Senate Appropriations Subcommittee. I am referring to the appearance of the Defense Department to present its appeals from House action on the Department's bill.

There is no thought in my mind of discussing the specific items. These will be handled adequately by the committee under the able and experienced chairmanship of the Senator from New Mexico [Mr. CHAVEZ]. But I think that there is one general point which is worthy of comment. It is the clear indication that budgetary ceilings rather than military needs are still controlling the Department's affairs.

The facts are simple:

First. The original budget request for the Defense Department—aside from military construction—amounted to $39,335,000,000.

Second. On April 6, the Secretary of Defense endorsed a series of changes in the budget which amounted to a net decrease of $119,100,000, but for some reason these changes have never been formally transmitted to Congress.

Third. In this connection, the Air Force Chief of Staff has testified that program adjustments the Air Force was permitted to submit were limited by the requirement to stay within the spending levels of the President's budget, and additional amounts for programs could not be requested officially.

Fourth. The House made a number of changes in individual programs totaling almost $4 billion, but the changes offset each other and the net effect was a $3 million increase in the total appropriation.

Fifth. The Defense Department now asks the Senate to appropriate exactly $39,334,500,000—$500,000, or one-thousandth of 1 percent, below the original budget request.

The inference is clear. Once a budget amount is set, no one in the executive branch is permitted to present military needs that may call for budget increases. The whole world situation may be changed by the summit conference and the events of the next few weeks—but the preparedness program is still held to a magic ceiling established by the Budget Director.

The Senate Appropriations Committee is in a position to get the facts. I hope that the Defense Department representatives will testify as to their real military requirements.

I know that the Senate, once it has the facts, will rise to the occasion, and I am confident will be supported by the American people.

BIRTHDAY OF SENATOR JAVITS AND SENATOR KEATING

Mr. JOHNSON of Texas. Mr. President, I am informed that today is the birthday of both distinguished Senators from New York [Mr. JAVITS and Mr. KEATING]. I have served for many years in the Senate with these fine gentlemen with great pleasure. I was associated with both of them in the House of Representatives, and now we are all in the Senate. I know them to be diligent public servants and very competent advocates. I am pleased to call them my personal friends.

It is somewhat unusual for a State to have two Republican Senators in this body, but I am speaking this morning of two unusual men. I am not surprised that they have been able to convince the people of New York of their outstanding effectiveness and their great ability. I wish them many happy returns of the day, and again express to them my friendship and my willingness to join with them on any matter of moment which is in the national interest.

Mr. KEATING. Mr. President, I wish to express my very deep gratitude to the distinguished majority leader both on my own behalf and on behalf of my colleague [Mr. JAVITS], who is absent from the Chamber at the moment. It is a great pleasure for us to work in the Senate under the leadership on both sides of the aisle.

I know my colleague shares my view when I say that the distinguished majority leader has at all times been helpful to us and most courteous and kind in his treatment of us. We, of course, have differences of opinion with the majority leader on legislation from time to time, but perhaps less frequently than some throughout the country might think. Here in the Senate, as we all know, we often see eye to eye with entire disregard of the center aisle separating the Members of the two parties.

I deeply appreciate what the distinguished majority leader has said. The statement coming from him means a great deal to me, and I know it will to my colleague.

I do want to pay a special tribute to Senator JAVITS, who is my senior in this body and who has been most helpful and cooperative to me as I learned the whys and wherefores of the Senate. He has been a tower of strength in a great many fields, in behalf of our State and our Nation, and I am delighted to be associated with him both in serving the Empire State and in observing our common natal day.

We have labored together so often in common causes that there is, perhaps, a certain poetic justice in our sharing, as well, the one date in history most significant to us both.

Mr. President, I have reached the point in life when I am not entirely happy about having attention called to the event, although I am very happy to say that 100 years ago today Abraham Lincoln was nominated for President of the United States. Since, therefore, the majority leader has called attention to our republicanism, I am very happy that we happen to have our birthday on such a momentous anniversary as the centennial of Abraham Lincoln's nomination.

NATIONAL REPRESENTATION FOR CITIZENS OF THE DISTRICT OF COLUMBIA

Mr. KEATING. Mr. President, the House Committee on the Judiciary yesterday ordered favorably reported to the House a drastically amended version of Senate Joint Resolution 39.

Under the committee's amendments, the provisions of the Senate resolution dealing with the abolition of the poll tax and the appointment of members to the House of Representatives in the event of a disaster were completely eliminated. The remaining provision, with regard to national representation for the citizens of the District of Columbia, was restricted beyond anything justifiable.

About the only affirmative significance of the House committee's action is that it served to move the resolution out of committee.

The committee has gone entirely too far in cutting the voters of the District down to size. They have said the voter here shall enjoy two-thirds or three-fifths as much voice as voters anywhere else in the United States.

This is a new concept of fractional citizenship. They propose to lift the citizens of the District out of second-class citizenship, but not to elevate them to first-class citizenship. So we shall have to coin a new phrase. Shall we call it "first-class citizenship once removed," or "second-class citizenship once removed"?

I hope that the committee's recommendations will not be presented on a take it or leave it basis.

Every effort should be made to bring the House resolution more in line with the Senate resolution during its consideration in the House and in conference. There certainly should be no inclination on the part of the Senate to accept House language which scuttles two-thirds of the Senate resolution and emasculates the remaining third.

There is some disposition to regard the District of Columbia amendment as a matter of local interest only. This is not the fact. There have been editorials in newspapers all over the country criticizing Congress' failure to restore democracy to the Nation's Capital and I have heard from many New York residents on this subject. It does not do our Nation any good in world councils either to retain this blot on representative government at home.

I recognize that compromise sometimes is necessary to get results. But the Senate resolution was itself a compromise and nothing was presented at the House hearings on the District of Columbia vote amendment which remotely suggested that it should be further watered down.

QUALITY OF GOVERNMENT PERSONNEL—STATEMENT BY MARION B. FOLSOM

Mr. KEATING. Mr. President, one of America's most distinguished public servants, former Secretary of Health, Education, and Welfare, Marion B. Folsom, recently presented most thought-provoking testimony to the Senate Subcommittee on National Policy Machinery. Drawing on his extensive experience in Government service as well as his knowledge of business and personnel problems, he presented a series of important proposals to help attract topnotch people into Federal work.

Among his suggestions is the creation of a central bureau in the White House which would maintain lists of openings in Federal positions, recruit qualified people, and take charge of instructing new officials in the unique features of Government administration, and pertinent rules and regulations.

I noted with particular interest Mr. Folsom's support for the conflict of interest proposals embodied in S. 3080, which I am cosponsoring in the Senate. This bill grew out of recommendations of a special committee of the Bar Association of the City of New York, and they represent an monumental effort to codify and clarify the present statutes on this vital subject.

Mr. President, I hope Mr. Folsom's thoughtful ideas and constructive proposals will receive the careful attention of all who are concerned about the quality of Federal personnel and the performance of our Federal Government. It is vital that we leave no stone unturned in our quest for the best qualified people to help run the world's most important Government.

In order that this significant testimony may receive wide attention, I ask unanimous consent that it be printed at this point in the RECORD.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

STATEMENT BY MARION B. FOLSOM BEFORE THE U.S. SENATE SUBCOMMITTEE ON NATIONAL POLICY MACHINERY, MAY 12, 1960

My name is Marion B. Folsom. I am a director and management adviser of the Eastman Kodak Co. in the fields of finance, public relations, and employee benefits. I joined Eastman Kodak in 1914 and became treasurer in 1935 and a director in 1947. I resigned these positions in 1953 to become Under Secretary of the Treasury of the United States. At that time I also resigned as chairman of the Committee for Economic Development and as a director of the Federal Reserve Bank of New York. In 1955 I became Secretary of Health, Education, and Welfare. I resigned from that office in 1958 and rejoined Kodak a month later in my present capacity.

Prior to 1953 I served the Federal Government in a number of different capacities. I was a member of the President's Advisory Council on Economic Security, which assisted in the development of the Social Security System in 1934–35, and I served on the several subsequent councils. Since 1936 I have been a member of the Business Advisory Council for the Department of Commerce. In 1944–46 I served as staff director of the House of Representatives Special Committee on Postwar Economic Policy and Planning and in 1940–41 as a division executive of the National Defense Advisory Commission. I have also served as vice chairman of the President's Advisory Committee on the Merchant Marine in 1947–48 and as a member of the National Advisory Board on Mobilization Policy in 1951–52.

I fully realize the importance of attracting able people into Government service and am pleased to present my views on the problem.

As far as my own experience is concerned, I found it satisfactory—in the administrative positions, in working for the congressional committee, and in the various advisory committees. I know many other businessmen who have also found Government service satisfying and rewarding. I do not feel that the difficulties faced by businessmen in the Government are as serious as often depicted. The situation has been exaggerated by the headlines arising from a few specific cases. Nevertheless, the fact that this impression exists among business people does create a problem in regard to recruiting men for these executive positions.

I have found that the factors involved in attracting men into Government positions vary widely, not only as to individuals but as to occupational groups. I will discuss four main categories: (1) businessmen; (2) lawyers; (3) college professors; and (4) miscellaneous professional men and State and local governmental officials.

BUSINESSMEN

It is true that businessmen will find working for the Government different in many respects from their experience in business. Much of the difficulty is due to the lack of appreciation of the fact that officials must operate in public view, and that Congress and the public have a right to know what is going on.

It is also hard for businessmen to become adjusted to the unique processes of governmental administration as compared with business administration. For instance, civil service rules make it difficult to reward good service of employees by prompt promotions and pay increases and to remove inefficient workers. Unless a person has had previous experience in government, it generally takes some months for him to adjust to the different surroundings and conditions, and the limitations of the numerous laws which reduce the flexibility of administration.

It is unfortunate that in most cases the business executive stays in Government positions less than 2 years. He generally leaves just about the time he reaches the peak of his usefulness. A study recently made by the Harvard Business School showed that in the past 16 years, of the businessmen who had been in Government service and left, 48 percent served only 1 year or less and only 33 percent served over 2 years.

DIFFICULTIES IN RECRUITING

While my experience was satisfactory to me personally, I did have difficulty in recruiting businessmen for top administrative positions, both in the Treasury and in the Department of Health, Education, and Welfare. Recruiting was especially difficult for such positions as Under Secretary, Assistant Secretary, and Assistants—the appointive positions between the top civil service and the Secretary. I know also that other departments have had the same difficulty, not only in this administration but in previous ones.

Businessmen with experience in handling people in large organizations are uniquely fitted for many executive positions in government. I have found that businessmen are available in two groups—the older men who are recently retired or who are approaching retirement age, and the very young men. Some very able men have been recruited from the older group in this and previous administrations and many of them have done outstanding jobs. It is often difficult, however, for one who has had a top position in industry to accept a secondary position as an assistant. Furthermore, the men in this age group often cannot stand the pressure and the long hours required in most of these positions. It is also more difficult for them to adjust to the differences between Government and business. The businessmen in the younger group who are available have generally not had adequate experience, although there are some outstanding exceptions.

The persons really needed for many of these positions are men in their late 30's or 40's, with 10 or 15 years of business experience and with several years in important administrative positions, especially in large organizations. Great difficulty is experienced in obtaining businessmen in this category.

The difference in salary is a factor, but I found this was not the main reason. The able men in this age group would benefit considerably from the Government experience. They would have a number of years after their return to business to make up for any monetary losses which might have been experienced during their stay in Government.

Difficulty is also experienced in regard to pensions and other employee benefits, stock options, etc., but these difficulties generally can be ironed out. Family reasons, such as the maintenance of two homes, change in schools for the children, and the difficulties in moving, also are factors.

FEAR OF MISSING OPPORTUNITIES FOR PROMOTION

What I found as the principal reason, however, was the fear on the part of the younger executive that, regardless of promises by the company, he would find upon his return that he might have lost an opportunity for advancement. While I would contend that the executive should benefit from the experience and thus might be able to advance faster, my arguments were not generally convincing. Because of this factor, it probably will be necessary in many cases to agree to a service of 2 years. An able person with the right experience can make a real contribution during that period, although it would be much better if he would stay longer.

All of the factors I've mentioned tend to make it difficult to attract the able executive, but I feel that good progress could be made in overcoming some of them if certain measures were taken by Government and industry.

While, as I've said, I do not think the climate for business executives in Government is as bad as it's generally depicted, it would help if congressional leaders would find occasion to say that they consider it important that businessmen be obtained for some of these key administrative positions. It would also help if congressional leaders could find occasion from time to time to praise the work of businessmen who have performed an outstanding service. The press naturally plays up the cases where businessmen are criticized. A better climate would result if Senators and Congressmen were a little more careful in criticizing officials, and if—when they did criticize certain individuals—they were more careful not to give the impression that they were criticizing businessmen in general.

I found that the top officials of the large business organizations were quite favorably inclined to let their young executives do a tour of duty in Government, but the difficulty arises with the attitude of the young executive in question. He quite often has the wrong opinion about the position of the businessman in Government.

COMPANY BENEFIT PLANS

Of course, there are steps which industry could take to make Government service more attractive.

Employee benefit plans now are an important part of an employee's remuneration and many businessmen would naturally hesitate to accept a Government position if it should adversely affect their rights to group insurance, group health, or company pension plans. A company should continue the employee in the group life and group health plans while he is in Government service, with the employee being considered as away on a leave-of-absence basis, and with the same premiums being paid by the company and employee as when he was with the company.

Ordinarily the status of the executive as to pension rights would be frozen as of the date of his leaving the company, with no credit being given for service while in the Government. The company should also give credit to the employee when he returns to the company for the time served in the Government. This practice was frequently followed for men returning from military service.

The Government can help in the situation by making it clear in the regulations regarding employment of businessmen that such arrangements regarding benefit plans are permissible to men on leave of absence from their company.

It should also be understood that it would be permissible for a company to make a reasonable grant to the executive at the time of leaving, as was done in the case of those leaving for military service.

If arrangements of this type can be made, several of the obstacles can be overcome. The company should also make it clear to the executive that a position will be available to him when he returns and that every effort will be made to locate him in a position at least as good as the one he previously had. The company also should agree that in case a general salary increase were made during his absence, his salary upon return would reflect such increases.

Of course, a company in most cases cannot promise to hold an exact position open and the executive will have to take that chance.

I feel quite confident that if measures along the lines I have suggested and will suggest later are adopted, there will be enough men who are willing to devote 2 or 3 years of their career to Government service. A capable man at the age I was talking about—35 to 45—would gain considerable benefit from this experience and should actually increase his earning power. But he should not go into the service with this in view.

The businessman who will probably succeed in Government work is one who not only has ability as demonstrated by his progress with his company, but has shown an interest in Government policies. He should have been active in affairs in his local community and his local, State, and National trade organizations, and thus become familiar with problems faced by Government. It would also be very helpful if he has had some previous experience with the Federal Government, either in service on advisory committees or parttime work.

LAWYERS

Lawyers with corporate law experience are well fitted by training and experience for many of these appointive positions, not just as general counsels in the departments, but also as assistants and under secretaries. This is especially true for the positions which call for contacts with Members of Congress and the preparation and analysis of bills. Lawyers also are very helpful in planning programs and analyzing problems. Due to the nature of their experience, they are accustomed to adapting themselves to new situations. While not many lawyers have had much experience in administrative or executive positions, this is not always necessary. On the other hand, some of these young lawyers have turned out to be very able executives.

It is generally easier to obtain able young lawyers than businessmen. Their income, in most cases, has not reached the point where the salary of a Government position would mean much monetary sacrifice. There seldom is any problem of employee benefits. The experience gained, moreover, in many cases would be more in line with their career.

There is one handicap in the rule that lawyers or their firms cannot participate in any case in which the lawyer was involved in his Government work until 2 years after he has left the Government. While such a rule is reasonable for lawyers in the Department of Justice, Internal Revenue, and certain other positions, it would seem that there should be more liberal interpretation in the usual appointive position. A clarification of this rule would make it easier to obtain able young men.

EDUCATORS

For many of these positions college professors, especially those in the fields of political science, economics, and business administration, are good prospects. Most of them have had little executive experience and desire advisory positions rather than administrative positions. They can be valuable additions for most departments, and are especially helpful in formulating programs. There is little difficulty experienced in professors' obtaining leaves of absence for a reasonable time and, as a rule, the Government salaries are higher than in the educational institution. Educators in administrative positions in their institutions are particularly good prospects, but they are not so readily available.

OTHER PROFESSIONS AND GOVERNMENT OFFICIALS

Good men are available also in other professions, such as hospital, health, and welfare administrators, and men with experience in State and local governments. These government officials, however, would probably prefer civil service positions so that they would not be subject to loss of position when administrations change.

A CENTRAL RECRUITING AGENCY NEEDED

With so many able men available, the problem resolves itself into one of recruitment and proper placement. At present there is no central agency in Government service for recruiting these men. This is left up to each individual department. It would seem highly desirable to have a central recruiting office established in the White House which would maintain a list of the various positions to be filled by political appointees and the qualifications required for the positions. One reason the service of so many businessmen is short is that they were not properly placed in the first place. The present system is too much hit or miss. The Secretary or agency head generally is limited to suggestions received from friends or acquaintances and there is little system to it.

Such an office, comparable to executive personnel offices in large companies, could obtain lists of qualified men from various trade associations, management consulting firms, and executive employment agencies, and let it be known that key businessmen interested in Government service should contact this office. Similar lists could be obtained for the other groups.

Such an office could also conduct a training program for the new executive, mainly to cover such things as conflict-of-interest rules, the mechanism of civil service, and the differences between Government and business. The attitude with which the executive approaches a Government job is most important, and such a training course should be very helpful in developing the right attitudes and approaches in dealing with other executive departments and with Congress.

A start has recently been made in giving the new executives a course of indoctrination but it is not uniform throughout the departments and the present program can be considerably enlarged. Such an office, to which the executive could come for help and advice, might help to increase the length of time which the businessman spends in Government.

It would be very helpful if more promising young businessmen or men from other professions at an early age could obtain experience in Government at a level below the level of Presidential appointments. A promising plan is now being tried out on a pilot basis in a program recently organized by Brookings Institution called the public affairs fellowship program. This plan calls for a number of Government agencies' taking promising businessmen into their organizations for periods of 6 to 9 months. A number of businesses have indicated interest in this procedure and it is hoped that the institution can demonstrate through this pilot program the feasibility of such an arrangement and encourage it to develop on a much broader scale. It may be necessary for the Government to authorize a special category of training positions in the intermediate class usually made by appointment, without regard to civil service, for periods up to 2 years.

CONFLICT OF INTEREST

Questions regarding conflict of interest undoubtedly prevent many executives from serving in Government positions. The publicity given to a few outstanding cases has greatly exaggerated the actual situation, however, as far as the effect on businessmen is concerned.

In the great majority of cases there is no conflict of interest, as the executive would not be dealing with his former company and there is no need for him to divest himself of his savings. Except in the case of men in the very top positions, if a case should arise where the executive would be dealing with his former company, he could arrange to turn this specific job over to an associate. In the few positions where a conflict of interest can be foreseen, the executive should not be forced to sell his assets, but should be given the option of turning them over to a trustee who would have complete control as to investment, voting rights, etc. Such an arrangement could be worked out with the assistance of the Department of Justice and with the approval of the Senate committee which confirms the appointment.

This whole question of conflict of interest is in a great state of confusion and complexity due to the large number of statutes relating to various phases of the problem. Some of these statutes go back many years, when conditions were quite different than they are now. The situation would be alleviated to a great extent if these statutes could be consolidated and a reasonable statute adopted to meet present conditions.

Fortunately, a committee of very able lawyers from the New York City Bar Association has recently completed an exhaustive study of this whole problem of conflict of interest. Their report contains specific recommendations regarding divestment, employee benefit plans, payment for outside services, gifts, post-Government employment activities, etc. Their report also makes recommendations about what phases of the problem should be covered by statute and which by regulations, and includes the draft of a proposed consolidated statute. I understand that the chairman of the committee, Roswell B. Perkins (a very able lawyer, who formerly served with me as Assistant Secretary of Health, Education, and Welfare) will present the report to your committee.

I have read the summary and the recommendations, and they seem to me to be very reasonable and provide adequate protection for the public interest. The enactment of

a consolidated statute and the adoption of other recommendations along the lines recommended by this committee would, in my opinion, greatly improve the present situation.

The conflict of interest statutes and regulations now cover part-time employment, as well as full time. Government departments find it quite helpful to bring in, from time to time, consultants or experts to help in specific problems, generally for short periods of time. These people are now often considered as Government employees, the same as full-time employees. This sometimes prevents these experts from serving. I recall a case where a person declined to serve on one of the advisory councils of the National Institutes of Health because of this provision. It would seem to me that the usual rules should not apply in the case of these part-time temporary consultants, and that they should also be permitted to maintain their usual connections and income. The New York City Bar Committee also covers this point in its recommendations.

Most of the business executives who come into Government service have only a vague idea regarding the conflict of interest statutes and regulations, and there is very little systematic effort to acquaint them with these rules. I would strongly endorse the recommendation of this New York City Bar Committee that a member of the White House staff be designated to see that uniform regulations are adopted in all the departments and agencies, and that instructions developed by the Department of Justice be given to each businessman when he enters Government service. Such an official could be associated with the recruiting office recommended earlier.

SALARY REVISIONS FOR APPOINTED POSITIONS

In regard to the salary level of executive positions in Government, the fact that it is lower than in industry undoubtedly discourages business executives from accepting positions in Government. As far as the top positions are concerned, such as Cabinet Secretaries and agency heads, I doubt if any increase in salary which would be practicable would make much difference. The people generally considered for these positions are in most cases earning salaries considerably above the Government level and a small increase would have little effect. These men know that a sacrifice in income is necessary and accept only because of an overriding desire to serve the Government.

On the other hand, an increase in the salaries in the second-line positions—that is, Under Secretaries, Assistant Secretaries, assistants to the Secretary, and assistant agency heads—would make a considerable difference in my opinion. It is more difficult for the younger men being considered for these positions to make the sacrifice in income.

A careful study which preceded the latest salary adjustments about 3 years ago recommended increasing salaries of Cabinet officers to $35,000, Under Secretaries to $30,000, Assistant Secretaries to $25,000. This schedule was revised downward, however, by Congress and the salaries fixed between $20,000 and $25,000. The schedule, as recommended, would have an appreciable effect in obtaining able men and the cost would be very little as altogether only about 300 positions would be affected.

CIVIL SERVICE SALARY REVISIONS

If the salary level of these political appointees were raised, it would also be highly desirable to raise the maximum salaries in the top grades of civil service employees. I feel that these maximum salaries are now distinctly out of line with comparable positions in industry, and the Government is losing too many of those who reach the top grades.

The salaries of Government employees in the lower and medium grades now compare favorably with those for similar work in industry. With the liberal sickness leave, vacation, pension, and now the group life and group health benefit plans which the Government employees have, the employee benefits in Government also compare quite favorably with those of progressive companies in industry.

A change, such as that suggested in the top Civil Service grades, could be made without much cost because there are relatively few employees in these grades (approximately 1,500 in the three top grades). I know of no one thing that would be as effective in improving Government administration as an increase in the maximum salary for these key workers. Not only would more of the able employees be kept in Government service, but the Government could attract abler young people in the first place.

During the 1930's, governmental careers and salaries were attractive enough that Government received its full share of able college graduates. In the postwar years this has not been the case. It has become increasingly difficult to compete with industry and the professions. It is important that steps be taken to make these careers more attractive.

Higher maximum salaries in the top grades would help. The Government should also do more in introducing executive and management development programs as is done in many industries today. In the Department of Health, Education, and Welfare, we started a program a few years ago under which the entire Department is screened periodically to identify the young people with the greatest potentials for development. These people, along with some directly from college, are given a series of rotating assignments which will insure a breadth of experience and opportunities for growth. I understand that the program is working very well and also that the White House is encouraging a program of identifying key individuals throughout the Government for such development. This is an important step for preparing individuals for these top civil service positions to replace the older persons who retire or leave.

SUMMARY

It is clear that Presidential appointees and the top-grade civil service employees determine to a very large extent the efficiency and effectiveness of Government operations. It is important, therefore, that every effort be exerted to obtain able men for these positions.

For these appointive positions men well fitted by experience in business, law, education, and other fields are available for service in Government. The following measures would help to attract able men to these positions and hold them for longer periods:

1. A central agency in the White House should maintain lists of positions and the necessary qualifications, recruit people, place them properly, and instruct them in the unique features of Government administration.

2. Certain obstacles could be overcome if the various conflict-of-interest statutes were consolidated and a reasonable statute adopted to meet present conditions.

3. Business concerns could make it easier for executives to serve in Government for 2 years or more if they would grant leaves of absence and continue coverage under group life, group health, and other employee benefit plans. The company also should assure the executive of at least a comparable position when he returns and should assure him that recognition will be given for his Government service. In addition, credit should be given him under the pension plan for his service in Government as was done for those going into military service.

4. The status of lawyers as to clients during the first 2 years out of Government service should be clarified.

5. Salaries should be increased moderately to reduce the monetary sacrifice often involved for those taking these positions.

6. A program for giving young men work in Government for a period of 6 to 9 months would be helpful in stimulating interest in Government service and in equipping young men for positions in Government later.

7. The maximum salaries of the three top grades of civil service should be increased. This would serve to hold more able civil service employees and to attract more young men into Government service.

8. A more extensive management development program should be adopted throughout Government to identify and develop the most promising younger people.

RETIREMENT OF SENATOR JAMES E. MURRAY—A GREAT SENATOR'S RECORD

Mr. HUMPHREY. Mr. President, I was not in Washington on the day the distinguished senior Senator from Montana announced that he would not run for reelection to the Senate.

Senator JAMES E. MURRAY has written a record of achievement in the Senate without peer in its dedication to the public good. He combined a genuine concern for the good of every American with a deep loyalty to the West—responsible regionalism at its best.

Senator MURRAY knew that the West had much to give to this Nation in the past two decades and in the future but he know that there were two major needs for assistance for fullest development in the West—water resources and public power. To both these causes Senator MURRAY gave imaginative and tenacious leadership.

This great Montanan and great American steered through the Committee on Interior and Insular Affairs which he so ably chaired the extension of our Western frontiers to Hawaii and Alaska.

The same bold planning and constant prodding he devoted to measures designed to maintain a strong mining industry essential to our national security.

Expanding both our geographic and our resource frontiers in the great West, Senator MURRAY served all of us in every corner of the Nation.

But beside his leadership in resources development, Senator MURRAY 25 years ago came to the Senate intent on writing a legislative record in the full sense of a new deal for all.

He wrote that record in education, welfare, and labor relations legislation. In the record are his votes and leadership for aid to education and higher teachers' salaries, improved and expanded social security coverage, civil rights, fair employment, health insurance and public housing. It is a record which exemplifies his faith that good government is concerned with the public good, the good which means the best possible life for all our citizens, not just a privileged few.

The senior Senator from Montana is himself a millionaire—the son of an immigrant railroad man. But he has recognized, as his record proves, the responsibility of the Federal Government for a

fully prosperous and continually growing national economy. To this end, he led the fight for the Wagner Act—American labor's charter of justice—in the early days of the Franklin Roosevelt administration, and in 1946 led the fight for the achievement of which he is said to be proudest—the Full Employment Act.

Senator MURRAY has earned his retirement, but we will surely miss his strong and enlightened leadership. It will not be so great a loss to us here and to the Nation as a whole if after his extraordinary Senate career comes to a close he will continue to share his vision, imagination, and devotion to our Nation's good with his fellow Americans.

I have considered it a rare privilege and a precious gift to share in the friendship of this remarkable man, who represents with such dignity and such forcefulness, and yet with such basic integrity and honor, the highest ideals of this Nation and faith in the future of the American Republic.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. HUMPHREY. I yield.

Mr. MANSFIELD. I should like to join with the distinguished senior Senator from Minnesota in what he said about my colleague the senior Senator from Montana [Mr. MURRAY]. I ask unanimous consent to insert in the RECORD at this point an editorial which appeared in the Great Falls Tribune of Thursday, May 12, 1960, entitled "As JIM MURRAY Retires."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AS JIM MURRAY RETIRES

Senator JAMES E. MURRAY'S retirement as senior Senator from Montana sparked spontaneous laudatory comment from those who knew him and his works best, his colleagues in the United States Senate. This fulsome praise went beyond the perfunctory, provided clear evidence of the solid respect and warm affection in which he is held by the critical top echelon of the Nation's lawmakers.

Out of their chairs to voice tribute rose the Senate leaders and whips of both parties. Perhaps our own Senator MIKE MANSFIELD summed sentiment best in saying: "He will leave the Senate with the dignity, prestige, and humanity which have been his hallmarks in his 25 years of outstanding service to the people of Montana, the United States, and the free world."

All this is highly gratifying to many thousands of Montanans who in five consecutive elections have voted their confidence in MURRAY as their choice to represent them in Washington. They, too, knew him well, and liked what they saw. Oldtimers knew him when he was a struggling, impecunious lawyer in rough-and-tumble Butte in the early years of the century, raising a flourishing brood of six sons with appetites to put a crimp in any family budget.

For, contrary to latter-day public misconceptions, JIM wasn't born with any silver spoon in his mouth. It was considerably later before he became possessed of means to afford entry into politics without economic strain.

As JIM MURRAY relinquishes the Senate seat he has filled so well, he takes high place among those distinguished Senators who have represented our Land of the Shining Mountains in its nearly three-quarters of a century of statehood. His successors will have large shoes to fill.

Mr. BRIDGES. Mr. President, the passing scene of American life always carries with it moments of joy or sadness, and I am sure that all of us look for joy. But there are occasions when sadness hits us, and one of these periods came recently with the announcement by our distinguished colleague from Montana, the Honorable JAMES E. MURRAY, that he will retire from public life upon completion of his present term.

There are those among us who feel the sadness deeper than others because certain Members of this body have served with him for many years. I am one of those Members and I dislike to think of JIM MURRAY leaving our midst.

Much has been said in recent years of the ability and influence of Senator MURRAY, and I have been pleased to note it in the public press and in the pages of our CONGRESSIONAL RECORD.

JIM MURRAY has had tremendous influence on the American scene during his more than 25 years of service as a U.S. Senator. This is as it should be, because JIM MURRAY is a man of great wisdom. He has gained during his public life a vast knowledge of our national and international problems, and he has applied his knowledge effectively in reaching solutions for the betterment of our American way of life.

When I came to the Senate 24 years ago, JIM MURRAY had been on the scene only a brief period, but he was helpful in many matters affecting the Nation. He has benefited many other Members of this body during the succeeding years, and he has been a highly respected and beloved Member.

The people of Montana and the rest of our Nation will sorely miss his services. His devotion to his State and Nation has been of the highest degree, and he will leave for others in future generations a record for them to attempt to attain.

Although Senator MURRAY and I are of different political faiths, I am happy to say that we have been friends through the years and I have constantly enjoyed the privilege of working with him.

HEALTH PROBLEMS OF THE AGED

Mr. HUMPHREY. Mr. President, it was my honor and my privilege to join the senior Senator from Michigan [Mr. MCNAMARA] in sponsoring the Retired Persons Medical Insurance Act, S. 3503, and I hope my colleagues will give this important legislation very careful and sympathetic attention.

In today's New York Times appears a letter to the editor from Senator MCNAMARA about this bill. I ask unanimous consent that this letter be printed at this point in the CONGRESSIONAL RECORD.

There being no objection, the letter to the editor was ordered to be printed in the RECORD, as follows:

HEALTH PROBLEMS OF AGED—SPONSOR OF SENATE BILL DISCUSSES OBJECTIVES OF PROPOSAL

To the EDITOR OF THE NEW YORK TIMES:

Your editorial of May 10 on "Health Aid for the Elderly" is to be highly commended for its positive outlook and succinct definition of the issue involved—namely, the use of the social security mechanism versus Federal-State subsidies. Quite correctly, the argument in behalf of the former mechanism is overwhelming. Equally correct is the claim that the administration's solution is no less compulsory than those proposals made by various Democratic legislators, including myself.

Concerning the administration's proposal, it is only on the surface that substantially more benefits are offered. The practical effect of the administration's proposal (it is not yet a bill as of this date), when applied to typical illness experiences of the aged, such as carcinoma, heart failure, arthritis, fractures, etc., would be such as to cost the individual more than under S. 3503, the retired persons medical insurance bill, introduced on May 6 by myself and cosponsored by 19 Senators. This advantage also applies to catastrophic illnesses.

In addition, the retired persons medical insurance bill covers the approximately 4 million retired aged not included in the Forand bill, thus meeting the criticism expressed in your editorial.

Finally, and ultimately more significant, S. 3503 is based on first dollar medical costs and would thus encourage the practice of preventive medical philosophy and low-cost restorative medicine through outpatient diagnostic services, home health programs, etc.

The retired persons medical insurance bill was prepared on the basis of over a year's study, consultation and analysis by the staff and members of the Senate Subcommittee on Problems of the Aged and Aging. It represents the best thought and advice of practical authorities in the fields of health services and medical economics. Therefore, I believe that ample time does remain in the present session of Congress to work out a solution to meet the need and the public demand for effective action.

PAT MCNAMARA,
U.S. Senator.

WASHINGTON, *May 12, 1960.*

FEDERAL PROGRAMS OF MEDICAL CARE FOR THE AGED

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the body of the RECORD a resolution adopted at the 43d annual meeting of Central Cooperatives, Inc., held in Superior, Wis., on March 28 and 29, 1960.

At the meeting, delegates representing 75,000 cooperative members in Minnesota, Michigan, Wisconsin, North Dakota, and South Dakota reaffirmed their support of the Forand bill and Federal programs of medical care for the aged.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION NO. 6—THE FORAND BILL

Whereas there is a lack of medical and hospital care provided for the aging through existing agencies of insurance; and

Whereas life expectancy and longevity is rapidly increasing each year and it is generally agreed that the problem of providing medical care for people on social security is an ever increasing one; and

Whereas there is no apparent hope of progress without national action: Be it

Resolved, That the delegates assembled at this 43d annual meeting of Central Cooperatives, Inc., go on record reaffirming our support of H.R. 4700, known as the Forand bill, representing to us either Federal action, or forcing suitable action by such existing agencies of insurance.

STUDENT LOYALTY OATHS

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the body of the RECORD a resolution adopted by the Community Council of Macalester College, St. Paul, Minn. It was once my privilege to be a member of the faculty of that college.

The resolution adopted by the community council relates to the National Defense Education Act, and protests as discriminatory and as an infringement upon freedom of thought the loyalty oath and the disclaimer affidavit provisions of the act.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

"Whereas section 1001(F) of the National Defense Education Act of 1959 constitutes an infringement upon freedom of thought; and

"Whereas the above-named section manifests a discriminatory treatment toward higher education: Be it

"Resolved, That the Community Council of Macalester College for 1960–61 hereby condemn the imposition of the above-named section upon institutions of higher learning and earnestly request its repeal."

The council feels strongly that forcing upon students who are not financially in a position to resist the discriminatory loyalty oath and affidavit is not in keeping with the respect which higher education deserves from the U.S. Congress. We respectfully urge you to work and vote for the deletion of clause 1001(F) of the National Defense Education Act.

DEATH OF DR. VICTOR E. LAWSON

Mr. HUMPHREY. Mr. President, one of Minnesota's great men passed away last month. He was Dr. Victor E. Lawson, founder and publisher of the West Central Daily Tribune in Willmar, Minn. Nothing that I could say about Dr. Lawson would be more eloquent than the tributes that poured into Willmar upon the news of his passing on March 19.

In testimony, therefore, to a wonderful man, a man who gave me valuable guidance and counsel during my service as mayor of the city of Minneapolis and as a U.S. Senator, I ask unanimous consent that a series of articles and editorials published in the West Central Daily Tribune, Willmar, Minn., and including a tribute delivered by Dr. Edgar Carlson, president of Gustavus Adolphus College, at the funeral services for Dr. Lawson, be printed at this point in the RECORD.

There being no objection, the articles, editorials, and tribute were ordered to be printed in the RECORD, as follows:

[From the West Central Daily Tribune, Willmar, Minn.]

STATESMAN, HISTORIAN, JOURNALIST, CHURCHMAN—UNUSUAL LIFE COMES TO A PEACEFUL CLOSE ON EVE OF 89TH BIRTHDAY—FUNERAL WEDNESDAY—EDITOR AT 17, HIS LIFE WAS ONE OF GREAT PUBLIC SERVICE

Dr. Victor E. Lawson, founder and publisher of the West Central Daily Tribune, passed away quietly Saturday evening at his home in Willmar, after a lingering illness from maladies attendant to old age. He would have observed his 89th birthday on Thursday of this week, March 24.

With his passing has gone an outstanding citizen of Willmar who in 1958—Minnesota's centennial year—was honored as being one of the leading personalities in our State's history. Statesman-journalist-historian and churchman, his life's work and influence touched many fields and made their great contributions. The story of his days almost read like Alger tales of having done so much with so modest beginnings.

Out of an humble carpenter's home with a rural school education, so paltry in those days of a few early grades, he became educated through his own sheer efforts so that a great college, Gustavus Adolphus College, conferred upon him the degree of doctor of humane letters. Of Swedish ancestry, he was recognized as a leading Swedish-American of our country when the late King Gustaf of Sweden decorated him as a Knight of the Order of Vasa. A founder of political parties and a State senator from this legislative district for a long number of years and at one time candidate for Governor of Minnesota. In the field of his chosen vocation—journalism—he was at one time president of the Associated Press of Minnesota and prominent in editorial associations. In his passing has gone the last of the pioneer editors of the Seventh Congressional District.

In his church he was a president of the Augustana Church Brotherhood of Minnesota and served on the board of directors of the Augustana book concern at Rock Island, Ill. In education, president of the Willmar Board of Education and a member of the board of directors of Gustavus Adolphus College. In history—the author of the Illustrated History of Kandiyohi County, a volume rated as the top county history in Minnesota, a work which led him to a presidency and life membership in the Minnesota Historical Society.

In his home community he served several terms as mayor and his influence felt in this community throughout his lifetime when as a public-spirited citizen and as an editor he championed and fought for worthwhile causes for community and civil betterment. As a self-educated man, the Victor Lawson Library now found on the second floor of the Tribune building testifies to the inexhaustible thirst for knowledge which was his.

Such in brief is the history of the man who will be laid to rest at services to be held on Wednesday of this week. Services will be held at 2 p.m. at the Bethel Lutheran Church in Willmar with the Reverend Robert N. Pearson officiating. Following this service the remains will be taken to the Lebanon Lutheran Church at New London where another service will be held at 3:15 with the Reverend Carl H. Gronquist officiating. Interment will be made in the Lebanon churchyard where the remains will be laid to rest with those of other members of the Lawson family who have preceded him.

Friends may call at the Harvey Anderson funeral home in Willmar until 12 o'clock noon on Wednesday.

Victor Lawson was the last member of the C. M. Lawson family. In addition to the parents who both passed away at New London, the sisters and brothers who preceded him in death were Carrie (Mrs. W. O. Swanson), Esther, Theodora, Thomas Lawson and Eben E. Lawson.

Immediate nephews and nieces who survive are Enock Swenson of New London, Lawrence Swenson of Olympia, Wash., Mrs. Frank Burns of New London, Verson Lawson of Helena, Mont.; Louis Lawson of Atwater, Mrs. A. D. Hall of St. Cloud, and through kin of Mr. Lawson's wife—Oscar B., Ann, and Gordon Augustson of Willmar, and Rudolph Augustson of Detroit, Mich.

VICTOR E. LAWSON, COUNTRY EDITOR, 1871–1960—"30"

"Thirty" is a symbol used in journalism to denote the end of a story written by a reporter. It also has become a mark symbolizing the end of a newspaperman's life and career. Truly that "30" personifies Victor E. Lawson whose hobby as a boy was printing, who became an editor at the age of only 17 years, and who was active for a period of over 60 years as a printer, editor and publisher. In his passing, journalism and the fourth estate has lost one of its greatest sons, one of honest and fearless conviction and one who also lived a life of great service to his community, his State, his church, and his fellow men. Peace to the memory of this unusual personality—statesman, journalist, historian, churchman—the founder of this newspaper and its beloved publisher over its life span thus far of 65 years.

LIFE SKETCH

Dr. Victor E. Lawson was born on March 24, 1871, at Paxton, Ill. He was the son of Carl Magnus Lawson and Maria Lindstrom Lawrence, devout Christian parents whose hospitable home in the very cradle of the Augustana Lutheran Church was thrown open to many of the early leaders and founders of the church.

When he was a mere lad the family moved to New London, Minn., in 1880 where the father continued as a carpenter, built churches just as he helped build the original Augustana College.

As a boy on the home farm his hobby was printing. No surprise then that at the age of 17 years he became editor of the New London Times and some years later was the founder of the Willmar Tribune, the forerunner of the present West Central Daily Tribune. As an editor he was the champion of the common man, was of liberal political philosophy, was a crusader for temperance and good morals, and an unholder of the Christian faith.

With a meager country schooling of a few early years he, through self-study and his personal library which today is monumental, was some years ago recognized by a great college when Gustavus Adolphus College bestowed upon him the degree of doctor of humane letters.

As an American of Swedish extraction, his contribution to the culture of both nations was notably recognized when the late King Gustaf of Sweden conferred upon him knighthood in the Order of Vasa.

Educationally he rose to places of eminence as president of the Willmar Board of Education and a member of the board of directors of Gustavus Adolphus College.

He served his home city of Willmar as mayor for several terms and many of the forward-looking programs of a civic nature were credited to him.

In the political realm he was one of the builders of the liberal movement in Minnesota, served as State senator from 1927 to 1939, was a candidate for Governor and the choice of the late Gov. Floyd B. Olson for U.S. Senator.

Great he was also as a churchman. In the Bethel Lutheran congregation he held positions as deacon and trustee, was president of the Minnesota brotherhood, served on the board of directors of the Augustana Book Concern. To his own bethel and in memory of his wife he gave a complete installation of carillon bells.

As a journalist he became president of the Associated Press of Minnesota and was the last of the pioneer editors of this West Central area.

A born historian he was. Note his authorship of the Illustrated History of Kandiyohi County, the outstanding county history in Minnesota, his presidency and life membership in the Minnesota Historical Society and the one credited with acquiring the State Society Building at the capital.

He was a great lover of nature and the outdoors. Note his leadership in acquiring Sibley State Park, Monson Lake State Park, Robbins Island and the establishment of

his own Ekeberg Conservation Foundation, 22 acres of which he finally gave to his church as the site of the present Shores of St. Andrew Bible Camp.

The above are merely the highlights of his public service and efforts in behalf of his community, his State and his church.

Mr. Lawson wedded Minnie Nelson of New London in 1894 but the young wife passed away 7 years later. In 1908 he married Julia Shellstrom who was his great helpmate until her demise in 1947. There were no children by either marriage.

He retired as head of the Tribune in 1947, assuming the position of the chairman of the board of the Tribune Co. but continuing his interest in the affairs of the newspaper he founded 65 years ago. Ill health came to him during the past decade but such maladies never dimmed the latent interests that were always his.

He passed away quietly at his home in Willmar Saturday evening March 19, 1960, on practically the eve of his 89th birthday.

Victor Lawson was the last member of the C. M. Lawson family. In addition to the parents who both passed away at New London, the sisters and brothers who preceded him in death were Carrie (Mrs. F. O. Swanson), Esther, Theodora, Thomas Lawson, and Eben E. Lawson.

Immediate nephews and nieces who survive are Enock Swenson, of New London; Lawrence Swenson, of Olympia, Wash.; Mrs. Frank Burns, of New London; Vernon Lawson, of Helena, Mont.; Louis Lawson, of Atwater; Mrs. A. D. Hall, of St. Cloud; and through kin of Mr. Lawson's wife—Oscar B., Ann and Gordon Augustson, of Willmar; and Rudolph Augustson, of Detroit, Mich.

[From the West Central Daily Tribune, Willmar, Minn.]

ALONG THE WAY
(By O. B. A.)

For just today we would revert back to our very personal column of some years past.

For during the decades of that column the writer took occasion to pay tribute to good and worthy people he had learned to know and esteem.

Today gives us the one and greater occasion to again pay honor—if we can find the words—to properly express our thoughts.

Pay deeply felt tribute to a great man who will be laid to rest tomorrow.

They say a truly great man is also great to his valet—he who is so close to the life of a man. In such a situation we found ourself during these past 44 years.

And we would seek to say so much that is on our hearts and call him great, not just because he was our employer, not because he was near of kin, not because he was our benefactor.

No—all those things aside, we pay deepest honor to the man—Victor E. Lawson himself—as we learned to know and almost worship him.

It was said of the Royal Air Force of Britain when they turned back the Luftwaffe these words by Churchill—"They did so much with so little."

How true that was of Victor Lawson—one who accomplished so much with so little, from such humble beginnings. Rose to such heights that he was termed illustrious as a statesman, historian, journalist, and a churchman.

As a country boy with a few grades of a rural school he became a doctor of humane letters. As a village newspaperman to become an editor of State and National stature.

As an historian whose work won him widespread fame, a legislator and political champion who stood so high in the halls of government, a churchman, who made such great contributions to the faith.

These are merely broad brackets of his life of achievements and service, service so unselfish, little thoughts of reward—the good done was his goals.

How can one but stand in awe and profound admiration—most especially we who were so close to observe it all.

Yet despite his gifts and the honors he attained, he was always the commoner, the one militant for those needing help, the crusader for causes, the upholder of noble principle and conviction cost what they would.

What more can one say in mere words found to be so futile in an hour like this?

And how best can one close this earnest comment but with the blessed benediction which we feel he will so well merit—"Well done, thou good and faithful servant."

Peace to the memory of Victor Emmanuel Lawson—seldom in our estimation do such personalities flash across the horizon of time or walk the terrestrial stage.

Great and yet humble, one for whom service was an ideal, one who was strong as a lion and yet with the abiding faith of a child—faith in his God and in his fellowmen.

Farewell Victor E. Lawson, our lives and the bit of world which surrounds us was made better by your having been in our midst.

We would live on in the aura and glow of inspiration which enveloped your days of sojourn here on earth.

DESK, THOUGH VACANT, THE SPIRIT LIVES

Yesterday's editorial comment was material that had been written previous to the recent bereavement which befell this newspaper. It was run as a fill-in. Today we resume the editorial pen. And we cannot write without notice of the one vacant desk in our editorial room which was graced so long by his presence. Yes, it is vacant but we will ever sense his presence, his spirit—for he will continue to live here in an atmosphere made up of memories of this man, his personality, and his principles. As this newspaper was founded and grew under his guidance so may we continue to carry on through the inspiration he bequeathed to us all. Victor Lawson has departed to far happier climes but we who remain cannot but be dedicated to the ideals which he personified throughout his life. Victor Lawson founded this newspaper as an independent voice and under his leadership it has so remained. Look back, ye who do know, and recall with us the causes that he championed and at times when it was both costly and grievous to himself. But he was an editor—every inch of him—born as such. For him the principles he defended with his pen were more precious than the peace or the purse. To him journalism was a calling, a consecrated profession, something which had nothing to do with material gain—it was a thing of the spirit—convictions held stanchly when others about him may have faltered—beliefs that could not be swayed or bought. We who follow, know his life and how he lived up to his role as the humble country editor, yes humble but fearless, having at heart at all times what he thought was for the best and good for his fellowmen. Journalism and the fourth estate has lost one of its greatest sons—one of its pioneers—one who laid foundation stones of what journalism should be if it is to be deemed worthy of being called a profession.

The present editor who has inherited his mantle and has stood by his side all these years to both observe and learn could write both an impressive and interesting narrative of the editorial side of this man Lawson, a side just as illustrous as the roles he achieved as a historian, statesman, and churchman. Perhaps the future may give occasion to do this.

But now we must close this editorial tribute—it could say no more if it were thrice its length. But, as we gaze at his vacant desk we will always have indelibly imprinted on our very souls the editorial gospel and creed which shone through his life and which words we often heard him express—"Be true to your convictions." And this he was, so gloriously that he won the admiration and esteem of even his severest critics in public and political life.

His editorial desk is vacant but the spirit of Victor E. Lawson lives on.

COMMUNITY, CHURCH, STATE PAID TRIBUTE AT VICTOR E. LAWSON RITES—CHURCH AUDIENCE THRILLS AT VICTORY OF FAITH SERVICE

In a thronged church auditorium, in the assemblage of a community which came to do him last honors, in the presence of distinguished representatives of church, State, the Fourth Estate, and of recorded history, last rites were held Wednesday afternoon for the late Dr. Victor E. Lawson, beloved founder and publisher of the West Central Daily Tribune. It was not a moment of only mourning, it was not an occasion of only bereavement and loss—it proved to be a service of triumph and victory as a man of the faith returned to his Maker. This was all revealed in the tributes paid by the representatives mentioned, by the hymns that spoke of that faith, by the stirring message from the pulpit, all closing with the dramatic rendition, by the choir, of "The Hallelujah Chorus" from "The Messiah" as the audience stood and shared the inspiration. Such were the rites at the Bethel Lutheran Church for the man who from such humble origin had attained distinctions but bore with so much modesty, as a statesman, historian, journalist, and churchman.

Seated in the audience were various groups in reserved pews including some 21 honorary pallbearers, men who had been close to the career of this departed citizen and friend in so many public, business, and personal walks of life. These were Dr. R. E. Anderson, Willmar; M. W. Blomquist, Willmar; Judge Harold Baker, Renville; A. W. Chalberg, Kandiyohi; Carl Dahlheim, Willmar; W. J. DeVries, Raymond; Edward M. Elkjer, Willmar; H. C. Feig, Willmar; C. J. Freeberg, Willmar; Dr. C. E. Gerretson, Willmar; O. N. Gravgaard, Hawick; Judge Sam Gandrud, Litchfield; Charles Hedlund, Willmar; Harry Hallberg, Kandiyohi; Dr. J. C. Jacobs, Willmar; Martin Leaf, Willmar; C. J. Nelson, Kandiyohi; Victor Olson, Benson; Paul E. Peterson, Willmar; J. Albert Peterson, Willmar; Senator H. L. Wahlstrand, Willmar.

The active pallbearers were associates and employees of the Tribune—R. C. Bengtson, Ernest Strom, Anton Okerman, Emil Aspaas, Sigurd Pederson, Lowell Lundquist, Stanley Haldorson, and Olaf Hovseth. Other Tribune employees and their families were seated as a group.

The processional was led by Rev. Robert N. Pearson, of Bethel Lutheran, Willmar; Rev. Carl Gronquist, of Lebanon Lutheran, New London; Rev. Carl Sandgren, of Minneapolis; Rev. Thomas Wersell, Minneapolis; and the distinguished representatives.

After the opening hymn "He Leadeth Me," there was the order of service and reading of the Scripture and prayer. Then followed the tributes by the distinguished representatives from the area of church, state, press, and historical.

Dr. Edgar Carlson, president of Gustavus Adolphus College, paid an eloquent tribute to Dr. Lawson in which he called attention to the many years the deceased had served on the board of directors of the college and his interest in education. His highest tribute came when he noted that though the departed had only a few grades of a rural schooling he rose to such eminence as a scholar that Gustavus conferred upon him the degree of doctor of humane letters.

"Without the benefit of higher education" said Dr. Carlson, "he became a recognized scholar, to whom the best trained scholars were proud and happy to pay tribute."

Representing Gov. Orville Freeman was his personal secretary, Thomas Hughes, who spoke of the years when Senator Lawson served in the State legislature and the contributions he had made as a statesman of Minnesota. Ralph Keller, Secretary of the Minnesota Newspaper Association cited Dr. Lawson as a journalist of the highest order—"one who held high his profession as an editor without fear or favor. Though one may have disagreed with his views you never doubted his honesty and integrity" said Mr. Keller. Arch Grahn of the Minnesota Historical Society pointed out the contributions which Dr. Lawson had made to both local and State history and informed that the acquiring of the historical building at the capitol was largely through his leadership. Rev. Thomas Wersell of Minneapolis represented Dr. Leonard Kendall, president of the Lutheran Minnesota Conference of the Augustana Church whose statement cited Dr. Lawson's services to the church, his gift of the Bible camp site and generally his Christian life and labors.

The second hymn sung was "Faith of Our Fathers" after which the Rev. Robert N. Pearson delivered a very impressive sermon. He informed the audience that for years Dr. Lawson had a motto on his desk. It read "Prepare to meet thy God." This quotation is from the book of Amos and was made the basis for the fine Pearson sermon. He declared that a true Christian always lives with the thought of being prepared to meet his God. And this is realized said Reverend Pearson through humility, through honesty, and through harmony with God. This done, said the pastor, death has no sorrow—it is an occasion for triumph and victory and he applied it all to the passing of Dr. Lawson. It was at this point that the entire audience arose as the choir, directed by Julian Framstad rendered "The Hallelujah Chorus" from "The Messiah"—a thrill to everyone who was in the edifice at that moment.

The benediction was pronounced and the recessional began while hymns were played on the carillon bells in the church tower, the gift of Dr. Lawson. The organist at the service was Mrs. Harold Dale. The bells were also played during the processional. Pastor Pearson acknowledged the many floral tributes and likewise many in memoriam gifts for such causes as benevolences, the Bible camp, the chapel at Gustavus, etc.

The funeral cortege now set off for New London where brief services were held at the Lebanon Lutheran church, the old family church of the Lawsons. Here the Reverend Carl Gronquist officiated and delivered an effective sermon stressing the truth that our entire Christian faith is based on the Resurrected Christ and because He lives, we too, shall live. Special music at this service was a duet, "Children of the Heavenly Father" sung in the Swedish by Mrs. Herbert Holm and Mrs. Harry Dokkesven. The organist was Mrs. Harold Olson.

With the two services now having been completed the remains were borne to the Lebanon churchyard where they were laid to rest in the family plot. Here both Rev. Pearson and Rev. Gronquist officiated at the rites.

The thronged Bethel church reflected friends from throughout this part of the State and from a distance. They had come to pay their last respects to a man whom they had learned to both love and admire—a country lad who had risen to prominence but never lost his common touch and humility.

Among those from a distance, the following have come to our attention: State Treasurer Val Bjornson, former State Senator Simonson of Litchfield, the Honorable Odean Enestvedt of Renville, former Representative H. W. Rundquist of Dawson, former Willmar school superintendent, George O. Brohaugh of St. Cloud, former Governor Elmer Benson of Appleton Lud Roe of St. Paul and former publisher at Montevideo, Russell Fridley, secretary, Minnesota Historical Society, Hon. O. G. Nordlie of Litchfield, former State Senator Ansgar Almen of St. Peter, William Macklin, managing editor of the New Ulm Daily Journal.

After the Bethel service and the Lebanon services groups of ladies in both congregations served refreshments. The choir, which in Bethel church sang the Hallelujah Chorus was made up largely from singers in the Messiah Chorus which will render this famous oratorio in Willmar on Palm Sunday. The Lawson Library in the Tribune Building was open to visitors after the church service.

TRIBUTE TO DR. LAWSON DELIVERED BY DR. EDGAR CARLSON, PRESIDENT, GUSTAVUS ADOLPHUS COLLEGE

"Dr. Victor Lawson was one of those rare persons who can be accounted for only by their unusual inner resources. Many people are shaped by the circumstances of their lives and reflect the communities in which they live and labor and the influences that have acted upon them. About Victor Lawson one has to say that the community reflects him to an even larger degree than he reflected the community. He was one of the major influences in the life of this city and of this State, of this congregation, and of the whole church.

"Without the benefit of higher education he became a recognized scholar, to whom the best trained scholars were proud and happy to pay tribute. I recall that when Gustavus Adolphus College conferred upon him the honorary degree, doctor of humane letters, in 1945, no less a historical scholar than Dean Theodore C. Blegen, dean of the Graduate School at the University of Minnesota, expressed his personal appreciation to the institution for this deserved recognition that had been given to one of Minnesota's great historical scholars.

"There was in him a remarkable combination of kindliness and humility on the one hand, and a sure confidence and almost regal bearing on the other. There was an independence of thought and action which was sure of its ground, while always inquiring and curious about new fields and new points of view. There was devotion to the old, the desire to conserve the best in the tradition, and an alertness to the new situation and new conditions which made him everyone's contemporary, and especially the contemporary of the young.

"Indeed, his interest in the young must be regarded as one of his outstanding qualities. For 25 years, from 1914 to 1939, he served as a member of the board of Gustavus Adolphus College. I am sure that the board has never had a more devoted or interested member than he, nor one who more fully embodied the best in its educational heritage. Always he knew what was going on at the college and was eager to learn more about it. In these recent years he gave concrete and dramatic evidence of his concern for youth and his faith in them by giving his beloved Ekeberg Farm to the youth of the church as a site for the Bible Camp, 'The Shores of St. Andrew.'

"In behalf of Gustavus Adolphus College, its board of trustees, faculty and staff and student body, and countless students and teachers of other years who owed a debt beyond that which they may have known to Dr. Lawson, I wish to pay him tribute and give public acknowledgment of our indebtedness to him. To those who stood closest to him by ties of blood and continuous association, we extend our deepest sympathies and assure you that we also stand in that community of gratitude and grief to which all who knew him now belong.

"The passing of another of these 'giants in the earth' makes us realize again how great is our debt to these men of vision and of faith, of whom there seem to have been so many in an earlier generation. They believed greatly in the God we have known in Jesus Christ, in America and its great possibilities, in the men and women with whom they associated, and most especially in the young. We may well pause to wonder whether they are being replaced by others in our generation. We honor men like Dr. Victor Lawson most by dedicating ourselves in what often appears to be the diminishing tribute of the great servants of mankind."

TRIBUTE TO SENATOR HUMPHREY

Mr. GORE. Mr. President, although I neither expressed nor experienced any joy when the able senior Senator from Minnesota laid aside his sword in another endeavor, I feel, and wish now to express, joy at seeing him back in harness on the floor of the Senate, where we need his intellect, his vision, his pleasant personality, and his articulate voice.

Mr. HUMPHREY. I thank the Senator from Tennessee for those words. I should like to share with him an intimate personal thought. I have never been happier in my life. I love the U.S. Senate. Having had the opportunity to experience some of the other delights of public life, I have come back home, and I hope to be able to remain here for some time.

I shall endeavor in the next few months to renew my contract, if the people of Minnesota are willing to be so gracious as to consider it.

Mr. MANSFIELD. Mr. President, I have already made known my feelings about the return of the distinguished senior Senator from Minnesota to the Senate, and how happy and glad I am for personal reasons.

I simply wish to say that, now that HUBERT HUMPHREY has returned, the sun is shining.

Mr. HUMPHREY. I thank the Senator from Montana.

THE DANGER OF SUSPENSION OF NUCLEAR TESTS

Mr. GOLDWATER. Mr. President, I ask unanimous consent that I may proceed for 15 minutes.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. GOLDWATER. Mr. President, for many years our policymakers have paid lip service to the idea of disarmament. This seems to be one of the ways, in modern diplomacy, of proving one's virtue. Recently, however, under strong Communist propaganda pressure, we have acted as though we mean this talk to be taken seriously. I cite our Government's momentous decision to suspend nuclear tests.

To the impending physical parity in nuclear weapons must be added a psychological factor assiduously cultivated by Communist propaganda. The horrors of all-out warfare are said so be so great that no nation would consider resorting to nuclear weapons unless under direct

attack by those same weapons. Now the moment our leaders really accept this, strategic nuclear weapons will be neutralized and Communist armies will be able to launch limited wars without fear of retaliation by our Strategic Air Command. I fear they are coming to accept it, and thus that a military and psychological situation is fast developing in which aggressive Communist forces will be free to maneuver under the umbrella of nuclear terror.

It is in this context that we must view the Communist propaganda drive for a permanent ban on the testing of nuclear weapons, and the inclination of our own leaders to go along with the proposal. There are two preliminary reasons why such proposals ought to be firmly rejected. First, there is no reliable means of preventing the Communists from secretly breaking such an agreement. Our most recent tests demonstrated that underground atomic explosions can be set off without detection. Secondly, we cannot hope to maintain even an effective strategic deterrent unless we keep our present nuclear arsenal up to date; this requires testing.

The moratorium on testing of nuclear devices prevents the exploitation of the full theoretical potential of some of our planned ballistic missile systems. Concurrently with the development of new missile systems, scientists had planned to develop new warheads for which the weight involved would have given vastly greater explosive forces than those now available in the relatively lightweight warheads used by missiles. Each day the moratorium continues will further delay the development, fabrication, and testing of warheads which would have significantly increased the striking power of new missile systems. Hence, Mr. President, we may be confronted with utilizing weapons far less potent than those originally contemplated or, as an alternative, equipping them with untested warheads. In manned bombers, however, weapon weight is not such a restrictive factor; and they are, and will continue to be, able to carry the very large yield by the comparatively heavy fully tested weapons now available.

This fact serves to highlight the danger of relying on any one particular system as an ultimate weapon. We must continue to develop our manned aircraft, to assure our continued capability to place adequate warheads on appropriate targets.

Scientists have a rightful place in our planning; but it is wrong, in my opinion, to depend entirely upon them for the development of military weapons for military strategy. I recall, Mr. President, that during World War II a scientific study showed that the B–17 would not survive in Europe. This decision came out after the B–17 had not only survived, but had enabled us to deliver such a strategic attack on Germany that we won the war.

What we must constantly remember is that we are the dominant country in the world today in air transportation; and, holding that dominance, we should utilize it, as England did her mastery of the seas, to maintain a situation without world wars for 200 years. If we are to be able to utilize that power, it cannot be tied up with red buttons. In other words, if we place all of our strategic and offensive hopes in missiles, once the red button is pushed the offensive strength is on its way and cannot be recalled. On the other hand, if our strategic forces are made up of the combination of missiles and manned bombers, then we shall have the flexibility and the maneuverability to show to the world our air power, as England did her sea power.

Nothing would delight Russia more than to have us agree to a disarmament program which would include the abandoning of our manned aircraft, for then she would, in effect, have taken from us the one weapon which we have to keep her from bullying the world as she desires.

Continued modernization of our manned force will be required, in order to maintain effectiveness. Both the growing obsolescence of the force and the significant increases being made in Soviet air defenses contribute to this requirement.

The mach 3 B–70 is the weapon system which best fulfills the vital requirement for a manned follow-on aircraft to the B–52.

It is the only manned aircraft system now under development by the Air Force. Its introduction into the strategic bomber force is essential to the continued effectiveness of the manned bomber force.

An effective offensive strategic capability requires a flexible force using manned aircraft and missiles.

Properly employed, manned aircraft and missiles can complement each other, by attacking the targets for which, individually, they are best suited. Both are essential, and neither can completely replace the other. The ratio of bombers to missiles may decrease, but we cannot abandon the manned bomber.

In addition, a diversified attack forces the enemy to dilute his defenses, so as to try to cover all speeds and altitudes.

Manned systems possess certain unique capabilities, not characteristic of missiles, which are considered mandatory to the strategic posture.

One is the capability which allows launching on less than certain information, because an airplane can be recalled. Launched in this situation, the manned system could be recalled or could proceed on to enemy targets; and, being airborne, it would be safe from the attack.

Also, manned aircraft can be used over and over on repeated strikes, whereas a missile cannot be used a second time.

In addition, the manned system fulfills the important role of obtaining intelligence and damage assessment information vital to planning subsequent strikes. It also provides a means of bringing mobile targets under attack.

Another unique capability of the manned system, now and for some time to come, is the ability to carry larger and greater yield weapons, as well as multiple weapons; whereas in the present state of the art, the ICBM can carry but one warhead, and it is of relatively small yield when compared with the yield of what the bomber can carry.

This capability enables the airplane to bring large-yield weapons to bear against such hardened targets as military and government control centers, or to attack several targets on the same mission.

We should also note that this large and variable load-carrying capability takes on additional significance when we consider the possibility that nuclear weapons conceivably would be banned at some time in the future, and only TNT weapons could be used.

In such a situation, missiles become a very expensive means of delivering TNT against the enemy, when compared to the cost of the bomber, with its capability of carrying many conventional bombs, and returning to carry more.

Furthermore, there exists the possibility that the moratorium on nuclear weapons tests will continue for at least the immediate future. If so, we shall be denied the means to develop and improve the ratio of warhead yield to weight, a factor of great importance when related to missiles. Consequently, reliable missile warhead yield growth, without testing, and within reasonable weight limitations, becomes most doubtful. Reliable, extremely large yield nuclear bombs are now in the inventory. When considered in conjunction with possible cessation of further flight testing of long-range missiles, this factor lends weight to the continued need for the manned bomber.

The manned aircraft can seek out, discriminate, and attack targets, with no sacrifice in accuracy and effectiveness. In short, it can achieve high accuracy using less accurate target data.

Moreover, the manned aircraft offer a much greater range of flexibility in choice of tactics. For example, they could use auy portion of the enemy perimeter to pentrate, with variance in both altitudes and speeds.

The man in the aircraft provides distinct advantages. He can use his judgment when confronted with unexpected conditions. He can disregard targets already destroyed, and can use his weapons on alternate targets. He has the ability to observe, think, and make unrehearsed decisions.

Of great significance is the increasing emphasis on arms control. Although complete and general disarmament is probably not attainable within the prevailing or foreseeable political environment, partial arms control is conceivable, and may eventually include space weapons, ICBM's, IRBM's, and nuclear weapons. Assuming this possibility, the future security of the Nation will, as today, be primarily dependent on the manned bomber force. The continuation of this force must be planned for and programed now. It cannot be a stop-and-go proposition, since many years are needed to develop and produce modern bombers and train personnel to use and maintain them.

Finally, manned systems offer cold-war application, not visualized in connection with large missiles.

In this regard, the flexibility of manned systems eases the decisionmaking process by providing an instrument

which may be employed on a graduated scale without an irrevocable commitment to combat.

The options provided the decisionmakers may vary from an increased ground alert posture to launching of the force subject to recall.

For instance, in times of stress it is difficult to let the world know, particularly potential enemies, that the readiness of the ballistic missile force has been stepped up. Nothing happens that anyone can see, whereas stepping up the readiness of the manned aircraft force on alert or initiation of an airborne alert is visible to friend and foe alike.

Furthermore, to display response in a tense situation, manned vehicles could be sent to where they would be seen by allies, or even picked up on radar screens of an enemy.

The aging B–47's are planned to be phased out of the Air Force inventory by the midsixties. Also, during the midsixties the earlier model B–52's will begin to be phased out.

This condition, coupled with an ever increasing Soviet defensive posture, requires modernization of our manned strategic capability.

An analysis of payload, range, speed, and penetration capabilities shows the B–70 to be the weapon system best suited to fulfill that requirement.

The B–70 would provide the Air Force with the most advanced, manned strategic system that the state of art now permits. It is unique, in that it has been designed expressly for continued operation in the supersonic environment.

It will travel the entire distance of its very great range at Mach 3, which is roughly 2,100 miles an hour. This represents a major aeronautical breakthrough, since it transcends the heat barrier, and conceivably opens the door to much greater speeds and further major advances in aeronautical science.

The principal technical factor which now permits attainment of a supersonic transport is the radical improvement in flight efficiency, which results in adequate range at acceptable fuel costs. Flight efficiency is the product of aerodynamic efficiency and propulsive efficiency. In considering aerodynamic efficiency, we find that a drastic decrease in lift-to-drag ratio occurs when sonic speed is reached and passed. However, recent developments and design refinements, such as the compression-lift principle, have substantially raised lift-drag ratios in the Mach 3 region. In compression-lift design, the aircraft wing is positioned on the supersonic shock wave, so that it derives additional lift from the increased air pressure behind the wave. It may be said that, in effect, the airplane "rides" its own shock wave. Thus, we see that by proper design we can translate increased speed into improved aerodynamic efficiency.

Furthermore, the attainable propulsive efficiency increases with increasing flight speed. The combination of the two factors produces flight efficiencies approaching those of present-day, high-subsonic aircraft. Still further improvement is anticipated in this area.

This speed means, for example, that in times of stress, if B–70's were on alert over the polar regions, and it was decided to attack, they would be over Moscow before an ICBM launched from this country could reach Moscow.

Penetration studies show that the B–70 will have excellent penetration capabilities. This capability is derived primarily from the airplane's speed and altitude; and this capability would be further enhanced by countermeasures, decoys, and air-to-surface missiles—all used under the monitorship of a human brain.

The B–70 is designed to carry a variable internal payload. It can carry several large bombs or a great many very small ones.

One of the problems in space research and military space work is the boost required to propel payloads through the lower dense atmosphere into space. It may be possible to realize substantial savings by launching space vehicles from the B–70 using it as a recoverable, first-stage booster instead of launching from the ground.

Of growing importance is the possible need for a defense against satellites. In this regard, the maneuvering ability, speed, and large load-carrying capacity of the B–70 offers great potential as an antisatellite weapons carrier, and possibly as a long-range platform for air defense missiles.

Additionally, the B–70's design, with the crew far removed from the engines, may be, with certain types of nuclear reactors, adaptable for nuclear propulsion.

Mr. AIKEN. Mr. President, will the Senator yield?

Mr. GOLDWATER. I am speaking on limited time.

The PRESIDING OFFICER. The time of the Senator from Arizona has expired.

Mr. GOLDWATER. Mr. President, may I have 6 more minutes?

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senator from Arizona may have 10 additional minutes.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. GOLDWATER. I do not expect to use the 10 minutes, but now I yield to the Senator from Vermont.

Mr. AIKEN. Mr. President, is the Senator from Arizona at liberty to disclose the planned cruising altitude of the B–70?

Mr. GOLDWATER. The planned cruising altitude is 70,000 feet, but I believe it will be higher than that.

Mr. AIKEN. Would the utilization of the B–70 necessitate the remaking of airports or airfields?

Mr. GOLDWATER. No.

Mr. AIKEN. What length of strips would be required for takeoff or landing?

Mr. GOLDWATER. The lengths and thicknesses of present runways for B–52's would suffice for the B–70's. In the construction of new runways, it would be desirable to make them longer, but it is not necessary.

Mr. AIKEN. A 10,000-foot runway would accommodate a B–70, then?

Mr. GOLDWATER. Yes.

Mr. AIKEN. Of course, the weight would depend on whether the plane was loaded or not, and the required ballast of the runway would depend on the weight of the plane.

Mr. GOLDWATER. I may say to the Senator from Vermont that, in my opinion, any modern B–52 or B–47 runway would handle a B–70.

Mr. AIKEN. I thank the Senator.

Mr. GOLDWATER. Mr. President, the B–70 offers the potential for assuming the role of rapid strategic airlift or paving the way for mach 3 transport aircraft.

Just as the B–52/KC–135 developments paved the way for jet transportation, so the B–70 would initiate mach 3 transportation, freight, and passenger.

Under conditions of total weapons control a mach 3 transport utilizing the B–70 design features would provide the United States the flexibility of rapidly transitioning from transport aircraft to weapon system should such a need arise.

The recent disclosure by the CIA and the State Department and the President on a successful penetration of Russia's heartland by the U–2 should be added reason for quickly going ahead with full development of the B–70 program. The reason that the U–2 was able to operate, and is still able to operate with immunity in the skies over Russia, is that it can fly at an altitude higher than any of Russia's interceptors can reach and higher than the effective range of any of its ground-to-air missiles. Russia abandoned her supersonic program in aircraft, and for that reason she has not developed a fighter capable of effectively reaching the altitudes at which this reconnaissance plane flies. If a reconnaissance version of the B–70 could come off the lines in a short time from now, we would have started an arm of our Air Force that could revolutionize the entire field of reconnaissance. This craft flying at mach 3, at altitudes above 80,000 feet, could with immunity give surveillance to any part of the world and keep us constantly posted on the actions and progress of any potential enemy, wherever he might be.

A manned airplane is required as an essential and integral element of the strategic posture.

The B–70 is the weapon system which best fulfills the requirement for a manned follow-on aircraft to the B–52.

The B–70 offers the potential of additional required roles, including nuclear-powered airplanes, first-stage boosters to space launchings, and mach 3 transportation.

The B–70 offers a reconnaissance type aircraft that could fly above the effective range of any enemy aircraft or missile, and at speeds over three times of any known enemy interceptor.

Our Government could then go to the United Nations with a statement that it was clearly obvious that to help insure the peace of the world, a constant surveillance should be made of the entire globe and that this surveillance would

be, so to speak, "posted on the bulletin board" for every member of the United Nations to see. Daily, yes, even hourly, observations of all the world from these altitudes could result in information which could certainly prevent any massive surprise attack being launched by one nation against another. Now, the United Nations would probably turn this down so we would then go to NATO and make the same proposal that we, with our B–70's, would provide a flying watchdog for the world, and that gathered information would be the property of the world. It is reasonable to expect that NATO would reject this, so then, as a last resort, the United States could say to the world that we know if the world could be kept posted as to the activities of all nations on a real basis, the dangers of any overt attack could be virtually removed, and that, desiring peace as strongly as we do, we would provide this surveillance at our own expense.

If an enemy power is bent on conquering a nation, and proposes to turn all of its resources to that end, that power is at war with the nation; and the latter—unless it contemplates surrender—is at war with him.

"These are the times that try men's souls," said Thomas Paine when we were struggling through the war that brought us independence. If he were alive today, he could well repeat that, or say, "Now is the time that tries men's courage."

TWENTY-FIFTH ANNIVERSARY OF REA

Mr. McCARTHY. Mr. President, rural electrification has been one of the most important developments in the progress of America and of American agriculture. It has revolutionized the workload on the farm and it has immensely benefited the family farm. Beyond this, it has enabled farm families to enjoy cultural values and a standard of living previously not possible. Perhaps no group can express more appreciative thanks than the farm wives of America who have seen the values brought to their homes and their families by rural electrification.

This great change has been accomplished in the past 25 years, and largely through the processes set in motion by President Franklin Roosevelt. The Rural Electrification Administration began with his Executive order in May 1935. Since then the percentage of farms in the United States with electricity has increased from less than 11 percent to more than 96 percent. In Minnesota only 6.8 percent of the farms were electrified in 1935, as compared to 98.6 percent today.

On the 25th anniversary of the establishment of REA, it is appropriate to commend the foresight of President Roosevelt and of the congressional leaders who supported and expanded the program. At the same time, the success of the rural electrification program is also the achievement of rural citizens. Rural electrification has been accomplished, not by government ownership or operation, but essentially as a private venture. The role of Government has been to provide funds for loans, just as it did for industry under the Reconstruction Finance Corporation. Although several forms of private enterprise were eligible to borrow for rural electrical expansion, most of the initiative came from rural cooperatives formed for this purpose. Of the 1,085 firms which have borrowed through REA, 984 have been rural co-ops. Special recognition is due on this occasion to the thousands of farm leaders who had both the determination and the skill to create their own institutions.

Nearly 16 million rural people are now served by locally owned and managed rural electric systems. and more than half of the Nation's farms get their electricity through an REA borrower. Over 83 percent of the Minnesota farms are served by REA. Only North and South Dakota have a higher percentage of farmers belonging to REA. The unusual success of REA co-ops in Minnesota is a reflection of the long and successful experience of Minnesota farmers with cooperatives. Given a means to finance their own electrification system, Minnesota farmers went ahead with confidence and skill to serve all the farmers of the State. Over 80,000 miles of powerlines have been constructed under REA in Minnesota, giving the State the third highest REA mileage of any State in the Nation.

The record of REA borrowers is not only one of success in giving service to the entire community. It has also been one of fiscal success. Approximately $3.5 billion has been loaned by REA in the past 25 years, and over $1 billion has been repaid by borrowers in principal and interest. The REA loans in Minnesota have totaled about $156 million, of which $37 million has been repaid on the principal, and another $20 million in interest. Repayments on loans are far ahead of schedule.

Today, the great majority of Members of Congress and citizens nationally agree on the value of the REA. It is an example of how Government can be used to extend freedom and independence for people.

Rural electrification was inevitable in the United States. Once started, it was simply a question of how fast it would come, of what form it would take, and of how many farmers would benefit. The Nation made its choice in democratic fashion and along lines consistent with democratic principles.

HE WHO WOULD BE SECURE AT HOME MUST BE SUPREME AT SEA

Mr. BUTLER. Adm. Arleigh A. Burke, Chief of Naval Operations, has repeatedly and emphatically defined seapower in this way:

> Seapower is not just men-of-war. It includes freighters, tramp steamers, passenger liners, tankers, and the many other ships which make up the merchant marine.
>
> But seapower is even more than this. It is the sum total of weapons, ships, shipbuilding capacity, and geography which enable a nation to use the sea advantageously during peace and war.

The free world desperately needs the sea. The free world will not long remain free unless it controls the sea. The community of free nations, who together compose a mighty strength, draws power from the sea, and is tied together by the arteries of the sea. Obviously, seapower will play a major, if not a predominant, role in any future emergency which can now be visualized.

Yet, it is increasingly remarkable that the United States—the cornerstone of the free world—would permit elements of its seapower to be deficient from a qualitative or quantitative standpoint. But that is exactly what is happening in terms of our merchant marine.

My colleagues, I am sure, will be alarmed, as I have been, by a recent appraisal of our ocean shipping resources and capabilities to support the defense of the United States, which has been prepared by the Office of the Chief of Naval Operations. I therefore ask unanimous consent to have printed in the body of the RECORD at this point a letter, and attachments, dated March 11, 1960, received from Vice Adm. Ralph E. Wilson, Deputy Chief of Naval Operations—Logistics.

There being no objection, the letter and attachments were ordered to be printed in the RECORD, as follows:

DEPARTMENT OF THE NAVY,
OFFICE OF THE CHIEF
OF NAVAL OPERATIONS,
Washington, D.C., March 11, 1960.

Hon. JOHN MARSHALL BUTLER,
U.S. Senate,
Washington, D.C.

MY DEAR SENATOR BUTLER: In your letter of February 17, 1960, you expressed interest in receiving a current appraisal of our maritime needs along the lines of the document dated February 21, 1959, and entitled "Ocean Shipping to Support the Defense of the United States." This paper has been revised to the present date, and a copy is enclosed for your information.

There has been little change in the substance of this appraisal since its last revision in February 1959. The bulk of our sea transportation resources have undergone another year's depreciation, and little has been accomplished in the way of either modernization or renewal.

The subsidized segment of the U.S.-flag merchant fleet remains at a few over 300 ships. The number of subsidized voyages authorized in the past year was a few more than in the year previous. There are a number of applications for subsidy pending. Although most of the subsidized shipping companies have entered into long-range ship replacement contracts, funding shortages have prevented actual replacement construction from being adequate. The rate of progress in the replacement of subsidized shipping depends on the future of construction differential subsidies. Our domestic shipbuilding industry is also largely dependent on this subsidy. In addition, the construction of the two superliner passenger ships authorized by the 85th Congress has not started due to financing difficulties.

Unsubsidized operators currently have about 700 ships active under U.S. flag. About 70 percent of this tonnage is in ships of World War II design or older. These ships will come to roughly the end of their competitive economic lifespans over the next few years. There is no orderly or comprehensive plan for their replacement, and the present state of the shipping market provides little incentive to the nonsubsidized owners to initiate replacement programs.

Our coastwise and intercoastal fleets which prior to World War II comprised the largest segment of the merchant marine, have declined nearly to extinction. The disappearance of this deepwater domestic fleet would be a more significant loss to our defense shipping capability than the small amount of tonnage involved would indicate. In their operations, these ships are never far from major U.S. ports and, as a group, are the most readily available for emergency usage of all ships under U.S. control.

The National Defense Reserve Fleet has undergone a decrease in numbers due to the scrapping of about 200 Liberty type vessels. Five hundred such vessels have been approved for scrapping. Some ships have been traded into the Reserve Fleet as partial payment on new construction to be financed through the Maritime Administration. In general, it may be said that the National Defense Reserve Fleet is gradually deteriorating, both in size and in qualitative usefulness.

Over the past few years, the American-owned merchant fleet registered under "flags of convenience" has come to be more and more important to defense logistic planning. Modern war concepts put a high premium on the active and operating ship, over the ship in reserve. The American-owned foreign flag merchant vessels under effective U.S. control constitute an active operating fleet of roughly 500 ships. About half the tonnage of this fleet was built in the last 5 years, and consists in great part of very large tankers. Half of the tanker capacity available to the United States is under flags of convenience. Thus from the standpoint of national defense we would be well justified in referring to these ships as the flag of necessity fleet.

The operation of these ships by American owners under flags of convenience has for some time been the target, along with our subsidy policies, of strong opposition by European governments and shipping owners who resent effective American competition in the carriage of ocean trade. More recently, opposition by maritime labor groups has increased to the point that operation under the usual flags of convenience (Liberia, Panama, and Honduras) is becoming increasingly untenable for some ship operators, principally those who deal mainly in presenting ships for charter (as contrasted to ships operated as proprietary carriers for oil or metal companies). These shipowners are attempting to escape this pressure by moving their ships to registry under the traditional maritime flags of Europe. Under present policies and conditions, such transfer results in the loss of effective control of these ships for emergency purposes.

The American owners of flag-of-convenience ships contend that they cannot pay American wage scales and operate in competition with European shipping without governmental subsidy.

American maritime labor contends that if the United States considers a strong merchant marine necessary to our position as a maritime power, then the Nation should be willing to pay the wage scales obtainable by American unions.

To bring the American-owned flag-of-convenience fleet of about 500 ships under U.S. flag with operating subsidies would entail large and continuing expenditures.

It would not be appropriate for either the Navy or the Department of Defense to become involved in a dispute between maritime labor and management. Our interest in the matter relates to the impact of this problem in our defense posture. It is imperative that U.S. control of this shipping be retained.

Your position and your interest in our maritime industry make it particularly important that you be fully informed on the above matters. I am, of course, at your service for any additional information that you may desire.

Sincerely yours,

RALPH E. WILSON,
Vice Admiral, U.S. Navy, Deputy Chief of Naval Operations (Logistics).

OCEAN SHIPPING TO SUPPORT THE DEFENSE OF THE UNITED STATES

INTRODUCTION

The United States must be prepared today—and throughout the foreseeable future—to deal immediately and effectively with any emergency that may be forced upon us. We must be ready at all times to fight a limited war, or a general war, or to support our foreign policies under tense conditions short of actual conflict.

The prosecution of war utilizes all the resources of our Nation. Our entire industrial potential is intermeshed into our overall national defense posture. To project our military power overseas and support sustained combat operations, our Armed Forces must rely heavily upon American industry—and our maritime industry, as in the past, must play a key role.

The prosecution of war utilizes all the reportation in wartime dictates that the United States must have effective control over sufficient active merchant type, shipping to promptly meet our initial emergency requirements—for the redevelopment of military forces and the rapid transportation of noncombatant evacuees from danger areas.

Several years ago we possessed a marginal, but gradually deteriorating capability to carry out the transportation task outlined above. More recently the Department of Defense has observed with concern the continued slow rate of progress made in the replacement of aging vessels. Greater emphasis must be placed on the need for orderly shipbuilding programs.

We cannot rely on NATO pooling to solve our merchant shipping problems, as it appears most probable that the combined requirements of all NATO nations will exceed the total capabilities of the pool. Moreover, considerable delay in the implementation of NATO pooling procedures is anticipated. Our global interests require that the United States be prepared for emergencies other than a NATO war.

BACKGROUND

At the outbreak of World War I, shipping available for charter to American interests suddenly became extremely scarce. Charter rates skyrocketed. We were forced to hastily improvise a shipbuilding program which was both costly and inefficient. Peak production was reached after the war ended. We learned in World War I that the law of supply and demand is real. We were subjected to the same lesson again in World War II.

The primary mission of the American merchant marine is the normal task of transporting our domestic waterborne commerce and a substantial portion of our foreign export and import ocean trade. The health of our industrial economy is dependent on sea transportation for the import and export of numerous raw materials and finished products. No other type of transportation can meet this requirement. It is imperative that the world's foremost trader control sufficient merchant shipping to transport what we need when we need it.

A collateral and extremely important mission of the American merchant marine is the maintenance of a posture of strength and readiness that will contribute the maximum to our national security. In the event of war we will require the services of a large number of merchant-type ships to meet our military, industrial, and civilian demands.

It is important that our anticipated wartime needs be insured to the maximum practicable degree in peacetime by the ready availability of privately owned merchant ships employed in gainful ocean commerce. The magnitude and quality of active commercial tonnage under U.S. control in peacetime will determine, in the event of a future war, whether or not we will be required to initiate a crash building program.

REQUIREMENTS AND AVAILABILITIES

Periodic evaluations of merchant shipping requirements and availabilities are made jointly by the Department of Defense, the Department of Commerce, and the Office of Civil and Defense Mobilization. A similar joint appraisal is made annually by the Maritime Administration and the Navy Department.

The determinations of merchant shipping requirements are based on approved mobilization plans for general war. Civilian and military requirements are combined to represent our total minimum shipping needs for the early phases of a general war.

Our joint evaluations of shipping availabilities consistently show that the United States does not have sufficient active U.S.-owned and controlled shipping to meet our initial wartime needs. Consequently, our estimated total capabilities must include planned early activations from the national defense reserve fleet—under optimum assumed conditions which make no allowances for possible damage to shore facilities. Some allowance is made for cumulative losses of shipping from enemy action.

The latest joint review of merchant shipping requirements and availabilities made by the Maritime Administration and the Navy Department indicates that during the initial phases of a general war:

(a) There would be a numerical deficit in excess of 200 dry-cargo ships equivalent to the C–2 class, approximately 30 refrigerated cargo ships equivalent to the Rs–S–BV1 class, and 4 heavy lift ships (150 tons booms) equivalent to the converted C–4 class.

(b) There would be small deficits in tanker availabilities.

(c) The small initial numerical deficits in passenger transport capacity are considered manageable. It is strongly emphasized, however, that there are serious qualitative deficiencies, particularly as to speed, in the available transports.

Our sea transportation resources for limited war are presently considered to be quantitatively adequate. However, the degree of promptness with which sealift responds in an emergency will have an important impact on the eventual outcome. A limited war crisis could well become a race against time to evacuate nationals, to redeploy troops and equipment, or to augment and resupply existing forces overseas. To be prepared for such situations, we must rely on the ready availability of active modern merchant ships of all types.

PRESENT CAPABILITIES

Existing inventories of sealift resources under U.S. control, as of January 1, 1960, are summarized below:

(a) Dry cargo ships

	Number	Deadweight tonnage
Operational	915	10,563,200
Reserve fleet	[1] 1,493	15,274,600

Total	757	15,998,300

(c) *Passenger ships/transports*

	Number	Passengers (emergency capacity)
Operational, active, total	58	102,001
Reserve fleet	101	236,423
Total	159	338,424

[1] Includes about a thousand Liberty ships of little or no wartime value, recommended for scrapping.

The active U.S.-controlled sealift capability is comprised of merchant ships under U.S. flag, certain foreign registered merchant ships under effective U.S. control, and merchant-type ships operated by the Military Sea Transportation Service (MSTS).

The term "effective U.S. control," applies to selected American-owned ships which have been registered by their owners under the so-called flags of convenience (Panama, Liberia, and Honduras), in order to reduce operating costs. In such cases, the Maritime Administration has effected agreements with the present shipping companies in the United States to make these ships available to the U.S. Government in the event of a national emergency. These agreements can be fulfilled without restraint, because the laws of Panama, Liberia, and Honduras do not impose restrictions on the control of merchant ships that fly their flags. These countries have little or no shipping requirements of their own. In view of these circumstances, the Department of Defense and the Maritime Administration consider such ships to be under effective U.S. control.

The vast proportion of our U.S.-flag merchant tonnage was constructed during the years 1942 to 1945. These ships were mass produced for specific wartime purposes. Many of their design features were matters of expediency rather than choice. Ships built during World War II are now 15 to 18 years old and have long been outmoded from the standpoint of modern design.

The capabilities shown as comprising the national defense reserve fleet may be misleading. It should be pointed out that about 1,000 of the dry cargo ships are slow-speed Liberty types of extremely limited usefulness. Over 200 Libertys have already been scrapped under previous approvals to select and scrap 500 of the poorest quality ships. Their marginal value did not warrant the cost of further preservation efforts. Of the 102 transport-passenger ships, 51 are 17-knot C–4 austerity transports and 23 are 15.5-knot Victory troopships.

We can look forward to further depreciation of the overall potential of the reserve fleet—from the standpoints of both quantity and quality. Consequently, there is an obvious need that the reserve fleet be purified on a cyclic basis by the trade-in of aging ships under orderly replacement programs. This requirement goes hand in hand with the need to modernize our active merchant fleet.

DRY CARGO SHIPS

The only fully modern dry cargo ships in commercial operation today under U.S. flag are the Mariner class ships, that were built by the U.S. Government, plus a few modern container ship conversions. The 20-knot C–4 Mariners, which can do 23 knots if required, represent an impressive step forward in cargo ship design. Their performance has been highly praised by several private operators, to whom 29 of the ships were sold. Three of these ships have been converted into passenger ships.

With regard to future construction of dry cargo ships, the Department of Defense recommends that the design characteristics listed below be incorporated to the maximum degree that is commercially practicable.

(a) Speed: When built under construction-differential subsidy contracts and certified as being suitable for economical and speedy conversion into naval auxiliaries, dry cargo ships should have a sustained sea speed of 20 knots or better. Dry cargo ships certified as otherwise suitable for the use of the U.S. Government in time of war or national emergency, should have the maximum sustained sea speed possible consistent with the commercial utilization of the ship. Where construction subsidies and/or national defense allowances are not involved, the owners are encouraged to build into the ships, the highest commercially economical speeds.

(b) Other characteristics: The most practical and useful types of general-cargo vessels, from a military point of view, appear to be those having the capacity and characteristics of the C–3's and C–4's (particularly Mariners), of Maritime Administration design. However, much is to be desired in the matter of modernization with respect to cargo handling equipment and methods. Cargo vessels should be designed and equipped to load and discharge, using their own gear, in one-half the time now required by the existing C–3's and C–4's.

At least one hatch of each vessel should be served by a "jumbo" boom of 60 tons capacity and all hatches should be equipped with 10-ton booms. There is a definite need for a limited number of heavy lift ships equipped with oversized hatches and cargo booms capable of lifting up to 150 tons.

(c) Special type cargo ships: Roll-on/roll-off ships on the order of the USNS *Comet* as well as ships with partial roll-on/roll-off capability offer advantages in meeting requirements for the overseas movement of mobile military equipment such as wheeled and tracked vehicles. Additionally, we encourage the continued development of container cargo ships, which are designed to carry containerized and prepalletized cargoes. Further construction of such ships in peacetime would increase active capabilities and afford operating experience. U.S. shipyards would also gain construction experience which would enable them to commence early production under an emergency situation.

TANKERS

American shipowners have built a good number of modern tankers in the past few years—some constructed in the United States for registry under U.S. flag but most built abroad for registry under foreign flag. These new ships range in speed from 16 to 18 knots. Consequently, the overall quality of our total tanker capability is much better than the dry cargo category. This improvement has been due to various incentives directly related to the law of supply and demand.

The tanker building program should continue in order to provide orderly replacement of aging ships. It is recommended that future tanker construction incorporate design features as indicated below:

(a) Speed: Where national defense allowances are made, and the ships are certified as suitable for speedy and economical conversion into naval auxiliaries, tankers should be capable of a sustained speed of 20 knots or more. Where no certification by the Secretary of the Navy is sought, then the maximum commercially economical speed is acceptable.

(b) Other characteristics: Although tankers of large deadweight tons capacity can be utilized to a limited extent, the recommended general characteristics of commercial tankers most suitable for military purposes are 25,000/38,000 deadweight tons, capable of carrying several types of petroleum products. At the same time, there is still a requirement for small tankers of about 17,000 deadweight tons to handle products to and from limited facilities.

PASSENGER SHIPS/TRANSPORTS

Seven new passenger ships have been built since World War II and three have been converted from Mariner class cargo ships. The seven new ships are the 25-knot *Constitution* and *Independence*, the 33-knot *United States*, the 20-knot *Santa Paula* and *Santa Rosa*, and the 21-knot *Brasil* and *Argentina*. The Mariner conversions are the 20-knot *Mariposa*, *Monterey*, and *Atlantic*. These ships have contributed significantly to our maritime prestige and to our defense readiness.

Additionally, the 19-knot *President Cleveland* and *President Wilson* were converted from troopships. These ships, however, are basically World War II types. They form a part of the older and major segment of our total trooplift capability, which is not fully suitable for possible future emergencies. The majority of our ships are old, deficient in speed, and lacking in other features that are important in minimizing the hazards of moving troops by sea.

There is an urgent need to improve the quality of our trooplift potential. For ships that will be employed in wartime to transport personnel through areas in which hostile modern submarines may be operating, it is necessary to set much higher standards of performance and safety than would be required for ships carrying dry cargo and fuel.

(a) Speed: Speed is the best defense that merchant ships can employ against an enemy. The faster the target, the more difficult it is to hit with submarine torpedoes—or to pinpoint with missiles. Fast ships can be operated independently over more devious routes than is possible in convoy operations. This complicates the search and attack problems of enemy aircraft and submarines. Recent studies confirm that vulnerability to submarine attack is significantly and progressively reduced as speeds of 25 knots and greater are attained.

Troopships constructed in the future, and passenger ships suitable for conversion into troopships, should be capable of a sustained speed of 25 knots or greater. In no case should their maximum sustained speed be less than 20 knots.

The Department of Defense has consistently urged that all new merchant-type shipbuilding incorporate the maximum speed that is economically practicable. In this regard, it is important that our merchant ships be commercially successful. To be of immediate use to the Department of Defense in an emergency, they must be operating commercially at the time they are first needed.

(b) Other features: Emphasis on added speed should not obscure the significance of other national defense features which can be built into a merchant ship. High standards of compartmentation reduce vulnerability to enemy hazards by localizing damage. Various preventive measures increase a ship's resistance to the spread of fire. Special mountings minimize breakdowns of essential machinery under shock.

Endurance adequate for round-trip voyages at maximum sustained speed is a vital factor in wartime. Additional fuel capacity, the size of distilling plants, the storage space for provisions, and many other design aspects have an important bearing on endurance. Many of the foregoing factors, aside from improving the wartime utility of a ship, also assure safer, more versatile, and reliable performance in peacetime commercial operations.

FUTURE OUTLOOK

The subsidized segment of the U.S.-flag merchant fleet amounts to 310 berth line ships. They operate over essential trade routes under mandatory voyage scheduling procedures dictated by the Maritime Administration. Several unsubsidized shipping companies have applied for governmental subsidy. Their applications are still pending.

The rate of replacement of subsidized ships is much slower than that considered necessary to avoid future obsolescence "in block."

Most of the subsidized shipping companies have entered into long-range contracts with the Maritime Administration for the orderly replacement of their aging ships. However, curtailment of construction funds have prevented actual building from being started on schedule for most of the ships.

The 85th Congress authorized but did not appropriate funds for the construction of two large high-speed passenger ships—one of 33 knots and one of 30 knots speed. Financing difficulties have so far prevented their construction from being started. Construction of these two ships would significantly improve our trooplift potential. They would almost double our capability in the important speed range of 25 knots and above.

The rate of progress of the building programs will depend on actions taken in the future with respect to construction-differential subsidies. It is hoped that it will be practicable for future governmental subsidy funding to keep pace with the contractual schedules for replacement.

Our unsubsidized shipping companies operate approximately 700 ships under U.S. flag. Further, they own and operate about 500 additional ships under flags of convenience which are subject to effective U.S. control. While they have built considerable tonnage in recent years, few unsubsidized operators, if any, have either a comprehensive or a long-range plan for the replacement of aging ships on an orderly time schedule. Their planning is influenced from day to day by various incentives or discouragements. Their enthusiasm for shipbuilding has been dampened recently by renewed attacks against flags of convenience.

Over the past several months, increasing pressure has been exerted against flags of convenience by foreign shipping interests, maritime labor organizations and Western European governments. Combined opposition from these sources threatens to make it economically impracticable for American owners to operate their ships under flags of convenience. This raises the immediate question as to what steps should be taken to insure the continued availability of these ships for purposes of national defense. It is important to note that well over half of the U.S.-controlled tanker tonnage is registered under the flags of Liberia and Panama.

Prior to the outbreak of World War II, the part of our shipping that was engaged in the coastal and intercoastal trade was the largest segment of the U.S. merchant marine. At that time nearly 700 ships took part in the carriage of our deepwater domestic trade. Shortly after our entry into the war, practically the entire coastal and intercoastal merchant fleet, which at that time represented about 60 percent of our total ocean-carrying capability, was put into service, usually transocean, directly supporting the war.

With the domestic deepwater fleet engaged, worldwide, in supplying the Allied Armed Forces, the domestic trade which they formerly carried was absorbed by other modes of transportation. The domestic deepwater carriers have never regained this trade.

Ships engaged in coastal and intercoastal trade occupy a particularly significant position relative to the emergency use of transportation. Ships in the coastwise trades are the most readily available for emergency usage of any ships in the U.S. merchant fleet. In their normal operations they are always close to U.S. ports, ready immediately to handle such high-priority movements as may be necessary. Of course, to be available for immediate use, these ships must be active and operating commercially at the time they are first needed.

At the onset of a major, nuclear war, the domestic deepwater fleet would be uniquely fitted to act as a link between our coastal cities during the period of likely disruption of systems of land transportation. A large percentage of the ships in domestic trade would be at sea at any given time and would therefore be most likely to escape damage. Their ability to provide communications and transportation between coastal cities during the period just after an attack could be highly important. Systems of land transportation in the United States are especially vulnerable at many focal points. The ability of the domestic deepwater fleet to provide essential coastal and intercoastal movements of priority material might well be crucial. A number of the ships of this fleet are especially adapted for rapid cargo handling, giving them an increased value at such a critical time.

EMERGENCY EXPANSION

One basic factor to be considered in the development of specific construction programs is the necessity for the maintenance of a sufficient number of private shipyards in operation to form the base for expansion in time of war to meet mass-ship construction programs. The Department of Defense desires to emphasize that the existence of these active privately owned shipyards, together with the skills of the shipyard workers and the capabilities of the tools, equipment, and facilities, is essential to the national defense.

SUMMARY

Under the most optimistic assumptions, and on a quantitative basis only, the United States still possesses a marginal capability to carry out the sea transportation tasks of a general war.

There are serious qualitative deficiencies in our overall sealift capability, particularly in the dry cargo ship and the transport-passenger ship categories. The further aging of outmoded ships will aggravate this situation.

The present rate of new shipbuilding will not offset the rapidly approaching block obsolescence of the vast proportion of U.S.-controlled merchant-type tonnage—both active and reserve. There is an urgent need for increased emphasis on orderly ship construction.

The continued depreciation of ships in the national defense reserve fleet without cyclic purification will soon generate serious quantitative deficiencies in our total sealift capability.

Crash building programs in wartime can only be avoided by maintaining a modern and adequate maritime posture in peacetime.

CONCLUSION

In order for the United States to maintain adequate merchant shipping to meet our initial wartime needs, it is important that the ships of both subsidized and nonsubsidized operators be periodically replaced under orderly and progressive programs. In so doing, every advantage should be taken of recent and future technological developments. Cargo handling equipment and propulsion plants should be further improved—with a view to reducing the transit and turnaround times of commercial shipping.

Our shipbuilding programs should be farsighted in order that ships contracted for in coming years will be actually competitive throughout their economic lifespan. Further, ships built with foresight will be more readily adaptable to speedy and economical conversion into naval auxiliaries, or otherwise suitable for naval use in the event of war.

U.S. SENATE,
February 17, 1960.

Vice Adm. RALPH E. WILSON,
Deputy Chief of Naval Operations, Department of the Navy, Washington, D.C.

DEAR ADMIRAL WILSON: On February 21, 1959, you provided me with an excellent document entitled "Ocean Shipping To Support the Defense of the United States," reflecting the views of the Department of Defense with respect to the American merchant marine.

I wonder whether or not the Department has made a current appraisal of our maritime needs along similar lines and will appreciate any comments you might be able to share with me.

With all good wishes and kind regards, I am,

Sincerely yours,

JOHN MARSHALL BUTLER,
U.S. Senator.

AFTERMATH OF PARIS MEETING

Mr. WILEY. Mr. President, the so-called summit—which was not really a conference at all—is now ended.

Prior to the meeting, there had been no great hopes for panacea-type solutions of East-West differences. Perhaps the maximum accomplishments could have been a reaffirmation among the four great powers of a continuation of a willingness to meet, discuss, and attempt to resolve—on a reasonable, rational basis—the East-West difficulties as well as perhaps establishing a pattern for successive meetings with the same objectives.

At the minimum, the world and the involved nations had a right to expect of their representatives at the Paris meeting reasonable standards of conduct and common courtesy.

The leaders of the Western Powers, I believe, acquitted themselves most commendably, in view of the circumstances.

Particularly President Eisenhower, I believe, recognizing the conditions that existed, conducted himself in accordance with the high esteem, good sense, adherence to principle which we have come to expect from the lifetime of service to our country of our great President.

Particularly, his composure, reasoned, patient and constructive conduct, in the face of irresponsible, flagrant, unmannerly insults by the representative of the Soviet Union merit commendation. In effect, the splendid way in which the President handled the situation resulted in Khrushchev's propaganda blast boomeranging upon himself and communism.

After the anticlimatic end of the session of the conference, which never really started, the world is now asking itself, "Where do we go from here?"

Realistically, world hopes have been jarred somewhat. Even though no overall solution was expected from the conference, there was some feeling that a continuation of the willingness of East and West to speak rationally to each other would be a contribution to lessening of tensions.

At this time, people are also asking, "Does this mean war?" Frankly, I do not think so. Generally, I believe it does represent, however, a toughening of the Communist line in dealing with Western Powers.

At the Paris meeting, sabotaged by Mr. Khrushchev, however, we witnessed a renewal of the hard Communist brinkmanship that, since 1946, has imperiled peace on the globe.

In the light of these factors, it becomes increasingly important that we stay alert, on guard, and adequate—econom-

ically, militarily, and spiritually. Despite the scope of the challenge, however, I am not a painter of doom and gloom. It is true, we face serious problems in the world. But what civilization has not? And think for a moment of the so wonderful tools we have to fight the battle with—

The greatest economy in world history;

A mighty arsenal of jet planes, nuclear bombs, and an ever-growing arsenal of missiles capable of carrying nuclear warheads;

A dedicated, devoted, ingenious people—selflessly dedicated to preserve freedom;

A mightly chain of free world nations supplemented by millions of people, vast resources, and thousands of additional military weapons to augment our own arsenal of peace;

And above all, we have freedom—for which all men yearn—the allies, in the uncommitted countries and, yes, even those under Communist tyranny.

Never before in history has a nation been so well equipped, blessed by a great people, and such a rich reservoir of resources, to carry out a role of world leadership, as well as support to carry forward programs in the interest of its own citizens.

We must, of course, be realists. The Communists are strong, tough, and dedicated—fanatically so—to their cause. Consequently, the battle will not be easy.

In the face of such a rugged enemy, obviously still intent upon world conquest, we will need to first, further shore up our defenses, as needed; second, assure maintenance of a strong alliance with the other free nations; and third, encourage bipartisan support of the programs and policies essential to provide for national security.

In effect, the free world now finds itself in the position that it was in long before the planned conference—that is, faced with the task of continuing to deal as effectively as possible with a powerful Communist bloc, dedicated to objectives of world conquest.

IN THE BEGINNING GOD

Mr. BYRD of West Virginia. Mr. President, in 1798 Napoleon set out on his expedition to Egypt. Much to the disgust of his soldiers and officers, he took with him a considerable company of scientists and philosophers. On a warm summer night these men were gathered together on the deck of the flagship. The heavens were brilliant, and these scientists were discussing whether or not the planets were inhabited. Some thought they were, and others that they were not. Then they began to discuss the origin of the universe, most of them taking the position that natural law and phenomena were sufficient to account for the origin of the world without a divine creator. Then Napoleon, who had been standing near them and silently listening to their conversation, introduced himself into the debate and, pointing with his hand to the brilliant host of the stars in the heavens, said, "Gentlemen, who made these?" A simple question, and one which went to the very heart of the matter.

Who made the world? The world is a great effect, and common sense tells us it must have a sufficiently great cause. The world is not only a great effect but it is also an intelligent effect, and it must have had a sufficiently intelligent cause. Back of all nebular hypotheses, primordial germs, and stardust, there lies some great secret; and the only key to it is the opening word of the Bible: "In the beginning God."

All things bright and beautiful,
All creatures great and small,
All things wise and wonderful,
Lord, God made them all.

Each little flower that opens,
Each little bird that sings,
He made their glowing colors,
He made their tiny wings.

The rich man in his castle,
The poor man at his gate,
God made them, high or lowly,
And ordered their estate.

The purple-headed mountain,
The river running by;
The morning and the sunset
That lighteth up the sky.

The cold wind in the winter,
The pleasant summer sun,
The ripe fruits in the garden,
He made them every one.

The tall trees in the greenwood,
The meadows where we play,
The rushes by the water,
We gather every day.

He gave us eyes to see them,
And lips that we might tell
How great is God Almighty,
Who hath made all things well.

LIBERTY IN LAW

Mr. ALLOTT. Mr. President, I ask unanimous consent that a wonderful article, written by our Chaplain, Dr. Frederick Brown Harris, entitled "Liberty in Law," which was published in last Sunday's Washington Star, be printed in the RECORD at this point in my remarks.

It is one of the most challenging statements that I have ever read. I am certain we can all be proud that we have a chaplain of the quality and leadership which this article portrays.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LIBERTY IN LAW

(By Dr. Frederick Brown Harris, Chaplain of the U.S. Senate)

In the midst of his great ministry, one of the most outstanding preachers of the 20th century made a significant discovery and confession. The Nation was then passing through what was being called by responsible citizens "an orgy of lawlessness." This nationally known preacher who was listened to eagerly by great crowds, in examining his own message, said: "I could not recall ever having preached a sermon on obedience; I could not recall ever having heard a sermon on obedience. I have searched volume after volume of modern addresses and sermons and I have not run upon any that dealt with respect for and obedience to authority. There were plenty on freedom, on the emancipation of the individual, on the outgrowing of old restraints, but few, if any, upon the necessity and glory of being mastered by what rightfully masters us."

Immediately after having been made conscious of that gap in the message to his generation, this prophet of God stood in the pulpit, which was his throne, and preached a sermon on "Obedience."

Certainly now, years later, the pulpits of the land need to thunder the same message. One does not have to be an alarmist or a pessimist to declare that one of the ominous symptoms, as we enter this decade of destiny, is that authority has broken down in the State, in the family, in the individual.

In the movies and television, upon which the eyes of millions are glued for hours every day, obedience to law is taken lightly. The representatives of the law are habitually at a disadvantage on the silver screen. The judge, the detective, the policeman, usually comes off badly in the plot, and the mere husband is often in ill repute with the audience. Those who are thus entertained are regaled with the story of attractive murderers, high-minded robbers, and noble crooks. Even in cases of heinousness involving law we witness often a veritable debauch of public sentimentality expressing itself in specious explanations of why a criminal does what he does. It is all a silly exaltation of crime.

In May, by Presidential decree, the Nation observes Law Day. In such an emphasis there is lifted before the gaze of all our people the fundamental conception on which all else in a democracy rests. Law Day floodlights the vital truth engraved on the facade of the noble edifice of the U.S. Supreme Court—equal justice under law—and of that sentence inscribed over the portal of the courthouse in Worcester, Mass.—"Obedience to Law Is Liberty."

Democracy is the faith that laws should be made and enforced, not by an all-powerful monarch or by a dictator whose rule is tyranny, but by the whole body of "We, the people," and that laws thus made should be gladly obeyed by all the people.

Any willful violation of law thus enacted is a blow at liberty itself. In just laws there is registered the conscience of God-fearing people.

Much is being said and written these perilous days about freedom and emancipation from compulsion. More, much more, needs to be said about discipline and law. The demand "don't fence me in" must be interpreted, if life is to be worth while and reach its highest possibilities, in the light of the larger truth mirrored in a great hymn—"Make Me a Captive, Lord, and Then I Shall Be Free." Says a U.S. Senator, as with deep anxiety he sees what so many of his contemporaries are doing with their boasted "liberty": "Unless discipline and obedience can be brought back to America we are on our way to the junk heap."

There is no way by which the democratic experiment can be saved if mad insistence on individual freedom to do as one pleases crowds out sober recognition of social obligations.

Often we hear of a "back to God movement." It is true that we need to get back to a conception of a God who is not, as some moderns have pictured Him, very amiable, even maternal, but to a God who stands for moral order—God who is all love, but also all law.

Too often we have confined our ideas of the Christ who revealed such a God as the "gentle Jesus." We think of the Man of Galilee only in terms of pity and compassion and kindness. But in these qualities we do not really touch the fundamental thing in His character. It was the thing that sent Him to the cross—"Thy will be done, as in heaven so on earth"—"Not my will, but Thine be done"—"Whosoever shall do the will of God, the same is my brother, my sister, my mother." To follow that Christ means to heed the injunction—"Confirm thy soul in self-control, thy liberty in law."

TRIBUTE TO JAMES W. MURPHY

Mr. HUMPHREY. Mr. President, I desire to pay tribute to the late James W. Murphy, the senior Official Reporter of Debates, who at the time of his death was in his 64th year of service to the U.S. Senate.

The Bible reminds us that a man diligent in his business "shall stand before kings." Certainly James Murphy excelled in the virtue of diligence.

He began reporting back in 1896; served 32 Congresses, and at the time of his death was still devoting meticulous attention and long, long hours to the complex and arduous task of recording this body's debates.

The CONGRESSIONAL RECORD, we must remember, demands the utmost in accuracy so that it will be a fully reliable historical record. The calm of our friend, James Murphy, in the fire of vigorous, emotional debate assured this accuracy.

But James Murphy's service was not just to the archives of U.S. history, it was to each of us in this body, who prized his friendship.

How can any of us really measure the value of James Murphy's careful editing which on more than one occasion saved us from a dangling participle, split infinitive, or misplaced literary allusion?

Our friend, James Murphy, and the capable staff with whom he worked, were always cooperative and generous with their skills and time. He was always ready with a kind word and a smile for each member of this body.

In honoring our late associate and friend, James W. Murphy, for his diligence, competence, and devotion to duty, we are actually honoring the entire Murphy clan for their tradition of service to the U.S. Senate. In 1848, his uncle, Dennis F. Murphy, was the first Murphy to come from Philadelphia to the Senate, by appointment of Senator John C. Calhoun. For 112 years the Murphys gave uninterrupted service as Senate reporters as a second uncle, James J., our dear friend James W.'s father, Edward V., Sr., and his brother, Edward V., Jr., and finally our late friend James W. himself, carried on the Murphy family tradition.

COMMUNITY ANTENNA SYSTEMS

Mr. MANSFIELD. Mr. President, is morning business concluded?

The PRESIDING OFFICER. Is there further morning business? If not, morning business is closed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the unfinished business be laid before the Senate for consideration.

The PRESIDING OFFICER. It is the understanding of the Chair that the unfinished business comes before the Senate automatically at the conclusion of morning business. The time limitation is in effect.

The Senate resumed the consideration of the bill (S. 2653) to amend the Communications Act of 1934 to establish jurisdiction in the Federal Communications Commission over community antenna systems.

Mr. McCARTHY. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Senate is under controlled time. Does the Senator ask unanimous consent that the time consumed in the quorum call not be charged to either side?

Mr. McCARTHY. Mr. President, I ask unanimous consent that the time necessary for the call of the roll not be charged to either side.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Minnesota? The Chair hears none, and it is so ordered. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. BYRD of West Virginia in the chair). Without objection, it is so ordered.

Mr. CHURCH. Mr. President, I offer the amendment which I send to the desk and ask to have stated.

The PRESIDING OFFICER. The amendment will be stated for the information of the Senate.

The LEGISLATIVE CLERK. On page 7, line 11, it is proposed to strike out "in order" and insert in lieu thereof "as may be required in the public interest".

Mr. CHURCH. Mr. President, in the course of the debate yesterday on the bill I had occasion to express my own misgivings concerning paragraph (g), and several other Senators also questioned the scope and application of this particular provision.

The distinguished Senator from Rhode Island [Mr. PASTORE] at the time made clear, in response to the inquiries put to him, the language was not intended to operate to preclude community antenna television systems from broadcasting programs which partake of the nature of a newscast or a sportscast which is of interest only if it is broadcast at the time the event occurs. Nevertheless, despite the reassurances which have been given us by the distinguished Senator from Rhode Island, it seems to me that the language in the bill is not sufficiently precise; and so the purpose of the amendment, which was originally drafted by the distinguished Senator from Arkansas [Mr. FULBRIGHT], who I understand is absent and will not be able to offer the amendment, is to make it perfectly clear that the Commission, in carrying out the provisions of the act, shall prescribe appropriate rules and regulations—and then my amendment would strike out the words "in order" and insert in lieu thereof the words "as may be required in the public interest"—to avoid duplication of programs.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. CHURCH. I am glad to yield.

Mr. PASTORE. Senators will recall that yesterday I mentioned the conference held with the Senator from Arkansas [Mr. FULBRIGHT] which was attended by me, by the chairman of the full committee, by members of the staff, by representatives of the CATV association and their attorneys and legislative counsel. We went over several amendments. As a matter of fact, we agreed at that time that they would propose four amendments requested by CATV representatives.

The Senator has had stated two of the four amendments to which I referred. This particular amendment I say is superfluous, and I say that as kindly as I can. I believe the language of the section as written is absolutely clear. But, as I said at the meeting to which I referred, and as I shall repeat now on the floor of the Senate, if the section needs clarification in the minds of some, I am willing to accept the amendment on the basis of the explanation, for the advancement of the proposal of the particular amendment.

Amendment No. 5, which is the amendment before the Senate, would modify section 330(g) on page 7, line 11, by inserting after the words "regulations" the following: "as may be required in the public interest," and delete the words "in order." Section 330(g) is the so-called duplicating section. As presently written it requires the FCC to prescribe appropriate rules and regulations to avoid the duplication of programs broadcast or scheduled to be broadcast by a TV station which is assigned to a community in which the licensed community antenna serves subscribers. This is a very important section of the bill.

It is my understanding that all Commission rules are required to be made consistent with the public interest. It was my belief that the language as presently contained in section (g) authorized the FCC to adopt appropriate rules and regulations and had included therein the requirement that such appropriate rules would be reasonable and in the public interest. However, to eliminate any misunderstanding that might be in the mind of any Senator, I am willing to accept the amendment. I suggest it is only a clarifying amendment and therefore the explanation contained in the report remains intact, because it should remain intact.

Mr. CHURCH. I thank the distinguished Senator from Rhode Island.

Mr. PASTORE. I am perfectly willing to yield back the remainder of my time if the Senator from Idaho is willing to do likewise.

Mr. CHURCH. I wish to make only one further remark. I believe the adoption of the amendment would make perfectly clear as a matter of law that certain types of duplication which the Commission finds to be in the public interest would not be subject to the application of this provision in the bill. I therefore hope that the Senate will concur in the amendment.

Mr. PASTORE. I also urge the Senate to adopt the amendment.

Mr. CHURCH. Mr. President, I yield back the remainder of my time.

Mr. PASTORE. I yield back the remainder of my time.

The PRESIDING OFFICER. The question is on the amendment offered by the Senator from Idaho [Mr. CHURCH].

The amendment was agreed to.

Mr. CHURCH. Mr. President, I offer the amendment which I send to the desk and ask to have stated.

The PRESIDING OFFICER. The amendment offered by the Senator from Idaho will be stated.

The LEGISLATIVE CLERK. On page 3, line 19, before the period, it is proposed to insert a colon and the following:

Provided, That the Commission may by rule waive the application of any section or subsection where it shall find that the public interest, convenience, and necessity will be served thereby.

The PRESIDING OFFICER. The Senator from Idaho is recognized for 15 minutes.

Mr. CHURCH. Mr. President, the purpose of the amendment which I have submitted is very simple. If the Senate will turn its attention to subsection (b) of section 330 on page 3 of the pending bill, beginning at line 14, it will be seen that it provides:

(b) (1) The provisions of sections 303, 304, 307, 308, 310, 311, 312, 313, 315, and 316 relating to stations, radio stations, broadcasting stations, licenses therefor, licensees thereof, and station operators shall apply also to community antenna television systems, licenses therefor, licensees thereof and operators thereof.

It is my understanding that some of the provisions of law to be found in these sections would not be suitable for or properly applicable to the kind of business conducted by a community antenna television system. Therefore, in order to make it perfectly clear that the section does not make it mandatory upon the Commission to apply all of these provisions to the community antenna television system, my amendment would add the following proviso:

Provided, That the Commission may by rule waive the application of any section or subsection where it shall find that the public interest, convenience, and necessity will be served thereby.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. CHURCH. I am glad to yield.

Mr. PASTORE. This is the second of the four amendments which were discussed with the Senator from Arkansas [Mr. FULBRIGHT]. I repeat that the objective of this amendment is inherent in the tone and meaning of the section as it is now written, because obviously sections cannot be added which do not apply, and only those portions of sections which would apply to this particular situation would be applicable to the cause and would be useful in the determination of the meaning of the section.

If there is any belief in the mind of anyone that the amendment might be necessary for clarification, I shall accept it on that premise, for that reason I said to the group when we were in the office that we would be perfectly willing to accept such an amendment if it was intended to clarify the section. Again I repeat, however, that we do not have to change the report, because the meaning is clear. The objective the amendment desires to accomplish is the objective we sought to accomplish when we reported the bill from the committee.

Section 330(b)(1) of the bill is intended to make certain provisions of the Communications Act applicable to CATV operations. The specific sections enumerated in the bill were prepared after full and complete consideration and consultation with the FCC staff to take into account the present and potential developments as currently foreseen in the community antenna business. It has been suggested that a rigid application of some of these provisions to CATV operations might be impracticable or work hardships in certain cases. Generally speaking the Commission has sufficient discretion so as to avoid arbitrary action and it would be fair to assume that the Commission in applying any of these provisions would act in a practical manner. However, in order to remove any doubt and to assure the Commission adequate flexibility, the following amendment would provide the Commission with the discretion to waive any of the sections where it finds that the public interest, convenience, and necessity will be served thereby. For that reason I am perfectly willing to accept the amendment.

Mr. COTTON. Mr. President, will the Senator yield 2 minutes to me?

Mr. PASTORE. I yield 2 minutes to the Senator from New Hampshire.

Mr. COTTON. I shall not oppose the amendment offered by the Senator from Idaho. I am sure it is offered in an attempt to improve the bill, but I wish to make it crystal clear that so far as the Senator from New Hampshire is concerned, he objects to legislation which encourages litigation, which unnecessarily burdens an administrative agency, and which compels operators to come in and justify themselves when it is unnecessary. In the opinion of the Senator from New Hampshire, the amendment offered by the distinguished Senator from Idaho does not in any way cure any defect, but it does not make the bill any worse, and therefore the Senator from New Hampshire will not oppose it.

Mr. PASTORE. Mr. President, I do not wish to labor this subject, because I do not think it merits laboring, but to clarify the point let me say to the Senator from New Hampshire that after all we are inserting in title III of the Communications Act a new category for supervision. Naturally there are many sections in the Communications Act to which reference must be made in the proposed legislation which would be applicable to programs which would come over the air through CATV.

Let me explain that this particular amendment has been brought up for this reason. In our conference, the question was raised what would be done under section 315, which is the equal-time section of the Communications Act. Let us assume that these people take a signal out of the air and then transmit it to their subscribers, and let us assume that there is a candidate for public office who makes a speech in Spokane, where he is a candidate for U.S. Senate or for the Presidency of the United States, and that picture comes over. Let us assume, then, that there is a political candidate who has had time assigned to him. Naturally, the CATV has nothing to do with the origination of the broadcast, because they merely take the signal out of the air.

In this particular case, we are saying that only that part of section 315 shall apply that would be practical and reasonable to carry out the intent of the act. If the opponent of that candidate went before the FCC, which obliges the originating broadcasting station to give equal time to the opponent, under section 315, then, if the opponent talked, it would be obligatory upon CATV to show the opponent as well as the original speaker.

If we do not do that, we are permitting an exemption so far as section 315 is concerned with respect to equal time, and we are dealing here in a way which is inimical to the intent of Congress, because Congress wants equal time given to opposing candidates.

That is the only reason for the amendment. It is inherent in the law. There will be no question about it, as it is presently written in the bill—if the bill shall be passed. All we are doing is clarifying it by saying that should the Spokane station, whose signal is being taken out of the air by a CATV in Helena, Mont., show a speech being made, let us assume, by Mr. NIXON, who has a qualified opponent against him, and if the Spokane station were obliged—not CATV, but the Spokane station—to show Mr. NIXON'S opponent, then the CATV in Helena would be obliged, under this bill, if enacted into law, to also show Mr. NIXON'S opponent, as the CATV had shown Mr. NIXON originally.

In the event that anything arises which makes it impractical or infeasible, because CATV is not a programing system, then it would not apply. That is all it means. It applies where "public necessity and convenience" are involved. Those are the important words.

I repeat that insofar as the contention of the distinguished Senator from New Hampshire is concerned, we have always by reference referred to the pertinent sections of the law that would apply. To do otherwise, I might say—and I say this considerately—would be a demonstration of inepitude in legislative craftsmanship.

Mr. COTTON. In view of the fact that I did not use my 2 minutes, may I have one-half minute more?

Mr. CHURCH. I yield time to the Senator.

Mr. PASTORE. I shall be glad to yield the Senator 5 minutes if he wishes.

Mr. COTTON. I merely wish a half minute. I do not need 5 minutes.

The PRESIDING OFFICER. The Senator from Rhode Island has 7 minutes remaining.

Mr. PASTORE. I will yield all the time the Senator from New Hampshire desires to use.

The PRESIDING OFFICER. The Senator from Idaho has 10 minutes remaining.

Mr. COTTON. I wish to have only half a minute.

Mr. MANSFIELD. I will yield half a minute to the Senator on the bill.

Mr. COTTON. I wish to say to the distinguished chairman of the subcommittee—and I do not do so flippantly—that his statement so well and so eloquently points up all the difficulties of the regulations and the complexities of this proposed legislation that if before he made that statement I had been moved to vote for the bill, I could not vote for it now, because I never heard so clearly and eloquently exposed the maze of difficulties which we would be walking into if we were to enact this bill extending FCC regulation over this entire field, with all of its applications.

Mr. PASTORE. I shall not labor the point. I merely wish to repeat that the committee has been working on this bill for 2 years with the lawyers of CATV, who are expensive lawyers, and very well-paid lawyers. The provisions now being considered are what were finally agreed upon after days and weeks of work. I say frankly that the amendments we are working on now are the agreements that were then reached. Those agreements, insofar as I am concerned, will be kept. I yield back the remainder of my time.

Mr. CHURCH. Mr. President, as the distinguished Senator from Rhode Island has already pointed out, this amendment was originally submitted by the Senator from Arkansas [Mr. FULBRIGHT], who is not presently available. He should have full credit for it. I am grateful to the Senator from Rhode Island for his remarks, and for the fact that he is willing to accept the amendment. I believe that the acceptance of the amendment will definitely improve the bill, in that it will make expressly clear the fact that none of the provisions of the present law which would constitute an undue harassment of the community antenna system should apply, and that the Commission may waive the application of any section or subsection when it shall believe that the public interest and convenience will be served thereby. That is the intent of Congress. This merely writes it expressly into the law. I hope the Senate will approve the amendment. I yield back the remainder of my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Idaho [Mr. CHURCH].

The amendment was agreed to.

Mr. PASTORE. Mr. President, by inadvertence, when the official copy of S. 2653 was printed, after being reported by the Senate Committee on Interstate and Foreign Commerce, the following phrase "The Commission may require that" was omitted from subsection (f) (1) appearing on page 6, line 20, following the words "local subscribers."

In fact, the bill which is printed in full in the committee report that accompanied S. 2653 contains this phrase.

I therefore move that S. 2653, page 6, line 20, following the words "local subscriber," be amended so as to include the following: "The Commission may require that".

I yield back the remainder of my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Rhode Island.

Mr. MONRONEY. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. MONRONEY. I wish to say, in behalf of those of us who oppose any legislation in this field, that the adoption of these committee amendments and other amendments which will be offered does not put the bill in the condition where we could possibly support it. This should be understood. We are not opposing the adoption of these amendments, but we do not believe that the bill, even by the adoption of the amendments, can be made acceptable to the CATV industry.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Rhode Island.

The amendment was agreed to.

Mr. BUSH. Mr. President, I send to the desk an amendment, and I invite the attention of the Senator from Rhode Island to it.

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. On page 6, line 2, after the period, insert the following:

> Nothing in this section shall be construed to authorize any such condition requiring any delay in redistributing any news, current event, or other program where any such delay would be contrary to the public interest.

Mr. BUSH. I yield myself 5 minutes. I offer the amendment as a result of the colloquy had between myself and the distinguished Senator from Rhode Island [Mr. PASTORE], in which he agreed, I think in general, to the purposes of my amendment. I think it is necessary that amendment be adopted in order to make it very clear that such broadcasts as regular newscasts, or current events, or special news bulletins on any current events, and events of international and national importance, like Princess Margaret's wedding or the summit conference—if we can mention those events in the same breath—or the Kentucky Derby, or the World's Series, or other events of national interest, would be excluded, as provided in the amendment if the bill were enacted into law.

I desire to have this explanation of the amendment appear in the RECORD as a part of the legislative history of the bill, in case the bill shall be passed.

Mr. PASTORE. Mr. President, will the Senator from Connecticut yield?

Mr. BUSH. I yield.

Mr. PASTORE. It is true that we had a colloquy on this subject yesterday afternoon. I reiterate now what I said then. There is no question in my mind that this practice is permissible, and is provided for within the context of the section already referred to. But if it is felt that it must be enumerated specifically, that is perfectly agreeable to me.

I merely say that this is a clarifying amendment. Some Senators may feel that this activity should be provided for in the language of the bill. Therefore, I am perfectly willing to accept the amendment.

I think the amendment is redundant; but even redundancy is pardonable if we can capture a vote for the bill.

Mr. BUSH. I think the issue concerning this matter is so important that redundancy is worthwhile.

Mr. PASTORE. I thank the Senator from Connecticut. I yield back the remainder of my time.

Mr. BUSH. I yield back the remainder of my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Connecticut.

The amendment was agreed to.

Mr. COTTON. Mr. President, I call up my amendment which is at the desk, and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. On page 4, line 21, it is proposed to strike out "assigned to" and insert in lieu thereof "operating in."

Mr. COTTON. Mr. President, I yield myself 4 minutes.

In the colloquy which took place on the floor yesterday afternoon, I called attention to an apparent inconsistency between the words in subsection (1) (d), at the bottom of page 4, and the words which follow, beginning on line 25 and continuing at the top of page 5.

In the first instance, the indication is that anyone who has been assigned a channel or the privilege of erecting and installing a local TV station may petition the Federal Communications Commission to restrict the operations of the CATV.

The words which follow a few lines later seem to indicate that the language was intended to refer only to communities in which a local TV station was already operating.

I must in honesty add that the Senator from Rhode Island should not believe that he will be capturing a vote if the amendment shall be agreed to, because I do not promise that I shall vote for the bill if the amendment is adopted.

To clarify the matter, I simply propose that the words "assigned to" be changed to "operating in," so as to make it clear that the reference is to stations in being, and not simply to stations for which, perhaps, many years ago a license or a channel was assigned.

Mr. PASTORE. Mr. President, merely as further proof of solicitude on the part of the subcommittee and a desire to meet all reasonable objections, even though sometimes we might consider them to be without added value, and even though it again involves redundancy, I am willing to accept the amendment of the Senator from New Hampshire.

I am not so optimistic of a gain for the bill in this case, as I was in the case of the amendment of the Senator from Connecticut [Mr. BUSH], because I know it is hard for me to capture the vote of the distinguished Senator from New Hampshire, whose position on the bill I understand.

Again, I believe the amendment is superfluous. I think the language of the bill is clear. I made an explanation of this language in my discussion of the bill yesterday. I said as emphatically as I knew how that it applies to an existing station which is providing service, and is intended to enable it to continue to operate its facilities.

I believe the section is well written. However, if it will make the distinguished Senator from New Hampshire happy to have adopted the language he proposes, I am perfectly willing to accept the amendment. I hope that it will clarify any misunderstanding on that point, and even will cause him to support the bill.

Mr. COTTON. I thank the Senator from Rhode Island. He is characteristically considerate. However, if the Senator from New Hampshire is guilty of redundancy, he is not the first Senator in the history of this body who has been redundant.

Mr. PASTORE. Mr. President, I yield back the remainder of my time.

Mr. COTTON. I yield back the remainder of my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from New Hampshire.

The amendment was agreed to.

Mr. PASTORE. Mr. President, there are two other amendments which were agreed upon in the conference which was held. One had to do with the leaving of the word "continued" in section (d), to which the Senator from New Hampshire has just referred. I should like to have the attention of the Senator from New Hampshire, because he is the one who raised the issue on this particular section.

I feel certain that the amendment would in fact weaken the case of the CATV. I hope the Senator from New Hampshire will agree to that, because I would not want to press any amendment which would put CATV at a disadvantage because of any agreement they might make.

If the Senator from New Hampshire agrees with me, I want it clearly understood that that is the only reason why the subcommittee is not sponsoring that particular amendment. I think it would weaken the case of the CATV's rather than strengthen it.

Mr. COTTON. The Senator from New Hampshire is in complete agreement with the Senator from Rhode Island.

Mr. PASTORE. Mr. President, the distinguished Senator from Arkansas [Mr. FULBRIGHT] is not here, and I have not heard of anyone else offering the remaining amendment; but we gave our word to the representatives of CATV, and discussed the matter with them. After they had studied the proposed legislation for weeks upon weeks, they objected to the use of the word "programs" and wanted the word "signals" substituted. I do not know why. There was an impression on the part of some of us that because litigation was pending, it might be somewhat of a commitment of the legislative function to insist on certain words.

We are perfectly willing to accept the word "signals" in place of the word "programs," but with the explanation that this is not being done to prejudge any pending litigation. We are accepting it only as a characterization of a system, and are using "signals" in place of "programs" only to clarify the section because the nomenclature may have been misunderstood by the representatives of CATV.

The PRESIDING OFFICER. Does the Senator from Rhode Island wish to submit the amendment at this time?

Mr. PASTORE. Yes. I offer the amendment, which is designated as "5-10-60—A," and ask that it be read.

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. On the first page, line 8, it is proposed to strike out "programs" and insert in lieu thereof "signals".

On the first page, line 9, strike out "programs" and insert in lieu thereof "signals".

On page 4, line 12, strike out "program services" and insert in lieu thereof "signals".

On page 6, line 20, strike out "programs" and insert in lieu thereof "signals".

On page 6, line 21, strike out "programs" and insert in lieu thereof "signals".

On page 6, line 25, strike out "programs" and insert in lieu thereof "signals".

On page 7, line 3, strike out "programs" and insert in lieu thereof "signals".

On page 7, line 8, strike out "programs" and insert in lieu thereof "signals".

Mr. PASTORE. Mr. President, I ask unanimous consent that an explanation of this amendment be printed at this point in the RECORD.

There being no objection, the explanation was ordered to be printed in the RECORD, as follows:

EXPLANATION OF AMENDMENT

AMENDMENT NO. 1

Page 1, line 8, change "programs" to "signals."

STATEMENT

With reference to the amendment which would substitute the word "signals" for the word "programs", it should be pointed out that the definition of a community antenna television system with the use of the word "program" was originally prepared and submitted by the FCC as its definition of a community television system and was contained in one of the bills considered by the committee when the community antenna problem was being heard by the Subcommittee on Communications. The committee adopted this definition as an accurate description of community antenna operations. The amendment offered by the Senator from Arkansas would substitute the word "signals" for "programs" in the definition and wherever the word "program" appears in the legislation. Such an amendment of itself does not appear to be significant because as I construe the word, it means the same thing. That is, the transmission and reception of the intelligence which becomes the picture on the television set in the home of the viewer.

I want to make it perfectly clear that in accepting the amendment which would substitute the word "signals" for "programs" that such a change is merely for clarification and that the committee's attitude with regard to the property rights, and possible copyrights, that may be involved in litigation now or later is not being affected by this legislation. In fact, in order to avoid any possible misunderstanding, I want to repeat once again the language of the committee's report as follows:

"One basic issue between the community antenna operators and the broadcasters and their program suppliers has never been resolved, and that is the question whether the former are appropriating the latter's programs in violation of their property rights therein. The community antenna industry insists that the broadcasters have released their programs for the enjoyment of the public, whether within or without the service areas of the originating stations. Since an individual viewer could erect a high and expensive antenna to receive the signal at a point where reception is not possible by ordinary means, it is argued that this can be done for the benefit of an entire community through the master antenna of a CATV system. There are a number of private lawsuits pending on this question.

"Your committee desires, therefore, to make it crystal clear that in recommending this legislation it is not affecting in any way the private rights which may have existed prior to the enactment of this bill. No such inference should be drawn because of the failure to apply section 325(a) which would require the community antenna system to obtain the consent of the originating station nor should any such inference be drawn which may have an effect on any private lawsuit by the inclusion or exclusion of any language in this legislation."

Mr. COTTON. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. COTTON. Does not the Senator understand that the purpose of the amendment, whether it be necessary or justified or not, was the desire not to have the CATV operators involved in the question of copyright royalties in the reproducing of signals?

Mr. PASTORE. That is the argument they made; but the subcommittee does not believe the argument really is relevant to the provisions of the bill as written. However, and again for the purpose of clarification, if there is any misunderstanding, we are perfectly willing to accept the amendment. It is a matter of fact that the reason why I sponsored it was so that no one could say we had not carried out our agreement to the full.

The PRESIDING OFFICER. Does the Senator from Rhode Island yield back the remainder of his time?

Mr. PASTORE. I yield back the remainder of my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Rhode Island.

The amendment was agreed to.

Mr. McCLELLAN. Mr. President, will the Senator yield?

Mr. PASTORE. Mr. President, I yield myself 2 minutes on the bill.

Mr. McCLELLAN. Mr. President, I wish to make an inquiry. I have not been able to keep up with all the debate on the bill. Do the words "significantly facilitate" still appear in the bill, on page 4, in line 25; or have they been stricken out of the bill?

Mr. PASTORE. Those words are still in the bill.

Mr. McCLELLAN. Is that also true of the word "facilitating" on page 6, in line 11, and also on page 7, in line 20?

Mr. PASTORE. That is true.

Mr. McCLELLAN. What is the significance of the word "facilitating," as thus used in the bill?

Mr. PASTORE. We discussed that point with the junior Senator from Arkansas [Mr. FULBRIGHT].

Mr. McCLELLAN. But at that time I was not present.

Mr. PASTORE. I realize that. I wish to say that I am perfectly willing to accept, as an amendment, the striking out of the word "significantly." I do not think it would add very much, one way or the other. The phrase "significantly facilitate" means facilitate. In fact, I think there is a little bit of redundancy there; it is like saying "no smoking, and positively no smoking." What is the difference?

The word "significantly" was used in the bill and was agreed upon by the staff of Federal Communications Commission when the bill was drafted. My opinion is that it makes little difference whether the word "significantly" is left in the bill at that point or is deleted.

Mr. McCLELLAN. I simply asked whether it remains in the bill. We are trying to make some legislative history here. As I read the language, I am trying to ascertain whether there must be a showing, or whether the Communications Commission must find, that the operation of the community antenna system is calculated to facilitate the continued operation of a local station. If that is one of the conditions required before a license will be issued to an antenna system, then the bill will put out of business practically all the antenna systems. I think there should be some explanation as to that portion of the bill.

Mr. PASTORE. No. We discussed this in great detail. This part of the bill means that in granting a license to a CATV, the Commission must make sure that the granting of the license will in no way hamper the facilitation of these operations. That is what that part of the bill is intended to mean, and I think that is what it says.

I wish to say to the Senator from Arkansas that if he feels that the word "significantly" should be deleted, I am perfectly willing to accept such an amendment.

Mr. McCLELLAN. But that language will have to be read in connection with some other language in the bill.

Mr. MANSFIELD. Mr. President, I yield myself 2 minutes on the bill.

The PRESIDING OFFICER. The Senator from Montana is recognized for 2 minutes on the bill.

Mr. MANSFIELD. I should like to ask the Senator from Rhode Island some questions.

Does he feel that he has kept faith with the representatives of the CATV systems, on the basis of the negotiations conducted over the past 2 years, by means of the bill which was reported by the committee and by means of the acceptance of the Fulbright amendments?

Mr. PASTORE. Of course I do. As a matter of fact, let me now read a letter addressed to me, and dated February 19:

> DEAR JOHN: I thought I would see you today on the floor, but failed to do so.
>
> I enclose the proposed amendments to S. 2653. I assume it will take a little time to look them over, but I am sending them to you because I will be away for part of next week, and I want you to have them as early as possible.

And these are the amendments he sent, and the amendments we talked about and agreed upon and voted on today, with the exception of the one mentioned by the senior Senator from Arkansas [Mr. McCLELLAN], which I am perfectly willing to accept if any Senator sponsors it.

Mr. McCLELLAN. Mr. President, will the Senator from Montana yield?

Mr. MANSFIELD. I yield.

Mr. McCLELLAN. I was not offering an amendment. I asked about the meaning of the words "significantly facilitate." I am not so much concerned about the word "significantly" as I am about the word "facilitate." Will that be a condition with which a CATV applicant must comply in order to be granted a license, if the local station petitions for consideration as to whether that will facilitate its business? Must that be one of the conditions precedent to the issuing of a license to the CATV? That is the way those words read to me.

Mr. PASTORE. But the whole section must be read in that connection. As regards an application for a license for a community antenna television system—

> The licensee of a television station assigned to a community in which such community antenna television system serves subscribers may petition the Commission to include in such license such conditions on the community antenna television system's operation as will significantly facilitate the continued operation of a television station which is providing the only available locally originated television broadcast program service.

The PRESIDING OFFICER. The time available to the Senator from Montana has expired.

Mr. PASTORE. Mr. President, I yield myself 5 minutes on the bill, for I think this point is of importance.

The PRESIDING OFFICER. The Senator from Rhode Island is recognized for 5 minutes on the bill.

Mr. PASTORE. Mr. President, nothing in the bill is intended to guarantee the economic security of any station. That was not the purpose of the committee in reporting the bill.

We are trying to facilitate the continued operation of a station which is the only available facility that is providing free television to people who will lose it if that station goes out of business. That is the concern of the Commission—the public interest.

The question here is whether the activities of the CATV will bring darkness to the free viewers who have only one station in the locality. That is where the public interest is involved.

But whether the station makes $1 million a year or 20 cents a year will be of no concern to the Commission. If there is bad management of the station, the Commission will take that into consideration.

But if there is an inequity in competition which will destroy the only existing station which is providing the only free television in a community, and this free service will be lost to viewers who cannot afford to buy the service of the CATV, the Commission must take that into account when it grants a license to the CATV.

Otherwise, if that were allowed to happen, free television would be changed to paid television. We are trying to guarantee an opportunity to the viewers—and that is where the public interest is involved—not guarantee the economic welfare of any station. That is our position, and I hope it is the position of the entire Senate.

Mr. McCLELLAN. Let me ask a question, please. If in a locality a CATV is in operation, and if it applies for a license—as it must do, following the enactment of this measure—could the local station petition the Commission to take into consideration this situation? In such a situation, only one could survive; and the question would be which one would survive?

Mr. PASTORE. I do not think that is the question.

Mr. McCLELLAN. I think that is the question. The bill says it must facilitate the local station.

Mr. PASTORE. If the local station is under good management and is providing free television, then, in the situation to which we have referred, the issuance of a license to a CATV would mean that those viewers of free television would be deprived of their opportunity to view free television. In that situation, I will say that, in my humble opinion, as between the two, I think the Commission would have to favor the free viewers, not the paying viewers.

Mr. McCLELLAN. But I think this language of the bill will do exactly what the Senator says the Commission would have to do; and I think it should be clarified.

Mr. PASTORE. Yes, if the matter ever came that close. In that event, I would say the philosophy of the Communications Act is that we must preserve free television, as opposed to paid television. So if that question arises, that is the law.

Mr. McCLELLAN. Is that what the bill means?

Mr. PASTORE. If it gets that close, that would have to be the decision.

Mr. McCLELLAN. I simply want that point clarified.

Mr. PASTORE. But let us assume that the owner of a station embezzled $50,000, and therefore the station became insolvent and would have to go off the air. Such a situation would not be a reason for the Federal Communications Commission to do anything, or everything, to hurt the CATV—merely in order to keep that station going. The bill only means that where the type of competition which siphons off the cream of the locality, through the process of paid television, leaves the free television viewers in a position where they might

lose their opportunity to see the one free signal, then the Commission must take that into account, in order to guarantee the opportunity of free TV to operate. The matter is as simple as that.

The PRESIDING OFFICER. The time the Senator from Rhode Island has yielded to himself has expired.

Mr. MAGNUSON. Mr. President, will the Senator from Rhode Island yield to me 3 minutes on the bill?

Mr. PASTORE. Yes, Mr. President; I yield 3 minutes on the bill to the Senator from Washington.

The PRESIDING OFFICER. The Senator from Washington is recognized for 3 minutes.

Mr. MAGNUSON. Mr. President, I wish only to make a statement on the bill, because I think there has been a great deal of misunderstanding. There was some confusion on yesterday, I understand, regarding the position of the Federal Communications Commission. I am sure the distinguished Senator from Rhode Island has tried to clarify the matter; but I wish to add whatever I can.

The latest report from the Federal Communications Commission appears on page 10431 of the CONGRESSIONAL RECORD, from which I shall read one paragraph:

> The Commission's continuing study of the CATV local station problem leads it to favor what it understands to be the basic underlying objectives of the proposed legislation. The bill would encourage local television broadcast station operation by extending some protection against inequitable competition by unlicensed television services and, at the same time, recognizes the public benefit in the provision of multiple program services by CATV systems. It may be noted that these objectives form the basis of two of the priorities set forth by the Commission in its sixth report and order for the assignment of television channels.

Thus, we see that the Federal Communications Commission—as is true of all the commissions with which I have had to do in the committee—favors the principles incorporated in the bill. I wanted to mention this because I understand there was some confusion yesterday on that point.

I wish to call the attention of the Senate briefly to the record and the history of this legislation. This matter has been before the committee for a long time. The committee has discussed the bill pro and con, and when the bill was reported no minority views were filed. No minority views have been suggested, although much time has elapsed since the bill was reported, and any Senator who wished to do so had the opportunity.

I wish to call attention to the fact that the bill was scheduled for action last August. At the request of the National CATV Association, we held it over until January, in order to give an opportunity to have worked out a proposal which would be agreeable to everyone. I personally asked the minority leader, the assistant majority leader, and the majority leader that it be made the pending order of business when we recessed. If the record will be examined, that statement will be found to be accurate. All this time has elapsed since then.

Late in January representatives of the national association, who I assume they were the ones who came before the Senator from Rhode Island, myself, and my seat mate, the Senator from Arkansas [Mr. FULBRIGHT], who had some concern about this matter, said their board was meeting some time in February and wondered if we could postpone action a little longer, so an effort could be made to further reconcile some differences in points of view. We agreed to such a postponement, and consideration of the bill was postponed. Finally, in a meeting in my office in late March or early April——

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. PASTORE. Mr. President, I yield myself 5 minutes, and yield to the Senator from Washington such time as he may require.

Mr. MAGNUSON. In late March or early April, the Senator from Arkansas, the Senator from Rhode Island, and representatives of the National CATV Association, met for a long time, for 2 or 3 hours, in our office, and we reached an agreement, I thought, on what procedure would be followed.

The Senator from Rhode Island has letters confirming this understanding. I assume they have been referred to in the debate. To this hour we have had no official communication whatsoever from the National CATV Association reversing their stand.

It was mentioned yesterday that there are certain persons going around to the offices of different Senators, talking about the bill, which they have a right to do, making statements to the effect that some of the association officials—probably those who met with us; or who else they were, I do not know—do not properly represent their point of view.

I say to the Senate that all we can go by, and all we could go by, is what the association, after official action by its board, transmitted to us by what I thought were its official representatives at that meeting.

Several of these TV facilities exist out in my part of the country. Some of the people are here from Montana and other places in the Pacific Northwest. There is also involved in our part of the country a booster problem, because of the terrain.

I am authorized to say for these people that they recognize what the FCC recognizes, and what the Senator from Rhode Island recognizes, and what everybody else interested in this question recognizes, that some type of regulation is called for. They say, and I say, the question is: Shall this matter be under the jurisdiction of a series of State public service commissions, or under Federal regulation?

All of these people are here, and every communication, or contact, or meeting, or testimony we have had has been to the effect that not only do they prefer Federal regulation of some kind, but that Federal regulation is dictated under the circumstances. The FCC has told me the same thing. They have told me, as late as this morning, they prefer Federal regulation. I do not mean to imply that everybody is satisfied with every part of the bill, but they recognize that the legislative process is such that some of the rough corners in the bill probably can be taken care of in House hearings.

In light of all these facts, I think the Senate should proceed to act on the bill, and Senators should perhaps proceed by suggesting amendments to be adopted in the House committee.

I wish to say to the Senator from Oklahoma [Mr. MONRONEY], who is a member of our committee, I think the Senator from Rhode Island has been more than patient, fair, and equitable in this matter.

Mr. MONRONEY. I think so, too.

Mr. MAGNUSON. I think the Senator from Rhode Island has gone out of his way to try to resolve some of the differences which have arisen. I think I have, too, in a small way. We are trying to get free television throughout the country, to the greatest extent possible. We appreciate that these CATV systems are also important and belong in the communications system of the United States. However, they can serve only those places where there are enough subscribers to make such facilities economically feasible. I think in some places free television is particularly limited, especially in areas west of the Mississippi. The people there are willing to pay, where there are enough customers and where a CATV system is adaptable. I do not think this bill will hurt any of those people.

I think in the last few days there has been an attempt to build a few strawmen to be knocked down. The attempt is made to let us believe that the FCC is going completely out of its way to hurt the community antenna systems, which I know the FCC does not want to do. Those systems serve a purpose in the spread of this great medium of communication. There are many farm people who have only one signal available. I am sure the Federal Communications Commission will not hamper those people at all when merely an application for a license is made.

I feel as the Senator from Rhode Island feels. We have other things to do than merely to consider this bill. If these people want State regulation, they ought to say so. If they think it is better for the whole communications system, then they ought to go along with what they agreed to accept. We are going to be fair and helpful—and the Senator from Rhode Island has been—and be willing to have amendments adopted to clarify the whole matter as best we know how. That is our intention.

I hope the Senate will not agree to send the bill back to the committee, which has spent much time and effort on it. I do not know of a bill on which the committee has spent more time in trying to resolve differences, and some of the bills before the committee have been quite important. We have tried our best. The matter has been fully heard before the committee, and the subcommittee of the Senator from Rhode Island, whose patience could have

been sorely tried, but he has labored long and patiently in his effort to frame a bill which the Senate could consider and pass.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. MONRONEY. Mr. President, I rise in opposition to the bill.

May I ask who is in control of the time in opposition?

The PRESIDING OFFICER. The minority leader is in control of the time in opposition. The Senator from New Hampshire [Mr. COTTON] is the acting minority leader.

Mr. MONRONEY. Will the Senator yield me 3 minutes?

Mr. COTTON. I yield the Senator such time as he may need.

Mr. MONRONEY. After the very eloquent and informative statement made by the distinguished chairman of the Interstate and Foreign Commerce Committee [Mr. MAGNUSON] and my distinguished colleague, the chairman of the Communications Subcommittee [Mr. PASTORE], I wonder if I could clear the air just a bit.

I know of no one who sat through the hearings or who has been present at any meeting at which the bill was being considered who has had anything but praise for the job which has been done by the distinguished chairman of the subcommittee and by the distinguished chairman of the full committee. Every view was received graciously and given serious consideration.

I attended practically all of the hearings which were held in 1959, some of which, in order to take care of witnesses from all over the country, continued as late as 7:30 at night. The distinguished junior Senator from Rhode Island did likewise. I have no complaint to make with regard to the patience of the Senators or the fairness of hearings.

If a license is to be required of every member of this industry, if we are to regulate so many in order to benefit so few, then the Senator from Rhode Island has done the very best possible job.

I introduced a bill as a working draft, for the benefit of the committee, so that if regulation had to come it could come in a manner which would not be crippling to the CATV units, of which there are so many.

After we had heard all the testimony, I had serious doubts as to the necessity for such broad regulation. Certainly there were doubts in the minds of dozens of CATV operators in Oklahoma, Texas, Kansas, and many other places, in regard to their being asked to give up so much freedom to obtain so little, under licensing.

The PRESIDING OFFICER. The time of the Senator from Oklahoma has expired.

Mr. MONRONEY. Mr. President, will the Senator yield me 3 more minutes?

Mr. COTTON. Mr. President, I yield 3 more minutes to the Senator from Oklahoma. I do not want to yield too much time to the Senator, until the minority leader returns to the Chamber. The time is being taken from the time on the bill. There is no amendment pending. That is why I do not want to yield too much of the time of the minority leader.

I yield 3 minutes to the Senator from Oklahoma at this time.

Mr. MONRONEY. I thank the Senator. I will be careful with the time.

The PRESIDING OFFICER. The Senator from Oklahoma is recognized for 3 minutes.

Mr. MONRONEY. Mr. President, so far as I could tell during the time I was supporting a bill to regulate this industry, in the belief that it was needed for its protection, I had the greatest help and service from the Washington representatives for the association.

The minute my own local operators, who I believe knew their business, told me they would rather not have any regulation, and that they felt they could survive and continue their operations without damaging anyone in our State, I never heard from or saw these representatives again.

Who has been bargaining? Who has been talking? Who has been taking up the time of the committee? I did not take part in these negotiations, and I do not know who purported to represent the 768 members of the CATV industry. The results did not represent the views of the members in Oklahoma. The results did not represent the views of dozens with whom I have talked, who have been in this city. Certainly I think it was high time that these men came to the Congress in person to tell the story to the Congress, particularly if the story was different from the position taken by their representatives.

The PRESIDING OFFICER. The time of the Senator from Oklahoma has again expired.

Mr. MONRONEY. Mr. President, will the Senator please yield me 1 more minute?

Mr. COTTON. I yield 1 more minute to the Senator from Oklahoma.

The PRESIDING OFFICER. The Senator from Oklahoma is recognized for 1 minute.

Mr. MONRONEY. Certainly the people who oppose licensing have not been heard in the councils which were considering amendments to the bill. Mr. President and Members of the Senate, that is the issue before us today. It is not a question of how the industry will be licensed, but whether licensing is necessary.

Mr. YARBOROUGH. Mr. President, will the distinguished Senator from Rhode Island yield 2 minutes to me, during which time I may propound to the Senator some questions, in order to clarify the provisions in the bill?

Mr. PASTORE. Will the Senator defer a minute?

Mr. President, how much time do the proponents of the bill have remaining on the bill itself?

The PRESIDING OFFICER. Eight minutes remain for the proponents on the bill.

Mr. PASTORE. Eight minutes?

The PRESIDING OFFICER. Eight minutes.

Mr. PASTORE. And we shall have 1 hour on the motion to recomit. I understand that motion has not been made yet.

The PRESIDING OFFICER. If and when the motion to recommit is made, the Senator from Rhode Island will have 1 hour on the motion.

Does the Senator from Rhode Island yield to the Senator from Texas?

Mr. PASTORE. I yield 2 minutes to the Senator from Texas.

Mr. COTTON. Mr. President, will the Senator wait a minute?

How much time does the opposition have remaining on the bill?

The PRESIDING OFFICER. The opposition has 23 minutes remaining on the bill. How much time does the Senator from Rhode Island yield to the Senator from Texas?

Mr. PASTORE. Two minutes.

Mr. YARBOROUGH. Mr. President, the purpose in asking the Senator from Rhode Island to yield is that I may clarify the provisions of the bill.

Mr. COTTON. Mr. President, I yield 2 minutes to the Senator from Texas from the time in opposition, so as not to use the remaining few minutes of the Senator from Rhode Island.

The PRESIDING OFFICER. The Senator from Texas is recognized for 2 minutes.

Mr. YARBOROUGH. Mr. President, I thank the Senator from New Hampshire for yielding 2 minutes to me.

Mr. President, I address these questions for the purpose of clarification.

Mr. PASTORE. Mr. President, may we have order in the Chamber, please?

The PRESIDING OFFICER. The Senate will be in order.

The Senator from Texas may proceed.

Mr. YARBOROUGH. My State has more of these community antenna television systems than any other State in the Union, and I can state that they play a very important part in the lives of tens of thousands of people. Due to the geographical extent of the systems and the population base, it is quite likely, therefore, that Texas will have more community antenna television systems than any other State in the Union for a long time to come. It is a very fast growing industry in our State. Many people have homes in what are known as fringe areas, and can receive television programs only over the community antenna television systems.

We did not hear answers to these questions before the committee, simply because nobody was objecting, though the bill has been pending for a couple of years. Questions have been raised. I know the distinguished Senator from Rhode Island can answer them. I think, Mr. President and distinguished Senators, these matters ought to be clarified in the RECORD before we vote.

First, where there is a local television broadcaster competing with a community antenna television system, what control, if any, would the bill give to the broadcaster over the community antenna television system?

Mr. PASTORE. The bill would not give the broadcaster any control at all, outside of the fact that he could file a petition with the Federal Communica-

tions Commission, and attempt to prove that unless the picture is shown as one of the three or four signals being serviced by the community antenna television system, in all probability it would cause him economic distress, which might lead to a closing down of the station.

The PRESIDING OFFICER. The time of the Senator from Texas has expired.

Mr. YARBOROUGH. Mr. President, will the Senator yield 2 more minutes? This is for the purpose of clarification of the bill.

Mr. PASTORE. Mr. President, so that we may avoid all of this seesaw of time, yielding a minute or a minute and a half to different Senators, I offer the amendment which I send to the desk and ask to have stated.

The PRESIDING OFFICER. The amendment will be stated for the information of the Senate.

The LEGISLATIVE CLERK. On page 4, line 25, it is proposed to strike out "significantly facilitate the continued" and insert in lieu thereof "facilitate the".

On page 5, line 7, strike out "continued".

On page 6, line 11, strike out "continued".

Mr. PASTORE. Mr. President, I yield 5 minutes to the Senator from Texas.

The PRESIDING OFFICER. The Senator from Texas is recognized for 5 minutes.

Mr. YARBOROUGH. Mr. President, I ask these questions of the distinguished Senator from Rhode Island, since the questions have been raised and I think the matter can be clarified in a very few minutes.

Under the provisions of the bill could there possibly be a limitation on the variety of programs received by community antenna television subscribers?

Mr. PASTORE. Will the Senator repeat the question?

Mr. YARBOROUGH. Could there possibly be a limitation on the variety of programs received by community antenna television subscribers under the provisions of the bill?

The charge has been made, Mr. President, that the people will not be able to get TV reception over the community antenna systems if the bill is passed.

Mr. PASTORE. In order to answer the question of my distinguished friend from Texas, I think we should get this matter in a proper context.

First of all, Senators must understand that the community antenna television system operates with some three or four or five signals.

Mr. YARBOROUGH. I understand.

Mr. PASTORE. The one of the impositions upon the communuity antenna system, which might affect it in some way, is the fact that the local broadcasting station, which has a contract, let us say, with the network, to show "I Love Lucy" or "Gunsmoke" in the middle of the week, might, if the community antenna system is taking that same program from some large city on a Sunday night, and broadcasting it before the showing by the local broadcasting station, let us say, anticipating it by three or four nights, protest to the FCC. If the local broadcasting station can show that is being done and can show it will injure the station financially, in such a way that if the action continues it might be necessary to go off the air, the FCC could take appropriate action. That is about the only encumbrance upon the CATV systems.

Mr. YARBOROUGH. In other words, if there were no local broadcasting station broadcasting in the same town or city in which the community antenna system operated, then there would be no possible limitation on the variety of programs of the community antenna television system?

Mr. PASTORE. Practically none at all aside from the fact that they would have to apply for a license and, as I said yesterday, if there were no objections—and in this case there would be no objections because there is no local station—it would be a perfunctory procedure and the license would be granted.

Mr. YARBOROUGH. Is there a provision in the bill which would allow broadcasting stations to charge the community antenna television system for the use of the broadcasting station signals or change the present legal relationship between the broadcaster and the community antenna television system?

Mr. PASTORE. Such a provision was contained in the legislation originally proposed. It is contained in the recommendation of the Federal Communications Commission, but we deleted it because we considered it unfair.

Mr. YARBOROUGH. It is not in the bill?

Mr. PASTORE. It is not in this bill.

Mr. YARBOROUGH. It has been so charged. My statement is intended to clear the air of many of the charges in regard to the bill. I hope the distinguished Senator from Rhode Island, who is chairman of the Communications Subcommittee and knows more about this subject than any other Senator, will be patient with me for a minute until we clear up some of these points on the floor.

Mr. PASTORE. I welcome the opportunity to do so.

Mr. YARBOROUGH. Would the bill increase the overall cost of the community antenna television system operation and subscription in any appreciable amount, and increase the cost to the subscriber who pays so much per month?

Mr. PASTORE. I would not say so. We heard the argument today that no one in Oklahoma was consulted about the proposed legislation. The CATV people of Oklahoma certainly knew of this measure. A prominent CATV operator, Mr. Griffing, of Oklahoma testified at the hearing a year ago. He must be fully aware of the progress of the bill and so, too, the CATV industry of Oklahoma.

Mr. YARBOROUGH. Is there any validity to the contention that under the provisions of section (d), page 4, beginning at line 17, the licensee of a television station assigned to a community in which there was a community antenna system could prescribe what the community antenna system carried, and how it operated, other than that the community antenna television system would have to carry the local broadcaster's signal also? Is that the only modification?

Mr. PASTORE. And to avoid duplication; that is correct. That is about all.

Mr. YARBOROUGH. There would be no other control whatsoever?

Mr. PASTORE. I do not see what other control there would be.

Mr. YARBOROUGH. I refer to the language beginning on page 4, line 20:

> The licensee of a television station assigned to a community in which such community antenna television system serves subscribers may petition the Commission to include in such license such conditions on the community antenna television system's operation as will significantly facilitate the continued operation of a television station which is providing the only available locally originated television broadcast program service.

It is contended that such provision would give the local broadcaster the power to require such a downgrading of programs of the community antenna system as not to take too many customers away from the broadcaster himself.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. PASTORE. I yield myself 5 additional minutes.

That is precisely the point that was raised by the distinguished Senator from Arkansas. Let me give a graphic example of how this operation would work.

Suppose in a community like Helena, Mont., there were a local broadcasting station which was the only facility providing service in that community. At the same time CATV was also servicing people in Helena, Mont. Suppose the local station should apply to the FCC and spell out the fact that there was unfair competition and that it felt that the CATV should show the signal that was being shown by the Helena broadcasting station, and at the same time included it with the other signals. Next let us assume that the Federal Communications Commission should grant that petition. Let us assume again that after the petition is granted and the CATV does show the signal of the local station at the same time and without duplication, and other action the FCC may take, but in spite of all that, the local station is in a bad financial position and is likely to go out of business, then that TV station is simply out of luck.

The implication was left here that in order to save the local station CATV would have to be wiped out. That is not true at all. If after this grant was made to the local station it still could not make headway that would be its misfortune, and it would have to close shop. But CATV would not be closed down because, after all, it is not CATV that put the local station out of business. They were both there at the same time. There is a limitation as to how far CATV can go to help the local stations. But once it has exercised equity, that is the end of the road. Beyond that is an abyss.

Mr. YARBOROUGH. In conclusion, is the grandfather clause of S. 2653 broad enough to assure absolutely that each existing community antenna system will get a permit or a certificate to continue operations under the grandfather clause?

Mr. PASTORE. Yes, except, of course, it might wish to expand its facilities or bring in more signals. It would then have to appear before the FCC, and in that case the FCC would decide the case in the public interest.

Mr. YARBOROUGH. Then as to the overwhelming majority of the CATV stations, where there is no local broadcaster, is their broadcasting affected in any way whatsoever other than in the matter of getting its license?

Mr. PASTORE. No, of course not, aside from the fact that it would have to come under regulation. Every time that subject is mentioned we are told that expensive lawyers must be hired. Everybody who has been reading the front pages of the newspapers for the past 2 weeks has observed that impressive argument: "Everyone has to hire a big lawyer in Washington." Most of these CATV operators are represented by attorneys. They know that. We are told about little people being in this business. They are small businessmen, but they are not destitute. Some of them operate million-dollar systems, and I find no fault with that. The fact is that when they have to submit an application and have it considered by the FCC, it will be granted if there is no objection. It is said that every small operator will have to hire a big lawyer and pay him big fees. It sounds like a good argument to make here, but it is not true.

Mr. YARBOROUGH. Mr. President, I thank the distinguished Senator from Rhode Island for his clarification of the points that have been raised with me by many of the operators of community antenna systems in my State. Texas is the largest State in the Union, and it has more of these systems.

Mr. MONRONEY. Mr. President, I believe the implication was left that the grandfather clause gives these operators the right to continue. I know the distinguished Senator from Rhode Island did not mean to leave the implication that they would be covered by grandfather clauses from now on. He knows, as we know, that a license is good for only 3 years, and then if the license covered by the grandfather clause is renewed, it is good for an additional 3 years; but it is a 3-cycle, is it not?

Mr. PASTORE. Of course. The FCC does not issue a license for longer than 3 years.

Mr. MONRONEY. That is the issue. The FCC would license them for 3 years, and they would then return with another application. Is it necessary to require this of little business in order to protect the very few who would be affected by the bill, and who are in the so-called minority?

Mr. PASTORE. The operator of the little broadcasting station——

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. PASTORE. I yield myself 5 minutes additional.

The PRESIDING OFFICER. The Senator has 5 minutes remaining.

Mr. PASTORE. I yield myself the 5 minutes. A small broadcaster in the town of Helena or in some little town in Colorado must apply every 3 years for renewal of his license. What does he have to do? He cannot take a picture out of the air and sell it to someone else, as some other operators are doing. He must pay for it. He must go to NBC, CBS, or ABC, and put the money on the line for everything he wishes to obtain. He is a small-business man, too. He must employ a lawyer. He must file an application. He must get a license every 3 years. Why does the Senator want preferential treatment for certain operators? All those operators are doing is taking a picture out of the air which belongs to someone else, which someone else paid to put on the air. They take it without compensation, and they sell it for a price. That is what the Senator is talking about, and he is saying that these people are being unfair to the few who are getting a little picture in their homes free.

Mr. KERR. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. KERR. Did the Senator say that the little station in Montana or Colorado which transmitted an NBC, CBS, or ABC broadcast had to pay for it?

Mr. PASTORE. It must pay for the privilege of showing the broadcast.

Mr. KERR. I thought it received pay from the network for showing it.

Mr. PASTORE. It must pay for the program. They have to pay for the privilege of showing the picture.

Mr. KERR. The Senator ought to review the facts.

Mr. PASTORE. The Senator has reviewed them, and he extends the same invitation to the distinguished Senator from Oklahoma. I hope the Senator from Oklahoma has read the Communications Act. I make that statement unequivocally.

Mr. KERR. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. KERR. The Senator from Oklahoma makes the statement that when a television station is operating with one of the national networks, CBS, NBC, or ABC, the network pays the local TV station for the time that is consumed in broadcasting a network program. I say to my good friend, who knows more, he thinks, than anybody else on earth, that if he will read a little, or find out a little, he will know more even than he now thinks he knows.

Mr. PASTORE. Is the Senator through?

Mr. KERR. I do not know whether I am.

Mr. PASTORE. Will the Senator harken for a moment?

Mr. KERR. I do not know what that means.

Mr. PASTORE. It means to listen.

Mr. KERR. Yes.

Mr. PASTORE. When we listen, we learn.

Mr. KERR. I do not know about both of us.

Mr. PASTORE. I know listening helps me. Let me say to the distinguished Senator that through the arrangement with the network the local station gets 30 percent of its rate card and what amounts to 70 percent is retained by the network. There is a difference between local rates and national rates. If that is not paying, I do not know what is paying.

Mr. KERR. The Senator does not know what he is talking about.

Mr. PASTORE. The Senator said that yesterday. I do know what I am talking about. The difficulty with the Senator from Oklahoma is whenever he cannot run anyone into the ground he gets a little intemperate. I have read the Communications Act, and I know it. I challenge the Senator from Oklahoma to do the same.

Mr. KERR. The Senator believes, in other words, that the Communications Act governs the contractual relationship between the broadcasting network and the local affiliate?

Mr. PASTORE. Yes. The contracts are filed with the FCC. If the Senator does not believe it, he can call up on the telephone and check it.

Mr. KERR. I do not have to do that.

Mr. PASTORE. That is the trouble with the Senator. He does not have to do anything. He knows everything.

Mr. KERR. No, no; but I know that much.

Mr. PASTORE. I withdraw my amendment. We have exhausted the time—I hope intelligently.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. ALLOTT. Mr. President, I send an amendment to the desk and ask that it be stated. It is identified as "5–17–60—A."

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. On page 4, between lines 9 and 10, insert the following:

(b) (4) Effective after ninety days following the effective date of this section the provisions of subsection (a) of section 325 relating to rebroadcasting by broadcasting stations shall apply to community antenna television systems as if they were broadcasting stations.

The PRESIDING OFFICER. The Senator has 15 minutes on the amendment.

Mr. ALLOTT. I yield myself 5 minutes. The amendment I have offered gets down to the nub of this situation. I do not care how the facts are distorted here. The plain fact is that the bill is not going to hurt anyone except those who compete unfairly with other people.

Section 325(a) of the Communications Act provides:

No person within the jurisdiction of the United States shall knowingly utter or transmit or cause to be uttered or transmitted any false or fraudulent signal of distress or communication relating thereto—

Now I come to the pertinent part—

nor shall any broadcasting station rebroadcast a program or any part thereof of another broadcasting station without express authority of the originating station.

The amendment which I have offered provides that, effective after 90 days following the date of this section, the provisions of subsection (a) of section 325, which is the one I have read, relating to broadcasting by broadcasting stations, shall apply to community antenna television systems as if they were broadcasting stations. That provision would be inserted on page 4, between lines 9 and 10.

I am not unmindful of what the committee has said on this particular point. I should like to read it. On page 11 of the report the committee says:

> One basic issue between the community antenna operators and the broadcasters and their program suppliers has never been resolved, and that is the question whether the former are appropriating the latter's programs in violation of their property rights therein. The community antenna industry insists that the broadcasters have released their programs for the enjoyment of the public, whether within or without the service areas of the originating stations. Since an individual viewer could erect a high and expensive antenna to receive the signal at a point where reception is not possible by ordinary means, it is argued that this can be done for the benefit of an entire community through the master antenna of a CATV system. There are a number of private lawsuits pending on this question.
>
> Your committee desires, therefore, to make it crystal clear that in recommending this legislation it is not affecting in any way the private rights which may have existed prior to the enactment of this bill. No such inference should be drawn because of the failure to apply section 325(a) which would require the community antenna system to obtain the consent of the originating station nor should any such inference be drawn which may have an effect on any private lawsuit by the inclusion or exclusion of any language in this legislation.

Yesterday afternoon I tried to explain to the Senate in my own words the effect which I believe the uninhibited growth of CATV is going to have on many States, particularly upon my State. Unless CATV is brought within some regulatory control, it is going to run out the small TV stations in my State, particularly one that I have in mind at this time. That particular station, in Grand Junction, serves a great area of some 55,000 or perhaps 60,000 people in western Colorado and eastern Utah. If CATV comes into Grand Junction and competes, not upon a fair, but an unfair basis, CATV can pick programs from the three main broadcasters out of the air and distribute them in Grand Junction in unfair competition with the local station.

The whole matter of what has been unfair has been gone into fully by the chairman of the subcommittee. I paid my respects to him yesterday afternoon, and I do it again today.

Here we have the situation of people taking a free signal out of the air. It is true that I have the right to pick it out of the air, but I do not have the right to pick it out of the air for a profit. Yet this is what these people want to do. They want to pick the signal out of the air without the consent of the person who puts it on the air, and they want to put it into the local community and convert it to a profit, and eventually bring in two or three networks, and then run the small one signal TV station out of business.

How will this work? In this particular instance, they will serve one little town. They cannot serve the suburbs because the expense of installation is too great. They cannot serve all the surrounding area, because the expense of installation is too great.

The PRESIDING OFFICER. The time of the Senator from Colorado has expired.

Mr. ALLOTT. I yield myself another 5 minutes.

There are now in this area 36 booster stations. They serve the people of western Colorado and eastern Utah, which are tuned in on this one station. If we do not by this bill bring in those people; if we do not provide some kind of regulation; there will be light in the communities, but there will be darkness in the suburbs and darkness throughout all of western Colorado and a part of eastern Utah.

I do not think anyone has the right to say that he can pluck a free signal out of the air, convert it to his own use and his own business, and make a profit from it, while he darkens the skies to the people who have an opportunity to get a free service.

I desire to make perfectly clear what I am trying to do by this amendment. There is nothing tricky about it. There is nothing new about it. The language has been in the Communications Act for a long time. It simply takes a part of the Communications Act, which is now in effect—section 325—and applies it within 90 days to the CATV system, so that CATV, like any other person, would have to get the consent of the person who broadcasts the signal before CATV could broadcast it.

There are cases which are now pending in the courts, but they have not yet been decided. Nevertheless, it is my opinion that this language should be a part of the bill.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. ALLOTT. I yield.

Mr. PASTORE. I must admit and concede that the Senator from Colorado has made a very powerful argument. As a matter of fact, many persons, particularly those who have been damaged by this condition, feel that they are compelled to get permission before they can rebroadcast a signal. However, everyone else who uses the signal for profit should do likewise. This is provided for in the Communications Act, section 325. That is the section which the Senator from Colorado would like to incorporate in the bill by his amendment.

I realize that the FCC, which was rather lukewarm to the proposed legislation, but is now supporting most of its provisions, has gone the full distance and is itself advocating that Congress compel consent to be obtained before CATV can take a signal and then sell it by the use of its cables.

I realize the reason for the Senator's position. I realize how he feels about this matter, because he is living with the problem. He lives among people who are enjoying both CATV and free television through one existing television station in a particular locality, as he has already explained. But the Senator from Colorado must realize that if his amendment is adopted today, irreparable harm will be done to the bill itself.

I am afraid we may be getting ourselves into a situation which may be rather delicate and serious. So, as seriously as I can say it, even though I am a proponent of the bill, and even though I realize that the Senator's amendment rubs pretty hard and roughly those who are opposed to the bill, I hope he might see it within his heart and in his good, fair mind to withdraw the amendment, and not press it.

Mr. ALLOTT. Mr. President, how much time have I remaining?

The PRESIDING OFFICER. The Senator from Colorado has 6 minutes remaining on the amendment.

Mr. DIRKSEN. Mr. President, I yield 3 minutes to the distinguished Senator from New Hampshire.

Mr. ALLOTT. Mr. President——

Mr. COTTON. I asked for this time.

Mr. ALLOTT. I have not yielded the floor.

Mr. COTTON. I beg the Senator's pardon.

Mr. ALLOTT. I yielded myself 5 minutes initially and then asked for 5 additional minutes subsequently. The Chair has advised me that I have 6 minutes remaining.

The arguments and the discourse of the Senator from Rhode Island are very persuasive. I cannot help thinking that more dead cats have been dragged to the Senate floor in the last 24 hours than I have ever seen in a similar period. I have seen more misinformation scattered in connection with this bill than I have seen in a long, long time.

I cannot accept the theory that the bill will place a great burden on these people. It does not put a great burden on the CATV operators. It does not put a burden on them which the small broadcasters—the small TV broadcasters—do not have to carry all the time. They manage to handle the situation, though; and in most instances, I believe, they do it without the employment of attorneys.

The question is whether we shall give one group an opportunity to compete with and run out of business another group who are supplying free broadcasting, and do it with free signals which they pluck out of the air.

I offered the amendment in all sincerity, as I am certain the Senator from Rhode Island believes—he did not imply otherwise—because I do not think anyone should have a right to pluck a signal out of the air and then make somebody else pay him a profit in order to get the signal and utilize it.

Nevertheless, I cannot help realizing that if the amendment were adopted, it would perhaps make it more difficult, even, to pass the bill, about which we have heard so much static and misinformation. For that reason, and that reason alone, and not because I believe

for a moment that the principle I have espoused is not the correct principle, I intend in a moment to withdraw the amendment.

But I say to the visitors who are sitting in the galleries, and are breathing so hotly down the necks of the Senate today, that if the Supreme Court decides one of the pending cases against CATV, it will be you who will be coming here on your knees, begging and praying for the kind of legislation which we are trying to give you this afternoon.

Mr. President, I withdraw the amendment.

Mr. COTTON. Mr. President, I had hoped the Senator from Colorado would not take us off our feet after he had offered the amendment, by withdrawing it. That is why I asked for 3 minutes in opposition to it.

Mr. ALLOTT. Mr. President, I have the floor, and I presume I have the right to do as I please concerning my use of it.

Mr. COTTON. Certainly.

Mr. ALLOTT. If the Senator from New Hampshire wishes to question me on the amendment, I shall be happy to yield to him.

Mr. MANSFIELD. Mr. President, if the Senator from Colorado wishes to withdraw his amendment, he has the right to do so.

Mr. COTTON. He certainly has.

Mr. President, will the distinguished minority leader yield me 3 minutes?

Mr. DIRKSEN. I yield 3 minutes to the Senator from New Hampshire.

Mr. COTTON. Before we cease discussing the amendment which was offered by the distinguished Senator from Colorado, and which he then withdrew, I should like to say for the benefit of the Senate and also for those outside the Senate that some of us who oppose the bill do not oppose it, as has been intimated, because we are carrying the flag for CATV.

I happen to come from a section of the country, and from a city—a county seat town—in the mountains; from a location where the people would never get TV unless they got it by this medium. My interest, and I am confident it is the interest of a good many other Senators, is for the consumer, the viewing public. I, for one, rather resent all the talk about pressure, telegrams, and all the rest. I am interested, as I think other Senators are interested, in protecting the means by which we who live in mountainous areas can get good TV service.

Furthermore, if the Supreme Court of the United States should suddenly decide, in its infinite wisdom, that CATV cannot take the signals from TV stations without the permission of those stations, I should like to have someone tell me, a simple country lawyer, how the FCC would be able to overcome the decision of the Supreme Court of the United States. It is a new theory for me to believe that a Government agency could do that.

If such a principle should become the law of the land by a decision of the highest tribunal of the Nation, the FCC would have no power to change it. The only way it could be altered would be to have Congress enact new legislation, a practice which is always frowned upon.

Mr. PASTORE. Mr. President, will the Senator yield for a question?

Mr. COTTON. If time permits, I yield.

Mr. PASTORE. If the Supreme Court should decide that a proprietary right exists, and that the privilege of using property which belongs to someone else must be paid for—I hope it would not do so—the fact that both mediums would be under the aegis of the FCC would certainly mean that the FCC could say that the rates charged must be reasonable, and that one segment of the population, such as the good people of New Hampshire, should not be deprived of the service. That would all depend on the FCC.

The PRESIDING OFFICER. The time yielded to the Senator has expired.

Mr. COTTON. Mr. President, may I have 2 minutes more?

Mr. DIRKSEN. I yield an additional 2 minutes to the Senator from New Hampshire.

The PRESIDING OFFICER. The Senator from New Hampshire is recognized for 2 additional minutes.

Mr. COTTON. Mr. President, I am absolutely sure that neither my good friend, the Senator from Colorado, nor my esteemed friend, the Senator from Rhode Island, nor any other Member of the Senate has any real idea that the courts are going to deprive the people who are receiving television shows by this means. I question it very much.

Mr. PASTORE. A court case is pending, and it could be decided one way or the other.

Mr. COTTON. I know a case is pending in court, and of course no one knows what the court will decide.

But let us remember some of the fundamental ethics and basic principles that are involved in this case. One thing is certain, namely, that every one in this country wants to have the privilege of receiving television programs. But because of the problems caused by technical difficulties in TV the economics of the broadcast industry, and the limited number of TV channel assignments there are many persons in parts of the country who could not get any TV reception or who, at best, could get only a single channel.

It is one of the glories of American ingenuity that when difficulties like these develop, ways to overcome them are soon found. As a result, we have booster stations, translators, satellites, and CATV's all contributing to the TV reception of the American people. Some of my friends from the West are interested in boosters; and as a member of the subcommittee, I want to help them.

I do not want to see any group in any valley in the country—whether in Wyoming or in New Hampshire, and whether receiving such programs by CATV or by booster or by some other means—not to have a full and fair chance to receive television.

Many of the parts of the pending bill are good.

The PRESIDING OFFICER. The additional time yielded to the Senator from New Hampshire has expired.

Mr. COTTON. Mr. President, may I have 1 more minute?

Mr. DIRKSEN. Mr. President, I yield 1 additional minute to the Senator from New Hampshire.

The PRESIDING OFFICER. The Senator from New Hampshire is recognized for 1 more minute.

Mr. COTTON. Mr. President, many of the parts of the pending bill are good. In any city or town where a struggling local TV station is endeavoring to survive, I am perfectly willing to see the CATV there come under some regulation.

But I object to the pending bill, in that it would bring under regulation by far the largest proportion of CATV stations which are not in any way in competition with any local station.

The bill goes too far; it provides too much regulation. The bill would encourage litigation. The bill would cause expense and harassment. That is why I shall vote to recommit.

The PRESIDING OFFICER. The additional time yielded to the Senator from New Hampshire has expired.

Mr. MONRONEY. Mr. President——

Mr. MANSFIELD. Mr. President, I assume that the Senator from Oklahoma has in mind a motion to recommit.

Mr. MONRONEY. I desire to call up my motion to recommit. But I shall be happy to withhold that, if the Senator from Montana wishes to speak. We have 1 hour on each side, and I hope we shall not use too great a proportion of it.

Mr. MANSFIELD. But it will have to be used on the motion to recommit.

The Senator from Florida [Mr. HOLLAND] has suggested that he would like to offer an amendment.

Mr. President, on behalf of the Senator from Florida [Mr. HOLLAND], I offer the following amendment: On page 7 of the bill, strike out the last sentence.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Florida.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. Does the Senator from Montana wish to ask unanimous consent that the time required for the quorum call not be charged to the time available to either side?

Mr. MANSFIELD. Yes, Mr. President; I so request.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

The absence of a quorum has been suggested; and the clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, I ask that the pending amendment be read.

The PRESIDING OFFICER. The pending amendment, submitted by the Senator from Montana [Mr. MANSFIELD], on behalf of the Senator from Florida [Mr. HOLLAND] will be read.

The CHIEF CLERK. On page 7, it is proposed to strike out the last sentence.

The PRESIDING OFFICER. The Senator from Florida is recognized for 15 minutes.

Mr. HOLLAND. Mr. President, I yield myself 5 minutes.

Let me say that the purpose of the amendment is to enable me to ask some questions of my friend, the Senator from Rhode Island.

I may say that I have not recently read the Communications Act, but I read it last year when we considered the equal-time provision.

Mr. PASTORE. As a matter of fact, the Senator from Florida and I have read section 15 of the Communications Act a number of times.

Mr. HOLLAND. I thank the Senator.

I wish to make clear that I am not an expert in this field; and therefore I shall have to rely largely on the replies I receive from the Senator from Rhode Island in response to my questions in regard to a matter which disturbs me.

I note that the bill is largely for the protection of what are termed local television stations.

Mr. PASTORE. No, just one.

Mr. HOLLAND. A single station?

Mr. PASTORE. Yes, it must be a single station; otherwise, the bill will really have no effect.

Mr. HOLLAND. I thank the Senator from Rhode Island.

That brings me to the following point: As Senators know, in the State of Florida the terrain is rather flat. The question of whether there is a single station generally depends on the height of the receiving tower at the point of reception.

For instance, in the city of Tallahassee, which until recent years has had very poor reception—though it is our capital city—there was located, several years ago, a so-called local station, and a good one, between Tallahassee and Thomasville, which I am sure would be termed a local station; but before and since that time, by putting up a higher tower, there may be received various stations in Jacksonville, which are about 150 or 160 miles away, a station in Panama City, which is only 100 miles away, and a station in Dothan, Ala., which is perhaps the same distance.

In the opinion of the Senator from Rhode Island, what is the standard as to what constitutes a single local station available for reception in a community?

Mr. PASTORE. It would be governed by the rule of reason, as I look at it. After all, the Commission is presumed to be proficient in this particular field. One could not say that a station in Providence does not go into Pawtucket or East Providence. It is difficult to state exactly; but I would say, within the area described by the FCC in granting a license to a station as to how far it can go, that would more or less control the matter.

Mr. HOLLAND. Looking at the bill, I notice several partial descriptions in this field, none of which, it seems to me, make it clear as to just how this question should be resolved. For instance, on line 21, page 4, of the bill, a local station is described as "a television station assigned to a community."

In lines 1 to 3, at the top of the next page, it is described as "a television station which is providing the only available locally originated television broadcast program service."

On lines 11 to 13 of page 6, it is described in the same words just read by me, "a television station which is providing the only available locally originating television broadcast program service."

Then four lines below that, on lines 16 to 18, it is described as "a television broadcast station which is assigned to a community."

Then a little bit later, in line 22, it is simply referred to as "local television broadcast station."

Similarly, on page 7, in lines 12 to 14, it is described again as "a television station which is assigned to a community."

There is yet a third concept that may or may not be applicable, which is shown on lines 9 and 10 of page 2, where appear these words "within the direct range of television broadcast stations."

All of those, at least to the Senator from Florida, do not add up to give a clear description of the area of application of this bill to stations which are to be considered as local stations. I am disturbed by that fact. I therefore ask for the clarification by my distinguished friend from Rhode Island. Also, I think the RECORD should be clear on this, because this is not wholly an engineering fact. This has to do with economic questions of great importance, not only to the so-called local stations, but also to the local customers or viewers, and to the communities generally. So I would appreciate any clarification of this question which the distinguished Senator might give.

Mr. PASTORE. In order to give a perfect explanation, of course, the language must be read in context, as we go from sentence to sentence.

The PRESIDING OFFICER. The time of the Senator from Florida has expired.

Mr. HOLLAND. I yield myself 5 additional minutes.

Mr. PASTORE. There are certain standards by which the FCC operates, and it has adopted what more or less are termed trade terms as to the kind of facility to which they are granting a license. The Commission might say it is an A service or a B service, for this city or that city.

The intent of the bill, and the way we have interchanged these words, is always with the understanding that where there is an imposition of a duty to public authority is actually provided in the bill, it is intended to protect the only existing TV station giving the only available service in a particular community on a free basis.

If the Senator wants to take up the wording of the bill step by step, I think we can get along much better. For instance, I think the Senator pointed out the first example of the language on page 4. Is that correct?

Mr. HOLLAND. That is correct.

Mr. PASTORE. I think the Senator referred to the language which reads:

> The licensee of a television station assigned to a community in which such community antenna television system serves subscribers may petition the Commission to include in such license such conditions on the community antenna television system's operation as will significantly facilitate the continued operation of a television station which is providing the only available locally originated television broadcast program service.

May I ask this question, as respectfully as I can? What is bothering the Senator about that, so I can answer the question?

Mr. HOLLAND. I referred to the station in Tallahassee. It is a local station, and it is an excellent station. It is owned by splendid, civic-minded people. I would like to do anything that is proper to protect them, along with their interested viewers. But before that station was there and since, as I have just stated, broadcasts or telecasts from other stations, with a little extra expense, were receivable, and viewed by many people, from the Jacksonville, Dothan, and Panama City stations.

My question is directed to that situation, and to a similar situation in Fort Myers, which has a single locally originating station, but which is in comparable distance from other stations as Tallahassee is from the outlying stations there. It is a similar distance from Tampa, St. Petersburg, Miami, and West Palm Beach. I have viewed telecasts from some of the stations in these other locations while in the Fort Myers area. Yet I notice at Naples, which is only 40 miles from Fort Myers, they have spent $350,000 of local money to put in a 700-foot tower back of that town, about 7 miles, which will open next week and receive for distribution the pictures from the three Miami stations and from the one station in Fort Myers.

Mr. PASTORE. May I ask a question?

Mr. HOLLAND. The Senator certainly may.

Mr. PASTORE. This is how the bill would operate in the particular instance of Florida. There is already a CATV system installed. Then a station comes in and, at the time the bill is passed, they are both operating. Let us assume the CATV has siphoned off the viewers in the congested areas; and stops there because it would be uneconomical to extend their lines to the outskirts because the cost would be prohibitive. Then let us assume that section began to build up and more people entered the CATV system. In other words, if the CATV system filed a petition to extend their facilities, a question might arise as to whether a public convenience and necessity were being served. It might well be the television broadcasting station would have to depend upon those people for free television viewers——

The PRESIDING OFFICER. The time of the Senator from Florida has expired.

Mr. PASTORE. I have 15 minutes. I think we can share the time together.

Mr. HOLLAND. I thank the distinguished Senator.

The PRESIDING OFFICER. The Senator from Rhode Island is recognized.

Mr. PASTORE. About the only thing that the broadcaster can do is to object to a further expansion and to rules which might interfere with his operation and might compel him to go off the air. Otherwise he could only say, "I petition to have my signal shown." That is the signal which is shown at a different time.

I do not think there would be that problem as much in Florida as there might be in the Midwest, because there is not the differential in time from the point where the large broadcasting station is sending out the signal which is captured by the CATV system, as against the broadcasting station which has an arrangement with the affiliate. Where one does not have that time differential element or bringing the programs in from a distant point, I do not think one would have the question of duplication, running more or less simultaneously.

In that particular case the local broadcasting station could as one step petition the FCC and ask for an order that the CATV system show, among the multiple signals to be provided, the signal which emanates from the local broadcasting station, which lives upon advertising in that locality. Unless the local station can service those people, the local station may lose its advertising, and if it loses its advertising the station may have to go out of business.

In that particular case, if the station would show cause, the Commission could order the CATV system to duplicate the signal of the local broadcasting station on one of the various signals which are provided.

Mr. HOLLAND. Would it be necessary to pay for that?

Mr. PASTORE. No.

Mr. HOLLAND. In other words, the CATV system in question would receive the signal from the so-called local station free, and would simply have to include it among the three or four or five signals handled through its wires?

Mr. PASTORE. This is local government at its best, because actually it would say, "I am taking nothing away from you. Let the people who pipe into you and who have four stations see this program."

If the people want to turn the programs off they can do so, because they can turn to three more programs. If the people want to see that program, they must pay for it.

There has been a big argument this afternoon as to whether it is necessary for a TV station to pay for its programs or not. The Senator knows how this works. The network sells time. For the local broadcasting station the local rate or the national rate may be $100 an hour. If someone is going a carry a network program, the local station generally has an arrangement where he gets 30 percent and the network retains 70 percent of the rate. It would be a payment to the network of 70 percent of the cost for the 1 hour of time of television. That is what I mean by the local station paying for it. We know in contracts of the affiliates that arrangements are made for so many free hours which are given to the networks.

In this particular case all of this would be done on a voluntary basis between the two parties, the local TV and the CATV, or it would be ordered to be done by the Commission, and there would be no charge insofar as this bill is concerned. The property rights in a program is something between the two parties.

Mr. HOLLAND. The order of the Commission would have to include as one term that there would be no charge, no cost for the displaying of the picture.

Mr. PASTORE. They would not even mention it, because the other party would be coming in and begging that the CATV system use the picture.

Mr. HOLLAND. Mr. President, I have two more instances to cite. I shall try to cover them in the time I have remaining.

In the case of Naples, I think we understand the situation. I will say that I have had no complaint from the so-called local station at Fort Myers. Apparently that station is not adversely affected. Apparently the Naples people intend to have the local program shown along with the three programs from Miami.

The next instance relates to the Fort Pierce, Eau Gallie, Vero Beach, Melbourne group. By the investment of citizens there an amount of $280,000 has been provided. A franchise has been obtained from the four cities affected, and the organization is now putting in the wiring distribution system.

As I read the letter, this group is not as far advanced as is the group at Naples, and they do not have, so far as I know, any local station. I believe the closest station would probably be at Orlando in one direction and perhaps at West Palm Beach in another direction.

Mr. PASTORE. Mr. President, will the Senator yield?

If there is no local station, there is no problem. There would simply be the filing of a petition for a license, and this group would come under the umbrella of supervision and protection by the Federal Communications Commission.

This action would preclude, in some instances, having the States move in with the chance of characterizing these groups as common carriers. To a certain extent there is a certain amount of protection even for the CATV people.

In the case the Senator cites and illustrates, I would say definitely that would be my clear understanding, from the provisions of the bill, from the hearings and from the history we developed. It is our understanding with the members of the Commission who appeared before the committee that in a situation of that kind this procedure would be a perfunctory procedure.

Mr. HOLLAND. The Senator is probably referring, as I was in my question, to a local station as one located in the immediate community.

Mr. PASTORE. That is correct.

Mr. HOLLAND. I doubt if that is the correct description, from all of the things we have heard, and those appearing in the text. I think the description more likely would be any station the signal of which can be received by viewers with clarity and with sufficient convenience to be available at practically all times. It would not have to be in the local town.

In fact, the station I referred to at Tallahassee is out on the line between Florida and Georgia, lying between the cities of Thomasville, Ga., and Tallahassee, Fla., and not actually located within the city of Tallahassee.

Mr. PASTORE. If the Senator will permit, I shall read from the report, for I think this is rather pertinent.

It should be pointed out that under this subsection the local television station has the burden of setting forth the operating conditions desired and of establishing that the imposition of such conditions would significantly facilitate its continued operation. Further, the necessity for making such determination would be limited to a comparable small number of situations wherein existing community antenna television systems serve subscribers in a community to which a local station has been assigned.

In other words, this is not punitive on the CATV systems. The whole burden of proof will be on the local station. The local station will have to be the moving party.

At best, what could the TV station win? It would simply be permitted to have its picture shown on CATV, together with other signals.

We are making it abundantly clear that there is no attempt to put the CATV systems out of business. No one wants to do that.

It has been said this afternoon, with dramatic force, great fervor and emotion that the only service for people in some of the localities, such as there are in the State of Kansas, comes from the CATV systems. I am not criticizing the CATV systems. As I said yesterday, they have rendered a noble service.

There are many localities in this country in which the people would not have an opportunity to view three or four signals, unless there were CATV systems.

I do not want to leave any impression with anybody that we are trying to oppress these people or trying to put these people under supervision, in order to find out what their profits are. I did not ask one CATV representative who came before our committee, "How much money are you making? What is your return on your investment?" I was not interested in financial arrangements. I do not want to do anything to hurt these people. We realize that this whole industry must be placed under the aegis of the FCC, if the FCC is to carry out its mandate, that it must, under the spirit of the law, bring free television to as many viewers of this country as possible, under a competitive system. That is the purpose, and it carries out the philosophy, of the law. If we cannot trust the Federal Communications Commission to assume that responsibility and to make sure that in some instances we protect those free viewers, who may be in

complete darkness unless something such as this mild bill is passed, we will be remiss in our obligation.

The argument is made, "Why should these people be put under regulation?" The answer is that this is the only way we can do this equitably. Why are the broadcasters put under regulation? These people are dealing in television.

Their argument is, "I am no different from the person who puts an antenna on his roof and takes the picture out of the air. The fact that I take the picture and sell it to somebody else for $9 a month is nobody's business but my own."

Can the Senator follow that reasoning? I cannot. I cannot follow that logic.

Mr. HOLLAND. I can follow it.

Mr. PASTORE. These people are in the television business.

Mr. HOLLAND. I can follow it at least to a certain extent. It seems to me this presents a question as to whether the State or the Federal Government ought to come into the picture as the regulating agency.

Mr. PASTORE. I shall say something further to the Senator in that regard.

Mr. HOLLAND. The distributing facilities are wholly within the control of the State public utilities commission.

Mr. PASTORE. The Senator is quite correct.

Mr. HOLLAND. All of this is on a wire, on the telephone circuit.

Mr. PASTORE. There is a serious question in this area.

Let me tell the Senator what happened in one of the States. In Montana the legislature passed a bill, which was vetoed by the Governor, under which they would have put these CATV systems under State control, under the public utilities commissioner. I suppose that would have made them common carriers, and they would have been limited to a 6-percent return on their investment.

These people fought that. They do not want that. As a matter of fact, if the Senate desires to pass a resolution that it is the sense of the Congress we should put this responsibility under the sovereignty of each individual State, and that it is not a matter for Federal control or Federal concern, I tell the Senator very frankly that I think that the representatives of the CATV systems who are in the galleries now will fall out of the galleries.

They do not want that. If the State of Florida wishes to take the operation over, if the State of Montana wishes to take it over, or if the State of Oklahoma wishes to take it over, that is satisfactory to me. I do not think they wish to do that, and I do not think we should require that of them, for the simple reason that this picture does come through the ether. The ether has no bounds, and the picture perhaps could emanate from the State of Washington. Perhaps it traverses Oregon. It happens to go to Montana in some form or other, and they have a system of antennas. They have a system of amplification of microwaves. Then they put it on a cable which rests on a pole, and the cable enters a man's house, and he sits in his home and looks at television. It is wonderful. I still think the system should be under Federal control and I believe it should be controlled in the modest way proposed.

Mr. HOLLAND. Does the Senator think the system should be under Federal control even in the many cases where the signal had to originate in the same State where it was received—as, for example, in the case of Key West?

Mr. PASTORE. The Senator raises a nice legal question. I would assume in a case of that kind that while it may be a favor to the State to allow the system to come under the aegis of the Federal Communications Commission, I still think the State could control it.

Mr. HOLLAND. I thank the Senator.

Mr. PASTORE. The State could control it.

Mr. HOLLAND. There is one additional point I wish to raise with respect to the operation of the service in Key West, a city with which the Senator is familiar.

Mr. PASTORE. Yes, I am familiar with it. As a matter of fact, I went to Key West to look at the operation.

Mr. HOLLAND. There is a receiving tower on one of the islands within easy receiving distance of the Miami stations, and the programs are piped by wire or otherwise 100 miles, or whatever the distance between those two points is, from the receiving station to Key West, along the Keys, and they are shown to the people on the Keys and in the city of Key West.

The city of Key West is perhaps the only place in Florida—certainly the only one I know about—which is far enough away from any transmitting station to cause great difficulty in receiving signals directly through the ether—even through the balmy Florida ether—signals from the station which originated the broadcast. So in that area there could not be a local station either?

Mr. PASTORE. No, because there are three television stations in Miami and I believe there is none in Key West.

Mr. HOLLAND. And they are all beyond the distance for direct service to Key West.

Mr. PASTORE. The Senator is correct. The provision would not apply. I assume the people who own this particular station would make their application. There would be nothing to it. I do not see that a hardship would arise. Much has been said about expensive lawyers which would have to be hired. I do not see the necessity of that exorbitant expense at all.

Mr. HOLLAND. There is another comment I should like to make and then I should like to ask a question.

I have not received any communication from any so-called local television station in Florida. Perhaps there is none such in Florida because of the facts which we have recited heretofore. Am I to understand from the arguments that have been made by the distinguished Senator from Rhode Island and others that there are local stations elsewhere throughout the Nation which are requesting this legislation?

Mr. PASTORE. As a matter of fact, the stations have presented their requests in such a way as to make it appear to be a matter of life and death. That is how serious the situation is. In States such as Idaho, Wyoming, and Montana, because of the nature of the terrain, it is almost impossible for a local station to exist unless it operates in a congested area. What happens? It is put in a congested area, and the operators feel that is their security. It is their bread and butter. The advertising supports the station. Then the CATV comes in. It may take its signals from Spokane. Perhaps it brings in three signals instead of one.

Mr. HOLLAND. Does it refuse to take the signal of the local station?

Mr. PASTORE. In many instances that has occurred.

Mr. HOLLAND. If that is so, I see ground for complaint, but if it did take the signal of the local station, as has been indicated——

Mr. PASTORE. Had that happened in the beginning we would not be here now. That is the point. That is all we are dealing with. When the bill was first introduced we were asked to write a bill which would compel the CATV to show the signal of the local broadcasting station upon request.

I said, "That is unfair. There must be an umpire. You must show reasons. What we will do is to allow you to file a petition, but the decision must be made by the FCC. We cannot allow you at your request to impose upon someone else's privileges and prerogatives. If the CATV people are brought under control and they petition the Federal Communications Commission, if it is decided that it is in the public interest, convenience, and necessity that your picture be shown, that will be ordered."

We could not be any fairer than we have been. As a matter of fact, the bill appeared to be absolutely acceptable. We sat down, as I said yesterday, and agreed that certain amendments should be made. The proposal to recommit is a last-minute move.

Mr. HOLLAND. Of course, the Senator means it was acceptable to the people with whom he was dealing.

Mr. PASTORE. The Senator is correct.

Mr. HOLLAND. Unfortunately the industry is spread out so broadly that he could not have heard from everyone or have them all in the committee room.

Mr. PASTORE. I realize that, and I hope I did not leave the impression that I talked to every one of the 700 operators. However, the operators of these stations have an organization through which they deal with the Government on such questions as we have before us. Some have problems different from others. I suppose the CATV operators in the State of Florida would not be as excited about this measure as perhaps the CATV operators in a State where there is a real problem, such as the States of Wyoming and Idaho.

Mr. HOLLAND. The Senator means the Mountain States.

Mr. PASTORE. The Mountain States.

Mr. HOLLAND. And the sparsely settled States.

Mr. PASTORE. That is correct. It is fair to assume that when one speaks with the president of an organization

or with members of its board of directors or its executive director or its lawyers, they more or less speak on behalf of the members of the organization, although I know they do not commit each and every one of them. I realize that. It would be impossible for me to talk to them all. However, many delegations have visited me in the intervening days, and whenever I could do so, I have talked with them. I have sat and talked with many CATV people. I have made it clear that we do not want to hurt any one, or put him out of business. This is a step in the right direction for all.

A measure of the kind before us must finally be passed—whether it be next month or the month after. It is inevitable. It must come because somewhere along the line someone will become indignant and say, "Such stations should be classified as common carriers."

We have provided specifically in the bill that such stations shall not be common carriers. Others think as does the Senator from Colorado, that they should get consent before taking a picture out of the air and selling it to someone else. We have provided specifically in the bill that that consent must not be required. We have taken care of that contingency in those situations.

Mr. HOLLAND. Let me ask two questions to bring into the RECORD what I believe is a résumé of this question. Do I correctly understand that where there is no single local station, and only one which can be viewed with facility and with relative ease from a certain locality, this question does not apply as to any station's being in a position to file an application and to be given an order requiring its signal to be carried?

Mr. PASTORE. The Senator is correct. Anyone could object to anything, but I do not think such an objector would be entitled to an order.

Mr. HOLLAND. Do I correctly understand that when there is no local station in the sense that there is no station which can be heard directly or viewed directly from the receiving area, the criterion likewise cannot apply in an injurious way?

Mr. PASTORE. This criterion does not apply.

Mr. HOLLAND. I thank the distinguished Senator.

Mr. President, I withdraw my amendment and I yield back such time as I may have remaining. I trust the Senator from Rhode Island will do likewise.

Mr. PASTORE. I yield whatever time I have, if I have any. If the amendment is withdrawn, all time is withdrawn.

Mr. MONRONEY. Mr. President, on behalf of the senior Senator from Oklahoma [Mr. KERR] and myself, I move to recommit the bill to the Committee on Interstate and Foreign Commerce.

Mr. PASTORE. Mr. President, I suggest the absence of a quorum, but I do so with the condition that the Senator from Oklahoma does not lose his right to the floor.

The PRESIDING OFFICER. Does the Senator from Rhode Island request that the time for the quorum call not come out of the time of either side?

Mr. PASTORE. I so request.

The PRESIDING OFFICER. Without objection, it is so ordered.

The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, I ask for the yeas and nays on the motion to recommit.

The yeas and nays were ordered.

Mr. MONRONEY. Mr. President, I rise to support the motion of my colleague from Oklahoma and myself to recommit the bill S. 2653 to amend the Communications Act of 1934 to establish jurisdiction in the Federal Communications Commission over community antenna systems. The bill would extend the long arm of Federal regulation to all the community antenna systems which exist throughout the country and which have been responsible for expanding television service to about 2 million people who otherwise would not have it.

I believe Senators would be interested to know that out of the 768 CATV systems which are listed, the average system has 530 subscribers. We are talking about what I consider to be little business. We are talking about organizations which were founded by free enterprise, many by TV repairmen or dealers in television sets at the local level, or sometimes by an electrician. Many of the systems were built and many of the lines strung by the men who founded them.

It is interesting to note also, as the effort is made to extend Federal control to these systems, that CATV was born during the television freeze which existed from September 1948, until July 1952. It was because of the failure and inability of FCC to act and allocate any new television stations that CATV was born. It was born as a result of the initiative of the free enterprise system. It has grown as a part of the free enterprise system. It is television which serves more than 2 million people throughout the gray or snow areas, or areas where no television could be received.

We talk about people in the mountain areas. A few people may be hurt, it is true, by the existence of the competitive CATV system, but certainly let us not forget about the 2 million who have been served without Federal regulation by systems which will continue to expand and perhaps eventually serve as many as 4 million people.

This certainly seems to me to be a poor time, in the closing days of the session, for Congress to try to regulate this industry. I wish to make it absolutely clear to all Senators that I do not believe it would be possible for the committee to take further action on the bill if it were recommitted to the committee. In that regard, I concur with what the chairman of the subcommittee, the Senator from Rhode Island, has said. However, I wish Senators to know that this is not a matter of urgency. To the contrary, I believe it is a matter of sufficient importance that we cannot afford to act without knowing what we are doing.

The very adoption of half a dozen amendments on the floor of the Senate, changing in many respects the action of the subcommittee, certainly should be convincing evidence that it is not a perfect bill, and that the last words on it have not been said with respect to the desirability of Federal regulation of this industry.

The opposition of the Senators who are fighting the bill and are moving to recommit it is not the result of any lobbying by any great high-pressure lobbyist. I believe I can speak for those who oppose the bill when I say that we rather like to have our constituents come to Washington when legislation of vital interest affecting them is being debated in Congress, and to go to work themselves in support of their position on it without paying huge sums of money to Washington lobbyists to get the job done for them. Certainly I compliment them on paying their way to Washington and working in their own behalf and letting Congress know what effect a bill like this will have on their industry. That is important.

Certainly I do not feel that the confusion which has resulted from some misdirected or misguided or misinformed efforts of attorneys to get them under Federal regulation, and who continue to urge them to accept Federal regulation, is to the benefit of the national association or meets with the approval of the majority of the members of the association. The Senator from Florida [Mr. HOLLAND] has said that this is a widely dispersed association of little businessmen. Many of the presidents must repair their own lines. Certainly many of them must collect their own bills. They have little time to read and understand the intricate problems of legislation that might affect them, or to worry about whether they would be destroyed by booster bills or repeater bills or translator bills, or all these other things that are being brought up. They are trying to keep the service going, because most of them are two- or three-man operations.

Regardless of any question about all the amendments which were agreed to, the fact is that most of them were presented by the Washington attorney for the association. Many members of the association were telling me as long ago as last July, when I filed objections to the bill when it was reported, that the people in my State did not want it, that they thought it was destructive of this little business.

I have before me a letter from the president of the National Community Television Association, Inc., which I shall read into the RECORD, as follows:

NATIONAL COMMUNITY TELEVISION ASSOCIATION, INC.,
Washington, D.C., May 9, 1960.

The Honorable A. S. MIKE MONRONEY,
U.S. Senate, Washington, D.C.

DEAR SENATOR MONRONEY: We have been asked to advise you of the official position of National Community Television Association, Inc., with respect to S. 2653. The NCTA does not support, and has not supported, S.

2653, as reported by the Communications Subcommittee of the Senate Interstate and Foreign Commerce Committee.

Amendments which have been discussed, in our opinion, do not make the bill acceptable to the CATV indusrty, nor do we believe it to be in the public interest.

Respectfully,

A.J. MALIN, *President.*

Mr. President, I believe that ought to put at rest the question whether the position taken by its Washington representatives, who seem to have been so determined to impose Federal regulation on this little group of people, represents the present view of the industry.

I hope Senators will realize that the only proper way to handle the bill is to recommit it; that the amendments will not do it any good, because the broad issue presented to us is the question whether we must extend the long arm of Federal regulation, with all the expense involved, to require licensing of 768 small businesses in order to protect a very few who could be adversely affected by the existence of the CATV system.

What does the bill do? The bill requires licenses from the Federal Communications Commission to construct or operate a community antenna system. Today it is possible to construct a community antenna system wherever one wants to construct it, where he can find a need for it and where he can find people who are willing to put up the money to get some television service. It is necessary to sell them on the need. A contract must be written for the service. Many of these contracts must run for as long as 3 years in order to help pay for the building of the lines or the extension of the service.

If the bill shall be passed, whether there is a single television station in a community or not, the man cannot begin to solicit anybody to be subscribers to the line unless he first hires a Washington lawyer and comes up and sees if he can get a construction permit; and even then it is not quite clear. He does not know whether he will get a certificate of convenience and necessity to operate it.

So the first thing we do is require Federal licensing for the construction and extension of television service to the dark areas, because whether the cases affect a local station or not—and most of them do not—it is not possible to build a new CATV without the Federal Government giving the say-so. That is what the bill does first. It is necessary to have a license from the Federal Communications Commission to construct and operate.

Second, the bill gives the Federal Communications Commission the same authority over the community antenna system as it has in respect to the licensing of a radio or television broadcasting system.

Granted, it does grandfather in a station now operating. For how long? Three years. It is a kind of short-lived grandfather. Then the station must go through all the evidentiary hearings, and meet any protests, both from the licensee of the local TV station and anybody else, and prove to the Federal Communications Commission that it is entitled to a 3-year extension of its right to serve.

Let us assume the parties have built their line. They have put their money in it. Seven hundred and sixty-eight systems have been built with their own money. The bill puts in jeopardy their right to continue in business after 3 years. They are at the mercy of the Federal Communications Commission.

I do not think that is what we want to do with free enterprise, which starts with its own money, and then have the Government say, when it is highly successful, and is bringing television to hundreds of thousands who could not otherwise see it, that "You are dead in 3 years unless the FCC says you can go ahead and perform the service you have been willing to perform."

Mr. HAYDEN. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. HAYDEN. Does the Senator seriously believe that the Federal Communications Commission would kill off the CATV stations.

Mr. MONRONEY. We do not know. I do know that they are in jeopardy. I do know that when they go to the little banks, as most of them have to do, to borrow money for line extensions, as they like to do, the bankers will wonder whether they will be alive 3 years from then. It will have a very adverse effect on their effort to finance themselves.

Mr. HAYDEN. Is it the general policy of the Federal Communications Commission to kill off free enterprise, or does the Commission try to permit it to continue?

Mr. MONRONEY. I know they are in jeopardy, and I know the people fear the adverse effect of the bill on the operation of their service. After 3 years, they will have to return to Washington and have an evidentiary hearing and go through all the rate and licensing aspects. They cannot do that without employing distinguished Washington counsel. That will necessitate very great expense for one-, two-, or three-man operations.

I do not think a case has been proved, by any means, that it is worth doing so much to do something for the benefit of so few.

Mr. HAYDEN. It seems to me that when the Federal Communications Commission decides one case of this kind, a pattern will have been set for all such cases.

Mr. MONRONEY. I submit that we do not know what will happen. Certainly the record of the Federal Communications Commission, which is discussed very often in the committee of the distinguished chairman of the Committee on Appropriations, has not been one to which we point with the greatest of pride, when we think of the speeding up or the settling of cases. The record has been quite the reverse.

So 768 new clients will be coming to Washington every 3 years to justify what I think can be proved to be an almost negligible number of stations which will be adversely affected, and which can be taken care of in the industry.

Mr. HAYDEN. There happens to be one in my State. The owners have spent their own money. They have built it up to a paying business. I refer to a station KIVA–TV in Yuma, Ariz. It serves that community and the surrounding area. If the new type of television facility is provided, and takes the cream of that station's business—takes its advertising away from it, what will it mean? It will mean that the people living in the city of Yuma can, by hooking up to a wire, get the CATV programs. But farmers living in other parts of Yuma County will be completely blacked out if station KIVA–TV cannot make money enough to enable it to remain in operation in Yuma.

Mr. MONRONEY. I am glad the Senator mentioned Yuma, because it has been mentioned so often on the floor. Many Senators might have believed that a CATV facility existed in Yuma. There is no such facility in Yuma. The radio and television station does not have any adverse effect, because there is no CATV system there.

Mr. Butcher, who owns the station, and who is a great friend of Mr. Eisenhower, has established national headquarters in an effort to fight for the passage of the bill and to prevent a CATV station from ever threatening the competition of bringing Los Angeles stations to the good people of Yuma or to the people living in other parts of Arizona, so that they might have the choice, not of one station, but of three or more stations. I do not believe that is wrong, under the American system. I do not think we are here to expand the Federal Communications Act. It never was intended to guarantee economic protection.

The only test for the granting of a license for a television or a radio station, in the long history of the Federal Communications Act, has been, Is there a frequency available which will not interfere with the frequency assigned to someone else? A hundred television stations could be established if frequencies were available for them. If there is a radio station in Yuma, six stations could be put in if frequencies could be found for them. But we have never contemplated granting economic protection to licensees until this bill was introduced. We are breaking entirely new ground, which will extend in the future to such a point that other people will want to install television in an area, and it will be necessary to provide economic protection for the local single station. I do not think such a policy has ever been established.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. PASTORE. Is it not true that in the whole history of the Federal Communications Commission the Commission has never refused to renew a license for either radio or television?

Mr. MONRONEY. I suppose that is probably correct. But it does not help with the bankers for a small CATV station, or those who may wish to buy stock in it, or the owner who wishes to expand and take into his range a thousand new

people on the edge of town. This is a fact of life. It is a pioneering effort.

It does not help to say they have never done so, so that we can put them in this license position, and expect that the Federal Communications Commission will automatically rubberstamp it through.

Mr. LONG of Louisiana. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. LONG of Louisiana. Is it not true that in a great number of cases the operator of a television station is protected from competition because not more than one or two stations can be licensed in any area? On the other hand, does not the bill undertake to provide that except under certain conditions not even an aerial can be erected to pick up the signals which are all around the area?

Mr. MONRONEY. The Senator from Louisiana is correct. The bill is rather discriminating, in a way.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. PASTORE. Of course it does not do that. There is nothing discriminatory in the bill. I challenge any Senator to point to any language which holds that an aerial cannot be erected. Of course an aerial can be erected.

Mr. MONRONEY. Not if there are more than 50 connections.

Mr. PASTORE. No. Anyone who erects an aerial, picks a signal from the air, and transmits it a long distance, moves into a locality, and through the instrument of wires and cables into someone's house, and charges a fee for the service, should be under Federal control.

Mr. MONRONEY. Why?

Mr. LONG of Louisiana. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. LONG of Louisiana. Suppose the owner of an apartment house having 500 apartments erects an aerial and lets every tenant connect to the aerial. Then suppose some other person erects an aerial of a similar height and connects it to 50 homes. What is the difference?

Mr. MONRONEY. The man who erects a master antenna on a huge apartment house is exempt, while the man who seeks to bring television out into the country by means of a central antenna system to more than 50 subscribers, at a fee of $1 or $2 a month for the master antenna system, which will bring in 3 or 4 stations, must obtain a license.

But the country people may be worse off. It may be necessary to have a microwave to get the signal through to them. In order to transmit a signal to them, it is then necessary for the operator to be licensed by the FCC, because his system broadcasts a radio signal. But these people do not put out a signal. They put nothing in the air.

Again, the bill would stretch the application of the Federal Communications Act far beyond anything to which it has ever been interpreted as applying.

It is said that a CATV is not a common carrier; and I thank the chairman for his consideration of this group, by writing that provision into the bill.

The only others who are regulated are the television and the radio broadcasting stations. But they are putting signals into the air.

All that the CATV people do is stick a pole high into the air, take out of the air a signal that is in it, amplify the signal, and pipe it through cables to people who are willing to pay $5 or $6 a month to have the benefit of receiving the signals of a number of television stations.

Where a local television station is already in existence, no certificate of convenience and necessity will be issued, because consideration will have to be given, under the bill, to facilitating the operation of the local station. The area might be a good one. Perhaps most of those who would be prepared to operate a television station would be smart enough not to establish one in an area which had a small population. But if a television station were established in a city with a population of 300,000, and if that were the only station there, I doubt very seriously whether, under the pending bill, it would be possible for a CATV to obtain a license to bring in the signals of the other networks.

Mr. LONG of Louisiana. Does the bill violate the principle that the airways are free and are available to everyone?

Mr. MONRONEY. I do not think it does. But it violates the principle of not having Federal regulation of cable transmission.

Let me state the best illustration: All of us know that the mightiest force in television, which controls 90 percent of all television programs received by viewers in the United States, are the networks. They are not subject to regulation, and very few Members of Congress would want them to be regulated. Why? Because the concept of the Federal Communications Act is that the networks themselves are not putting anything on the air. They use cables to carry the signals to the local stations. So they are not regulated.

So we do not regulate—and I do not think we should—the mighty giant of television which supplies the television diet of 50 million television sets by carrying the television program signals by cable to the viewers.

But if the quite similar CATV systems are to be regulated by means of this bill, we shall be establishing a precedent; and in that event I do not see how we can properly regulate the smallest midget in the industry, but fail to give some consideration to regulating the mighty networks which are carrying signals by means of a similar system, and also without using the airways.

Mr. LONG of Louisiana. Does the bill provide that a community antenna system cannot carry the same program that is being carried over a local station at the same time?

Mr. MONRONEY. I should like to discuss that point.

Fifty-two CATV systems are today operating in cities in which there is a local television station. By means of this bill, those CATV people will be required not to duplicate a program which will be run later. In that event, all 52 of those CATV's will have to employ administrative personnel, who will have to compare schedules, and the CATV's will have to hire engineers, so they can switch back and forth, to be sure they are not putting out on this Friday a signal that will be put out by the local station next Friday. So those 52 CATV's will have to more than double their personnel, in order to protect the local stations.

Mr. LONG of Louisiana. I do not know too much about how these antennas operate. But presently is it necessary for someone to stay there, to control the antenna all the time?

Mr. MONRONEY. I am reliably informed that most of them are completely automatic. They are beamed to a certain group of stations which they can reach; and they amplify the signals. They do not have to be attended. Their concern is only with possible line breaks. They do not have to turn on or turn off any signals or stations, because they do not originate anything and they do not add anything.

From the distinguished Senator from Wyoming, I have learned that in some cases the CATV's are sufficiently manned to be able to monitor, as a public-relations service, so they will not duplicate a program which later on will be shown by the local television station.

Mr. McGEE. Mr. President, will the Senator from Oklahoma yield?

Mr. MONRONEY. I yield.

Mr. McGEE. A pending case involves both the city of Casper and the city of Rawlins. The CATV can bring in four channels from Denver, but it releases in the community only three. That gives the CATV a choice of the programs it will release; and under the system that is used, an engineer of the CATV has the opportunity to make that decision. The CATV carried three of the Denver stations, but did not carry the fourth one, KSPR; and it went out of business.

Mr. MONRONEY. I thought it was a UHF.

Mr. McGEE. No; it was a live TV station—Station KSPR. So it went out of business. The testimony was that they could not get the signal on the local cable, but they could get the signals of the stations that remained in business. That point became a bone of contention. The CATV already had sufficient engineering staff to choose the signals for its pattern. I think that raises a question of how much additional overhead there will have to be, and I think this probably will be the pattern for most of the CATV's.

Mr. MONRONEY. I think it can be worked out. I think there is a desire on the part of most of CATV systems to cooperate, and I do not think it is necessary to have Federal regulation in order to take care of the very few stations which are affected.

Mr. McGEE. I merely was attempting to refer to the question of overhead.

Mr. MONRONEY. The problem of additional overhead will affect 52 of them, if they are required not to produce a program which will be produced later on by the local station.

Mr. LONG of Louisiana. Then is it correct to state that in a great many cases the operating costs will be substantially increased, if the proposed regulations go into effect?

Mr. MONRONEY. Yes; for the 52 stations.

Furthermore, now we have to consider a new amendment; under the bill, as now amended, when people wish to receive by television the world's series games on the days when they are played, or wish to receive by television the Oklahoma-Notre Dame football game or the wedding of Princess Margaret, if the intention is to receive those programs as news items, the CATV must be sure to handle those events on the days when they occur. But in the case of the "I Love Lucy" program or the "Gunsmoke" program, the CATV must not duplicate a later television showing by the local station; that will be required by this bill. Therefore, there will also have to be monitoring of the program, in order to decide what is current news, according to the interpretation given by the Senator from Connecticut, and what is an entertainment program.

Mr. LONG of Louisiana. So, first of all, the bill will increase the operating costs of many of the CATV's; second, the bill will to a certain degree impede their operation; and, third, the bill will require the CATV's to hire Washington lawyers and pay them substantial legal fees, although presently the CATV's do not have to pay such fees?

Mr. MONRONEY. Yes. In fact, I think the pending bill is a full-employment bill for the members of the Washington bar who are in the television field.

In fact, I do not believe the bill will be of any particular advantage to even the small stations, except that it will prevent the expansion of CATV's. Many a man living in a small community might be inclined to establish a CATV. But if this bill were enacted into law, he would say, "Oh, all this Federal regulation is too complicated. So to heck with it. It would be easier to build my own antenna system, rather than take the time to go to see all those Washington officials, and fill out all the required papers, and abide by all those regulations."

But the point is that we want more CATV's, not less. Yet this bill would throttle the existing systems and stations.

On yesterday, I asked why the bill is not made to apply, to only the communities in which are located the 52 stations which are affected.

Mr. McCLELLAN. Mr. President, will the Senator from Oklahoma yield?

Mr. MONRONEY. I yield.

Mr. McCLELLAN. A while ago the Senator referred to the possibility of establishing a precedent for more or less assuring or guaranteeing financial success in connection with the operation—as I understood the Senator from Oklahoma—of the local television stations.

Did I correctly understand the Senator?

Mr. MONRONEY. Yes; that is correct.

Mr. McCLELLAN. I should like to have the Senator give his interpretation of three provisions of the bill which are all related and which refer to the same subject matter. We begin with subsection (d) on page 4, wherein it states:

Either prior to or within thirty days after the grant of an application for a license or a renewal thereof for a community antenna television system which was in operation on the date of the enactment of this section, the licensee of a television station assigned to a community in which such community antenna television system serves subscribers may—

This is what the television station operator may do within 30 days after the grant of an application for a license—

petition the Commission to include in such license such conditions—

This is the local TV operator or owner. It is stated that if a license is granted to this community antenna television system, certain conditions are going to be imposed. Conditions for what?—

such conditions on the community antenna television system's operation as will significantly facilitate the continued operation of a television system which is providing the only available locally originated television broadcast program service.

If that is true, and if such a petition were made, would the Commission be able to grant, or could it grant, a license to operate under conditions that would not facilitate the continued operation of the station?

Mr. MONRONEY. An economic test is imposed. The whole matter is put in jeopardy, because if the Senator has been through, as I am sure the Senator has, ratemaking cases and procedures of that kind, he knows the local television operator would be able to bring in his books. He can plead he is going to be damaged, such as Mr. Butcher is pleading in Yuma. The people that have TV stations can raise as much of a cry as Mr. Butcher is raising with reference to getting this bill passed to avoid future competition. I do not think the Commission will get through with the granting of a single grandfather license if such extreme language is put in the law as "will significantly facilitate the continued operation of a television station."

Mr. McCLELLAN. In other words, if the licensing of an antenna system would detract from profits being made by a television station operator, would that not be a significant situation that might facilitate against the continuation of the station?

Mr. MONRONEY. As a matter of fact, CBS, which knows a lot about the market necessary to support a television station, will not take an affiliate in a town of less than 50,000. NBC declined to connect with a station on the basis that the market was too small. In other words, the stations that are in trouble are going to be in trouble regardless of what is done, because most of them serve areas so small that there is no advertising market for the network to seek it out, and they have to operate without network revenues and without very much local advertising. I do not think there is a single one of those stations that could not come before the Commission and say, "We cannot exist, because we are already in trouble, and this will make it worse."

Mr. McCLELLAN. The meaning of the word "facilitate," as I understand it, is to make easy or less difficult; to free from difficulty or impediment. In other words, it is to facilitate the execution of a task; to lessen the labor of; to assist; aid.

In other words, the station owner could petition the Federal Communications Commission to impose conditions that will facilitate, that will aid, that will remove any difficulty, that will remove any encumbrance or hindrance to the continued operation of that station.

Mr. MONRONEY. Which would mean limiting competition, which this bill is designed to do, from newly constructed CATV's.

Mr. McCLELLAN. I am not saying for the moment it is not a good thing. I am trying to find out what the bill does do.

Further on, if I had a station I could petition the Federal Communications Commission to impose conditions which would significantly facilitate my continuing to operate my television station. I assume the Commission is supposed to grant it, if there is such a petition, because in subsection (e), on page 6, it provides:

Findings by the Commission as to the effect upon the public interest, convenience, and necessity of the grant of an application or renewal * * * shall be made with due regard for the desirability—

Set out in the preceding section—

of facilitating the continued operation of a television station.

In other words, that is the paramount consideration the Commission must give in the granting of every license. Is that correct?

Mr. MONRONEY. That is correct.

Mr. McCLELLAN. Let us turn to subsection (g) on the following page, and I read the concluding sentence in that subsection:

In promulgating such rules and regulations the Commission shall be guided by the standards set forth in subsection (e)—

To which I have referred; that is, the Commission must take that into consideration, and must do it on the condition that it will facilitate the continuation of a local TV station.

Mr. MONRONEY. That is correct.

Mr. McCLELLAN. In other words, the rules the Commission promulgates must be promulgated to achieve that purpose. That is the proposed law we are considering. I am not saying it is not a good thing, but I think we ought to know what it does. This provision sets up a TV station in a position of preferred consideration, and in a position of preferred consideration in competition with another station.

Mr. MONRONEY. I thank the Senator.

With all this trouble, let us get this one thing clearly in mind. On page 1090 of part 2 of the hearings, copies of which are on each Senator's desk, there is a table listing 43 communities where community antenna systems and television stations are co-located.

As of that date, 11 of those community antenna systems out of the 43, in localities which would be affected by the bill, did not carry local stations. I am advised that 9 of those 11 do so now. Since the date of the information nine more CATV systems have been installed in communities with local stations. I am advised all of them now carry the local stations. So here is this gigantic problem which demands Federal regulation. Thus, out of 52 CATV systems, only 2 CATV systems do not carry the local broadcasts.

Mr. CLARK and Mr. McGEE addressed the Chair.

Mr. MONRONEY. I shall be glad to yield to the distinguished Senator from Wyoming, but I would prefer that he be brief.

Mr. McGEE. Would the Senator prefer to wait until he has completed his statement?

Mr. MONRONEY. No; I shall be happy to yield; but I would prefer that the Senator be brief. The Senator from Pennsylvania [Mr. CLARK] spoke to me previously.

Mr. McGEE. I am glad to defer to the Senator from Pennsylvania.

Mr. CLARK. Just so I may ask whether Wilkes-Barre, Pa., is not one of the two. I refer to page 1090 of part II of the hearings. I understand the Wilkes-Barre CATV did not receive the local station signals, and it does not yet. I wonder if the Senator knows.

Mr. MONRONEY. I do not have the modern list. This was checked only last night by those who are most familiar with it. I am advised that it does now receive it.

Mr. CLARK. It does now, or does not?

Mr. MONRONEY. It does now receive it.

Mr. CLARK. My information is to the contrary.

Mr. MONRONEY. Mr. President, I yield to my distinguished colleague and friend the Senator from Wyoming [Mr. McGEE].

Mr. McGEE. First I should like to ask the Senator a question about the number of CATV systems. How many of those systems are beyond the application of this particular bill?

Mr. MONRONEY. All of the systems which I have described would be under the bill. One hundred sixteen systems have 300 or less subscribers; 452 systems have between 300 and 1,000 subscribers; 200 systems have over 1,000 subscribers. They all would come under the bill. Only those systems having 50 or less subscribers are not covered. Those are usually more or less the cooperative stations, where a small community works out the problem. It would be hard for a system to exist on fewer than 50 subscribers.

Mr. McGEE. I raised the question because I had some confusion in my own mind. In our hearings, as the Senator will recall, an attorney for the association, who now stands in rather bad light in the Senator's cause, testified that in his judgment perhaps 200 or more of the systems would fall in the 50 or less class.

Mr. MONRONEY. I am sure there are a lot more. We have always admitted that there are some we do not even know about. There are a number of such systems in San Diego and Beverly Hills, Calif., and Seattle, Wash., which are purely bigtown, neighborhood services, where the terrain makes it impossible to get good TV reception.

Mr. McGEE. Does the Senator know whether any of those happen to be apartment house operations?

Mr. MONRONEY. I would not believe that these would include any such operations. The apartment houses would be exempt, as the Senator knows, even though they might have 1,000 outlets and might be charging $2 or $3 a month for the master antenna service. The apartment houses are exempted completely and totally by the provisions of the bill.

Mr. McGEE. I was speaking in terms of those systems the Senator was explaining.

Mr. MONRONEY. These are the community antenna systems. The apartment house systems are not classified in the same group.

Mr. McGEE. I have one other question, on a point which has been raised. The question involves the effect of the proposed legislation on the future plans of CATV systems. Is the Senator aware of any effect this may have had upon the booster systems. The Senator joined me and our colleagues in passing booster station legislation a few months ago, which legislation required licensing by the FCC.

Mr. MONRONEY. I think those stations were already operating and that we gave them a certain amount of time in which they could continue to operate without a license, until they could meet the technical standards of emanating a proper signal which would not interfere with other broadcasts. I do not think there was a certificate of convenience and necessity involved, but I think it was a matter of putting a proper signal in the air waves.

These are two different things. I supported the Senator in that regard. A lot of this trouble, as the Senator well knows, in regard to complaints by small television stations, originated on the booster situation. The CATV group was kind of a "Johnny come lately" as a whipping boy.

I think there was a problem. I think the legislation we passed was good legislation, providing for standards, so that a wave going into the air would not "mess up" all the other waves or would not interfere with aerial navigation, and things such as that. Since those stations emanate a signal, certainly they are entitled to be held to some kind of a Federal standard. CATV does not emanate any signal. It puts nothing in the air. The CATV systems merely pull out of the air what is going through the air and put it on a cable and run it into a man's home, if he is willing to buy it.

Mr. McGEE. Part of the point is the fact that the booster people welcome regulation. They welcome licensing. So far as we have been able to observe, at least in our area, this has not discouraged any of these men at the present time, for they are still petitioning for the right to be licensed and to go into business. I question that this action will restrain the CATV people.

Mr. MONRONEY. I am sure it will, particularly in regard to new CATV systems.

Mr. LONG of Louisiana. Mr. President, will the Senator yield to me?

Mr. MONRONEY. I will yield to the Senator from Louisiana. I want to yield some time to my distinguished colleagues, and I want to reserve some time.

Mr. LONG of Louisiana. Referring to this section the distinguished Senator from Arkansas pointed out, Does the Senator from Oklahoma know of any other situation in United States law where the requirement is made that a person in business must operate his business in such a way as to facilitate the success of his competitor?

Mr. MONRONEY. No. That certainly has never been true under the Federal Communications Commission in history. A person could put 10 radio stations in a community of 1,000 people, if somebody were crazy enough to do it. The FCC does not care a bit about that, because there is no economic test for broadcast stations or television stations. However, it is sought to put an economic restriction in the bill, to provide that one must facilitate the operation of TV stations.

Mr. LONG of Louisiana. Is there anything in the bill to assure that the television stations will continue to operate in such a way as to facilitate the continued existence of the community antenna systems?

Mr. MONRONEY. Indeed not.

Mr. LONG of Louisiana. Would it not seem that what is sauce for the goose ought to be sauce for the gander? If we are going to do it one way for one fellow, the other fellow ought to get the same consideration.

Mr. MONRONEY. The Senator from Louisiana has made a very good point. As the Senator said earlier, it is like passing a law——

Mr. LONG of Louisiana. To protect garfish from the white trout.

Mr. MONRONEY. That is correct.

Mr. President, I will yield the floor and reserve some time for myself.

Mr. KEATING rose.

Mr. MONRONEY. Mr. President, I yield 2 minutes to the distinguished Senator from New York, and I will yield more time if he wishes to have more time.

Mr. KEATING. Mr. President, 2 minutes will be sufficient.

The PRESIDING OFFICER. The Senator from New York is recognized for 2 minutes.

Mr. KEATING. Mr. President, this is a measure which is of considerable interest to a great many New Yorkers who are today beneficiaries of various community antenna television systems. They are concerned that the provisions of the bill before us would stifle a young and growing industry which is providing a unique and valuable service to thousands of people in New York State.

Mr. President, some remarks were made a few minutes ago about this not being of any interest in New York City.

I think perhaps that is true, but there is a very large area of New York State which serves "country people," as the distinguished Senator from Oklahoma has called them. These are the people who receive the benefit from these stations.

There are at least 35 community antenna systems now operating in my State. They serve some 36,000 subscribers who, as I understand it, would not otherwise receive any television programs. It is, therefore, vital that any step which might impair this valuable service be very carefully considered.

The distinguished Senator from Rhode Island [Mr. PASTORE] has worked hard and is to be commended for the very fine manner in which he has handled the bill and conducted the extensive hearings. However, on the basis of the correspondence I have received, and my meetings with various delegations concerned with this problem, I have grave doubts that S. 2653 represents sound legislation in this field. I am gratified to learn that community-TV operators are willing to be licensed by the Federal Communications Commission. That is only proper, since they are an integral part of the television industry in this country.

The PRESIDING OFFICER. The time of the Senator from New York has expired.

Mr. KEATING. Mr. President, will the Senator yield me 1 more minute?

Mr. MONRONEY. I yield 1 more minute to the Senator from New York.

The PRESIDING OFFICER. The Senator from New York is recognized for an additional minute.

Mr. KEATING. Mr. President, I agree with those who have contacted me that the bill before us is drafted in a manner which may cause undue harm to this industry. I regret that no amendments appear in sight which might make this proposed legislation acceptable.

I therefore shall support the motion of the distinguished Senator from Oklahoma to recommit the bill for further study, in the light of these objections which have been raised. I think regulatory legislation is justified and needed and should be welcomed by all parties. However, this bill is not the proper vehicle, and I therefore oppose it.

The PRESIDING OFFICER. The additional minute yielded to the Senator from New York has expired.

Mr. KEATING. Mr. President, will the Senator yield me a half minute more?

Mr. MONRONEY. I yield 1 additional minute to the Senator from New York.

The PRESIDING OFFICER. The Senator from New York is recognized for 1 more minute.

Mr. KEATING. Mr. President, an impressive array of telegrams and letters have indicated clearly to me the views of many of my constituents on this bill. I have received a great many from people in the community TV industry, from chambers of commerce, from mayors and other community officials, and from interested citizens. I ask unanimous consent that the texts of seven of these telegrams in opposition to the bill be printed at this point in the RECORD.

There being no objection, the telegrams were ordered to be printed in the RECORD, as follows:

HORNELL, N.Y., *May 14, 1960.*
Hon. KENNETH B. KEATING,
Senate Office Building,
Washington, D.C.:

As mayor of the city of Hornell I strongly urge the defeat of the provision to amend the Communication Act, S. 2653. Certain provisions of S. 2653 make this bill discriminatory in that it protects the large TV station industry at the expense of the smaller CATV industry. First: By making the CATV obtain permission from the TV stations to carry their programs. If the TV stations have property rights in their programs, then they have access to the courts in this matter and do not need the bill. If they do not, then this bill will impose an unwarranted hardship on the CATV industry. Secondly: The bill makes the FCC the judge and jury on the economic impact the CATV systems have on the local (if any) TV stations and could cause the CATV systems to delete certain conflicting or repeated programs from their systems if carried by the local station. This is almost impossible to do mechanically except at great expense to the CATV system, which would have to be passed on to the viewing public. Also, this would be in direct opposition of free enterprise. The CATV industry agrees that certain regulations contained in the bill are feasible and workable. They have stated that they would welcome FCC control and have tried to amend this bill to make it workable. But the bill in its present form would cause a great many CATV systems to close up, causing the subscribers and investors in the SE systems to lose their investment and their right to receive more than one channel or network (Hornell now gives 7 channels). Cable systems in our neighboring towns of Bath, Addison, Canisteo, Avoca, Andover, Wellsville, Dansville, Whitesville, Alfred, Arkport, and many others would probably have to give up doing business.

FRANK F. WOLFANGER,
Mayor.

CANISTEO, N.Y., *May 13, 1960.*
Hon. KENNETH KEATING,
Senate Office Building,
Washington, D.C.:

As a representative of the people of this village I am very much opposed to the CATV bill, S. 2653, now before the Senate. I feel that this bill in the present form will seriously jeopardize television reception in this valley. I am definitely against the part that requires our system to secure permission from TV stations before their programs can be carried. Please vote against this bill. I feel it favors the large networks at the expense of the public now being served by cable systems.

ERNEST G. MATTHEWS,
Mayor.

LAKE PLACID, N.Y., *May 14, 1960.*
Senator KENNETH B. KEATING,
Senate Office Building,
Washington, D.C.:

Sincerely recommend defeat of S. 2653, which represents an effort to create monopolistic control of retransmission of television signals and is directly contrary to our traditional concept of free enterprise.

R. J. PEACOCK,
Mayor.

SARANAC LAKE, N.Y., *May 14, 1960.*
Senator KENNETH B. KEATING,
Washington, D.C.:

We can only see that the type of regulation as provided in Senate bill 2653 will cause nothing but additional and wholly unnecessary costs to both the Government and the public and will not do a thing to improve television reception.

FRANCIS RATIGAN,
Mayor.

LAKE PLACID, N.Y., *May 16, 1960.*
Senator KENNETH KEATING,
Senate Office Building,
Washington, D.C.:

Please vote against bill S. 2653 as I feel it could deprive a community of better television reception and broader television coverage.

VERNON LAMB, Jr.,
President, Lake Placid Chamber of Commerce.

CANISTEO, N.Y., *May 13, 1960.*
Hon. KENNETH KEATING,
Senate Office Building,
Washington, D.C.

DEAR SENATOR: We understand there was a bill introduced May 11, 1960, namely, CATV S. 2653, which is to be voted on the first of the week. As the people in our community depend solely upon a master antenna system for television reception we are definitely opposed to the passage of this bill. Please vote no on this proposition.

FRED SCHNURLE,
President, Canisteo Chamber of Commerce.

HORNELL, N.Y., *May 13, 1960.*
Hon. KENNETH KEATING,
Senate Office Building,
Washington, D.C.:

National Community Television Association has notified this association that Senator MONRONEY will move adoption of resolution to resubmit Senate bill 2653 to committee for reconsideration. New York Community TV Association consisting of 35 companies representing an investment in this State of several million dollars and serving 36,000 subscribers in 42 communities of this State strongly urges you on behalf of over 150,000 viewers to approve Senator MONRONEY's resolution, or, if the bill is presented, the complete defeat of Senate bill 2653.

JACK E. PRYOR,
President, New York State Television Association.

Mr. KEATING. Mr. President, I am grateful to my friend from Oklahoma for yielding the time.

Mr. MONRONEY. Mr. President, I understand that the opponents of the motion to recommit are prepared to use some of their time. We would like to reserve the remainder of our time until they have discussed it.

The PRESIDING OFFICER. The Senator from Oklahoma may reserve the remainder of his time.

Mr. McGEE obtained the floor.

The PRESIDING OFFICER. How much time does the Senator from Wyoming desire?

Mr. McGEE. Mr. President, the Senator from Wyoming is very uncertain as to his expectations. It depends upon whether he is carried away with himself. I think perhaps 15 or 20 minutes would be adequate.

The PRESIDING OFFICER. The Senator is recognized for 15 minutes.

Mr. MANSFIELD. How much time does the Senator from Wyoming wish?

Mr. McGEE. The Senator is very reluctant to make a commitment unless it has an open end.

Mr. MANSFIELD. I yield at least 20 minutes to the Senator from Wyoming.

The PRESIDING OFFICER. The Senator from Wyoming is recognized for 20 minutes.

Mr. McGEE. Mr. President, we have been receiving a liberal education in human relations and personalities in the past few days, and rather than recount at this very late hour of these long debates what has transpired, and rather than try to pull together all of the loose ends, I should like to address myself to what I consider has emerged as the central question on this bill. It is the question which was raised by both of the Senators from Oklahoma. One of them asked, "Why regulate so many people to benefit so few?" The other asked, "Why do we interfere with so many in order to try to correct the grievance of but a handful?"

For that reason I believe it is important that we bear in mind what it is we are talking about in the industry.

The communications industry, as it pertains to the airways, has become a matter of deep concern for all of us because of its tremendous potential, power, and control. Because of that power, we enacted the Communications Act of 1934, which reserved to the people of the United States control of the airways. This was public property that was in turn to be licensed to those who were willing to use it responsibly under certain conditions. First, radio was brought under regulation, then TV, and as the TV industry developed and perfected its techniques, along came TV boosters, as they are called. TV boosters posed new problems which had not been anticipated before, but legislation was enacted last year which placed TV boosters under the jurisdiction of FCC.

In the meantime, there have developed the community antenna television systems, or the cable systems, as it is more properly described. This is as integral a part of this phase of the industry as the others in terms of the service it renders.

I am mindful of the technical differences between picking a signal out of the air and originating one, but the impact is the same, and this is an inseparable part of the TV projection and power in our country at the present time. Yet this is the one segment which remains outside the regulatory powers of the State. The purpose of this committee, I think in all fairness, ought to be made clear.

We simply seek an orderly and constructive development of the television industry in this country in the public interest. That is our only concern. The report again and again shows that we did not design to help someone to make a different profit from someone else, and that we were not trying to interfere with the free enterprise system per se. Our primary concern was with the public interest, and it is the public interest that becomes the first criterion in the calculation or the values which we place on the elements involved in this debate at this moment.

What has happened? With one segment of the industry still not under the same rules that apply to the others, we find arising a set of circumstances which produce confusion and, in some instances, has even produced violence and threats of violence.

Let me spell that out. Not only does the industry regulate its total picture except for the community antenna system, but also it has produced in the West—and I suppose it is appropriate that it has happened in the West—a series of frontier brawls that would do credit to any of the high-powered shows on TV today.

I think for a moment of the city of Sheridan, Wyo., where because of the open conflict between the TV business and the cable interests in Sheridan there was window peeping, there were spies, and there were attempts to tap information up the stairways of radio stations. The situation had cloak and dagger aspects that Los Angeles and New York have never thought to invent on the Saturday night late shows. Yet this was because we were dealing with a segment of the industry that had some semblance of regulation or was willing to go under regulation, and another part which has sought to remain outside the category of regulation.

In the city of Riverton, in the State of Wyoming, there were detecting devices which located large instruments on or about the projection tower of the booster station which jammed the station. We had another spy drama that completely distorted the community life in terms of prejudice, bias, heated arguments, and the passions which go along with the kind of heat generated on a local basis.

In the city of Thermopolis we had the story of high-powered rifles being employed to control the activities of one group which came under the jurisdiction of the FCC at the expense of the other group, which was not willing to come under that jurisdiction.

Finally, perhaps most recently I submit this story, and I suggest that while the setting is appropriately in the West and perhaps smacking a bit of the old frontier, it is not confined to the Far West, at least.

I have in my hand a letter which describes a similar kind of incident which did not occur in the Western United States. I wish the distinguished Senator from New Hampshire [Mr. COTTON] were present to listen to this fascinating story from his own State. This comes appropriately from the city of West Lebanon. I suppose that city is in the western part of New Hampshire. The paragraph I read is from a local broadcaster:

> Some time ago I built a small booster station which operates on channel 12 creating no interference whatsoever, which is very popular with the TV viewers. As of two weeks ago this little station has been consistently jammed. I think the FCC should legalize booster operations immediately and jamming should be outlawed. I believe that I could provide a better TV service to the viewers in this area by the use of a booster station operation with power of 1 watt, free of charge to the viewers, than they are now paying for to get by CATV.

He goes on to explain that he has evidence to submit that the jamming was contributed by the local cable company.

Mr. President, do not misinterpret what I have said. I do not believe that practice represents the policy of all cable operators. I do not think this is the accepted tactic of CATV operators. I say only that when we consider a business which is as highly competitive as this industry has become, in which the economic stakes are so great that open lawlessness and near violence are invited, in an attempt to capture a TV market, there is greater reason for the inclusion of all segments of the industry under the same rules, with the same referee, in the interest of stability and the growth of the industry.

Mr. MONRONEY. Mr. President, will the Senator yield?

Mr. McGEE I yield.

Mr. MONRONEY. I believe the Senator is describing cases which are mostly booster cases, and some rivalry between CATV systems and booster stations. I believe it should be made clear to the Senate that this bill does nothing to protect or guarantee booster stations in any way. Legislation which the Senate has already passed does that.

Mr. McGEE. Yes. My point is that the booster is a projection of a live broadcast, and in the competition for a market there has been the temptation to resort to these devices. It is petty to listen to, but it does suggest the kind of confusion and chaos which comes out of this if part of the industry is left to play under one set of rules—which means no rules—and the other part is restrained by another set of rules under regulation by the FCC.

In the interest of community stability and law and order in the competition for this kind of market, it seems to me that the rules ought to apply to all those concerned with the same market.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. McGEE. I am glad to yield to the Senator from Pennsylvania.

Mr. CLARK. Would the Senator explain to me how he believes requiring CATV groups to be licensed by the FCC would eliminate the conditions which he has been describing?

Mr. McGEE. In the first place, the FCC, as I understand, would regulate conditions under which they would operate if a booster were locally adopted. That booster station itself would then be subject to FCC jurisdiction, because of the authority to test and to act in defense of the booster. They are not under regulation. Legislation is pending which we in the Senate have authorized for licensing them. If we placed the CATV under the same regulation we would have the same referee calling the tune on the same participants, or competitors for the same market.

Mr. CLARK. Mr. President, will the Senator yield further?

Mr. McGEE. I am glad to yield further.

Mr. CLARK. Does the Senator believe that the local conditions of disorder which he has described would be effectively curbed by the FCC in Washington as a result of licensing, or does he believe that registration would elim-

inate the economic conflict and therefore it would automatically take place?

Mr. McGEE. The FCC, it seems to me, would be in the position to regulate it. This would depend on the FCC. Between radio stations, where this kind of thing has arisen, the FCC has moved in.

Mr. CLARK. I have received from my State some complaints against the bill, indicating that it would impose very difficult screening duties on CATV in order to eliminate duplication which might come from several different stations. I wonder whether the Senator would care to comment on that point.

Mr. McGEE. Yes. The answer is self-evident. We have as cases in point two stations in my own State, one in Rawlins and the other in Casper, in which cable systems now have the capacity to select channels, which they are already doing. They are carrying one channel at Casper and refuse to carry the other. They have the power to make the selection from channels broadcast through Denver, in this instance.

Mr. CLARK. Therefore, the Senator believes the passage of the bill would legitimately require CATV to hire whatever personnel is necessary to assure that there should be no duplication in connection with the programs of a local station in one place and perhaps the programs of a network in another place?

Mr. McGEE. In those cases where it should be ruled by the FCC in the public interest, convenience, and necessity that this be done in specific cases. This would not be the rule. This would be a particular case. I wished particularly to call attention to the kind of situation that results from a half regulated and half unregulated industry, with both trying to operate side by side.

I have suggested two things. First, that the industry should be guided by the same set of rules. All of it is, except this important segment, the cable system. Secondly, I have pointed out that, because of the competition for this market, there is a considerable state of confusion and some near violence.

I should like to proceed now to a third consideration, to try to keep this picture in its total value. In addition, we have heard referred to on the floor of the Senate again and again the cases of second-class TV citizens in these mountain areas. The basic purpose in our calculations for providing public interest, convenience, and necessity is to make sure that every American has the privilege of choosing free TV. He should also have the privilege of paying for pay TV. There are many things to be said for the multiplicity of channels which the cable systems make available. However, no citizen ought to be forced to go without TV because of the existence of a cable system that already jeopardizes the economic role of selected stations that has been referred to in this discussion. That is the third aspect of the overall effect and for the need, it seems to me, for uniform regulatory power on the part of the FCC.

Mr. LONG of Louisiana. Mr. President, will the Senator yield?

Mr. McGEE. I am glad to yield to the distinguished Senator, who has distinguished relatives in my State.

Mr. LONG of Louisiana. I should like to ask the distinguished Senator from Wyoming, if the bill is to pass, why would it not be desirable to approach this regulation on the basis of providing that the operation of the community antenna system should not be in such a manner that would substantially impede or hazard the continuous operation of a TV station, rather than approach it on the basis of conditions that would be imposed under which it would significantly facilitate the continued operation of the local TV station? As long as the community antenna system provides no substantial hardship on the local station, the local station should not be in a position of demanding more. It seems to me it is demanding too much to demand that it should facilitate the operation of this business. It seems to me that what I have suggested would be enough.

Mr. McGEE. The FCC would use that as one of the standards for weighing the relationship between the two. In the colloquy with the chairman of the subcommittee a little earlier this afternoon, he pointed out that the initiative would still have to come from the broadcaster, who would have to initiate the complaint, and that would be referred to the Commission. Therefore, in the few instances where this would represent a case of a clash of interest, the initiative would come from the broadcaster, and still would not place any undue burden on the system.

Mr. LONG of Louisiana. I am referring to page 4 of the bill, at line 21, where it provides:

> A television station * * * may petition the Commission to include in such license such conditions on the community antenna television system's operation as will significantly facilitate the continued operation of a television station which is providing the only available locally originated television broadcast program service.

The thought that occurs to me is that it would seem to go far enough to say that the community antenna system should not impose any undue injury or hardship on the television station. However, to say that it could be required to operate in a manner to facilitate the continued operation of the competitor and system in his business, is too much to ask.

Mr. McGEE. I see the Senator's point. If I remember the legislative background, it was to insure that it did not in the first place indulge in pettiness. The "significantly" referred to the economic survival of the station in a one-station community which depended on this station to surround the area through dependence on boosters. I think it encompasses the complete position of the committee on that one point.

Mr. LONG of Louisiana. As the law stands today there is nothing in the law by which the FCC can prevent one television station from driving another one out of business. I have seen that happen in my State, where a VHF station came into a community which had a UHF station, by providing a better signal and better programs.

Mr. McGEE. That is a little different. I should like to read the language which the Commission itself uses, when it says that this situation gives rise to an "inequitable competitive disadvantage which the local station is unable to overcome by any reasonable means within its control." That is what they are trying to guard against.

Mr. LONG of Louisiana. The Senator made the point that in his State an antenna system would not carry the program of a local station. It seems to me, on those facts, that the system should be required to carry the program.

Mr. McGEE. Yes.

Mr. LONG of Louisiana. But to go beyond this and say that they would have to operate the facility in such fashion as to help their competitor, rather than injure him——

The PRESIDING OFFICER. The time of the Senator from Wyoming has expired.

Mr. McGEE. Mr. President, I ask unanimous consent that I may have an additional 10 minutes.

Mr. MANSFIELD. I yield 10 additional minutes to the Senator from Wyoming.

Mr. McGEE. I think the explanation of that, I may say to the Senator from Louisiana, is that the way in which they are competing, in which they pull a signal out of the air, a signal for which they pay nothing, and which they sell, is an unfair attribute, competitively, in connection with the live station, which has a limited market to begin with, and has to sell advertising in the community. In most cases, the community has only one signal, and that signal is in competition with a multisignal device which has no overhead expense so far as the maintenance of its system is concerned.

It is to enable the making of that system more competitive for economic purposes, rather than to try to assist what we have called the little people of the West, the valley people and the mountain people, which is one of the very basic reasons for the proposed legislation, but it is only one.

In an industry as vital to the public interest, convenience, and necessity as television, it seems completely wrong to lift this significant segment outside the rules of the game because of competitive factors and the discrepancy in those factors, which were discussed with the Senator from Louisiana.

I should like, for a moment, to address myself to the kind of burdens which it is claimed will rest on the community antenna television system. In the first place, CATV systems will be put to virtually no expense except in the cases where they will be required to carry the local signal. This theoretically will cut down the one extra channel they might have offered.

Second, it will require that they file applications for licensing purposes. I am not very much impressed with the suggestion that CATV people will be broken by the burdens of the cost of counsel.

I can recall vividly, and even better can the chairman of my subcommittee recall, that during the compilation of the thousands of pages of hearings, every single CATV witness, at the sessions I attended, was accompanied by counsel. In fact, in my State of Wyoming, in Casper, every lawyer who appeared happened to be a fine Democratic lawyer. I did not know there were that many Democratic lawyers in the State of Wyoming. But every one who testified for a free CATV system in the State was a Democrat. I do not know whether that was a coincidence, because I happened to be presiding at the time, but the CATV operators had counsel. Furthermore, they had counsel in Washington. In fact, they have had so much counseling that I am inclined to believe they are not certain as to what they believe themselves. They have not been without counsel. That has produced their confusion.

I fail to believe that the requirement of counsel before the Federal Communications Commission will break any of the CATV people or put them out of business on that basis.

Let us consider the other group in our State. That is the group which depends upon booster systems. They came before our committee. They came all the way to Washington without counsel. Cowboys, miners, and ranchers testified before the committee. They described how they climbed up the mountainsides on their hands and knees to put up boosters. They did not have the expert counsel of lawyers or engineers. They received no pay. They charge nothing for the signal they deliver. Yet they are willing to come under the regulation of the FCC. They believe the purpose of the bill is desirable, and that they will not go out of business. They do not believe they will be bankrupted.

Therefore, I believe the whole argument of the cost of employing counsel in Washington for the CATV system is a completely spurious one. I think it has no real bearing on the issue, as I see it, at this time.

Finally, I believe the central question concerns the type of proper and effective legislation which will permit regulation in the public interest. It is the public interest which must come first. It is only fair that there be one set of rules in the single game in which several groups are participating, and that there be, preferably, one referee to judge whether the rules are being adhered to honorably.

If there are any tough-seated CATV spokesmen in the galleries, after these 2 long days of debate, let me say to them that they have made a real contribution in my State. I think they have helped to advance the TV industry specifically. But I think they have also opened a Pandora box, because the day is in sight when any group with enough money to get hold of enough CATV systems can concentrate the whole industry in New York, Los Angeles, or Chicago, and can feed the whole country. There is nothing which exists at the present time to prevent that.

This is what started in radio; this is what got underway in TV at one time. It was found to be wise to restrict the number of radio stations which any single economic group could own. I think the number is seven. It was found to be desirable to restrict the number of TV stations which anyone could own. I think the number is five.

Yet the CATV's comprise a completely unregulated, unrestricted group having tremendous vigor and great economic power.

When the committee met in Casper, Wyo., it took the testimony of one of the former presidents of the CATV Association, a man by the name of Bill Daniels, who said it would be a more effective industry if it could be placed in his hands. Mr. Daniels already owns 23 systems. Although he is the head of the Wyoming TV system, he does not live in Wyoming. He lives somewhere else. He owns systems in seven or eight States of the Union.

It is the encroachment upon the realm of economic freedom which enters the picture. It is a tremendous power potential to enable those who are willing to provide this economic capacity to seize control of it. That is why it is fair, in the public interest, that we bring this group, too, under Government regulation.

I am impressed by the fact that so many fine representatives of the CATV have come all the way to Washington to tell Senators how they feel about the matter. That is what makes democracy work. I think it is one of the most impressive demonstrations I can ever recall. But I ask Senators, What about the tens of thousands who cannot afford to come to Washington? Who is looking after their interests? They have a stake in this matter. This activity involves the public interest. That is why the Senator from Oklahoma, the Senator from Louisiana, the Senator from Montana, and the Senator from Illinois, and the Senator from Wyoming were sent here—to protect the public interest of the people of the United States. In my judgment, that is the guts of the proposed legislation. To look after the public interest is the obligation of the Members of the Senate; it is the No. 1 priority in the bill.

Mr. MANSFIELD. Mr. President, how much time remains on my side?

The PRESIDING OFFICER. The Senator from Montana has 32 minutes remaining.

Mr. MANSFIELD. I yield 15 minutes to the Senator from Utah.

Mr. MOSS. Mr. President, I support S. 2653. I associate myself with the remarks of the distinguished junior Senator from Wyoming [Mr. McGEE], who has delivered a very telling argument for the bill.

Last year I introduced and the distinguished senior Senator from Montana [Mr. MURRAY] cosponsored, S. 1886, which represented a comprehensive treatment of the pressing problems of television booster and community antenna television systems. Acute and pressing problems involving both types of television repeater devices were facing the people of my State. It was my hope that comprehensive legislation which would provide the Federal Communications Commission with the authority it felt it needed to license boosters, and would also provide the Commission with authority to regulate CATV's, would be quickly enacted. Such legislation is imperative to preserve and protect the widespread dissemination of free television service to the many citizens of my State and other States who are not so fortunate as to live in areas where direct television reception is feasible and also to enable local TV stations to exist.

Extensive hearings were held under the able and incisive leadership of the distinguished junior Senator from Rhode Island and the distinguished junior Senator from Wyoming. As a result of these hearings it was decided to present two bills, one concerning boosters and one concerning CATV's. S. 1886, which in its amended form dealt only with the booster problem, was passed at the end of the last session and awaits action in the House. It is my understanding that such action will not be forthcoming until the Senate takes action on the bill now before us. Since the present session is rapidly nearing the end, I am glad that we will complete action on the bill today.

S. 2653 is a committee bill which has been worked out with painstaking consideration of the legitimate interests of all concerned—the public, the community antenna television system operators, and the licensing of free television broadcasting stations. The bill received the unanimous approval of the Interstate and Foreign Commerce Committee. Perhaps there are in the committee bill provisions which, ideally, might be strengthened; but I am persuaded that the bill represents sound and constructive legislation.

In the past few days the CATV industry has renewed criticisms and arguments against passage of the bill. They are "scare-type" objections, to be expected from a wholly unregulated industry, when it is proposed to be brought under regulation.

Mr. President, the work of the committee has clearly shown that the overwhelming public interest in this matter demands that cable operators be subjected to regulation. I should like to point out some of the arguments being advanced by the spokesmen of cable operators and comment briefly upon them.

It is said that the bill is aimed at putting CATV's out of business. This could not be farther from the truth. No doubt some CATV operators sincerely feel that to be compelled to comply with public interest requirements would complicate their business and would affect it adversely. Many broadcasters felt the same way when the Radio Act of 1927 was adopted; but today the industry is thriving. No provision of the bill has been shown to be onerous or unfair to the CATV's.

It is said that the standard of licensing of new CATV's—namely, "due regard for the desirability of facilitating the con-

tinued operation of a television station which is providing the only available locally originating television broadcast program service"—which is found in section 330(e) in section 3 of the bill, is unfair to the CATV's.

This objection goes to the heart of the CATV problem. It would be technically feasible to have 10 television stations in New York City and have their signals blanket the Nation over satellites, boosters, and CATV's. But if the Commission were to permit such a system, the death knell of local television would be sounded, and the Congress would immediately pass legislation to restore it. CATV's, unregulated, can accomplish much in this direction on a piecemeal basis. The whole purpose of this bill is to protect the public interest. And it is essential for Congress to reaffirm the traditional American concept favoring local service.

Once again it must be emphasized that this standard will rarely, if ever, result in an outright denial of a CATV authorization. But it will assure that all such authorizations are conditioned so that they will not destroy or cripple local service.

It is said that it is unfair to make CATV's carry the signals of local stations. The bill does not impose such a blanket requirement, but leaves disposition of a request therefor to the judgment of the Commission. The need for the requirement lies in the fact that once the CATV system is connected to a television set, that set will frequently no longer be able to receive the local station directly.

It is said that the antiduplication provision will require CATV's to maintain expensive switching mechanism and to increase their expenses of operation. In this connection it must be remembered that, today, CATV's normally get their program material free, that they charge for their service, and that they have none of the public-service responsibilities or technical responsibilities of regular stations. The antiduplication rules will place upon CATV's a relatively small burden of regulation, as compared to the heavy burden of regulation that is placed upon their competitors.

The Senate has completed only one-half of the legislative job with respect to repeater stations. On September 9, 1959, it passed S. 1886, which gives the Federal Communications Commission the power it thought it needed to license VHF booster stations in the areas where those stations are needed. That bill was important, because it is necessary to assure the maintenance of free television service in areas which otherwise would be unserved. The pending bill is equally important, because it, too, is necessary, in order to assure continuing television service to rural areas, and for the additional reason that it is essential to maintain and encourage local service.

I should like to call attention to one aspect of the proposed legislation. This bill would bring CATV's under regulation essentially paralleling the regulation to which broadcasting stations are subject. The bill would not treat the CATV's as common carriers. It would not make their services, rates, and charges subject to common-carrier regulation, although the CATV's render a type of service which lends itself to monopoly. And, unlike broadcasting stations, the CATV's impose on the public a direct charge for installation and for service.

I am hopeful that if this bill is promptly enacted and is administered wisely and vigorously by the Federal Communications Commission, no resort to common-carrier legislation will become necessary. On the other hand, if we do not enact this bill at this time, and if the CATV situation is allowed to continue to drift in its present unregulated pattern, I believe the result will inevitably be common-carrier legislation—whether at the Federal level, the State level, or both.

I urge, Mr. President, that the Senate pass Senate bill 2653.

I point out that the broadcasting industry is now being regulated, insofar as the stations themselves are concerned, by means of the enactment of the bill which dealt with repeater and translator systems. Therefore, the only segment of the industry not now subject to regulation is that which relays pictures to the people of the Nation; I refer to the CATV's.

It seems to me to be common sense to have all elements of the industry come under the jurisdiction of the same regulatory commission and under the same general pattern of regulation, so as to assure the people of America of access to free television, and to assure that local communities may support local television stations.

We have not said a great deal about the importance of having local television outlets for community affairs, for political speeches, and for cultural activities which are peculiar to a particular region or city or area. If the local television stations wither and die, or if they are unable to grow and expand, then many areas of the country will be deprived of that opportunity, which should exist for all parts of the United States.

Mr. President, I believe the Senate should pass the pending bill; and I believe that this bill and its companion measure, the booster bill, should then become the law of the land.

Mr. MANSFIELD. Mr. President, how much time is left to those on this side?

The PRESIDING OFFICER. Twenty-one minutes.

Mr. MANSFIELD. Mr. President, I yield back 16 minutes of that time, and hold the remaining 5 minutes for the Senator from Arizona and other Senators who wish to speak against the motion to recommit.

Mr. MONRONEY. Mr. President, I yield 3 minutes to the distinguished Senator from Iowa [Mr. HICKENLOOPER], who wishes to ask some questions.

Mr. HICKENLOOPER. Mr. President, I merely wish to ask some questions of the Senator from Oklahoma or of another Member of the Senate.

It seems to me that a rather complicated legal situation could arise in this instance. As I understand, a CATV station merely takes something out of the air, and does not put anything into the air.

Mr. MONRONEY. That is correct.

Mr. HICKENLOOPER. After it takes something out of the air—just like using the air we breathe—it then wires it, by means of a physical operation, into a house, where it is hooked up to a television set.

Mr. MONRONEY. That is correct.

Mr. HICKENLOOPER. What justification is there for having the Federal Government move into that regulatory field? Can it be called interstate commerce? If so, can the Federal Government then regulate my radio set in my house because I take the signal out of the air by means of an aerial erected on top of my house?

Mr. MONRONEY. This presents a problem, because many think this is exclusively in the field of intrastate commerce. Of course, the ether waves are interstate. But when the signal is taken out of the air and is transmitted to the Senator's house by cable, that is purely intrastate.

Mr. HICKENLOOPER. Then can the Federal Government, under the theory of this proposed regulation, regulate a farmer's well because the farmer takes air out of the wind that is moving past his farm, and thereby runs his windmill, and because that air happens to blow across the Mississippi River, from Illinois to Iowa, for instance? Does that make it interstate commerce, so the Federal Government can regulate the operation of that farmer's farm or can determine how he shall run his well?

Mr. MONRONEY. Of course, there are many strange constructions of interstate commerce.

Mr. HICKENLOOPER. I realize that.

Mr. MONRONEY. This does not seem to fit into the more normal categories. Neither does it fit into normal channels of communications, which deal with the regulation of signals or communications. This matter is strictly on the receiving, and not the originating, side.

Mr. HICKENLOOPER. I could understand some persuasive arguments that could be made if the CATV stations put something into the air. Being put into the air, as it is said, it flies we know not where, and they could not control it after it got into the air. It is out in the ether, and it would be interstate. But let us consider a station where, unless the cables or wires go across State lines, a CATV station is doing nothing in interstate commerce that I can see at all. It would seem to me if the Supreme Court would say that is a proper field for regulation by a Federal commission, when the station is operating strictly within the State, the Federal Government could regulate me when I turn on my radio because I pick up the signal by an aerial at the top of my house and it is piped down to my living room.

I am merely asking a question. I do not know whether this is a sound argument.

Mr. MONRONEY. Many lawyers doubt the constitutionality of the provision. I am not a lawyer, but it is

apparent that 99 percent of the operations would be intrastate in character.

Mr. HICKENLOOPER. I assume each of these CATV stations would be an individual unit operation.

Mr. MONRONEY. That is correct, in a community.

Mr. HICKENLOOPER. There is no interlocking arrangement between a CATV station in, for example, the western part of a State, and the eastern part, unless there might be common stock ownership; but these CATV stations are individual unit operations. The CATV is a station which takes something out of the air that is already in the air, and uses a physical facility to transfer it to a community television station.

Mr. MONRONEY. One antenna serves 50 or more people.

Mr. HICKENLOOPER. Where does the line of regulation begin? Does it begin with two or three sets, or with one set? If so, the operator of one television set which brings in a signal from the aerial at the top of his house could be regulated.

Mr. MONRONEY. The bill states 50 or more sets, or an aerial in a central location of a building that could serve 200.

Mr. HICKENLOOPER. It is the basic reason why the Federal Communications Commission asserts jurisdiction over this matter that concerns me.

Mr. MONRONEY. I thank the distinguished Senator for raising the question.

Mr. President, I yield to the Senator from Kansas [Mr. CARLSON] 2 minutes.

The PRESIDING OFFICER. The Senator from Kansas is recognized for 2 minutes.

Mr. CARLSON. Mr. President, I do not want to let the debate close without expressing my views on the bill. I think I have been most diligent in my attendance on the debate on this bill. I did so for two reasons. One reason is that I was not a member of the committee that heard much testimony and devoted much time to the consideration of the bill, the members of which, therefore, are very familiar with it. I expressed my appreciation to the chairman yesterday for his service in this field, as is true as to any bill he undertakes to bring before the Senate.

Second, I am fearful that if the proposed legislation is approved and becomes the Federal law of this land, it will have a limiting effect on the expansion of television in areas where it is needed. I have heard the arguments made that if community antenna systems are not put in, some local stations will come into the areas and establish television stations. That argument sounds reasonable, but it is not a practical one. There is not a person who is served by a community antenna television system who would not like to secure free television; but when one cannot get it, he is willing to pay for television programs. Some of these operations are quite expensive, but they do perform a service for people who otherwise could not secure it in sparsely settled areas.

So I am compelled, based on the debate I have heard in the past 2 days, to vote to recommit the bill.

I was hopeful the bill would be in such shape that I could support it. I hope it will be eventually, because I firmly believe we must have some regulation. However, I do not believe enough study has been given to the bill and enough time spent on it to protect the people who need the service.

Mr. MONRONEY. Mr. President, how much time remains to me?

The PRESIDING OFFICER. 4 minutes remain to the Senator.

Mr. MONRONEY. Mr. President, will the Senator from Illinois [Mr. DIRKSEN] yield me sufficient time so the senior Senator from Oklahoma [Mr. KERR] can present his argument?

Mr. DIRKSEN. Mr. President, how much time remains on the bill?

The PRESIDING OFFICER. Fifteen minutes remain to the Senator from Illinois on the bill.

Mr. MONRONEY. As I understand, the Chair stated I have only 4 minutes remaining. I yielded only 3 minutes to the distinguished Senator from Iowa and 2 minutes to the distinguished Senator from Kansas. I did not hear the gavel fall. That would leave us 8 minutes. Another 5 minutes would be sufficient.

Mr. DIRKSEN. Mr. President, I yield 5 minutes to the distinguished Senator from Oklahoma.

Mr. MONRONEY. Mr. President, do I correctly understand we now have 13 minutes?

The PRESIDING OFFICER. Four minutes remain on the amendment; and 15 minutes to the Senator from Illinois on the bill.

Mr. DIRKSEN. Mr. President, I yield 6 minutes to the Senator from Oklahoma.

Mr. MONRONEY. I ask my colleague if he could take 10 minutes.

Mr. KERR. I defer to my colleague.

Mr. MANSFIELD. Mr. President, would the Senator yield for the purpose of my suggesting the absence of a quorum, with the understanding that the time would not be taken out of the time remaining to either side, so that we could have more Senators present before the vote?

Mr. KERR. Mr. President, I yield for that purpose, without expressing too much hope in the success of the efforts of the Senator from Montana.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that I may suggest the absence of a quorum, without the time being taken out of the time allocated to either side.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. KERR. Mr. President, I rise in support of the motion to recommit the bill. I do it for the simple reason that I think it is an absolute necessity to protect the well-being and the opportunity for existence of over 760 small businesses.

Mr. President, I say to my good friend from Rhode Island that if anything I said on the floor in this debate was offensive to him personally I wish to apologize. I acknowledge to him that I am not an expert on Federal communications legislation, and I know he is.

There are many things, Mr. President, I do not know, but I will tell Senators that what I do know I know as well as anybody.

I know the effect of a Supreme Court decision. I know that if the Supreme Court says a CATV system cannot capture from the air a sound wave set in motion by a TV station and reconvey it by a channel to homes, if my good friend from Rhode Island thinks the Federal Communications Commission can change the situation so that it can be done by an order of the Federal Communications Commission, he ought to read about the experiences of countless thousands of people in this country who have found out the hard way they cannot get around a Supreme Court decision that easily.

Mr. PASTORE. Mr. President, will the Senator yield on that point?

Mr. KERR. I will yield on the Senator's own time.

Mr. PASTORE. I do not have any time.

Mr. MANSFIELD. Mr. President, I yield 2 minutes from the time on the bill to the Senator from Rhode Island.

The PRESIDING OFFICER. The Senator from Rhode Island is recognized for 2 minutes.

Mr. PASTORE. I merely say to the distinguished Senator from Oklahoma that I never said what he is suggesting I said, and the distinguished Senator knows I never meant that.

Mr. KERR. I have apologized to the Senator for saying what he does not know and what he does know.

Mr. PASTORE. May I finish?

Mr. KERR. If we are going to do this, let us do it.

Mr. PASTORE. Does the Senator want to do it his way, or no way at all?

Mr. KERR. No. Let us presume that the Senator from Rhode Island is sincere and that I am sincere. I know that is a violent presumption for either one of us, but let us do it for once.

Mr. PASTORE. How do we want to do it? May I proceed?

Mr. KERR. The Senator said the Senator from Oklahoma knew that what the Senator from Oklahoma said was not so.

Mr. PASTORE. No, I did not say that. I said that I did not say what the Senator asserted I did say.

Mr. KERR. And that I knew the Senator did not say it; that is what the Senator said.

The PRESIDING OFFICER. The Senate will be in order.

Mr. PASTORE. I said this: Should these two factions come under the aegis of the Federal Communications Com-

mission and should the Supreme Court decide that the CATV system have no proprietary right to capture the picture or the signal and to show it at a cost, since both of them would be under the aegis of the Federal Communications Commission, if the broadcaster should impose an unreasonable or a confiscatory fee upon the CATV system in order to obtain permission to show the signal, the fact that both of the groups were under the umbrella of the Federal Communications Commission would mean that reason would be used and justice would be meted out to both sides by the FCC. That is all I said. Now, if the Senator from Oklahoma finds any fault with it, I am sorry, but that is all I said.

Mr. KERR. That is all I said the Senator said.

Mr. PASTORE. No.

Mr. KERR. That is all I said the Senator said.

Mr. PASTORE. The Senator did not say that. If the Senator will further yield——

Mr. KERR. I will yield on the Senator's time. Mr. President, I do not want to yield on any of the 6 minutes I have, because that is all the time I have.

The PRESIDING OFFICER. The 2 minutes yielded to the Senator from Rhode Island have expired.

Mr. KERR. I say again, Mr. President, that if the Supreme Court says that cannot be done then the Federal Communications Commission cannot say it can be done. That is point No. 1.

Another thing which I know as well as anybody relates to whether the network pays the local broadcasting company for broadcasting the network programs. I am about that like Sam Jones was about how he got religion. Sam Jones was asked about how he knew he got religion and he said, "I was there when it happened." [Laughter.] I know that the national network does not require the local TV station to pay the national network for the privilege of broadcasting the national network programs. The national network sells the advertisement for a certain amount of money, and then pays the local broadcasting station a certain percentage of that fee to broadcast it for them. I know that, Mr. President.

Mr. PASTORE. Mr. President, will the Senator yield on that point?

Mr. KERR. I will yield on the Senator's time.

Mr. PASTORE. Mr. President, how many minutes do I have?

Mr. MANSFIELD. Mr. President, I yield 1 minute to the Senator from Rhode Island.

The PRESIDING OFFICER. The Senator from Rhode Island is recognized for 1 minute.

Mr. PASTORE. The fact of the matter is that the rate is set per hour or per quarter hour by the local broadcasting station. I do not know if the Senator from Oklahoma is affiliated with or associated with any broadcasting station——

Mr. KERR. The Senator from Oklahoma is, and it is a matter of public record.

Mr. PASTORE. That is correct. The network by arrangement may pay 30 percent of the rate to the station. Therefore, it is necessary the network retain 70 percent of the cost of rate time, for programs of the national network. The Senator knows that that is the fee. That is what I meant about the fee for using the program which emanates from the network.

Mr. KERR. Not at all, Mr. President.

Mr. PASTORE. Of course, it is.

Mr. KERR. The national network fixes the fee.

Mr. PASTORE. By arrangement with the station, but the payment by the local TV station can be 70 percent of the rate.

Mr. KERR. The national network fixes the fee, and gives a certain percentage of it to the local station for the broadcasting of the program.

The PRESIDING OFFICER. The time of the Senator from Rhode Island has expired.

Mr. KERR. I do not know all of the provisions in the communications law, but I know what is in a contract between a national broadcasting system and an affiliate, a local station.

Mr. President, my good friend from Rhode Island—and I say that sincerely—talked about the little people yesterday, yet he has brought to the Senate a bill which he says is for the benefit of some 52 of the 760-some local community antenna systems, and he wants to put all 760 of the systems under regulation of the Federal Communications Commission, simply to protect local broadcasting stations against 52 of them.

I submit to Senators, is that a reasonable proposition? If the Senator is interested in those 52 instances, considering how able the Senator is, he could bring a bill to the Senate for the benefit of those persons, or could amend the bill to limit it to them. Then the argument would be over.

Mr. PASTORE. Mr. President, will the Senator yield on that point?

Mr. KERR. I will yield to the Senator in just a minute. That is not what the Senator has done. He has brought to the Senate a bill to regulate 760 systems, although he makes his whole case on what is being done in regard to some 50 community TV broadcasting systems.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. KERR. I yield on the Senator's own time.

Mr. PASTORE. Mr. President, will the Senator yield me 1 minute?

Mr. MANSFIELD. Mr. President, I yield 1 minute to the Senator from Rhode Island.

The PRESIDING OFFICER. The Senator from Rhode Island is recognized for 1 minute.

Mr. PASTORE. The Senator from Oklahoma is glorifying, perhaps even inadvertently, the Senator from Rhode Island. The Senator from Oklahoma keeps using the third person designation, saying, "He does this," and "He does that."

The Senator from Rhode Island is representing the committee. We had a subcommittee, which included the distinguished junior Senator from Oklahoma [Mr. MONRONEY]. The matter was heard by the subcommittee. We went before the full committee. We explained the bill before the full committee.

I am the Senator in charge of the bill on behalf of the committee. The Senator keeps saying, "The Senator from Rhode Island wants to do this," or "He wants to do that," or "He does not want to do that."

I appreciate the glorification, but I am acting on behalf of the subcommittee and the committee. This was a committee action, not the action of the Senator from Rhode Island.

The PRESIDING OFFICER. The time of the Senator from Rhode Island has expired.

Mr. KERR. Mr. President, I still maintain that if the Senator from Rhode Island wishes to take care of 52 stations he can amend this bill on his own initiative on the floor. This bill has for its purpose subjecting to regulation 760 small private-enterprise businesses which had the ingenuity to go out and get started, and if this bill is passed, it will be the death knell to them.

The PRESIDING OFFICER. The time of the Senator from Oklahoma has expired.

Mr. MANSFIELD. Mr. President, I yield 3 minutes to the Senator from Arizona.

Mr. HAYDEN. Mr. President, in Arizona there are a number of CATV stations, and they serve a very useful purpose by conveying television programs to mining camps and to isolated parts of the State. We are very glad to have them render that service. But in one instance, at Yuma, about 200 miles from the center of population, there is an entirely different situation. The local station, KIVA–TV, serves an area with a radius of about 60 miles. That television station exists on the advertising which comes to it from businesses in the town of Yuma. If CATV comes to Yuma, its operators propose to charge $90 to make a connection over telephone lines in the city and then charge $6 a month to supply the programs, which originate in Phoenix. I do not doubt that a majority of the citizens in Yuma would be glad to pay those charges for that kind of service.

But what else does it do? It blacks out a large area in southern Yuma County.

For about 40 miles up the Gila River from Yuma there is an irrigated section which supports a farming population. South of Yuma, toward the Mexican border for nearly 20 miles there is another irrigated farming section. The people living in those sections cannot afford to have wires strung to each of their farms. They will receive absolutely no service if the station in Yuma is put out of business. This bill, as I understand it, provides protection for the Yuma television station.

All I plead for is the enactment of legislation which will not allow television service to be brought in which would put out of business a local community station, and from which no one could obtain service except those living in the town where the local station is now located.

The citizens living in the surrounding areas who now own television sets could turn them on and get nothing. That is no way to treat good people.

Mr. CARROLL. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield 1 minute to the Senator from Colorado.

Mr. CARROLL. There is an identical situation in Grand Junction, Colo., where there is a local station. I was privileged to be seated with the subcommittee when it came to Denver. This local station is picked up by TV boosters which go to five or six counties. If they put in CATV, the testimony was that it will drive the station to the wall because it will take away the advertising.

The PRESIDING OFFICER. The time of the Senator from Colorado has expired.

Mr. MONRONEY. Mr. President, may I ask if there is any time remaining?

The PRESIDING OFFICER. The Senator from Oklahoma [Mr. MONRONEY] has 4 minutes remaining, and the Senator from Montana [Mr. MANSFIELD] has 2 minutes remaining.

Mr. MONRONEY. Mr. President, the bill comes before us in an effort to protect some very few television stations. I am aware of that. I am aware of the situation at Grand Junction, which would not be able to furnish a signal that would supply the booster stations which take the signals over the mountains. I am aware of the problems which it is alleged will exist in Yuma if it finally gets a CATV station. Many people who wish more service, and who wish to see network programs other than those supplied by the local station, are willing to pay the required fee to see it so someone builds a CATV system in this area.

I think the figures are very important. The bill would cause the licensing of 768 CATV stations, because in some 52 cities there is a 1-television station situation which might be damaged.

Why put over 700 under complicated licensing system, almost as demanding as that required to obtain a television station license, with renewal every 3 years, and require a vast expenditure on the part of the small businesses to maintain Washington, D.C., counsel for that purpose simply because there are 52 locations where there might be difficulty?

The bill will not help the 52 locations very much, because in all but two of the places where CATV is in competition, CATV now carries the program of the local station. In most cases there is no conflict between the CATV and the local station. They work together. Some are jointly owned. As I saw only yesterday, at Brazos, Tex., the local station was going on the air jointly with CATV to celebrate the birthday of the new station.

There is no need to pass a bill which would throttle the expansion of CATV to millions of people in the flat areas of the country. The CATV operators would have to get a license for the construction of the stations. If the operators have to do all the things which are prescribed by the bill before they build the lines and install the wires, millions who are now in the "snow areas," the gray areas or the black areas in the flat country will be deprived of the service. Regulation will stump the little businessmen who build the lines. It will stump the men who must borrow the money, because the best they can look forward to is a 3-year license on an investment which may involve $100,000 or $200,000.

We are not asking that the bill be killed. We say, let us take a look at it next year. I believe we can come up with a much better bill, if we wish legislation, and certainly a measure which will do some good for the citizens the Senator is talking about, and for whom this bill will do no good.

The PRESIDING OFFICER. The time of the Senator from Oklahoma has expired.

Mr. MONRONEY. I ask unanimous consent to have printed in the RECORD following my remarks a telegram from Vance L. Eckersley, vice president, WDAU–TV, to the Senator from Pennsylvania [Mr. CLARK], dated May 17, 1960.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

SCRANTON, PA., *May 17, 1960.*

Senator JOSEPH CLARK,
Washington, D.C.:

Several of the 65 CATV systems which carry the channel 22 signal of WDAU–TV to more than 90,000 homes, have requested that we indicate to you that some broadcasters have serious doubts as to the wisdom of some of the provisions of S. 2653.

WDAU–TV works harmoniously with almost all of the cable systems within its coverage area. This cooperation brings local television service to a wide area which otherwise might have no television.

It is thought that S. 2653 will end such unpleasant situations as exist in Hazleton, where the cable system does not carry the signals of the Scranton-Wilkes-Barre stations and, in fact, microwaves the signal of channel 2, WCBS–TV, New York City, to Hazleton, where it is carried on cable to 4,000 homes to compete with the local CBS affiliate.

Unfortunately, the bill accomplishes these worthwhile objectives by requiring the elimination of all duplication of programs carried by local stations. In many situations this is a practical impossibility. For example, a cable system in Sunbury carrying the Scranton-Wilkes-Barre ABC, CBS, and NBC affiliated stations and also carries the Lancaster station would find the Lancaster station duplicating some of the CBS programs and some of the NBC programs. Also, a cable system in Williamsport carrying the three Scranton-Wilkes-Barre stations together with the Altoona station would find the latter duplicating some of the CBS programs and some of the ABC programs. To prevent such duplication would require constant switching.

VANCE L. ECKERSLEY,
Vice President, WDAU–TV.

Mr. MANSFIELD. Mr. President, I yield to myself the time I have remaining on this subject.

The PRESIDING OFFICER. The Senator is recognized for 2 minutes.

Mr. MANSFIELD. The Senator from Oklahoma has suggested that we recommit the bill and consider it next year. In making that statement he suggests there is a need for a bill. I wish to take this means to compliment, as highly and as sincerely as I can, the distinguished Senator from Rhode Island [Mr. PASTORE] for the fair, impartial, and unbiased job he has done in bringing this legislation before the Senate. So far as he is concerned this legislation does not mean anything one way or the other. One could not ask for a fairer man to look after the interests of both elements of this industry or all segments of the industry.

I asked him, in behalf of my distinguished senior colleague from Montana [Mr. MURRAY] and our colleagues in the House, to hold hearings back here so that interested people from my State both in TV and in CATV could come here and have their case laid on the table. I am happy to state that the Senator from Washington [Mr. MAGNUSON], the chairman of the full committee, and the Senator from Rhode Island [Mr. PASTORE] agreed to do so. I also asked the Senator from Rhode Island if he would go to Montana at the request of the Montana delegation and there hold hearings in the field. He did so in the State capitol at Helena. Both sides were heard. Everyone who had anything to say had a chance to say it. He came back to Washington. He met with representatives of the industry. He spent hours with their attorneys. He met with Senators who are interested in preserving the CATV industry, as he is and as I am. His committee reported a bill after a long time; and what happened? The things which had been agreed to are disagreed to by representatives of the CATV industry.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. MANSFIELD. Mr. President, I ask for 1 minute on the bill.

If the Senate wishes to act on the basis of an unbiased man's judgment, if it wishes well-thought-out and careful legislation, if it wishes legislation which will preserve and save CATV and keep it from some other alternative, then I say that the Senate ought to uphold the hand of the Senator from Rhode Island and his committee and vote against recommitting the bill.

The PRESIDING OFFICER. All time for debate on the motion has expired.

Mr. MONRONEY. Mr. President, I observe the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered. The question is on agreeing to the motion of the Senator from Oklahoma [Mr. MONRONEY].

Mr. MONRONEY. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. MONRONEY. As I understand, the vote will be on the motion to recommit.

The PRESIDING OFFICER. The question is on the motion to recommit, offered by the Senator from Oklahoma [Mr. MONRONEY]. On this question the yeas and nays have been ordered. The clerk will call the roll.

The legislative clerk called the roll.

Mr. TALMADGE. On this vote I have a pair with the senior Senator from

Wyoming [Mr. O'MAHONEY]. If he were present and voting, he would vote "nay"; if I were permitted to vote, I would vote "yea." Therefore, I withhold my vote.

Mr. McCARTHY. On this vote I have a pair with the Senator from West Virginia [Mr. RANDOLPH]. If he were present and voting, he would vote "yea"; if I were permitted to vote, I would vote "nay." I withhold my vote.

Mr. MANSFIELD. I announce that the Senator from New Mexico [Mr. ANDERSON], the Senator from North Carolina [Mr. ERVIN], the Senator from North Carolina [Mr. JORDAN], the Senator from Delaware [Mr. FREAR], the Senator from Arkansas [Mr. FULBRIGHT], the Senator from Rhode Island [Mr. GREEN], the Senator from Texas [Mr. JOHNSON], the Senator from Tennessee [Mr. KEFAUVER], the Senator from Florida [Mr. SMATHERS], the Senator from New Jersey [Mr. WILLIAMS], and the Senator from Texas [Mr. YARBOROUGH] are absent on official business.

I also announce that the Senator from Missouri [Mr. HENNINGS] and the Senator from Michigan [Mr. MCNAMARA] are absent because of illness.

I further announce that the Senator from Massachusetts [Mr. KENNEDY], the Senator from Oregon [Mr. MORSE], the Senator from Wyoming [Mr. O'MAHONEY], the Senator from West Virginia [Mr. RANDOLPH], and the Senator from Missouri [Mr. SYMINGTON] are necessarily absent.

On this vote, the Senator from Delaware [Mr. FREAR] is paired with the Senator from Oregon [Mr. MORSE]. If present and voting, the Senator from Delaware would vote "nay," and the Senator from Oregon would vote "yea."

On this vote, the Senator from Rhode Island [Mr. GREEN] is paired with the Senator from Tennessee [Mr. KEFAUVER]. If present and voting, the Senator from Rhode Island would vote "nay," and the Senator from Tennessee would vote "yea."

I further announce that, if present and voting, the Senator from North Carolina [Mr. ERVIN], and the Senator from Massachusetts [Mr. KENNEDY] would each vote "nay."

Mr. KUCHEL. I announce that the Senator from Utah [Mr. BENNETT] and the Senator from North Dakota [Mr. BRUNSDALE] are necessarily absent.

The Senator from Indiana [Mr. CAPEHART] is absent because of death in his immediate family.

If present and voting, the Senator from Utah [Mr. BENNETT] and the Senator from North Dakota [Mr. BRUNSDALE] would each vote "nay."

The result was announced—yeas 39, nays 38, as follows:

[No. 197]

YEAS—39

Aiken	Fong	Monroney
Bridges	Gore	Morton
Bush	Hickenlooper	Mundt
Byrd, Va.	Hill	Muskie
Byrd, W. Va.	Holland	Prouty
Carlson	Javits	Robertson
Clark	Johnston, S.C.	Russell
Cooper	Keating	Saltonstall
Cotton	Kerr	Scott
Dirksen	Long, La.	Smith
Dworshak	Lusk	Sparkman
Eastland	McClellan	Stennis
Ellender	Martin	Wiley

NAYS—38

Allott	Douglas	Magnuson
Bartlett	Engle	Mansfield
Beall	Goldwater	McGee
Bible	Gruening	Moss
Butler	Hart	Murray
Cannon	Hartke	Pastore
Carroll	Hayden	Proxmire
Case, N.J.	Hruska	Schoeppel
Case, S. Dak.	Humphrey	Thurmond
Chavez	Jackson	Williams, Del.
Church	Kuchel	Young, N. Dak.
Curtis	Lausche	Young, Ohio
Dodd	Long, Hawaii	

NOT VOTING—23

Anderson	Hennings	O'Mahoney
Bennett	Johnson, Tex.	Randolph
Brunsdale	Jordan	Smathers
Capehart	Kefauver	Symington
Ervin	Kennedy	Talmadge
Frear	McCarthy	Williams, N.J.
Fulbright	McNamara	Yarborough
Green	Morse	

So the motion to recommit was agreed to.

Mr. MANSFIELD. Mr. President, I move that the Senate reconsider the vote by which the motion to recommit was agreed to.

Mr. PASTORE. Mr. President, will the Chair please restate the announcement of the vote?

The PRESIDING OFFICER. On this question, 39 Senators voted in the affirmative, and 38 Senators voted in the negative, so the motion to recommit is agreed to.

Mr. DIRKSEN. Mr. President, I move that the Senate reconsider the vote by which the motion to recommit was agreed to.

Mr. KERR. I move to lay that motion on the table.

Mr. MAGNUSON. Mr. President, on that question, I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. DOUGLAS. Mr. President, will the Chair state the motion which is now before the Senate?

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Oklahoma [Mr. KERR] to lay on the table the motion of the Senator from Illinois [Mr. DIRKSEN] to reconsider the vote by which the motion to recommit was agreed to. The yeas and nays have been ordered.

Mr. MAGNUSON. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Washington will state it.

Mr. MAGNUSON. Do I correctly understand that a vote "yea" is a vote to table the motion to reconsider?

The PRESIDING OFFICER. The Senator from Washington is correct.

Mr. MAGNUSON. And that a vote "nay" is a vote to leave open the motion to reconsider?

The PRESIDING OFFICER. The Senator is correct. The clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. McCARTHY (when his name was called). On this vote, I have a live pair with the Senator from West Virginia [Mr. RANDOLPH]. If the Senator from West Virginia were present and voting, he would vote "yea." If I were at liberty to vote, I would vote "nay." I withhold my vote.

Mr. TALMADGE (when his name was called). On this vote, I have a live pair with the distinguished Senator from Wyoming [Mr. O'MAHONEY]. If the Senator from Wyoming were present and voting, he would vote "nay." If I were at liberty to vote, I would vote "yea." I withhold my vote.

The rollcall was concluded.

Mr. MANSFIELD. I announce that the Senator from New Mexico [Mr. ANDERSON], the Senators from North Carolina [Mr. ERVIN and Mr. JORDAN], the Senator from Delaware [Mr. FREAR], the Senator from Arkansas [Mr. FULBRIGHT], the Senator from Rhode Island [Mr. GREEN], the Senators from Texas [Mr. JOHNSON and Mr. YARBOROUGH], the Senator from Tennessee [Mr. KEFAUVER], the Senator from Florida [Mr. SMATHERS], and the Senator from New Jersey [Mr. WILLIAMS] are absent on official business.

I also announce that the Senator from Missouri [Mr. HENNINGS] and the Senator from Michigan [Mr. MCNAMARA] are absent because of illness.

I further announce that the Senator from Massachusetts [Mr. KENNEDY], the Senator from Oregon [Mr. MORSE], the Senator from Wyoming [Mr. O'MAHONEY], the Senator from West Virginia [Mr. RANDOLPH], and the Senator from Missouri [Mr. SYMINGTON] are necessarily absent.

On this vote, the Senator from Delaware [Mr. FREAR] is paired with the Senator from Oregon [Mr. MORSE]. If present and voting, the Senator from Delaware would vote "nay," and the Senator from Oregon would vote "yea."

On this vote, the Senator from Rhode Island [Mr. GREEN] is paired with the Senator from Tennessee [Mr. KEFAUVER]. If present and voting, the Senator from Rhode Island would vote "nay," and the Senator from Tennessee would vote "yea."

I further announce that, if present and voting, the Senator from North Carolina [Mr. ERVIN] and the Senator from Massachusetts [Mr. KENNEDY] would each vote "nay."

Mr. KUCHEL. I announce that the Senator from Utah [Mr. BENNETT] and the Senator from North Dakota [Mr. BRUNSDALE] are necessarily absent.

The Senator from Indiana [Mr. CAPEHART] is absent because of death in his immediate family.

The Senator from Maryland [Mr. BUTLER], the Senator from Kansas [Mr. SCHOEPPEL], and the Senator from Wisconsin [Mr. WILEY] are detained on official business.

If present and voting, the Senator from Utah [Mr. BENNETT], and the Senator from North Dakota [Mr. BRUNSDALE], and the Senator from Maryland [Mr. BUTLER] would each vote "nay."

The result was announced—yeas 38, nays 36, as follows:

[No. 198]

YEAS—38

Aiken	Cooper	Gore
Bridges	Cotton	Hickenlooper
Bush	Dirksen	Hill
Byrd, Va.	Dworshak	Holland
Byrd, W. Va.	Eastland	Javits
Carlson	Ellender	Johnston, S.C.
Clark	Fong	Keating

Kerr	Morton	Saltonstall
Long, La.	Mundt	Scott
Lusk	Muskie	Smith
McClellan	Prouty	Sparkman
Martin	Robertson	Stennis
Monroney	Russell	

NAYS—36

Allott	Douglas	Long, Hawaii
Bartlett	Engle	McGee
Beall	Goldwater	Magnuson
Bible	Gruening	Mansfield
Cannon	Hart	Moss
Carroll	Hartke	Murray
Case, N.J.	Hayden	Pastore
Case, S. Dak.	Hruska	Proxmire
Chavez	Humphrey	Thurmond
Church	Jackson	Williams, Del.
Curtis	Kuchel	Young, N. Dak.
Dodd	Lausche	Young, Ohio

NOT VOTING—26

Anderson	Hennings	Randolph
Bennett	Johnson, Tex.	Schoeppel
Brunsdale	Jordan	Smathers
Butler	Kefauver	Symington
Capehart	Kennedy	Talmadge
Ervin	McCarthy	Wiley
Frear	McNamara	Williams, N.J.
Fulbright	Morse	Yarborough
Green	O'Mahoney	

So the motion to lay on the table the motion to reconsider was agreed to.

LEGISLATIVE PROGRAM

Mr. DIRKSEN. Mr. President, I should like to inquire, first, of the acting majority leader, about the program for tomorrow and also for the remainder of the week, insofar as it is possible for him to inform the Senate now.

Mr. MANSFIELD. Mr. President, in response to the question asked by the distinguished minority leader, I must admit that I do not have too much information available. But, as of now, it is the intention to have the Senate meet at 11 o'clock tomorrow morning, so that at about 12 o'clock it will be possible for Senators who desire to do so to make speeches on the retirement of our distinguished colleague, the senior Senator from Wyoming [Mr. O'MAHONEY].

It is anticipated that we shall then bring up some printing resolutions and minor money resolutions out of the Committee on Rules and Administration. If possible, we may get to the Stella bill, a bill of some renown. If we do not get to it tomorrow, we should get to it within the next several days.

I hope within the next 10 minutes or so to have a more complete schedule to announce and to inform Senators whether we shall meet Friday or go over from Thursday until Monday.

SUPPLEMENTAL AIR CARRIERS

Mr. CANNON. Mr. President, I am concerned today about the fate of the supplemental air carriers industry in this country. After years of hearings the Civil Aeronautics Board, in January 1959, certificated and authorized supplemental air carriers, recognizing this unique and essential service as a necessary segment of the Nation's air transportation structure. Today the supplemental air carriers have a record of proven contribution in the framework of air travel, serving civilian passengers and cargo and as military carriers.

These airlines are unique in that they have never been nor are they now subsidized by the Federal Government. In addition to efficient, alert, and dependable day-to-day service supplied to the military, supplemental airlines were authorized to fly regular scheduled flights—10 flights per month—between any 2 cities within the United States. Currently cities such as New York, Chicago, Miami, Los Angeles, San Francisco, Honolulu, Detroit, and Dallas are served with civilian business and tourist air travelers who have come to depend on the unique transportation need filled by the supplemental airlines.

It should also be noted, Mr. President, that much of the credit for holding the line on air transportation costs belongs to the pioneers of the supplemental air carrier industry who have contributed greatly to low-fare, air coach travel.

During a visit to the Supplemental Air Carrier Conference, a national trade association, I saw the system and facilities utilized to respond to the demands of the Defense Department for troop movement on an around-the-clock basis day after day. The services proved themselves able and responsible when activated by the armed services. Most important, perhaps, is the system of the supplemental air carrier industry in doing business with the military in such a fashion that it provides airlift ready to take on a military mission in a matter of hours if a national emergency should arise. We have had altogether too many illustrations of the deficiencies in our airlift potential and I am sure that the committees concerned with this legislation will bear me out in this statement. This is a time when we should be doing everything we can to increase our airlift capabilities rather than to harass and place obstacles before an industry which serves so useful and necessary functions for both civilians and military.

I am sure that Congress and friends of aviation everywhere were distressed at the news last month that the appellate court had upset the Civil Aeronautics Board's certification of these small pioneering airlines which have contributed so much toward our national defense and as a convenience for the traveling public.

I know, Mr. President, that the court held that the Civil Aeronautics Board had no legal means by which these carriers' important services could be certificated under the Federal Aviation Act, as the statute is now in effect, and the court pointed out that the problem is one which invites congressional action. In fact, it is my interpretation that the Congress would be remiss in its historic duty to further the cause of safe and dependable air travel if we failed to act on this problem. It may perhaps be only a technical change that is required in the law, which can be remedied by the Congress, but our failure to act will have a most serious and perhaps disastrous effect on peacetime air transportation and national security.

I hope, Mr. President, that my colleagues will recognize the necessity for coming to the immediate rescue of the supplemental airlines and enact legislation during this session which will preserve the certificates granted to the individual carriers of the industry during this critical time in our national defense airlift. I believe that after some 12 years of proven ability the very least that Congress can do is to make permanent that which the governing agency—the Civil Aeronautics Board—has found to be so vitally in the public interest and in the interest of our national defense. I urge Members of the Senate, and particularly members of the committees directly affected in the study of this problem to give their most earnest and painstaking study to a problem that merits immediate attention.

REPORTED CASES OF SOVIET ESPIONAGE

Mr. MUNDT. Mr. President, this week in Paris Mr. Khrushchev engaged in a global blasphemy by raising his right hand and swearing before the God in whom he does not believe that his hands were clean from the standpoint of international espionage.

To a man who started his services on the House Un-American Activities Committee back in the days when Martin Dies, of Texas, was its chairman, that event struck a familiar note with me, and I have obtained from the Legislative Reference Service of the Library of Congress a list of over 65 Russian spy cases, documented in the history of the United States, beginning on May 1, 1946.

They include such famous cases as the Allan Nunn May case, that of a British scientist who was convicted for espionage, involving people in Canada.

The list includes the Judith Coplon case. She was convicted of taking Justice Department secrets and using them to aid Russia.

It includes the case of Alger Hiss, who was found guilty of lying to a grand jury in connection with his theft of State Department documents.

The list includes the case of Valetin A. Gubitchev, a United Nations employee who was found guilty as Judith Coplon's codefendant, and who was caught redhanded transferring American money for spy secrets to be delivered to the Russian Government, for whom he was then working.

The list includes the case of Harry Gold.

The list includes the case of Julius and Ethel Rosenberg, about whom nothing further need be said.

It includes the Morton Sobell case.

It includes the David Greenglass case.

It includes the case of William Remington, who was found guilty of perjuring himself at his first trial in 1951, when he said he never gave any secret material of the War Production Board to Russia.

It includes the case of Yuri Novikov, secretary of the Soviet Embassy, named as a coconspirator in the Verber-Ponger indictment.

It includes the case of Igor A. Amosov, assistant naval attaché at the Soviet Embassy in Washington.

The list goes on and on for more than 65 specific cases of spies serving Mr. Khrushchev, his predecessor, Mr. Stalin, and the Government of Russia, all having occurred within the territorial limitations of the United States.

I think the RECORD should show those cases, and I ask unanimous consent to have printed in the RECORD the entire list of the documented cases of spying by Communist agents on American soil.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

SOVIET ESPIONAGE—A SELECTED LIST OF REPORTED CASES OF SOVIET ESPIONAGE IN THE UNITED STATES AND OTHER WESTERN ALINED NATIONS

(NOTE.—Those instances involving diplomatic personnel are indicated by "diplomatic.")

May 1, 1946: Allan Nunn May, a British scientist who worked on atomic energy in Canada, was sentenced to 10 years in prison by a British court. May was part of the Soviet espionage ring in Canada which was exposed by Igor Gouzenko, a code clerk in the Soviet Embassy in Ottawa, who broke with the Russians and sought political asylum. Seventeen Soviet Embassy officials charged with espionage have been expelled from Canada. Eight Canadian citizens, including a member of Parliament, were convicted of espionage and given various jail sentences.

June 30, 1949: Judith Coplon was convicted of taking Justice Department secrets and using them to aid Russia. She was sentenced to from 40 months to 10 years in prison. On January 28, 1952, the U.S. Supreme Court ruled that she was entitled to a new trial because the Government used illegal wiretap evidence. She was never retried on this charge.

October 31, 1949 (diplomatic): Dr. Erwin Munk and a clerk named Horvat of the Czech Embassy in Washington were declared persona non grata.

January 25, 1950: Alger Hiss found guilty of lying to a grand jury in 1948 when he declared that he had never given any secret State Department documents to Whittaker Chambers, who then passed them on to the Soviet Union. He was sentenced to 5 years in prison.

March 1, 1950: Klaus Fuchs was sentenced by a British court to 14 years imprisonment after pleading guilty to giving atomic secrets to Russia.

March 9, 1950: Judith Coplon, in her second trial, was found guilty of conspiracy to commit espionage and was sentenced to 15 years in prison. On December 5, 1950, the U.S. Court of Appeals reversed the conviction on the grounds of illegal arrest and use of illegal wiretap evidence. The Supreme Court refused to review the case on January 28, 1952.

March 9. 1950 (diplomatic): Valetin A. Gubitchev, a United Nations employee, was found guilty as Judith Coplon's codefendant. He was sentenced to 15 years' imprisonment but the sentence was suspended on condition he leave the United States. Gubitchev sailed for Poland on March 20th.

April 15, 1950: Air Force Cpl. Gustav Mueller was convicted of attempting to give U.S. military secrets to Russia. He was sentenced to 5 years at hard labor.

September 22, 1950: Alfred D. Slack pleaded guilty to giving samples of a secret explosive to Harry Gold and was sentenced to 15 years in prison.

November 22, 1950: Abraham Brothman was convicted of conspiring to mislead a grand jury (which was investigating espionage) and of influencing Harry Gold to give false statements to the jury. He was sentenced to 7 years' imprisonment and fined $15,000. In July 1951, the U.S. Circuit Court of Appeals upheld the 2-year sentence and $10,000 fine for misleading a grand jury, but reversed the 5-year sentence and $5,000 fine for influencing Gold.

November 22, 1950: Miriam Moskowitz was convicted (together with A. Brothman) of conspiring to mislead a grand jury and was sentenced to 2 years in prison and fined $10,000.

December 9, 1950: Harry Gold pleaded guilty to transmitting atomic secrets to the Russians and received a 30-year prison sentence.

April 5, 1951: Julius and Ethel Rosenberg were sentenced to death for procuring and transmitting atom bomb secrets to Russia during and after the Second World War. They were both executed on June 19, 1953.

April 5, 1951: Morton Sobell was sentenced to 30 years in prison for giving nonatomic defense secrets to the Fuchs-Gold spy ring.

April 6, 1951: David Greenglass admitted to giving atomic data to the Fuchs-Gold ring while working as an Army technician at Los Alamos, N. Mex., and was sentenced to 15 years' imprisonment.

September 26, 1951 (diplomatic): Nicholai P. Orlov, the assistant naval secretary of the Soviet Embassy in Stockholm, was ordered to leave Sweden immediately in connection with the Andersson espionage case.

November 14, 1951: Ernest Hilding Andersson, a petty officer in the Swedish Navy, was sentenced to life imprisonment after being found guilty of gross espionage for the Soviet Union. Andersson admitted supplying the Russians with secret data on the Swedish Navy, coastal defense installations, and suitable invasion areas along the coast of northern Sweden. He named N. P. Orlov, Konstantin Vinogradov, a Soviet Embassy secretary, and Tass correspondent Victor Anissimov as his accomplices.

October 1952: Nikolai Skvartsov, a political officer in the U.N. Department of Security Council Affairs, was discharged after the State Department notified the U.N. that he had violated a U.S. law.

February 4, 1953: William Remington was found guilty of perjuring himself at his first trial in 1951 when he said he never gave any secret material of the War Production Board to Elizabeth Bentley, a self-styled Communist spy. He was sentenced to 3 years in prison.

February 25, 1953: Lev C. Pissarev, Tass correspondent, was deported from the Netherlands for spying after being arrested on December 23 in the act of receiving secret documents from a Dutch official who was cooperating with the police.

May 30, 1953 (diplomatic): Christache Zambeti, first secretary of the Rumanian Legation in Washington, was declared persona non grata for attempting to blackmail a U.S. citizen into espionage acts.

June 5, 1953: William Perl was sentenced to 5 years in prison for perjury for having told a grand jury in 1950 that he did not know atom spies Julius Rosenberg and Morton Sobell.

June 8, 1953: Air Force Staff Sgt. Giuseppe Cascio was convicted by court martial in Taegu, Korea, of conspiracy to give jet plane secrets to the Communists. He was given a 20-year jail sentence and a dishonorable discharge.

June 8, 1953: Kurt Ponger and Otto Verber were convicted of conspiracy to procure and transmit Army, Air Force, and aircraft plant data to the Soviet Union. They were sentenced to 5 to 15 years and 3⅓ to 10 years in prison, respectively.

June 8, 1953 (diplomatic): Yuri Novikov, second secretary of the Soviet Embassy, was named as a coconspirator in the Verber-Ponger indictment. He was then declared persona non grata by the U.S. Government and returned to the Soviet Union.

October 31, 1953: Pvt. Robert W. Dorey was sentenced to 15 years in prison after pleading guilty to fleeing to East Germany, then twice returning to the U.S. Zone with Soviet agents whom he guided around U.S. military installations.

February 3, 1954 (diplomatic): Igor A. Amosov, assistant naval attaché at the Soviet Embassy in Washington, was declared persona non grata and expelled for engaging in espionage.

February 3, 1954 (diplomatic): Alexander P. Kovalev, second secretary to the Soviet delegation to the United Nations was declared persona non grata and expelled for espionage activities.

May 29, 1954 (diplomatic): Leonid E. Pivnev, assistant air attaché in the Soviet Embassy in Washington, was declared persona non grata and expelled for engaging in espionage.

August 28, 1954: Nobuniori Higurashi, a Japanese Foreign Office official, committed suicide after he had confessed to giving secret information to a Soviet spy ring. The central figure in the ring was Yuri A. Rastvorov, former member of the Soviet mission in Tokyo, who has been granted political asylum in the United States. Two other Foreign Office officials have also been implicated.

December 22, 1954 (diplomatic): Maj. Ludvik Sochor, Czech military attaché in Geneva, and two of his assistants were expelled from Switzerland for espionage.

September 14, 1955: An Australian Royal Commission on Soviet Espionage released its report. The commission, created after Vladimir Petrov, third secretary of the Soviet Embassy, sought asylum from the Russians on April 13, 1954, declared that two Soviet spy "apparatuses" had been functioning in Australia since 1943. At least 120 Australians, all of whom were Communists, assisted the Soviet spy rings but because of the Australian law on espionage and the admissibility of evidence no prosecutions were undertaken.

March 1, 1956 (diplomatic): Maj. Anatoli Kuznetsov, assistant military attaché of the Soviet Embassy in Teheran was expelled from Iran after being arrested with Iranian Air Force Warrant Officer Hussein Rejaei Tehrani who confessed to espionage.

June 14, 1956 (diplomatic): Col. Ivan A. Bubchikov, assistant military attaché of the Soviet Embassy in Washington, was declared persona non grata for "activities incompatible to his continued presence in this country."

July 13, 1956 (diplomatic): Gennadi Popov, the Soviet second secretary, was expelled from Canada for spying.

August 24, 1956 (diplomatic): Victor I. Petrov, a translator in the languages section on the U.N. Secretariat, was discharged from the United Nations after the U.S. delegation issued a statement saying that Petrov had sought to get "information vital to the security and defense of the United States."

August 29, 1956 (diplomatic): Rostislav Shapovalov, second secretary of the Soviet mission to the U.N., was requested to leave the United States after it was discovered that he exerted pressure on a Russian refugee in the United States to become a Soviet agent.

September 5, 1956 (diplomatic): Sweden expelled Peter Mirosnikov for receiving secret data from Anatole Ericson and sent a formal protest to Moscow about its spy activities in that country.

October 5, 1956: Anatole Ericson, a radar instrument maker, was convicted of giving military secrets to Russia by a Swedish court and sentenced to 12 years at hard labor.

October 5, 1956: Jean Joseph Philip, a code clerk at the Budapest Legation in Paris, and Roger Dubois, Legation press attaché, were convicted in France of spying for the Hungarian Secret Service and were sentenced to imprisonment.

December 18, 1956 (diplomatic): Mate Vegh, former Hungarian second secretary, was expelled from Switzerland for spying.

January 14, 1957 (diplomatic): Maj. Yuri P. Krylov, assistant military attaché of the

Soviet Embassy in Washington, was declared persona non grata for purchasing classified electronic equipment and attempting to purchase secret military information.

January 28, 1957 (diplomatic): Vassili M. Molev, a clerk attached to the Soviet Embassy in Washington, was declared persona non grata by the State Department. He was later named as a coconspirator in the indictment of the Sobles' spy ring.

February 27, 1957 (diplomatic): The Danish Government expelled Soviet Lt. Comdr. Mikhail Ruditchev, assistant naval attaché of the Soviet Embassy, on the grounds that he was attempting to obtain secret military information.

March 12, 1957: A Swedish court sentenced Bedros Zartaryan, a Turkish engineer employed by a firm which was building Swedish naval and air bases, to 10 years at hard labor for grand espionage for the Soviet Union.

March 16, 1957 (diplomatic): Jiri Stejskal, third secretary of the Czechoslovak Legation in Vienna, was expelled from Austria for attempting to bribe a police official to carry out espionage work.

April 24, 1957: Robert Folke Damstedt, assistant secretary of the Swedish Atomic Energy Commission, was convicted of stealing secret papers, and was sentenced to 5 years in prison.

May 7, 1957: Three men were sentenced to death in Greece after being convicted of treason and espionage for the Soviet Union. Another man was given a life sentence, and five other persons were given lesser terms.

July 23, 1957: West German security officials broke a Communist spy ring headquartered in a Bonn hotel.

August 9, 1957: Myra Soble, wife of Jack Soble, was sentenced to 5½ years in prison after pleading guilty to charges of espionage.

August 9, 1957: Jacob Albam was sentenced to 5½ years in prison after pleading guilty to espionage in behalf of the Soviet Union as a member of the Soble spy ring.

September 5, 1957: A former Japanese Foreign Office official was fined and sentenced to prison for selling secrets to a Soviet agent.

September 20, 1957: U.S. Air Force Capt. George French was convicted and sentenced to life imprisonment for attempting to sell military secrets to the Soviet Union.

September 25, 1957: An Austrian customs service official was arrested for espionage and confessed that he turned information over to Czech Communist agents.

October 8, 1957: Jack Soble was sentenced to 7 years in prison after pleading guilty to heading a spy ring for the Soviet Union.

November 1957: German officials reveal that a former first lieutenant in the West German Air Force has been convicted of espionage.

November 15, 1957: Col. Rudolf I. Abel, a Soviet intelligence officer, was sentenced to 30 years in prison and fined $3,000 for passing U.S. defense and atomic secrets to Russia.

February 21, 1958: M. Sgt. Roy A. Rhodes was convicted by a U.S. Army court martial of conspiring to deliver U.S. secrets to the Soviet Union and was sentenced to 5 years imprisonment at hard labor and was dishonorably discharged.

May 19, 1958 (diplomatic): Aleksandr Solovyev, assistant military attaché of the Soviet Embassy in Rome, after being detained on charges of espionage was asked to leave Italy.

June 7, 1958 (diplomatic): Nikolai I. Kurochkin, third secretary of the Soviet Embassy in Washington, was declared persona non grata for the improper procurement of U.S. Army manuals and other materials.

July 18, 1958: Brian Linney, an engineer, was sentenced to 14 years imprisonment by a British court for selling secret information to Col. Oldrich Pribyl, a former Czech military attaché in England.

November 20, 1958: Mark Zborowski was convicted of perjury in denying to a Federal grand jury investigating espionage that he had known Jack Soble. He was sentenced to 5 years in prison.

November 20, 1958: Lt. Hans Berli was sentenced by a Swiss military court to 4 years hard labor for giving classified military secrets to Czech agents.

February 21, 1959: Einar Bleckinberg, a former Danish diplomat, was sentenced in Copenhagen to 8 years in prison for spying on behalf of Communist Poland.

January 30, 1960: Horst Ludwig and Fritz Briesemeister were sentenced by a West German court to 4 and 5 years at hard labor, respectively, for treason. Two other defendants, Werner Jaeger and his wife Hanni, were sentenced to 3 years and 18 months.

April 1, 1960: Anthony M. Wraight, a former Royal Air Force officer, was found guilty in London of having given military information to Russia and was sentenced to 3 years in prison.

May 11, 1960 (diplomatic): The Swiss Government arrested and expelled two Soviet Embassy officials for attempting to collect secret information on Swiss army installations and U.S. rocket bases in West Germany.

May 23, 1960: U.S. News & World Report (p. 54) described Communist espionage in West Germany as follows:

"Last year, in West Germany alone, 2,787 Communist spies were caught. * * * East Germany sent most of them * * * but 264 were from Russia, 114 from Poland, 63 from Czechoslovakia, 11 from Rumania, 8 from Hungary and 2 from Bulgaria.

"During the first 4 months of this year, 820 more Communist agents were arrested, including 691 from East Germany, 72 from Russia. Yet only a fraction of all spies sent from the Soviet bloc to West Germany are caught.

"The current estimate is that 17,000 Communist spies are operating in West Germany. * * * Red agents also make West Berlin the kidnaping center of the world. Since the war they have tried 340 kidnapings, succeeded in 255.

"West German estimates of 17,000 active agents do not include either the silent group (Polish, Czech and Rumanian spies posing as refugees) or the 35,000 members of the outlawed West German Communist Party.

"Over the years, more than 15,000 Red agents have been arrested in West Germany. Of these, fewer than 2,000 have been convicted. Many were let off because they confessed, voluntarily, not long after they entered West Germany. Others showed they were coerced into spying by Red threats to their families."

ANNIVERSARY OF NOMINATION OF ABRAHAM LINCOLN TO BE PRESIDENT OF THE UNITED STATES

Mr. DIRKSEN. Mr. President, I do not want this day to pass without observing that 100 years ago today Abraham Lincoln was nominated, in a great structure in Chicago known as the Wigwam, as the Republican candidate for the Presidency of the United States.

I have read a good many accounts as to what happened at that convention, and particularly those of a New York reporter named Murat Halstead. I think it is one of the most fascinating bits of reporting I have ever seen.

Abraham Lincoln was 51 years old when he was nominated on May 18, 100 years ago today.

I think it was one of the statesmen from New York, Mr. William M. Evarts, who made a seconding speech, who used a phrase or two which were not only interesting, but very applicable. He spoke about, "for the suffrages of the whole country." That is an interesting phrase. It has been echoed by the distinguished Senator from Montana [Mr. MANSFIELD] and the distinguished majority leader, the Senator from Texas [Mr. JOHNSON], when they have spoken of unity. Unity means speaking for the whole country. That becomes an interesting echo from over a century of time.

Also in the speech Mr. Evarts used the phrase, in presenting the name of Mr. Lincoln, that he was nominating him to be "the Chief Magistrate of the American Union." There is a rounded sound about the expression, "Chief Magistrate of the American Union." This is a Union. It is American. There is a Chief Magistrate. His name is Dwight David Eisenhower. I glory in how he has spoken for the American Union under difficult and challenging circumstances.

I wish to add one squib from the Great Emancipator, Abraham Lincoln, because he had a dedication of spirit to the cause of peace precisely like that of the present President of the United States. On one occasion Lincoln said:

> The man does not live who is more devoted to peace than I am. None who would do more to preserve it. But it may be necessary to put the foot down firmly.

So our President is equally dedicated to the cause of peace, and with that same devotion and that same firmness of spirit he has put his foot down, and in so doing merited the applause of our people.

I think I am at liberty to say that the President will return to the Nation's Capital in midafternoon of Friday of this week. I hope that all the citizenry who are available and so disposed will be able to journey to Andrews Field and to greet the President as he returns to his own country.

Mr. GRUENING. Mr. President, will the Senator yield?

Mr. DIRKSEN. I yield.

Mr. GRUENING. In regard to the reference to what took place 100 years ago in the Republican convention, history has certainly recorded that the Republican Party made a wonderful choice in its nominating Abraham Lincoln for President, but I invite attention to the fact that at that time there was also a magnificent second choice whom the Republicans did not choose to call upon. That was William Henry Seward, who led in the balloting for two ballots and was overtaken by Lincoln on the third, but who lived on to be one of the great Secretaries of State in both Lincoln's and Johnson's Cabinets, and to consummate the purchase of Alaska, thus making a further great contribution to our Nation, even greater than those he had previously made as the Governor of New York State and as a Member of this body.

Mr. DIRKSEN. Mr. President, to round out the historical aspects of the

matter, the President-elect wisely chose as his running mate, if it was within his choice, a very redoubtable citizen, a great scholar, I suppose one of the greatest Latin scholars who ever came to the Congress. He came from Maine, and his name was Hannibal Hamlin. He was really a great citizen.

BIRTHDAYS OF SENATOR JAVITS AND SENATOR KEATING, OF NEW YORK

Mr. DIRKSEN. Mr. President, I would like to have my friend the Senator from New York listen when I say that speaking of anniversaries, I would not let this day go by without observing that this is the anniversary of the birthday of the distinguished senior Senator from New York [Mr. JAVITS]. Interestingly enough, it is also the anniversary of the birthday of the junior Senator from New York [Mr. KEATING]. Probably, never in the history of the Senate have there been two Senators from the same State who have had the same natal day. And so I offer my felicitations to my distinguished friends, Senator JAVITS and Senator KEATING.

Mr. JAVITS. Mr. President, I wish to express my deep gratitude to my own leader. I understand the majority leader, when I was not in the Chamber earlier today, paid a tribute, on our birthday, to my colleague, Mr. KEATING, and to me. Mr. President, this is unusual, but it is a source of deep gratification to me. My colleague is not only a colleague, but also is a friend. We represent the most populous, and, in financial and industrial terms, the most powerful State in the Union. I should like to express to him my congratulations to him on his birthday, and to affirm our friendship and the gratification which I have in serving with a colleague in such close harness in the interests of so great a State.

Mr. President, it is a strange and fortuitous circumstance that Abraham Lincoln should have been nominated to be President on this day 100 years ago. This only enhances the joys of the day for me, and I know it does also for my colleague, Mr. KEATING.

I have one other thought which I wish to share with my colleague from Illinois. We have had a bad international blow in the last day. I have thought about it a great deal today. One does think about things on one's birthday. Perhaps this is a day to gain strength for what must be the integration of the free world and its greater devotion to freedom. I wish to state to my own leader the gratification which I have in being able to stand in the U.S. Senate and to fight for the causes which are conducive to that objective.

I am very grateful to my colleague for his affection and the warmth of his greeting.

Mr. DIRKSEN. I thank the Senator.

Mr. MANSFIELD. Mr. President, I wish to join with the distinguished minority leader in extending congratulations to New York's two famous sons. I believe both the Senator from Illinois and I served with them in the House of Representatives, and got to know them and to recognize their value at that time.

It is, of course, a sad occasion, as we get older to note each passing birthday. There is nothing we can do about it.

It is a pleasure to have the opportunity to join with the distinguished Senator from Illinois in honoring two great members of his party, who have made many contributions to the betterment and to the welfare of our country in both Houses of the Congress.

Mr. KUCHEL. Mr. President, I, too, desire to extend my most heartfelt congratulations to both the able Senators from New York. We have had occasion to listen to eloquence from the heart of our colleague, the senior Senator [Mr. JAVITS] but it is far more than his eloquence; it is, in addition, his ability and leadership in so many public causes in the Senate, which mellow the hearts of the rest of us on this occasion—it is his own friendship for his friends.

I should like to say to JACK, and in absentia to his colleague, KEN, that all of us in the Senate join in the congratulations of which our leader on the Republican side so eloquently spoke and of which earlier today the leader of the Democratic side spoke. If I may be pardoned for saying so, Mr. President, I am glad both these stalwart Senators sit on this side of the aisle.

Mr. COOPER. Mr. President, I also join with my colleagues in extending congratulations and good wishes to our colleagues from New York, the distinguished senior Senator [Mr. JAVITS] and the distinguished junior Senator [Mr. KEATING].

We know that both of these men are men of fine intelligence, with wonderful abilities and great capacities. We know also that they are men of great integrity, humane spirit and heart. They are splendid representatives of a great State.

I know that all of us have treasured—as I have particularly treasured—our associations and friendship with these two colleagues.

Mr. President, I wish to join also with the minority leader, the Senator from New York, and others, in noting that this is the 100th anniversary of the nomination of Abraham Lincoln to be President of the United States. One hundred years ago our country faced a great problem, the problem of whether this country would remain united. We survived a great war, a tragic war. That war, bad as it was, bound our country together.

I do not wish to draw any analogies which may not be quite correct, but I think it can be said that today we are in a very difficult situation. Our country faces great problems as we look ahead. One of the factors which has been happy and helpful in the last few days has been the support given to the President of the United States at the summit.

I hope and believe that that support will continue and that our country will be unified as we look ahead.

The summit was a test of the intentions of the Soviet Union and Mr. Khrushchev. It may be also a test of the determination of the people of the United States to take whatever measures are necessary to defend our security and their determination to pursue whatever measures may be necessary toward the solution of the issues which have brought about the differences between the United States and the Soviet Union, and also our determination to pursue disarmament continuously. All of those things may eventually and ultimately bring peace to our country and to the world. But I do wish to say that there is some similarity between the conditions we face today and those faced by the country 100 years ago.

Mr. ALLOTT. Mr. President, may I add to the words of the Senator from Kentucky [Mr. COOPER] my sincere congratulations to both Senators from New York on this very unusual and happy occasion of their birthdays. The junior Senator from New York [Mr. KEATING] a while ago spoke almost in a sad tone about the passing of the years and the addition of years to his age. I take from my own memory a quotation which might serve to hearten him. I believe it was Tennyson who said:

> Yet I doubt not through the ages one increasing purpose runs,
> And the thoughts of men are widen'd by the process of the suns.

So in achieving age, as we all come to our birthdays each year, we may feel the weight of years, but I am sure my friends will find heart in the words of Tennyson.

Mr. GRUENING. Mr. President, as a native of New York State I am happy to join in the tributes initiated by the distinguished minority leader in behalf of the two Senators from New York who are celebrating their birthdays today. I had a very happy contact and experience with them before I became a Member of the Senate, which was several years ago when, as a so-called "Tennessee plan" Senator, I was elected by the people of Alaska to come to Washington to promote the cause of Alaskan statehood. The argument was advanced by some Members of the Senate and some Members of the House of Representatives at that time that they did not see how it was possible to justify and could not vote for admitting Alaska with only a little more than 200,000 people, when the great State of New York with 15 million people had only two Senators. But those arguments were not made by the two Senators from New York, one of whom, Senator JAVITS, was in the Senate and the other Senator KEATING, in the House at that time. Both of them voted for statehood, thus showing that they took a broad national view which extended their interest from the East coast far into the Pacific to America's farthest western and northern terrain. In doing so they demonstrated that they fully appreciated the great value to our entire Nation of the admission of the 49th State. They saw the great value in extending the frontiers of democracy to within naked-eye view of the Soviet police state. They rose above the purely parochial argument based upon the disparity in population, between New York State and Alaska, understanding fully, as some other Members of Congress did not, that had the policy been followed from the very beginning to admit no new State

whose population was smaller than those which were already in the Union, we would still be a nation of 13 States strung along the Atlantic seaboard. I am happy to join in congratulations and best wishes to my colleagues from the Empire State and to applaud their statemanship on the Alaska and Hawaii statehood issue and on other issues of national importance since that time.

SUPPORT OF THE PRESIDENT

Mr. ALLOTT. Mr. President, I think that one of the striking events which has occurred in this country in the last few days is the heart-warming support of the President evinced by his countrymen. The insertion in the RECORD a few moments ago by the Senator from North Dakota [Mr. MUNDT] of the record of spying in this country by Russian spies, Stalin spies and Khrushchev spies, should make every American aware that we are not living in a world of fantasy. We are living in a world of realism, and we also have to engage in a program of realism if we are to protect ourselves.

Mr. President, I hope that every Member of the Senate, as well as other Members of the Congress, who can possibly do so, will be present to welcome the President when he reaches home and to express the unity behind the President which the leaders of the Senate on both sides of the aisle have so well expressed. This is a serious time, but I believe the unity of the people of the United States has never come closer to being a oneness than it has today. I hope it will continue.

AMENDMENT OF MOTOR VEHICLE SAFETY RESPONSIBILITY ACT OF THE DISTRICT OF COLUMBIA

Mr. MANSFIELD. Mr. President, I move that the Senate proceed to the consideration of the bill (S. 2131), Calendar No. 1267.

The motion was agreed to; and the Senate resumed the consideration of the bill (S. 2131) to amend the Motor Vehicle Safety Responsibility Act of the District of Columbia, approved May 25, 1954, as amended.

THE B–70 WEAPONS SYSTEM

Mr. CANNON. Mr. President, within recent days we have seen the hopes of the world for peace dashed by the impetuous and irresponsible tirades of Mr. Khrushchev at the Paris summit conference.

Instead of moving in the direction of disarmament and an easing of the tensions, we find to the distress and disappointment of the free world that we and the Russians are entering a period of even greater intensified cold war maneuvers in which the gravest consequences may be anticipated.

The question that seriously concerns me in that connection is, again, the adequacy and confidence that we can place in our Defense Establishment.

This body has heard prolonged and able debate by the junior Senator from California [Mr. ENGLE], by the junior Senator from Missouri [Mr. SYMINGTON], and others concerning the attributes and superiority of the B–70 bomber.

The Senate, Mr. President, has also heard that our danger point in our military security will occur in the next few years during which we are attempting desperately to close the missile gap.

I find it indefensible for the administration to have cut the $365 million B–70 budget approved by Congress last year to a figure of only $150 million this year. And I note with grave concern that the administration advocates an expenditure of only $75 million for fiscal 1961, when the amount for the B–70 should have been $463 million for fiscal 1961.

Where does this type of fiscal juggling of our military defenses place this country?

To me, it means that by the middle of this decade, we will have not a fleet of some 60 or more B–70 bombers capable of almost instantaneous arrival at a troubled area and capable of penetrating any known defense the Russians now have. But what we will have will be a mere prototype, an experimental model, which will not assure us that we can do what has to be done.

This will not, Mr. President, accomplish what many of our outstanding military leaders and congressional experts claim we should have at that critical time.

Therefore, I urge my colleagues in the Senate and Americans everywhere who are concerned with national defense to reexamine our vulnerability, to reexamine the scuttling of the B–70 program, and I am sure they will come to the conclusion that this country cannot afford to risk placing all of our confidence in the B–47's and B–52's of the Strategic Air Command and fixed, above-ground ICBM bases, together with Polaris, which may, in fact, be inadequate to a task which may come to them within the next few years.

Without the B–70 in our free world arsenal, our security would be doubtful. We could not, for example, place utmost confidence in our ICBM's, and we could not forever rely on the Strategic Air Command's present inventory.

This airplane, if we provide for its production now, would be the only recallable weapon that would be in our inventory even after all of our missiles are in place. Flying overhead even as a diplomatic weapon, it could be incalculable visible evidence of the military strength of this country.

It offers for us a weapon which could be directed toward the Soviet Union within minutes, and would require the U.S.S.R. to divert untold resources in manpower and treasure in seeking to provide a defense against the B–70. It is the one weapon that I feel would be exclusive to our inventory and which the Russians would not be capable of matching for some time.

The B–70 program, in my opinion, should be speeded up and placed on a crash program basis if that is what it will take to deliver these excellent airplanes at the earliest possible moment. To my mind, it represents an insurance policy which this country cannot afford to take lightly.

I hope that my colleagues in the Senate will weigh the evidence that has been presented in favor of the B–70 weapons system, and reexamine the contribution this system is ready to make to our defenses before unthinkingly subscribing to the administration policy that it is something we can do without.

ENROLLED BILLS AND JOINT RESOLUTION PRESENTED

The Secretary of the Senate reported that on today, May 18, 1960, he presented to the President of the United States the following enrolled bills and joint resolution:

S. 684. An act for the relief of Gerald Degnan, William C. Williams, Harry Eakon, Jacob Beebe, Thorvald Ohnstad, Evan S. Henry, Henry Pitmatalik, D. LeRoy Kotila, Bernark Rock, Bud J. Carlson, Charles F. Curtis, and A. N. Dake;

S. 2317. An act for the relief of Mary Alice Clements;

S. 2523. An act for the relief of Harry L. Arkin;

S. 2779. An act relating to the election under section 1372 of the Internal Revenue Code of 1954 by the Augusta Furniture Company, Inc., of Staunton, Va.;

S.J. Res. 166. Joint resolution authorizing the Architect of the Capitol to permit certain temporary and permanent construction work on the Capitol grounds in connection with the erection of a building on privately-owned property adjacent thereto.

ADJOURNMENT TO 11 A.M. TOMORROW

Mr. CANNON. Mr. President, I move that the Senate stand in adjournment until 11 o'clock tomorrow morning.

The motion was agreed to; and (at 6 o'clock and 38 minutes p.m.) the Senate adjourned until tomorrow, Thursday, May 19, 1960, at 11 o'clock a.m.

HOUSE OF REPRESENTATIVES

WEDNESDAY, MAY 18, 1960

The House met at 12 o'clock noon.

The Chaplain, Rev. Bernard Braskamp, D.D., offered the following prayer:

II Timothy 4: 17: *The Lord stood with me, and strengthened me.*

Eternal and ever-blessed God, who alone can make us equal to every untoward circumstance and every bitter calamity, wilt Thou give us a sense of security and strength as we walk a dim and shadowy way whose meaning our finite minds cannot comprehend.

Grant unto us the chivalry and courage of a strong faith which is confident that our anchor will hold no matter how fiercely the storms of adversity may rage and that out of the welter of world tragedy there will emerge a new and nobler era for all mankind.

Hear us as we daily pray that the nations of the earth may be drawn into a closer and deeper fellowship with one another, possessing the same passionate

strivings after peace and righteousness and inspired with the same earnest longings to be comrades in the doing of Thy will.

In the name of our blessed Lord we pray. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

CALENDAR WEDNESDAY

The SPEAKER. This is Calendar Wednesday. The Clerk will call the committees.

Mr. McCORMACK (after the Committee on the District of Columbia was called). Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. McCORMACK. The Committee on the District of Columbia was called. The next committee in order today or any future day when action is taken under Calendar Wednesday would be the Committee on Education and Labor.

The SPEAKER. That is correct.

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that further proceedings under the call of Calendar Wednesday be dispensed with.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

Mr. PATMAN. Mr. Speaker, reserving the right to object, has the Committee on the District of Columbia been called and passed?

The SPEAKER. The committee has passed.

Mr. PATMAN. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts [Mr. McCORMACK]?

There was no objection.

HIGHWAY INVESTIGATION

Mr. MUMMA. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. MUMMA. Mr. Speaker, the May 21 issue of Labor, a periodical put out by the railway labor organizations, devotes an article to the current highway investigation of the Roads Investigating Subcommittee.

It uses the words "shocking, biggest scandals, fantastic," and so forth, and borders on the overly enthusiastic use of the spectacular. The writer of that article further professes agony and attempts to malign all the railroaders against new highways despite the fact they might use them in their daily travels to and from work or just for the fun of Sunday driving.

However, for myself, speaking as a member of that subcommittee, I think the writer could not have been present at the hearings and heard all the testimony. I have been in the supply and materials and contracting business and feel qualified to pass on this subject. You know, the parallel that comes to my mind about this situation in Oklahoma is something like a bank clerk being in collusion with the vice president of a bank—how long does it take the president or board of directors to find out something improper had been going on—perhaps until the Federal bank examiner comes around and uncovers the mess, if he is lucky and the bank clerk and board of directors do not attempt to conceal the dereliction from the examiner, which is the sort of thing which happened in the Oklahoma case.

To attribute the program as being full of corruption because of the Oklahoma incident is gross injustice to the rest of the highway construction program and untrue.

COMMITTEE ON THE JUDICIARY

Mr. ALBERT. Mr. Speaker, on behalf of the gentleman from Louisiana [Mr. WILLIS] I ask unanimous consent that Subcommittee No. 3 of the Committee on the Judiciary may be permitted to sit today during general debate.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

SAN LUIS UNIT OF THE CENTRAL VALLEY PROJECT

Mr. ASPINALL. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill (H.R. 7155) to authorize the Secretary of the Interior to construct the San Luis unit of the Central Valley project, California, to enter into an agreement with the State of California with respect to the construction and operation of such unit, and for other purposes.

CALL OF THE HOUSE

Mr. GROSS. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. McCORMACK. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 94]

Alexander	Durham	Murray
Allen	Forand	Pillion
Baring	Gavin	Powell
Blitch	Gilbert	Preston
Bonner	Green, Oreg.	Roberts
Brown, Mo.	Hébert	Rogers, Tex.
Buckley	Jackson	Santangelo
Cannon	Johnson, Colo.	Scott
Celler	Kilburn	Short
Chelf	Landrum	Smith, Kans.
Davis, Tenn.	Mitchell	Taylor
Dawson	Morris, Okla.	Walter
Diggs	Moulder	Williams

The SPEAKER. On this rollcall 393 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

SAN LUIS UNIT OF THE CENTRAL VALLEY PROJECT

The SPEAKER. The question is on the motion offered by the gentleman from Colorado [Mr. ASPINALL].

The motion was agreed to.

Accordingly, the House resolved itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill H.R. 7155, with Mr. THOMPSON of Texas in the chair.

The Clerk read the title of the bill.

The CHAIRMAN. When the Committee rose on yesterday the Clerk had read through section 1, ending on line 21, page 3 of the bill.

If there are no amendments to this section, the Clerk will read.

Mr. HEMPHILL. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. HEMPHILL: On page 3 at end of line 21 insert new paragraph to be known as paragraph (b) to read as follows:

"No water provided by the Federal San Luis unit shall be delivered in the Federal San Luis service area to any water user for the production on newly irrigated lands of any basic agricultural commodity, as defined in the Agricultural Act of 1949, or any amendment thereof, if the total supply of such commodity as estimated by the Secretary of Agriculture for the marketing year in which the bulk of the crop would normally be marketed and which will be in excess of the normal supply as defined in section 301(b)(10) of the Agricultural Adjustment Act of 1938, as amended, unless the Secretary calls for an increase in production of such commodity in the interest of national security."

Then renumber the first paragraph as section 1(a) and renumber other sections accordingly.

Mr. HEMPHILL. Mr. Chairman, the purpose of this amendment is to keep within some reason this particular authorization bill. This is similar to the language which is contained in the Senate bill, although not identical. The language contained in the Senate bill, we find here, had some technicalities as to what marketing year would be involved. All this does is to say that we are not going to here authorize the use of water to promote further surpluses, and we take the basic crops, which are cotton, wheat, tobacco, rice—I believe corn has been included on a different formula—and say that the irrigation districts or the water districts cannot contract for the use of this water on this new land, if there is any new land irrigated—and I assume there will be—to provide more surplus crops.

Now, I might say to the gentleman from California, if he will give me his attention, that I would like for him to answer for me at this time a question about the cotton acreage production in this particular area. As I understood the gentleman from California yesterday in reply to the gentleman from North Carolina, the gentleman from California

assured the gentleman from North Carolina that despite the fact that the committee report said that there were 132,000 acres of cotton, the result of this particular legislation, if enacted, would be to reduce the cotton acreage.

Mr. SISK. Mr. Chairman, will the gentleman yield?

Mr. HEMPHILL. I yield to the gentleman from California.

Mr. SISK. In answer to the question yesterday, I stated that rather than increasing any acreage in cotton, it definitely would reduce the acreage. Of course, I am basing that on actual, practical knowledge of the area and what will happen once we develop and get some sweet water, pure water, that will grow fruits and many other things that the present water will not grow due to the chemicals within that water. The particular material referred to in the report was taken from the original Bureau of Reclamation report, and apparently the assumption was there that certainly the acreage would not increase. It is my opinion, and it was testified before our committee at length by a great many people farming in the area, that cotton acreage would go down substantially and grain acreage, as such probably would disappear, because it is much more feasible economically to produce vines—that is, grapes and fruits of various types—nuts and many of the other specialty crops in this semitropical area than it is to produce things like grain or cotton which we are forced to do now because of the chemicals in the water which we are pumping from the deep wells.

If the gentleman will yield further, let me say this: So far as I am concerned, I am happy to accept his amendment. I realize that many times people in some of the areas would prefer not to have this language, feeling that it might cause some problem. However, I am in complete agreement with him; under no circumstances do I want to see, and I believe no one in California wants to see any increase in production of crops that are in surplus. It is my firm conviction, as I think it is that of the people of California, that what we would be permitted to do here under diversification is to reduce production substantially. On that basis I am happy to accept the amendment offered by the gentleman from South Carolina.

Mr. HEMPHILL. I thank the gentleman from California. I might say to the gentleman that it does not make sense to us to pay people to take cotton land out of production in one part of the country and then legislate to put land into cotton production in another part of the country. It does not make reason, although I recognize that in our agricultural approach in this country the rule of reason is not the rule of the Department of Agriculture.

Mr. SAYLOR. Mr. Chairman, will the gentleman yield?

Mr. HEMPHILL. I am glad to yield to the gentleman.

Mr. SAYLOR. I should like to say the amendment the gentleman has offered has materially strengthened this bill; it has improved it. I want to commend him for offering this amendment.

Mr. HEMPHILL. I thank the gentleman.

The CHAIRMAN. The time of the gentleman from South Carolina [Mr. HEMPHILL] has expired.

Mr. HEMPHILL. Mr. Chairman, I ask unanimous consent to proceed for 2 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from South Carolina?

There was no objection.

Mr. HOEVEN. Mr. Chairman, will the gentleman yield?

Mr. HEMPHILL. I am glad to yield to the gentleman.

Mr. HOEVEN. I think the gentleman's amendment makes a lot of sense and I certainly shall support it.

Mr. HEMPHILL. I thank the gentleman. I might say to the gentleman that the junior Senator from California made the statement in the other body on the 12th day of May that the effect on the basic crops that would be affected in this area would be to reduce production and acreage. They want the land for the production of vegetables and other crops of that kind. I appreciate the support given me in protecting the growers of our basic crops. They are limited now by acreage allotments. My amendment provides that this bill shall not jeopardize those allotments and the water will not be used to increase surplus crops.

The CHAIRMAN. The question is on the amendment offered by the gentleman from South Carolina [Mr. HEMPHILL].

The amendment was agreed to.

The Clerk read as follows:

SEC. 2. The Secretary is authorized, on behalf of the United States, to negotiate and enter into an agreement with the State of California providing for coordinated operation of the San Luis unit, including the joint-use facilities, in order that the State may, without cost to the United States, deliver water in service areas outside the Federal San Luis unit service area as described in the report of the Department of the Interior, entitled "San Luis Unit, Central Valley Project", dated December 17, 1956. Said agreement shall recite that the liability of the United States thereunder is contingent upon the availability of appropriations to carry out its obligations under the same. No funds shall be appropriated to commence construction of the San Luis unit under any such agreement, except for the preparation of design and specifications and other preliminary work, prior to ninety calendar days (which ninety days, however, shall not include days on which either the House of Representatives or the Senate is not in session because of an adjournment of more than three calendar days to a day certain) after it has been submitted to the Congress, and then only if neither the House nor the Senate Interior and Insular Affairs Committee has disapproved it by committee resolution within said ninety days. If such an agreement has not been executed by January 1, 1962, and if, after consultation with the Governor of the State, the Secretary determines that the prospects of reaching accord on the terms thereof are not reasonably firm, he may proceed to construct and operate the San Luis unit in accordance with section 1 of this Act: *Provided*, That, if the Secretary so determines, he shall report thereon to the Congress and shall not commence construction for ninety calendar days from the date of his report (which ninety days, however, shall not include days on which either the House of Representatives or the Senate is not in session because of an adjournment of more than three days). In considering the prospects of reaching accord on the terms of the agreement the Secretary shall give substantial weight to any relevant affirmative action theretofore taken by the State, including the enactment of State legislation authorizing the State to acquire and convey to the United States title to lands to be used for the San Luis unit or assistance given by it in financing Federal design and construction of the unit. The authority conferred upon the Secretary by the first sentence of this section shall not, except as is otherwise provided in this section, be construed as a limitation upon the exercise by him of the authority conferred in section 1 of this Act, but if the State shall agree that, if it later enlarges the joint-use facilities, or any of them, it will pay an equitable share of the cost to the United States of those facilities as initially constructed before utilizing them for the storage or delivery of water and will bear the entire cost of enlarging the same and if, as a part of said equitable share, it makes available to the Secretary sufficient funds to pay the additional cost of designing and constructing the joint-use facilities so as to permit enlargement, it shall have an irrevocable right to enlarge or modify such facilities at any time in the future, and a perpetual right to the use of such additional capacity: *Provided*, That the performance of such work by the State, after approval of its plans by the Secretary, shall be so carried on as not to interfere unduly with the operation of the project for the purposes set forth in section 1 of this Act and the use of the additional capacity for water service shall be limited to service outside of the Federal San Luis unit service area: *And provided further*, That this right may be relinquished by the State at any time at its option.

SEC. 3. The agreement between the United States and the State referred to in section 2 of this Act shall provide, among other things, that—

(a) the joint-use facilities to be constructed by the Secretary shall be so designed and constructed to such capacities and in such manner as to permit either (i) immediate integration and coordinated operation with the State's water projects by providing, among other things, a capacity in San Luis Reservoir of approximately two million one hundred thousand acre-feet and corresponding capacities in the other joint-use facilities or (ii) such subsequent enlargement or other modification as may be required for integration and coordinated operation therewith;

(b) the State shall make available to the Secretary during the construction period sufficient funds to pay an equitable share of the construction costs of any facilities designed and constructed as provided in paragraph (a) above. The State contribution shall be made in annual installments, each of which bears approximately the same ratio to total expenditures during that year as the total of the State's share bears to the total cost of the facilities; the State may make advances to the United States in order to maintain a timely construction schedule of the joint-use facilities and the works of the San Luis unit to be used by the State and the United States;

(c) the State may at any time after approval of its plans by the Secretary and at its own expense enlarge or modify San Luis Dam and Reservoir and other facilities to be used jointly by the State and the United States, but the performance of such work shall be so carried on as not to interfere unduly with the operation of the San Luis unit for the purposes set forth in section 1 of this Act;

(d) the United States and the State shall each pay annually an equitable share of the

operation, maintenance, and replacement costs of the joint-use facilities;

(e) promptly after execution of this agreement between the Secretary and the State, and for the purpose of said agreement, the State shall convey to the United States title to any lands, easements, and rights-of-way which it then owns and which are required for the joint-use facilities. The State shall be given credit for the costs of these lands, easements, and rights-of-way toward its share of the construction cost of the joint-use facilities. The State shall likewise be given credit for any funds advanced by it to the Secretary for preparation of designs and specifications or for any other work in connection with the joint-use facilities;

(f) the rights to the use of capacities of the joint-use facilities of the San Luis unit shall be allocated to the United States and the State, respectively, in such manner as may be mutually agreed upon. The United States shall not be restricted in the exercise of its right so allocated, which shall be sufficient to carry out the purposes of section 1 of this Act and which shall extend throughout the repayment period and so long thereafter as title to the works remains in the United States. The State shall not be restricted in the exercise of its allocated right to the use of the capacities of the joint-use facilities for water service outside the Federal San Luis unit service area;

(g) the Secretary may turn over to the State the care, operation, and maintenance of any works of the San Luis unit which are used jointly by the United States and the State at such time and under such conditions as shall be agreed upon by the Secretary and the State;

(h) notwithstanding transfer of the care, operation, and maintenance of any works to the State, as hereinbefore provided, any organization which has theretofore entered into a contract with the United States under the Reclamation Project Act of 1939, and amendments thereto, for a water supply through the works of the San Luis unit, including joint-use facilities, shall continue to be subject to the same limitations and obligations and to have and to enjoy the same rights which it would have had under its contract with the United States and the provisions of paragraph (4) of section 1 of the Act of July 2, 1956 (70 Stat. 483, 43 U.S.C. 485h–1) in the absence of such transfer, and its enjoyment of such rights shall be without added cost or other detriment arising from such transfer;

(i) if a nonreimbursable allocation to the preservation and propagation of fish and wildlife has been made as provided in section 2 of the Act of August 14, 1946 (60 Stat. 1080, 16 U.S.C. 662), as amended, the features of the unit to which such allocations is attributable shall, notwithstanding transfer of the care, operation, and maintenance to the State, be operated and maintained in such wise as to retain the bases upon which such allocation is premised and, upon failure so to operate and maintain those features, the amount allocated thereto shall become a reimbursable cost to be paid by the State;

(j) the State shall not serve any lands within the Federal San Luis unit service area except as such service is required as a consequence of its acceptance of the care, operation, and maintenance of works under paragraph (g) of this section.

Mr. BALDWIN. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. BALDWIN: On page 10, following line 10, insert following new section: section 4:

"If the Secretary proceeds to construct, operate, and maintain the San Luis works under the terms of section 1 of this Act solely as a Federal project, the operation shall be subject to the following restriction:

"Whenever the chlorides in the water at the head of the Delta-Mendota Canal exceed 150 parts per million during the months of July, August, or September, the mean daily diversion from the Sacramento-San Joaquin Delta to San Luis unit via Tracy pumping plant and Delta-Mendota Canal as measured at the San Luis pumping plant shall not exceed the mean daily import to the Sacramento Valley from the Trinity project."

Renumber the remaining sections of the bill.

Mr. BALDWIN. Mr. Chairman, the purpose of this amendment is to protect the Sacramento-San Joaquin Delta from undue infiltration of salt water during the summer months. This amendment provides that in the event the chlorides in the water at the head of the Delta-Mendota Canal exceed 150 parts per million during the months of July, August, or September, the mean daily diversion from the Sacramento-San Joaquin Delta to the San Luis unit via Tracy pumping plant and Delta-Mendota Canal as measured at the San Luis pumping plant shall not exceed the mean daily import to the Sacramento Valley from the Trinity River project, which shall be defined as the mean daily release from Whiskeytown Reservoir. The effect of this amendment would be to bar any pumping of water from sources which are natural to the Sacramento-San Joaquin Delta in the event chlorides exceed 150 parts per million at the head of the Delta-Mendota Canal. Since the Trinity River project will introduce additional water into the Sacramento River channel which is not natural to the Sacramento-San Joaquin Delta, the residents of the delta would have no riparian rights as to the Trinity River water and, therefore, they would have no legal right to endeavor to bar the use of this Trinity River water in the San Luis project, even during the summer months of July, August, or September. However, this amendment would recognize the right of these residents of the delta to bar pumping in the San Luis project of waters which are natural to the Sacramento-San Joaquin Delta such as the water from the Shasta Dam, Folsom Dam, Monticello Dam, and other similar dams on tributaries of the Sacramento and San Joaquin River, whenever the chlorides exceed 150 parts per million at the head of the Delta-Mendota Canal. This amendment will give protection to the residents of the delta from undue salinity infiltration.

Since it has been stated both in the committee report on H.R. 7155 and in the floor debate that the primary period during which water will be pumped into the San Luis project will be during the winter months, this amendment should have no adverse effect whatsoever on the operation of the San Luis project.

I urge the adoption of this amendment.

Mr. SISK. Mr. Chairman, will the gentleman yield?

Mr. BALDWIN. I yield to the gentleman from California.

Mr. SISK. I appreciate very much the problem the gentleman has in the area he represents, and I am fully cognizant of the problem he seeks to solve to be sure it does not recur. I am completely in accord with the position he takes. Therefore, I personally am very happy to accept the amendment the gentleman is offering.

Mr. BALDWIN. I thank the gentleman.

Mr. SAYLOR. Mr. Chairman, will the gentleman yield?

Mr. BALDWIN. I yield to the gentleman from Pennsylvania.

Mr. SAYLOR. I am happy to accept the amendment. It will relieve a situation which is worrying the people in the area the gentleman represents.

Mr. BALDWIN. I thank the gentleman.

The CHAIRMAN. The question is on the amendment offered by the gentleman from California.

The amendment was agreed to.

The Clerk read as follows:

SEC. 4. In constructing, operating, and maintaining a drainage system for the San Luis unit, the Secretary is authorized to permit the use thereof by other parties under contracts the terms of which are as nearly similar as is practicable to those required by the Federal reclamation laws in the case of irrigation repayment or service contracts and is further authorized to enter into agreements and participate in construction and operation of drainage facilities designed to serve the general area of which the lands to be served by the San Luis unit are a part, to the extent the works authorized in section 1 of this Act contribute to drainage requirements of said area. The Secretary is also authorized to permit the use of the irrigation facilities of the San Luis unit, including its facilities for supplying pumping energy, under contracts entered into pursuant to section 1 of the Act of February 21, 1911 (36 Stat. 925; 43 U.S.C. 523).

SEC. 5. The Secretary is directed to plan the works authorized in this Act in such a manner as to contemplate and make possible the future provision of Central Valley project service, by way of the Pacheco Tunnel route, to lands and municipalities in Santa Clara, San Benito, Santa Cruz, and Monterey Counties heretofore anticipated as a possibility by the Acts of December 14, 1949 (63 Stat. 852) and August 27, 1958 (72 Stat. 937). Construction of additional works to provide such service shall not be undertaken until a report demonstrating their physical and economic feasibility has been completed, reviewed by the State, and approved by the Secretary, and the works have been authorized by Act of Congress.

With the following committee amendment:

Page 11, line 9, strike out "December" and insert "October".

The committee amendment was agreed to.

The Clerk read as follows:

SEC. 6. The Secretary is authorized, in connection with the San Luis unit, to construct minimum basic public recreational facilities and to arrange for the operation and maintenance of the same by the State or an appropriate local agency or organization. The cost of such facilities shall be nonreturnable and nonreimbursable under the Federal reclamation laws.

Mr. ASPINALL. Mr. Chairman, I offer a perfecting amendment.

The Clerk read as follows:

Amendment offered by Mr. ASPINALL: On page 11, line 20, strike "suih" and insert "such".

The amendment was agreed to.

The Clerk read as follows:

SEC. 7. The provisions of the Federal reclamation laws shall not be applicable to water deliveries or to the use of drainage facilities serving lands under contract with the State to receive a water supply, outside of the Federal San Luis unit service area described in the report of the Department of the Interior, entitled "San Luis Unit, Central Valley Project", dated December 17, 1956.

Mr. ULLMAN. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. ULLMAN: On page 11, after line 22, strike out lines 23 and 24, and on page 12 strike out lines 1 through 5.

Mr. ULLMAN. Mr. Chairman, this is the amendment to strike out section 7 of the bill. I want to state at the outset, I am in favor of this project. It is an excellent project. It is one that is very greatly needed to develop fully the limited water resources of this area. But I want to explain something about this project. This is a joint undertaking, an undertaking between the Federal Government and the State of California. It has taken many months and many years of negotiations between the two groups in order to find some area of agreement in which they can go forward and develop these water resources. In this bill which is before you, they have arrived at partial agreement, an agreement only to this limited extent, it provides that at some time in the future, an arrangement shall be worked out between the State of California and the Federal Government as to the joint construction and operation of the San Luis project.

Mr. Chairman, I am willing to go along with this concept because I think this is probably the only way we can proceed in order to get the water resources properly developed. But I am very much interested as I know my colleagues are in protecting the basic reclamation law, the practices and the safeguards governing reclamation that we have built up over these many years. I am particularly concerned about preserving the 160-acre limitation in this project. When the Federal Government spends money, the money of all the people of the Nation, to develop a reclamation project, the benefits should be spread as broadly and as widely as possible and we should be particularly careful that no large landowners or special interest gain special enrichment. That, in effect, is what this amendment says. Now this is a sound provision. It is one that the people of America have insisted upon all through these years. Section 7 would, in effect, say that the portion of the project that is beyond the Federal service area should not be subject to this limitation. Due to the vagueness of the Federal-State relationship and due to the fact that no agreement has been worked out, this, in effect, becomes a Trojan horse section—it opens wide doors to special privilege. There are tremendous landholders here who are very much interested in getting all the benefits they can from this project. If we leave this section in the doors are open to circumvent the basic reclamation laws and the 160-acre limitation. The issue is this: Shall Federal benefits and Federal safeguards follow Federal investment? I am not here to tell you that we should try to superimpose upon the State all of our Federal requirements. All I say is that Federal benefits should follow Federal investments. If we leave out section 7, you have a complete bill. This provision was not included in the original legislation. Our committee experts say the section is surplusage. The only reason I can determine why it was put in the bill is because there are large landholders in the area who want to gain special privileges.

Mr. ASPINALL. Mr. Chairman, will the gentleman yield?

Mr. ULLMAN. I yield.

Mr. ASPINALL. Does not the gentleman from Oregon remember the discussion that took place in committee, to the effect that this was a part of the agreement between the northern and southern interests in California, and that they were supposed to be in agreement? This section 7 came before our committee and was treated by our committee as a part of the understanding between the interets in the State of California. The gentleman also understands, I think, that the committee on which he serves, the Committee on Interior and Insular Affairs, is not desirous of having these intrastate quarrels thrashed out on the floor of the Congress of the United States.

The CHAIRMAN. The time of the gentleman from Oregon has expired.

Mr. ASPINALL. Mr. Chairman, I ask unanimous consent that the gentleman from Oregon may be permitted to proceed for another 5 minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Colorado?

There was no objection.

Mr. ASPINALL. So it does follow that this language is in this bill for a purpose; that is, to show that wherever there is a State interest involved, if the State facility is paid for entirely by State funds, then the Federal law should not be applicable to that particular project or part of a project.

Mr. ULLMAN. Certainly what the gentleman has said is true. But this particular provision is one on which landholders and interests in the southern California area were particularly insistent. It has been said repeatedly on the floor that this section is redundant, that you do not need this language in the bill in order to carry forward the purposes of the act. It has been said repeatedly that this does not change the reclamation law. If it does not change the reclamation law, then why is it in the bill? I have grave fear, and many others join me in that fear that this section will be the vehicle to circumvent the 160-acre limitation. Why would there be this great fight over this section unless somebody had a great deal to gain?

The proponents of the section have said: "We do not want it to get into the courts." I say: What do you have to fear from the courts if you are not changing reclamation law? If it does change the reclamation law, then we should analyze that change on its own merits. This the committee has not done. If it does not change the reclamation law, it has no business in this bill. It is surplusage. There is no question of States rights here. On page 8, it says:

The State shall not be restricted in the exercise of its allocated right to the use of the capacities of the joint-use facilities for water service outside the Federal San Luis unit service area.

We are not attempting to foist anything upon the State. All we want to do is to safeguard our Federal investment; make sure we maintain the safeguards on the Federal investment.

I hope my colleagues will concur in this amendment. The other body took several days to debate this issue. They finally struck this section out, and I am sure those who want this bill will vote to strike this section and allow the bill to become law.

Mr. GEORGE P. MILLER. Mr. Chairman, will the gentleman yield?

Mr. ULLMAN. I yield.

Mr. GEORGE P. MILLER. I want to congratulate the gentleman. Fourteen or fifteen years ago this was a hot issue. It defeated a Democratic Senator for reelection from our State. The very associations and groups who are now advocating the repeal of the land limitation clause of the reclamation law are the same ones who were advocating its repeal then. You can tell me all you want to that there is not something to be gained by keeping section 7 in the bill. I do not believe it. The ones who are trying to retain it are the prototype of those who have been against the 160-acre limitation clause for the past 30 years.

Mr. ROOSEVELT. Mr. Chairman, will the gentleman yield?

Mr. ULLMAN. I yield.

Mr. ROOSEVELT. I, too, want to congratulate the gentleman on his statement, and particularly because I come from southern California. I want to say, very frankly, I believe that if there was not something that some very special groups could see to their advantage from retaining this provision in the bill, I do not think it would be in. I can see no harm in taking it out. I do not believe in any way it will jeopardize the sale of bonds on the California project. I earnestly support the gentleman in what he is saying.

Mr. BURDICK. Mr. Chairman, will the gentleman yield?

Mr. ULLMAN. I yield.

Mr. BURDICK. Mr. Chairman, I wish to compliment the gentleman and rise in support of the amendment.

Mr. HOSMER. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, the best that can be said of the arguments thus far made in favor of the pending amendment is that they are in error. What we have here is not one project, but two separate projects: One project to serve roughly half a million acres in Mr. SISK'S area, the

central Joaquin Valley, California, out of the Federal project; and in addition to the project to serve Mr. SISK's area we have a separate State water project.

Both of these projects, because of the geographical facts of life in California, have to occupy the same reservoir site in order to store their water; so we got together on building a dam at the San Luis site, which is the only available site that will hold both State water and Federal water. They are each going to put their own water into it; they are each going to take their own water out of it. There is a sharing of the costs; the State is paying its fair share and the Federal Government is paying its share to construct this reservoir. I do not see why any Federal law should be imposed upon the water produced by the State any more than there is any reason why State law should be imposed on the Federal project. If anybody reads the Constitution and believes we have State governments and a Federal Government he should realize that this is a matter of States rights, and there should be no interference from the Federal Government.

Why do the people from southern California want this section 7 left in if the report says it is surplusage? Insofar as our committee and the Congress is concerned it is surplusage, but from the California State standpoint it is not surplusage. They look at it from the standpoint of removing the possibility of long litigious lawsuits over the next 20 years which will delay the project while those lawsuits are being carried through the various courts, and which would keep this arid and thirsty area from getting the water it needs for many years. I ask that it be kept in for that reason, and I ask that it be kept in for the additional reason that it will make it impossible for certain areas in Kern County to join in with the State-financed plan; and, as a consequence, the people further south who must take this water and use it in their factories, their homes, and their industries will have, by themselves alone, to build the conduit to carry this water up over the mountains and down into the valleys, a very, very expensive job. It will increase the cost to our workers and to our industries and to our homes unmercifully if we have to do this. So that is the second reason we wish to have this in.

The third reason, of course, is to avoid the delay in getting the bond issue, because you cannot issue State water bonds and get a financial house to float them while there is litigation pending. This particular section 7 spells out here once and for all what is a fact, that the Federal reclamation law does not interfere with the State project, and removes the possibility of carrying this thing up through the courts of the land through the course of some 20 years, with the consequent delay of getting water service to our people.

The most zealous protector of the 160-acre limitation that we know of in this land, the National Reclamation Association, under date of yesterday advised each and every one of the Members of this body that it recommends retention of section 7. Of course, its recommendation is based on the very reasons I have given.

In closing its memorandum to the Congress, the National Reclamation Association said this:

> The San Luis project is urgently needed. Your support for the bill, H.R. 7155, with section 7 included, would be very greatly appreciated.

That comes from the most zealous protector of the 160-acre limitation in the country. They know and they understand this situation, and they recommend that the amendment before you be defeated. They recommend it in the interest of the maximum use of water in this water-short land of ours, they recommend it in the interest of the progress of the West and thereby in the interest of the progress of the rest of the Nation. They realize that the arguments upon which the amendment before you is based are fallacious. They have analyzed the matter and they say to the Congress of the United States: "Act sensibly, keep section 7 in there, permit the project to go ahead as it should go ahead on a sound basis, recognizing the difference in jurisdiction between the State and Federal Government and if a 160-acre limitation is proper in the State area, let the State impose it."

Mr. COHELAN. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I speak in support of the amendment offered by the gentleman from Oregon [Mr. ULLMAN] to delete section 7 from the San Luis bill.

Debate yesterday and today has opened up the question with which this amendment is concerned, namely, the question of how Federal reclamation law shall apply to a project of this unique nature which involves joint Federal and State investment. Let me reiterate that this is a unique problem because it is a joint Federal-State project that we are planning at San Luis.

Normally, Federal reclamation law would apply to a federally constructed reclamation project. Normally, it would not apply to a State-constructed project. But this is a joint Federal-State project and the entirely honest and legitimate question of how reclamation law shall apply here arises.

The bill in the original form proposes to answer this question simply by stating that water taken from the San Luis Reservoir to be used in the Federal Central Valley project shall be subject to Federal reclamation law and that water taken from the reservoir for all other purposes shall be specifically freed from Federal reclamation law. It is section 7 which states this latter provision.

This formula is unacceptable. It ignores the all-important fact that Federal reclamation law has traditionally been stated not in terms of where water is used, but in terms of the facilities through which it is developed. There can be no question about it. Title 43 of the United States Code, section 523, reads:

> Water impounded, stored, or carried in Federal reclamation facilities shall be subject to Federal reclamation law.

Because this formula is unacceptable—the formula set forth in the present bill in its section 7—we should delete it as proposed in the Ullman amendment.

The fact is that waters to be accumulated in the San Luis Reservoir will have been developed elsewhere in the various mountainous regions of the State of California and will have been regulated and controlled by such facilities as Shasta Dam, Keswick Dam, Nimbus Dam, Folsom Dam, and others—all projects constructed with Federal funds. Then, on top of that, at San Luis itself, these waters shall have been stored in another facility dependent upon Federal funds. Let us not forget that the San Luis Reservoir substructure will be entirely a Federal project. If the State of California does, in the final instance, participate to make the San Luis Reservoir a joint Federal-State project—if it does, it will add to the basic Federal substructure.

Now, it is not my contention that the Federal reclamation law should apply to waters developed entirely by the State of California. What I am saying is that the definition of so-called State waters included in this legislation in its section 7 is simply not correct. In direct conflict with Federal reclamation law, the language of this section would set as a basis for the application of the law the standard of where it is to be used. Instead, the law traditionally applies on the basis of what facilities are used to develop and accumulate the water.

Clearly, then, section 7 of this measure is a device to bypass and confuse existing Federal reclamation law. It should, therefore, be removed.

I take issue with my good friend and colleague from the 14th District of California [Mr. HAGEN] who yesterday suggested that those of us who oppose the formula provided in section 7 should themselves offer clarifying language.

On the contrary, it is plain enough on the face of it that those who propose to bypass Federal reclamation law by putting forth this kind of formula, when their proposals are called to light and criticized, must then themselves suggest an alternative—presumably one more in line with traditional reclamation principles. Furthermore, if they cannot offer an acceptable alternative, I believe we have no choice but to strike section 7 from this measure and leave a final determination of the question to the courts.

I think it remains only to be pointed out once again that the result of passing this bill without cleaning up the matter of Federal reclamation law can only be unjust enrichment of the various large land owners who will benefit by receiving water from facilities built in some substantial degree with Federal tax revenues.

I urge strongly that our colleagues support the Ullman amendment, because, in doing so, we will be preventing the bypassing of Federal reclamation law. Then, with this question answered, we can join in supporting the San Luis project which is so vital to the State of California and which, in its large purposes, has my full support.

Mr. YOUNGER. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I would like to state at the outset that I was not in Congress at the time when my colleague from California waged his fight, and I am one of those who wants to retain section 7, and I was not a part of that fight. Nor does this San Luis project deliver any water to our particular section.

Mr. Chairman, I am in favor of retaining section 7 for three fundamental reasons; three. In the first place, this is the first joint reclamation project that we have had. Every time we have something in which the State participates it is a question: If the Federal Government puts some money in it, are they going to control? I think we ought to make clear so as to encourage other States to participate in reclamation that if they do participate with the Federal Government, there is no intention on the part of the Federal Government because they put some money in it to control the water that comes out of a joint project. And, you can only do that by keeping section 7 in so that the intent of Congress is known.

Second, this fear of the 160-acre limitation certainly ought to have no bearing here, because the organization that represents that group, the National Reclamation Association, is for retention of section 7. I am sure that the gentleman from Oregon [Mr. ULLMAN] believes in the National Reclamation Association; is that not true?

Mr. ULLMAN. Mr. Chairman, will the gentleman yield?

Mr. YOUNGER. I yield to the gentleman.

Mr. ULLMAN. I would say to the gentleman that the National Reclamation Association generally represents large landowners. The National Grange, the National Farmers Union, and the labor organizations represent a great many taxpayers. Those organizations are all against section 7 and are supporting my amendment.

Mr. YOUNGER. I am very happy that the gentleman brought that up, the tax question, because it brings me to the third part—to my mind, the important part of this proposal—and that is the payer. Who is going to pay for this project? In my opinion, the people who are going to pay for this project are the ones whose attitude and whose recommendation we should pay some attention to. I have here a letter which I think most Members have received from the Feather River Project Association. Let me read from this the names of the associations which are joined here and want to keep section 7 in:

Partial list of California counties, agencies, organizations, and associations which have officially declared their support of the provisions of section 7 of H.R. 7155 (Sisk), a bill to authorize the Federal San Luis unit, Central Valley project, California: Irrigation Districts Association of California (represents 190 water districts in California), Metropolitan Water District of Southern California, Antelope Valley-East Kern Water Basin Association, Eastern Municipal Water District, Riverside County Water Association, Santa Ana River Water Association, San Bernardino County Supplemental Water Association, Chino Basin Municipal Water District, Mojave River County Water District, Mojave Water Agency, Mojave Desert Soil Conservation District, San Bernardino Valley Water Conservation District, California Farm Bureau Federation, Kern County Farm Bureau, San Bernardino County Farm Bureau, Imperial County Farm Bureau, Kern County Board of Supervisors, San Bernardino County Board of Supervisors, League of Women Voters, Los Angeles Chamber of Commerce, Bakersfield Chamber of Commerce, and Feather River Project Association.

Southern California Water Coordinating Conference, which includes members representing the following: San Antonio Water Co., Southern California Water Co., Santa Fe Irrigation District, Calleguas Municipal Water District, Eastern Municipal Water District, Southern California Water Works Association, Western Municipal Water District, Metropolitan Water District, Orange County Water District, Bueno Colorado Municipal Water District, California Water & Telephone Co., Central Basin Municipal Water Association, Orange County Municipal Water District, Compton Municipal Water District, San Diego County Water Authority, Orange County Municipal Water Authority, Palm Springs Water Co., San Bernardino Valley Municipal, Municipal Water District, United Water Conservation District, Ventura River Municipal Water District, Chino Basin Mutual Water District, Fallbrook Public Utility District, Riverside County Water Advisory Commission, Inglewood Water Department, Long Beach Water Department, Coachella Valley County Water District, and Oceanside Water Department.

I think if we pay attention to the people who are paying the bill, we will leave in section 7.

Mr. HAGEN. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, it pains me to disagree with my good friends, the gentleman from California [Mr. COHELAN] and the gentleman from Oregon [Mr. ULLMAN], for whose motivation I have the highest regard. I just think they are wrong in this instance and I hope that Members listening will vote for or against this amendment on the basis of fact and logic rather than on the basis of emotion or the identity of persons on one side or the other of this question.

Section 7 in the bill was worked out very carefully with the author of the bill, the gentleman from California [Mr. SISK], and representatives of the Governor's office in California, and at no time was it ever stated that there was any intention to change Federal reclamation law. I am certain if that were the case the gentleman from California [Mr. SISK] would not have included it in his bill, because he has stated repeatedly that he supports Federal reclamation law.

Therefore, there is a disagreement only over the question of whether or not section 7 accomplishes more than we seek to accomplish, to wit, a clear statement of the presently prevailing interpretation of reclamation law applied to the facts of the San Luis project. If we want to label this section 7 which we seek to retain in the bill, it might be described as the antibarratry section, the States rights section, the prevention of litigation section, the clarity and equity section; any one of these phrases would fit it. It merely states what we consider the prevailing opinion to be with respect to current Federal law as applied to the facts which will be represented in the joint undertaking of the San Luis and the Feather River projects. The Congress has often codified and stated existing law in the interest of clarity and the interest of convenience. That is all we are asking you to do in the case of section 7. We agree that the state of the law is exactly as would be obtained under section 7, but we can foresee, perhaps, that some court 10 years from now might disagree with our interpretation unless the Congress says that this is the law.

Further, there is a very practical matter concerned. The viability of the Feather River project of the State of California, which is only indirectly connected with the San Luis project, is tied up in the fate of a $1¾ million bond issue. That bond issue can be passed and sold only if it is evident to bonding house attorneys and purchasers and even potential customers of the State project that the State project, which is financed and paid for by the State, is not going to be subject to Federal management by the decision of some court 10 years hence. So this is a very practical caveat in the bill in the interest of clarity.

Mr. HOSMER. Mr. Chairman, will the gentleman yield?

Mr. HAGEN. I yield to the gentleman from California.

Mr. HOSMER. As a matter of fact, the Federal investment in its service area is being reduced by reason of the fact that it is cooperating with the State in the financing of the dam.

Mr. HAGEN. That is correct.

I also want to point out that the State's contribution to the so-called joint structures is in excess of the Federal contribution in every instance; in other words, the State is going to pay exactly for what it gets and pay more than the Federal Government of the cost of these common structures.

You may ask why this should be of interest to someone from New York, Kansas, or some other State. This is an unique venture in partnership in that a State undertakes to make a major contribution to its own water development. Should this partnership venture fail for any reason, you will see the State of California back here several years hence asking for the Federal Government to build this total State project, and you will discourage the development of cooperative plans in other States, so that the potential Federal cost, created by the adoption of the amendment offered by the gentleman from Oregon, in my opinion, poses a real threat of large increases in Federal expenditures in the future. That is one of the reasons why we ask that you sustain our position on section 7. The savings that will be immediately achieved by this joint Federal-State project have been indicated. The State of California will pay for the total benefit of the State project from these joint structures. As a matter of fact this characteristic of separate identity is stipulated in several sections of H.R. 7155 in addition to said section 7. For

example subsection (f) of section 3 stated on page 8 of the bill before us declares:

> The State shall not be restricted in the exercise of its allocated right to the use of the capacities of the joint-use facilities for water service outside the Federal San Luis unit service area.

Except as it adds reference to drainage facilities specifically this language is an exact statement of the intent of, and the import and effect of, section 7. Simply stated said subsection (f) declares that State water deliveries shall not be subject to any Federal statutory or administrative regulation insofar as water deliveries are concerned and it is my belief that this language is also broad enough to cover the use of drainage facilities although section 7 is more explicit on this point.

Mr. GUBSER. Mr. Chairman, I move to strike out the requisite number of words.

Mr. Chairman, when the gentleman from California [Mr. GEORGE P. MILLER] was speaking, I am quite sure that he did not intend to imply that every person who was in favor of retaining section 7 in this bill was in opposition to the philosophy and the principle of the 160-acre limitation. I am sure he spoke generally and not specifically, because in my own case I am wholeheartedly in favor of the 160-acre limitation. I will go so far as to say that if I were once again a member of the California Legislature and this proposal were before the legislature to limit the benefits of the State water project to 160 acres, I would vote for such a limitation. But my opposition to the amendment offered by the gentleman from Oregon is not based upon the philosophy of the 160-acre limitation. It is based purely upon the philosophy of States rights. I thought the gentleman from Oregon put his finger squarely upon the issue which is here involved when he said, shall Federal benefits follow Federal investment? I presume the gentleman from Oregon believes they should and Federal regulation should follow benefits. I might say I agree with the gentleman. Is that a correct statement of the gentleman's point of view?

Mr. ULLMAN. Mr. Chairman, will the gentleman yield?

Mr. GUBSER. I yield to the gentleman from Oregon.

Mr. ULLMAN. That is basically true. We have here a Federal-State project where an arrangement has not been worked out. We have no agreement and I have no way of knowing and no one has any way of knowing where the benefits will flow at this time. I only want Federal benefits to follow where Federal investment is made.

Mr. GUBSER. Then I have stated the gentleman's issue correctly: Shall Federal benefits, Federal regulation, follow Federal investment—and we both agree they should. The point I would like to make here is that Federal regulations do follow Federal investment in this case because Federal investment is for the San Luis service area which is a Federal service area. Because we are building this jointly the Federal investment is $60 million less than it would otherwise have been. All we are asking here today is for the State legislature to have the right to determine the rules and regulations which apply to the service area which is served by investment made by the State.

I think we should remember this. The State of California owns this land upon which this reservoir will be built and if this bill does not pass, that the State of California will build the San Luis reservoir. But, if the State of California builds the reservoir on land that it now owns, then the opportunity to use that site will be taken away from the Federal Government and we will never be able to finish the Central Valley project. The people in the Federal San Luis service area of the Central Valley project, mostly in the district of our colleague, the gentleman from Califorina [Mr. SISK], will not have the chance to receive Federal water because the State has already built a reservoir on the only site available. Let us remember this; we are not giving anything to the State of California for the non-Federal service area. We are asking the State for the right to build our portion of this dam on top of the one that the State is going to build anyway. So why under the point of view is it justifiable for us, because we are being taken along as a partner, to tell the State of California that for your part of the project which you pay for, you must follow the same rules and regulations that we follow for our part?

I was asked before I concluded my remarks to remind the House that this is not a power project and public power is not involved in any way. In fact, the San Luis project is a consumer of power rather than a producer. Since I was asked by a Member on our side to bring that point out, I am so doing at this time.

The CHAIRMAN. The time of the gentleman from California has expired.

Mr. ASPINALL. Mr. Chairman, I ask unanimous consent that all debate on the pending amendment, and all amendments thereto, close at 1:30 p.m.

The CHAIRMAN. Is there objection to the request of the gentleman from Colorado?

There was no objection.

Mr. SISK. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, there has been quite a little comment on this particular section of the bill. This is a controversial section which has created a great deal of fire. I want to state my position clearly because this was a part of some six or seven amendments which a group of us agreed to attempt to keep in this piece of legislation on behalf of some of our friends in southern California. These amendments were written into the bill which I introduced at that time. I carried on a consistent fight for all of those provisions. All of the provisions were written into the bill up until this point. I think my colleague from California [Mr. HOSMER], will agree that our joint efforts in the committee did manage to retain this section. However, since that time a controversy has developed over the meaning of this language. If anything happens with this section in the bill that would not happen with it out of the bill, then we are amending the reclamation law. This is simply a legal practicality. The facts are that the people in my area are not particularly concerned, because our area is 100 percent under the reclamation law, but I simply wanted to make sure that the Federal project will be able to operate successfully under the reclamation law. At the same time I want to make sure that the State project can operate successfully under the State law. That is my position. That is what I think will happen under this bill, whether this section is in or out.

Unfortunately a situation has developed where a few people are apparently reading something into this section which we in the committee do not read into it; that is, that it might offer a loophole through which water could be secured which could not be secured without it.

With reference to a legal proceeding in court, it is my opinion that when the Congress speaks that will be it. There will be no more litigation with this section out than with it in. That was my position from the beginning, that I would do the best I could to get it to the floor and then abide by the decision of my colleagues. The other body saw fit to strike this section, as I say. In view of the controversy that has arisen, in view of the fact that we all agree that we do not want to amend the reclamation law, it is my opinion at the present time that the legislation would be less controversial if the section is stricken from the legislation.

Mr. HAGEN. Mr. Chairman, will the gentleman yield?

Mr. SISK. I yield.

Mr. HAGEN. It is true that you have stated many times that you support the Federal reclamation law, including the acreage limitations, as applied to traditional federally subsidized projects.

Mr. SISK. The gentleman is correct.

Mr. HAGEN. Has anyone ever pointed out to you how this particular section 7 attempts to change the Federal reclamation law?

Mr. SISK. No. That is the point I wished to make. On the other hand, I have an idea that it has not been pointed out specifically that it would not amend it. Apparently it is the interpretation that various people have placed upon it, which has created the controversy.

Mr. HAGEN. It is your understanding that the present state of the law is that the Federal reclamation law would not apply to a wholly State-owned, State-financed project?

Mr. SISK. That is exactly right. It is my opinion, and it certainly is the intent of our committee and it is very accurately spelled out in the report accompanying this bill, that Federal law shall govern the Federal project and State law shall govern the State project; I believe that when the Congress

speaks that will be the intent; that Federal law governs the Federal project and State law the State project.

Mr. HAGEN. Is it not, therefore, fair to say that all section 7 does is to restate in the legislation what is already provided by current law?

Mr. SISK. That covers it precisely. The gentleman sat in the room at the time the agreement was made. This simply was inserted for purposes of clarification.

We intended and I believe that section 7 is merely a statement of existing Federal reclamation law and that, with or without section 7 in the legislation, the courts would hold that the sharing of a site and joint financing, construction and use of structures placed thereon as proposed in the San Luis legislation would not subject State water deliveries to Federal reclamation law. Further, it is my opinion that, acting pursuant to the legislation, with or without section 7, the Secretary of the Interior would have full legal authority to enter into a contract with the State of California spelling out the safeguard stated in section 7.

The CHAIRMAN. The time of the gentleman from California has expired, all time on this amendment has expired.

The question is on the amendment offered by the gentleman from Oregon [Mr. ULLMAN].

The question was taken; and on a division (demanded by Mr. ULLMAN) there were—ayes 81, noes 84.

Mr. ULLMAN. Mr. Chairman, I ask for tellers.

Tellers were ordered, and the Chair appointed as tellers Mr. ULLMAN and Mr. HOSMER.

The Committee again divided, and the tellers reported that there were—ayes 139, noes 122.

So the amendment was agreed to.

The Clerk read as follows:

SEC. 8. There is hereby authorized to be appropriated for construction of the works of the San Luis unit, including joint-use facilities, authorized by this Act, other than distribution systems and drains, the sum of $290,430,000, plus such additional amount, if any, as may be required by reason of changes in costs of construction of the types involved in the San Luis unit as shown by engineering indexes. Said base sum of $290,430,000 shall, however, be diminished to the extent that the State makes funds or lands or interests in land available to the Secretary pursuant to sections 2 or 3 of this Act which decrease the costs which would be incurred if the works authorized in section 1 of this Act (including provision for their subsequent expansion) were constructed solely as a Federal project. There are also authorized to be appropriated, in addition thereto, such amounts as are required (a) for construction of such distribution systems and drains as are not constructed by local interests, and (b) for operation and maintenance of the unit. All moneys received by the Secretary from the State under this Act shall be covered into the same accounts as moneys appropriated hereunder and shall be available, without further appropriation, to carry out the purposes of this Act.

Mr. BOW. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. Bow: On page 12, line 9, after "the sum of" insert "not to exceed," and on line 9 strike out the word "plus" and strike out lines 10, 11, and line 12 through the period following the word "indexes."

Mr. BOW. Mr. Chairman, this amendment would limit the authorization to $290,430,000. As the bill is now written, it authorizes the sum of $290,430,000 "plus such additional amount, if any, as may be required by reason of changes in costs of construction of the types involved in the San Luis unit as shown by engineering indexes."

Mr. Chairman, I raise this question so that we may have a limitation and so that we may know the amount that is authorized under this bill. As the language now reads, you would depend upon some engineering indexes to determine the amount of the authorization. You would have your $290,430,000, and then it says "plus such additional amount as shown by engineering indexes." Now, whose engineering indexes? What engineering indexes? Let us say you had three or four engineering indexes, one showing an increase, one showing a decrease, and perhaps one showing the level to be as it is. What index are you going to take? I do not believe that the House should legislate in this manner. If it is going to run considerably over the $290 million in the authorization during the period of construction, that will be known. There will be plenty of time to come back to the House and ask for this additional authorization, but it seems to me rather irresponsible to say that we are going to depend upon some engineering indexes when we do not know what engineering index is going to be used.

Therefore, Mr. Chairman, I ask that this amendment be adopted so that we will not exceed the $290,430,000. If later on it becomes necessary to come back to the House and show why this additional amount is needed—as we have done in the past in the Central Valley project where there has been a later estimate—the funds will be provided. But, I do not believe we should have this kind of loose language in a bill when we have legislation in the future.

Mr. MEADER. Mr. Chairman, will the gentleman yield?

Mr. BOW. I yield to the gentleman from Michigan.

Mr. MEADER. Would the gentleman tell me, as a member of the Committee on Appropriations and familiar with authorizations generally, is this open end proposal common in authorizations for construction work?

Mr. BOW. I understand in the Central Valley, in some areas, that it has been done in the past, but if we made mistakes in the past and the estimates have been low many times, I think we should correct that now and say it shall not exceed a certain amount, and perhaps they will be more careful in the manner the money is spent rather than saying it will be $290 million plus some engineering indexes later on. I think it is a rather reckless way of appropriating.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. BOW. I yield to the gentleman from Iowa.

Mr. GROSS. I want to commend the gentleman for his amendment and say only this: Simply because these open end bills have been passed before is no reason why we should not put an end to it, and this is a very good time to start.

Mr. BOW. Mr. Chairman, I agree with the gentleman and I hope the Committee will go along with this amendment that we shall not exceed the amount; $290 million is a great deal of money and an open end authorization saying that somebody's index later on will make it possible to spend a lot more is a little dangerous, I should say.

Mr. SISK. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I hesitate to oppose this amendment because very frankly I am anxious to see that this construction, as well as any other construction, be done as economically as possible. I agree to some extent with the comment of the gentleman from Iowa that just because this has been in other bills is not necessarily a reason to leave it in this bill. I will say, however, that so far as I know, for the last 50 years, throughout the history of reclamation projects, this is the language that has been used.

The position taken by the departments downtown, including the Bureau of the Budget, as I understand their position, the Department of the Interior, the Corps of Engineers and others whose work is involved in this, is that this could save money; and, of course, there is some possibility that it might increase the cost. That is, they should be given the flexibility of following the construction indexes. This is a single index. There is not a multitude of these prepared. Actually the construction industry each month submits figures to a central filing section where they prepare what is called the construction index for that period of time. That has been followed by all agencies as the construction index. It is my hope that that index will show a reduction in cost of construction rather than an increase, although we have been faced with increases during the past 10 years; there is no question about that.

Mr. ASPINALL. Mr. Chairman, will the gentleman yield?

Mr. SISK. I am glad to yield to my chairman.

Mr. ASPINALL. Is there any possibility that the amendment offered by the gentleman from Ohio can make any saving to the Federal Government in the construction of this facility?

Mr. SISK. There is no possible saving that I can see because what you would be doing, of course, would be giving them an authorization to go ahead and construct. Then you get to the point where you have spent all the money and you have a project that lacks a couple of million dollars of being completed. Certainly we are not going to let it stand uncompleted and unusable.

Mr. ASPINALL. Is there any possibility that it might lead to agreement of contracts that would be any more economical in the interest of the district or the Federal Government?

Mr. SISK. Based on my knowledge and understanding of the Department's

position and that of the construction people, I would say no. What it actually does is to place these people in a straitjacket, to a certain extent. It might tend to cause them to go up in their costs. In other words, in this case, the ceiling would become the floor. That is something we always run into. I think this project, so far as the Federal Government is concerned, is going to be constructed for substantially less than this amount. I expect that it will be constructed for somewhere in the neighborhood of $230-odd million. But I do feel that this amendment would place the Department and the construction agencies in a straitjacket which might tend to increase costs rather than decrease them.

Mr. MEADER. Mr. Chairman, will the gentleman yield?

Mr. SISK. I yield to the gentleman.

Mr. MEADER. Would it not have this effect, that those undertaking this construction work would realize that if they had to have a larger authorization they would have to come back to Congress for further legislation which would involve some time and some difficulty; and that would tend to make them more careful than if they had the leeway which the language in the bill would afford?

Mr. SISK. Of course that is possible, as the gentleman states it. However, as I say, it is my firm opinion that the people who are guarding the dollars down there are going to see to it that the contracts go according to these construction indexes as they have existed from year to year. That is my only reason for opposing the amendment. I appreciate what the gentleman is trying to do. I am sympathetic with his position. I do believe that to give them the flexibility which they have under the normal language here is advisable. After all, the appropriation committee still has to appropriate the money and they can stop these appropriations whenever they desire. So there is certainly no desire on my part, or on the part of the committee, to take anything away from the appropriating power of the Congress, because I think it is essential not only to this project but to the carrying on of any other kind of construction carried on by the Federal Government.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio [Mr. Bow].

The amendment was rejected.

Mr. SAYLOR. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. SAYLOR: On page 12, line 19, after "Federal project" strike out the balance of line 19 and all of lines 20, 21, 22, and 23.

Mr. SAYLOR. Mr. Chairman, the figure that has been included in this bill as the cost of the San Luis project is $290 million. By the language of my amendment, I just strike out $192 million more, because the cost of this project is actually in excess of $482 million. If there was ever an open-end proposition presented to this Congress, it occurs on page 12 in section 8, lines 19 to 23. The distribution and drainage systems should be constructed by the Federal Government or by the water users at an estimated cost of $192,650,000. If this language stays in the bill, instead of authorizing a project for $290,430,000 plus, up or down, according to the indices, you are authorizing a project in excess of $483 million. The Federal Government can build the distribution and drainage system, and there is absolutely no requirement to come back and ask this Congress or anyone else for the approval to build these features.

If anybody from California wants to stand up and tell me that that information is not correct, here is his opportunity to do it. This amendment just saves the taxpayers money and makes them come back to the Congress to get the approval for this $192 million.

Mr. SISK. Mr. Chairman, will the gentleman yield?

Mr. SAYLOR. I yield to the gentleman from California.

Mr. SISK. Here again the gentleman knows this is the normal language that is used in all these projects. Is that correct?

Mr. SAYLOR. No. This is a different situation. This is a joint State-Federal project. This is the first one that they ever had. In every bill that we have ever had before, the cost of the distribution system has always been included in the amount that has been authorized. This is the first time we have ever had a bill presented that does not have that amount included. This $290 million does not take care of the distribution system. What my amendment does is just to say to the people of California that we will approve your project and if the State will enter in good faith into the type of contract which has been authorized, then there will be no responsibility on the part of the Federal Government to build the distribution system. If there is not a contract entered into and it becomes a full Federal project, before they can go ahead, they have to come back and ask the Federal Government for approval of $192 million more.

Mr. WILSON. Mr. Chairman, will the gentleman yield?

Mr. SAYLOR. I yield to the gentleman from California.

Mr. WILSON. Mr. Chairman, I support the gentleman in his amendment.

I should like to add my voice to those advocating the passage of the San Luis unit of the Central Valley project. This project has much merit and has been already delayed too long.

For many years, the State of California has desired to cooperate with the Federal Government in the joint development of the San Luis unit of the Central Valley project.

In the first place, construction of this urgently needed water storage project would have a double-barreled impact upon the State economically. Secondly, the Federal portion of the San Luis unit would make a most important resource contribution by furnishing much needed additional water to an area of almost 500,000 acres of highly productive farm lands on the west side of the San Joaquin Valley. In addition, the San Luis storage unit would be an important link in the State's far-reaching plan for moving water from surplus areas in the north to water deficient areas in the southern part of the State.

The lands in the proposed Federal service area are desperately in need of an additional water supply. Overpumping within the last decade has lowered the ground water table in excess of 400 feet, which has had the effect of skyrocketing pumping costs and forcing good acreage out of production.

Unfortunately, this agricultural economic tragedy is still in progress. Of the 500,000 acres in the service area, about 400,000 were developed for irrigation in 1950. A good percentage of these lands are now dry and unproductive because of the high pump lifts resulting from the falling water table. Prospects are that unless an additional water supply is brought into the area—such as would occur with construction of the Federal San Luis unit—the existing ground water supply is adequate to sustain somewhat less than 150,000 acres in irrigation. Without San Luis, therefore, two-thirds of a rich agricultural area will be an almost complete economic loss to the State.

The constantly lowering ground water table effects a sort of "creeping paralysis" in the once lush western San Joaquin Valley. This agricultural decline, moreover, is taking place in the face of California's continuing population growth, which is expected to make it the most populous State in the Union. In a rapidly growing State, where good farmland is limited by the available water supply, more land, not less, must be irrigated to keep up with growing State needs for food, fiber, and job opportunities.

The Federal San Luis unit, therefore, must be considered as a rescue-type development, vital to the continued economic development of the San Joaquin Valley and to the State of California and to the Nation as a whole. Everyone benefits if valuable natural resources can be developed and sustained.

The State of California has long recognized its upward population trend and the urgent requirement to develop its soil and water resources to meet its growing needs. A forward-looking State water plan developed in the 1920's laid the groundwork for the great Central Valley project. A complete restudy of that far-reaching early planning resulted in the California water plan, recently completed, one of the most ambitious State water programs ever advanced.

The first step in this new plan is the Feather River project and several features of the San Luis unit, such as the San Luis Reservoir, are a part of this project. Such joint facilities will play an important part in the State's scheme to carry water to its service area in the southern part of the San Joaquin Basin and across the Tehachapi Mountains to provide the growing metropolitan complex in the Los Angeles-San Diego area with an adequate water supply.

Furthermore, by constructing the San Luis unit on a partnership basis—with Federal-State cooperation—it is estimated that the Federal cost on this project would be some $56 million lower than it would be if only the Federal unit were constructed.

In accordance with the proposed legislation, the facilities of the San Luis unit which are common to both the Federal and State plans would be jointly developed. Such cooperation is a necessity if the needs for water in the burgeoning Golden State are to be met in the future.

During congressional consideration in the other body of the San Luis unit legislation there was considerable discussion of the various facets of the excess land provision of the reclamation laws. Involved in the discussion were the lands to be irrigated in the Federal service area and, through joint development of some of the facilities of the unit with the State of California, the lands in the service area of the State's Feather River project.

There is no question that the owners of lands within the proposed Federal service area should comply with the 160-acre limitation in existing law. Before any water from the project could be furnished legally to these people, each prospective water user would have to enter into the customary recordable contract with the Federal Government to dispose of his lands in excess of 160 acres in a single ownership. This procedure would apply to all, including large landowners such as the Southern Pacific Railroad Co., which holds some 120,000 acres in the San Luis area.

The Senate was informed that the railroad company had stated it was not interested in selling its excess lands, but indicated it would be willing to pay interest on water supplied for its excess lands. Other landowners in the Federal service area have indicated they will comply with the acreage limitation, and it is true that the unit would be a feasible undertaking even if the Southern Pacific Railroad lands were excluded from project water service.

The question of whether the acreage limitation provision would apply to the lands in the State's service area has caused confusion and misunderstanding. It is understood the administration's view is, that since the State would fully pay for its share of the construction of the joint facilities prior to its use of them for the delivery of water, the provisions of the Federal reclamation laws, and thus the excess acreage limitation, would not apply to the State's service area. This would be true whether the legislation specifically exempts the State's service area from application of the Federal Reclamation laws, as does section 7 of H.R. 7155, or is silent on the matter as is S. 44, in the form it passed the Senate. There seems to be no precedent for application of the Federal Reclamation laws to the service area of a State-constructed storage facility.

Surplus crops will not be a particular problem so far as the San Luis unit is concerned. Consider these factors: The land is of high quality—more than 85 percent is classified in class 1 and 2. The growing season is long—over 250 days. Farms in the Federal service area will be of reduced size, as required by reclamation law. More and better quality of water will be provided by the new storage. Because of all these factors, crops will be grown which are generally not surplus to the Nation's needs. Also, these same basic conditions will make this an extremely versatile agricultural area, responsive to shifts in demand for agricultural products. Should some particular crop encounter marketing difficulties, it would be easy for the San Luis area farmers to shift to a more profitable crop which is not in surplus.

The expected crops from the San Luis project area include: Truck crops 88,000 acres; deciduous fruits and grapes, 22,000 acres; miscellaneous field crops, 66,000 acres; alfalfa, 88,000 acres; irrigated pasture, 44,000 acres; long staple cotton, 132,000 acres, and grain and hay, 44,000 acres. With the project development, there would be a drastic reduction in the 162,000 acres of grain and hay now grown in the area.

When the question of surplus crops is raised, an accusing finger is generally pointed at the cotton which would be grown in the San Luis unit area. In this regard, however, it should be remembered that California-grown cotton is of the long-staple variety. This is high quality cotton and there is a demand for it in this country. Thus, it does not contribute to the surplus problem in short-staple cotton. Furthermore, efficient production methods and irrigation enable the farmers in California to grow this better quality cotton at a low cost per acre. Considering the competition that cotton is meeting from imports and man-made fibers, the welfare of the domestic cotton industry depends on lowering the cost of cotton by increasing quality and instituting more efficient methods of production, such as you would have in the San Luis area.

Mr. SISK. Mr. Chairman, will the gentleman yield?

Mr. SAYLOR. I yield to the gentleman from California.

Mr. SISK. Actually, the facilities authorized by the language which the gentleman proposes to strike out here has absolutely nothing to do with the State project. There is not any part of the State project involved in this distribution system. This is a distribution system for a Federal project, and whether or not the people decide to contract with the Bureau of Reclamation under the normal procedure to construct the distribution system or decide under a bond issue or by some other method to construct, it is still part of the Federal project. Of course, it is covered by the reclamation law and has no part of the State project and no application to anything at all that has to do with the State project. I believe my colleague will agree with me on that.

Mr. SAYLOR. Let me ask my colleague, the author of the bill, then if that is the case—are you willing to go back to section 8 and strike out the words "other than distribution system" and insert the sum of $482 million, because that is what it becomes?

Mr. SISK. So far as I know, the statement by the gentleman that the distribution facilities have always been included in the total amount of money authorized, that is not my understanding. The gentleman may be right. It is my understanding that the normal language in these various projects which we have authorized—and the gentleman has been on the committee, of course, longer than I have—but it is my understanding that is the normal language we have always used in projects authorized in the 6 years that I have been on the committee.

Mr. SAYLOR. And the Central Valley project and the Central Valley distribution system have all, or almost all, been built by the Federal Government. In this case, this language which is in the bill authorizes $192 million more. What my amendment does is to tell the people of the area that if they want the Federal Government to build a distribution system, then they have to come back here again and get a further authorization.

Mr. SISK. Mr. Chairman, will the gentleman yield further?

Mr. SAYLOR. I am happy to yield further to my colleague from California.

Mr. SISK. Let me say there are a good many of the systems which were not built on money furnished by the Federal Government, but were built on their own. On the other hand, many have been built under the terms of this type of language.

Mr. SAYLOR. And a great deal of the trouble in the Central Valley has grown out of the distribution system that the Federal Government built.

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

Mr. ASPINALL. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. ASPINALL: On page 12, line 23, after the word "interests", insert "but not to exceed in total cost the sum of $192,650,000".

And on page 12, line 23, change period (.) to colon (:) and add "*Provided*, That no funds shall be appropriated for construction of distribution systems and drains prior to ninety calendar days (which ninety days, however, shall not include days on which either the House of Representatives or the Senate is not in session because of an adjournment of more than three calendar days to a day certain) after a contract has been submitted to the Congress calling for complete repayment of the costs of such distribution systems and drains within a period of forty years from the date such works are placed in service."

The CHAIRMAN. The gentleman from Colorado [Mr. ASPINALL] is recognized in support of his amendment.

Mr. ASPINALL. Mr. Chairman, I, too, have been somewhat alarmed because of the fact that we did not come out and expressly state in this legislation the amount that should be authorized as the cost of the possible drainage and distribution installations. My amendment states that any contracts for this contemplated construction shall be placed with the Congress so that they can be reviewed so that they will conform to the procedures that we usually follow in such matters. The reason for this provision is, that all authorizations for reclamation projects do not carry this provision. Some projects do not necessitate the building of drainage and distribution facilities. In California it

so happens that a large part of the drainage and distribution facilities have been built by the local irrigation districts themselves. It is contemplated that such facilities will be constructed by the local districts in this particular project.

We have on certain occasions authorized separately certain distribution systems for California projects. However, in the planning and distribution of such projects at the San Luis project it is so much more practical, so much more feasible, so much more economical to plan for all the different construction facilities which are necessary. If it is found at the time of the primary construction that the drainage and distribution facilities, which mean so much to the success of the project, cannot be constructed by the local interests, then those facilities should be a part of the whole project and should be built by the Federal Government and the cost thereof should be returned by the users to the Federal Government. That is what my amendment provides. I think that it is a perfectly feasible way to take care of the situation. My amendment shows what the possible cost of this project may be. Remember that 99.99 percent of this project is repayable to the Federal Government. This does not provide for a 10-year development period for these distribution and drainage facilities. This provides that as soon as they are in shape to be put into operation the payments shall start.

Mr. BOW. Mr. Chairman, will the gentleman yield?

Mr. ASPINALL. I yield.

Mr. BOW. I think the gentleman's amendment is a good one and brings it out where we can see what these costs actually will be.

Would the gentleman explain why the operation and maintenance is in this bill when, in answer to an inquiry which I made yesterday of the gentleman from California [Mr. SISK] he said no operation and maintenance money would be used.

Mr. ASPINALL. Well, the operation and maintenance funds are provided annually by the great Committee on Appropriations. These funds are payable annually. Sometimes they are paid before the start of the irrigation system. At other times they may be delayed until later in the season. But in order to keep these authorizations from coming back to Congress from time to time we have used this language. It permits the great Committee on Appropriations to continue its control and authority over this portion of the reclamation program.

The CHAIRMAN. The time of the gentleman from Colorado [Mr. ASPINALL] has expired.

Mr. SAYLOR. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I am happy to join the chairman of the House Interior and Insular Affairs Committee in support of his substitute amendment, because this actually places in the bill the actual cost of the project, $482 million. I think the Members of the House who are going to vote on this project ought to know the total amount in the project. I think the manner in which it is now placed is a safeguard and that the committee should go along with the amendment.

Mr. ASPINALL. Mr. Chairman, once again I say it is a great pleasure to work with my colleague from Pennsylvania [Mr. SAYLOR].

Mr. MCCORMACK. Mr. Chairman, I move to strike out the last word and take this opportunity to rise in support of the bill in its present shape, and congratulate the members of the Committee on Interior and Insular Affairs, both Democrats and Republicans, for the very careful and excellent manner in which the committee has always, during my years in this body, considered and screened legislation coming before the committee. The illustration of leadership on both sides, the chairman of the committee, my friend, the gentleman from Colorado [Mr. ASPINALL], and my friend, the gentleman from Pennsylvania [Mr. SAYLOR], shows the manner in which they approach consideration of legislation that comes before this excellent committee. It shows the teamwork, it shows the understanding. The gentleman from Pennsylvania made a profound speech. It was logical. Some of us might disagree to his amendment, but not to the logic of his reasoning behind his amendment. The chairman of the committee offers an amendment in the nature of a substitute, but an amendment by reason of the parliamentary situation. The gentleman from Pennsylvania accepts the amendment. That is the kind of teamwork in committee which produces the most constructive results.

This project is a great one that means much to the State and people of California. As far as I am concerned, coming from Boston, I am interested in projects all over the country. I do not feel because I come from Boston I should vote against a project that is going to marshal the natural resources of any section of our country in the service of the people of that section and indirectly the people of the entire country simply because it involves appropriations where other sections of the country might primarily benefit. I have voted for all these projects over the years. This is another project. It is in the best interests of our country. It is going to mean a great deal to the people of California, and I am supporting the bill, but I particularly wanted to take the floor to call to the attention of the House this fine teamwork and understanding that exists in the committee and to congratulate both the Democratic and Republican members of the committee for the manner in which they have approached the consideration of this bill in committee and on the floor, and the manner in which they approach the consideration of all bills referred to their committee.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Colorado.

The amendment was agreed to.

Mr. ASPINALL. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. ASPINALL. Does not the vote recur on the amendment offered by the gentleman from Pennsylvania? Or will he withdraw his amendment?

The CHAIRMAN. The amendment of the gentleman from Colorado being in the nature of a perfecting amendment, the motion to strike out the paragraph falls.

If there are no further amendments, under the rule the Committee rises.

Accordingly, the Committee rose; and the Speaker having resumed the chair, Mr. THOMPSON of Texas, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 7155) to authorize the Secretary of the Interior to construct the San Luis unit of the Central Valley project, California, to enter into an agreement with the State of California with respect to the construction and operation of such unit, and for other purposes, pursuant to House Resolution 514, he reported the same back to the House with sundry amendments adopted in the Committee of the Whole.

The SPEAKER. Under the rule the previous question is ordered.

Is a separate vote demanded on any amendment?

Mr. HOSMER. Mr. Speaker, I demand a separate vote on the so-called Ullman amendment.

The SPEAKER. Is a separate vote demanded on any other amendment? If not, the Chair will put them en gross.

The amendments were agreed to.

The SPEAKER. The Clerk will report the amendment on which a separate vote has been demanded.

The Clerk read as follows:

On page 11, line 22, strike out lines 23 and 24, and on page 12 strike out lines 1 through 5.

The SPEAKER. The question is on the amendment.

Mr. HOSMER. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 215, nays 179, answered "present" 1, not voting 38, as follows:

[Roll No. 95]

So the amendment was agreed to.

The Clerk announced the following pairs:

Mr. Johnson of Colorado for, with Mr. Aspinall against.

Mr. Hébert for, with Mr. Allen against.

Mr. Buckley for, with Mr. Short against.

Mr. Rogers of Texas for, with Mr. Taylor against.

Mr. Sikes for, with Mr. Pillion against.

Mr. Santangelo for, with Mr. Kilburn against.

Mr. Brewster for, with Mr. Jackson against.

Mr. Gilbert for, with Mr. Smith of Kansas against.

Mr. Thompson of Louisiana for, with Mr. Wainwright against.

Mr. Walter for, with Mr. Williams against.

Mrs. Green of Oregon for, with Mr. Barden against.

Mr. Diggs for, with Mr. Scott against.

Mr. Baring for, with Mr. Alexander against.

Mr. Davis of Tennessee for, with Mr. McMillan against.

Mr. JONES of Missouri changed his vote from "yea" to "nay."

Mr. ASPINALL. Mr. Speaker, on the rollcall I voted "no." I have a live pair with the gentleman from Colorado [Mr. JOHNSON]. If he were present, he would vote "yea." I, therefore, ask to be recorded as voting "present."

Mr. WILSON changed his vote from "yea" to "nay."

Mr. MERROW changed his vote from "yea" to "nay."

The result of the vote was announced as above recorded.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

Mr. UTT. Mr. Speaker, I have a motion to recommit which is at the Clerk's desk.

The SPEAKER. Is the gentleman opposed to the bill?

Mr. UTT. I am, Mr. Speaker.

The SPEAKER. The Clerk will report the motion to recommit.

The Clerk read as follows:

Mr. UTT moves to recommit the bill, H.R 7155, to the Committee on Interior and Insular Affairs.

The previous question was ordered.

The SPEAKER. The question is on the motion to recommit.

The motion was rejected.

The SPEAKER. The question is on the passage of the bill.

The bill was passed.

A motion to reconsider was laid on the table.

Mr. ASPINALL. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (S. 44) to authorize the Secretary of the Interior to construct the San Luis unit of the Central Valley project, California, to enter into an agreement with the State of California with respect to the construction and operation of such unit, and for other purposes, which is a bill similar to the one just passed by the House.

The Clerk read the title of the Senate bill.

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There was no objection.

The Senate bill is as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. (a) That for the principal purpose of furnishing water for the irrigation of approximately five hundred thousand acres of land in Merced, Fresno, and Kings Counties, California, hereinafter referred to as the Federal San Luis unit service area, and as incidents thereto of furnishing water for municipal and domestic use and providing recreation and fish and wildlife benefits, the Secretary of the Interior (hereinafter referred to as the Secretary) is authorized to construct, operate, and maintain the San Luis unit as an integral part of the Central Valley project. The principal engineering features of said unit shall be a dam and reservoir at or near the San Luis site, a forebay and afterbay, the San Luis Canal, the Pleasant Valley Canal, and necessary pumping plants, distribution systems, drains, channels, levees, flood works, and related facilities. The works of the San Luis unit (hereinafter referred to as joint-use facilities) for joint use with the State of California (hereinafter referred to as the State) shall be the dam and reservoir at or near the San Luis site, forebay and afterbay, pumping plants, and the San Luis Canal. The joint-use facilities consisting of the dam and reservoir shall be constructed, and other joint-use facilities may be constructed so as to permit future expansion; or the joint-use facilities shall be constructed initially to the capacities necessary to serve both the Federal San Luis unit service area and the State's service area as hereinafter provided. In constructing, operating, and maintaining the San Luis unit, the Secretary shall be governed by the Federal reclamation laws (Act of June 17, 1902, 32 Stat. 388, and Acts amendatory thereof or supplementary thereto). Construction of the San Luis unit shall not be commenced until the Secretary has (1) secured, or has satisfactory assurance of his ability to secure all rights to the use of water which are necessary to carry out the purposes of the unit and the terms and conditions of this Act, and (2) received satisfactory assurance from the State of California that it will make provision for a master drainage outlet and disposal channel for the San Joaquin Valley, as generally outlined in the California water plan, Bulletin Numbered 3, of the California Department of Water Resources, which will adequately serve, by connection therewith, the drainage system for the San Luis unit or has made provision for constructing the San Luis interceptor drain to the delta designed to meet the drainage requirements of the San Luis unit as generally outlined in San Luis project report by the Bureau of Reclamation of May 1955, as transmitted to the Congress by the Secretary of the Interior, December 17, 1956.

(b) No water provided by the Federal San Luis unit shall be delivered in the Federal San Luis service area to any water user for

the production on newly irrigated lands of any basic agricultural commodity, as defined in the Agricultural Act of 1949, or any amendment thereof, if the total supply of such commodity for the marketing year in which the bulk of the crop would normally be marketed is in excess of the normal supply as defined in section 301(b)(10) of the Agricultural Adjustment Act of 1938, as amended, unless the Secretary of Agriculture calls for an increase in production of such commodity in the interest of national security.

SEC. 2. The Secretary is authorized, on behalf of the United States, to negotiate and enter into an agreement with the State of California providing for coordinated operation of the San Luis unit, including the joint-use facilities, in order that the State may, without cost to the United States, deliver water in service areas outside the Federal San Luis unit service area as described in the report of the Department of the Interior, entitled "San Luis Unit, Central Valley Project," dated December 17, 1956. The Secretary shall not commence construction of the San Luis unit, except for the preparation of designs and specifications and other preliminary work, until the execution of such an agreement between the United States and the State, but if such an agreement has not been executed by January 1, 1962, and if, after consultation with the Governor of the State, the Secretary determines that the prospects of reaching accord on the terms thereof are not reasonably firm, he may proceed to construct and operate the San Luis unit in accordance with section 1 of this Act: *Provided*, That, if the Secretary so determines, he shall report thereon to the Congress and shall not commence construction for ninety calendar days from the date of his report (which ninety days, however, shall not include days on which either the House of Representatives or the Senate is not in session because of an adjournment of more than three days). In considering the prospects of reaching accord on the terms of the agreement the Secretary shall give substantial weight to any relevant affirmative action theretofore taken by the State, including the enactment of State legislation authorizing the State to acquire and convey to the United States title to lands to be used for the San Luis unit or assistance given by it in financing Federal design and construction of the unit. The authority conferred upon the Secretary by the first sentence of this section shall not, except as is otherwise provided in this section, be construed as a limitation upon the exercise by him of the authority conferred in section 1 of this Act, but if the State shall agree equitably to share the total cost of constructing the joint-use facilities and as a part of its share to make available to the Secretary sufficient funds to pay the additional cost of designing and constructing the joint-use facilities so as to permit enlargement, it shall have an irrevocable right to enlarge or modify such facilities at any time in the future, and a perpetual right to the use of such additional capacity: *Provided*, That the performance of such work by the State, after approval of its plans by the Secretary, shall be so carried on as not to interfere unduly with the operation of the project for the purposes set forth in section 1 of this Act: *And provided further*, That this right may be relinquished by the State at any time at its option.

SEC. 3. The agreement between the United States and the State referred to in section 2 of this Act shall provide, among other things, that—

(a) the joint use facilities to be constructed by the Secretary shall be so designed and constructed to such capacities and in such manner as to permit either (i) immediate integration and coordinated operation with the State's water projects by providing, among other things, a capacity in San Luis Reservoir of approximately two million one hundred thousand acre-feet and corresponding capacities in the other joint-use facilities or (ii) such subsequent enlargement or other modification as may be required for integration and coordinated operation therewith;

(b) the State shall make available to the Secretary during the construction period sufficient funds to pay an equitable share of the construction costs of any facilities designed and constructed as provided in paragraph (a) above. The State contribution shall be made in annual installments, each of which bears approximately the same ratio to total expenditures during that year as the total of the State's share bears to the total cost of the facilities; the State may make advances to the United States in order to maintain a timely construction schedule of the joint-use facilities and the works of the San Luis unit to be used by the State and the United States;

(c) the State may at any time after approval of its plans by the Secretary and at its own expense enlarge or modify San Luis Dam and Reservoir and other facilities to be used jointly by the State and the United States, but the performance of such work shall be so carried on as not to interfere unduly with the operation of the San Luis unit for the purposes set forth in section 1 of this Act;

(d) the United States and the State shall each pay annually an equitable share of the operation, maintenance, and replacement costs of the joint-use facilities;

(e) promptly after execution of this agreement between the Secretary and the State, and for the purpose of said agreement, the State shall convey to the United States title to any lands, easements, and rights-of-way which it then owns and which are required for the joint-use facilities. The State shall be given credit for the costs of these lands, easements, and rights-of-way toward its share of the construction costs of the joint-use facilities. The State shall likewise be given credit for any funds advanced by it to the Secretary for preparation of designs and specifications or for any other work in connection with the joint-use facilities;

(f) the rights to the use of capacities of the joint-use facilities of the San Luis unit shall be allocated to the United States and the State, respectively, in such manner as may be mutually agreed upon. The United States shall not be restricted in the exercise of its right so allocated, which shall be sufficient to carry out the purposes of section 1 of this Act and which shall extend throughout the repayment period and so long thereafter as title to the works remains in the United States. The State shall not be restricted in the exercise of its allocated right to the use of the capacities of the joint-use facilities for water service outside the Federal San Luis unit service area;

(g) the Secretary may turn over to the State the care, operation, and maintenance of any works of the San Luis unit which are used jointly by the United States and the State at such time and under such conditions as shall be agreed upon by the Secretary and the State;

(h) notwithstanding transfer of title or of the care, operation, and maintenance of any works to the State, as hereinbefore provided, any organization which has theretofore entered into a contract with the United States under the Reclamation Project Act of 1939 for a water supply through the works of the San Luis unit, including joint-use facilities, shall continue to have and to enjoy the same rights which it would have had under its contract with the United States and the provisions of paragraph (4) of section 1 of the Act of July 2, 1956 (70 Stat. 483; 43 U.S.C. 485h–1), in the absence of such transfer, and its enjoyment of such rights shall be without added cost or other detriment arising from such transfer;

(i) if a nonreimbursable allocation to the preservation and propagation of fish and wildlife has been made as provided in section 2 of the Act of August 14, 1946 (60 Stat. 1080; 16 U.S.C. 662), as amended, the features of the unit to which such allocation is attributable shall, notwithstanding transfer of title or of the care, operation, and maintenance to the State, be operated and maintained in such wise as to retain the bases upon which such allocation is premised and, upon failure so to operate and maintain those features, the amount allocated thereto shall become a reimbursable cost to be paid by the State.

SEC. 4. In constructing, operating, and maintaining a drainage system for the San Luis unit, the Secretary is authorized to permit the use thereof by other parties under contract conforming generally to the provisions of the Federal reclamation laws with respect to irrigation repayment or service contracts and is further authorized to enter into agreements and participate in construction and operation of drainage facilities designed to serve the general area of which the lands to be served by the San Luis unit are a part, to the extent the works authorized in section 1 of this Act contribute to drainage requirements of said area. The Secretary is also authorized to permit the use of the irrigation facilities of the San Luis unit, including its facilities for supplying pumping energy, under contracts entered into pursuant to section 1 of the Act of February 21, 1911 (36 Stat. 925, 43 U.S.C. 523).

SEC. 5. The Secretary is authorized, in connection with the San Luis unit, to construct minimum basic public recreational facilities and to arrange for the operation and maintenance of the same by the State or an appropriate local agency or organization. The cost of such facilities shall be nonreturnable and nonreimbursable under the Federal reclamation laws.

SEC. 6. The Secretary is authorized to provide Central Valley project service, by way of the Pacheco Tunnel route, to lands and municipalities in Santa Clara, San Benito, Santa Cruz, and Monterey Counties: *Provided*, That construction of the works to provide such service shall not be undertaken until a report demonstrating their physical and economic feasibility has been completed, reviewed by the State, and approved by the Secretary and by the Congress, and in no event prior to July 1, 1964, unless, in the meantime, the Governor of the State of California shall have notified the Secretary that the State approves the construction of such works by the United States.

SEC. 7. There is hereby authorized to be appropriated for construction of the works of the San Luis unit, including joint use facilities, authorized by this Act, other than distribution systems and drains, the sum of $290,430,000, plus such additional amount, if any, as may be required by reason of changes in costs of construction of the types involved in the San Luis unit as shown by engineering indexes. There are also authorized to be appropriated, in addition thereto, such amounts as are required (a) for construction of such distribution systems and drains as are not constructed by local interests, and (b) for operation and maintenance of the unit. All moneys received by the Secretary from the State under this Act shall be covered into the same accounts as moneys appropriated hereunder and shall be available, without further appropriation, to carry out the purposes of this Act.

Mr. ASPINALL. Mr. Speaker, I move to strike out all after the enacting clause of the bill S. 44, and substitute therefor the language in the bill H.R. 7155 as passed by the House.

The SPEAKER. The question is on the amendment offered by the gentleman from Colorado [Mr. ASPINALL].

The amendment was agreed to.

The SPEAKER. The question is on the passage of the Senate bill, as amended.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

A similar House bill, H.R. 7155, was laid on the table.

AMENDING HOUSE RESOLUTION 27, 86TH CONGRESS

Mr. BOLLING (on behalf of Mr. SMITH of Virginia), from the Committee on Rules, reported the following resolution (H. Res. 530, Rept. No. 1613) which was referred to the House Calendar and ordered to be printed:

Resolved, That H. Res. 27, Eighty-sixth Congress, is amended by striking out the period at the end of clause (7) on page 2 and inserting "; and" and by inserting after clause (7) on page 2 the following clause: "(8) involving the activities and operations of interstate compacts;".

ECONOMIC AND SOCIAL DEVELOPMENT IN RYUKYU ISLANDS

Mr. BOLLING, from the Committee on Rules, reported the following resolution (H. Res. 533, Rept. No. 1616) which was referred to the House Calendar and ordered to be printed:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 1157) to provide for promotion of economic and social development in the Ryukyu Islands. After general debate, which shall be confined to the bill, and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Armed Services, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

AUTHORIZING A PAYMENT TO THE GOVERNMENT OF JAPAN

Mr. BOLLING, from the Committee on Rules, reported the following resolution (H. Res. 532, Rept. No. 1615) which was referred to the House Calendar and ordered to be printed:
